MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: The text background color.
Example:

```
Var c as ScintillaControlMBS // your control
```

```
// Set background color for background styles:

// window background style
c.Style(32).BackColor = Color.Black
// margin background style
c.Style(33).BackColor = Color.Black
```

Notes: Text is drawn in the foreground colour. The space in each character cell that is not occupied by the character is drawn in the background colour.
(Read and Write property)

170.10.7 Bold as Boolean

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: Whether font is bold.
Notes: When you set this to true, the weight is set to kFontWeightBold, otherwise to kFontWeightNormal.
(Read and Write property)

170.10.8 CaseVisible as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: The value of caseVisible determines how text is displayed.
Notes: You can set upper case (kCaseVisibleUpper, 1) or lower case (kCaseVisibleLower, 2) or camel case (kCaseVisibleCamel, 3) or display normally (kCaseVisibleMixed, 0). This does not change the stored text, only how it is displayed.
(Read and Write property)

170.10.9 Changeable as Boolean

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: Whether this text is editable.
Notes: This is an experimental and incompletely implemented style attribute. The default setting is changeable set true but when set false it makes text read-only. The user can not move the caret within not-changeable text and not-changeable text may not be deleted by the user. The application may delete not-changeable text by calling DeleteRange().
(Read and Write property)

170.10.10 CheckMonospaced as Boolean

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: Whether font is mono spaced.
Notes: This attribute indicates that the font may be monospaced over the ASCII graphics characters (' ' ,Ä¶ '
textasciitilde ', including letters ('a',Ä¶'z', 'A',Ä¶'Z') and numbers ('0',Ä¶'9')). This allows optimizing speed and memory use for some common scenarios where documents are mostly composed from ASCII characters. Fonts are rarely monospaced over all possible characters. Emoji 'üòÉ', Arabic characters 'ÿ¥' and Chinese ideographs 'Êº¢' are often different widths to Roman letters. Even when a font is designed as monospaced, not all characters may be present and platforms may substitute other fonts for any missing characters with the substitute characters taking more or less space. However, fonts are often reliably monospaced over ASCII text (disregarding control characters) and many documents contain mostly ASCII characters. This setting allows simplified position calculations for text runs that are purely ASCII graphics characters.
Before treating the font as monospaced, it is first checked over the ' ' ,Ä¶ '
textasciitilde ' range and for some known combinations of characters that may have different spacings because of kerning or ligatures. Applications may apply the 'check monospaced' attribute just to fonts known to be monospaced or on all fonts, leaving it to Scintilla to reject fonts that are proportional.
(Read and Write property)

170.10.11 Description as String

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: The style description.
Notes: Retrieve an English-language description of a style which may be suitable for display in a user interface. This looks like "Doc comment: block comments beginning with /** or /*!".
(Read only property)

170.10.12 EOLFilled as Boolean

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: Whether to fill till end of line.
Notes: If the last character in the line has a style with this attribute set, the remainder of the line up to the right edge of the window is filled with the background colour set for the last character. This is useful when a document contains embedded sections in another language such as HTML pages with embedded JavaScript. By setting eolFilled to true and a consistent background colour (different from the background colour set for the HTML styles) to all JavaScript styles then JavaScript sections will be easily distinguished from HTML.
(Read and Write property)

170.10.13 Font as String

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: The fontName is a string holding the name of a font.
Example:

```
Var c as ScintillaControlMBS // your control
Var style As ScintillaStyleMBS = c.Style(ScintillaStyleMBS.kStylesCommonDefault)
// Set font to be system font
style.Font = SystemInformationMBS.SystemFont
```

Notes: Under Windows, only the first 32 characters of the name are used, the name is decoded as UTF-8, and the name is not case sensitive. For internal caching, Scintilla tracks fonts by name and does care about the casing of font names, so please be consistent. On GTK, Pango is used to display text and the name is sent directly to Pango without transformation. On Qt, the name is decoded as UTF-8. On Cocoa, the name is decoded as MacRoman.
(Read and Write property)

170.10.14 ForeColor as Color

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: The text foreground color.
Notes: Text is drawn in the foreground colour. The space in each character cell that is not occupied by the character is drawn in the background colour.
(Read and Write property)

170.10.15 HotSpot as Boolean

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: This style is used to mark ranges of text that can detect mouse clicks.
Notes: The cursor changes to a hand over hotspots, and the foreground, and background colours may change and an underline appear to indicate that these areas are sensitive to clicking. This may be used to allow hyperlinks to other documents.
(Read and Write property)

170.10.16 Identifiers as String

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: The identifiers associated to a sub style.

Notes: (Read and Write property)

170.10.17 InvisibleRepresentation as String

MBS Scintilla Plugin, Plugin Version: 26.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: The character to show for invisible style.
Notes: When a style is made invisible with Visible property, text is difficult to edit as the cursor can be at both sides of the invisible text segment. With these messages invisible text segments can be made visible with a single UTF8 character giving the user an indication if the cursor is left or right of the invisible text. The character is displayed using the current style.
(Read and Write property)

170.10.18 Italic as Boolean

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: Whether this style uses an italic style.
Notes: (Read and Write property)

170.10.19 Name as String

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: Retrieve the name of a style.
Notes: This is a C preprocessor symbol like "SCE_C_COMMENTDOC".
(Read only property)

170.10.20 Parent as Variant

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: The parent control.
Notes: (Read only property)

170.10.21 Size as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: The font size.
Notes: Sizes can be set to a whole number of points with Size property or to a fractional point size in hundredths of a point with SizeFractional property by multiplying the size by 100. For example, a text size of 9.4 points is set with SizeFractional = 940.
(Read and Write property)

170.10.22 SizeFractional as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: The font size in 100th.
Notes: Sizes can be set to a whole number of points with Size property or to a fractional point size in hundredths of a point with SizeFractional property by multiplying the size by 100. For example, a text size of 9.4 points is set with SizeFractional = 940.
(Read and Write property)

170.10.23 Stretch as Integer

MBS Scintilla Plugin, Plugin Version: 26.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: The stretch for condensed or expanded text.
Notes: The weight is a number between 1 and 9 which corresponds to a horizontal magnification between 50% and 200% with 1 being very condensed, 5 normal, and 9 very expanded. While any value can be used, fonts and platforms often only support between 2 and 3 stretches. The best supported and useful values are kFontStretchCondensed, kFontStretchNormal, and kFontStretchExpanded. The Inconsolata variable font supports many stretch values and can be useful for experimenting. Condensed text can be used to display more text in a narrower window and expanded text may be used for clearer text that is easier to read. The API is based on the Cascading Style Sheets font-stretch property.

See ScintillaControlMBS.kFontStretch* constants.
(Read and Write property)

170.10.24 Style as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: The style number for this style.
Notes: (Read only property)

170.10.25 Tag as Variant

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: The tag value.
Notes: A variable for you to put any reference information you like.
(Read only property)

170.10.26 Tags as String

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: The tags of a style.
Notes: This is a space-separated set of words like "comment documentation".
(Read only property)

170.10.27 Underline as Boolean

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: You can set a style to be underlined.
Notes: The underline is drawn in the foreground colour. All characters with a style that includes the underline attribute are underlined, even if they are white space.
(Read and Write property)

170.10.28 Visible as Boolean

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: Whether to show this text.
Notes: Text is normally visible. However, you can completely hide it by giving it a style with the visible set to 0. This could be used to hide embedded formatting instructions or hypertext keywords in HTML or XML. Invisible text may not be deleted by user actions but the application may delete invisible text by calling DeleteRange().
(Read and Write property)

170.10.29 Weight as Integer

MBS Scintilla Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: The weight of the font.
Notes: The weight or boldness of a font can be set with Bold or Weight properties. The weight is a number

between 1 and 999 with 1 being very light and 999 very heavy. While any value can be used, fonts often only support between 2 and 4 weights with three weights being common enough to have symbolic names: kFontWeightNormal (400), kFontWeightSemiBold (600), and kFontWeightBold (700).
(Read and Write property)

170.10.30 Constants

Case Visibility

Constant	Value	Description
kCaseVisibleCamel	3	Camel case.
kCaseVisibleLower	2	Uppercase letters.
kCaseVisibleMixed	0	Mixed case.
kCaseVisibleUpper	1	Uppercase letters.

Font Weights

Constant	Value	Description
kFontWeightBold	700	Bold font.
kFontWeightNormal	400	Normal font, not bold.
kFontWeightSemiBold	600	Semi bold.

Common Styles

Constant	Value	Description
kStylesCommonBraceBad	35	This style sets the display attributes used when marking an unmatched brace with the BraceBadLight method.
kStylesCommonBraceLight	34	This style sets the attributes used when highlighting braces with the BraceHighlight method and when highlighting the corresponding indentation with HighlightGuide.
kStylesCommonCallTip	38	Call tips normally use the font attributes defined by kStylesCommonDefault. Use of CallTipUseStyle causes call tips to use this style instead. Only the font face name, font size, foreground and background colours and character set attributes are used.
kStylesCommonControlChar	36	This style sets the font used when drawing control characters. Only the font, size, bold, italics, and character set attributes are used and not the colour attributes. See also: ControlCharSymbol method.
kStylesCommonDefault	32	This style defines the attributes that all styles receive when the StyleClearAll method is used.
kStylesCommonFoldDisplayText	39	This is the style used for drawing text tags attached to folded text.
kStylesCommonIndentGuide	37	This style sets the foreground and background colours used when drawing the indentation guides.
kStylesCommonLastPredefined	39	To make it easier for client code to discover the range of styles that are predefined, this is set to the style number of the last predefined style.
kStylesCommonLineNumber	33	This style sets the attributes of the text used to display line numbers in a line number margin. The background colour set for this style also sets the background colour for all margins that do not have any folding mask bits set. That is, any margin for which mask & kMaskFolders is 0. See Mask in ScintillaMarginMBS class for more about masks.
kStylesCommonMax	255	This is not a style but is the number of the maximum style that can be set. Styles between kStylesCommonLastPredefined and kStylesCommonMax may be used.

Chapter 171

Screenshot

171.1 Globals

171.1.1 ScreenshotDisplayMBS(index as Integer) as picture

MBS Picture Plugin, Plugin Version: 3.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the Screenshot from the display with the given index.
Example:

Backdrop = ScreenshotDisplayMBS(0)

Notes: Index starts at 0 for the main display.
Works on Linux only for first screen.

Plugin version 10.4 added support for multiple displays on Windows.
Blog Entries

- MBS Xojo / Real Studio Plugins, version 16.4pr7
- MBS REALbasic Plugins Version 10.4 release notes
- MBS REALbasic Plugins, version 10.4pr3

171.1.2 ScreenshotFromStringMBS(Width as Integer, Height as Integer, RowBytes as Integer, data as string) as picture

MBS Picture Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates the picture from a string returnd by ScreenshotStringMBS.
Example:

```
Var p as Picture
Var s as string

Var w,h,r as Integer

s=ScreenshotStringMBS(w,h,r)

p=ScreenshotFromStringMBS(w,h,r,s)

Backdrop=p
```

Notes: Returns nil on any error.
(for example if width, height and rowwidth doesn't fit together.)

171.1.3 ScreenshotMBS as picture

MBS Picture Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a picture of the screen content in screen resolution.
Example:

```
Var p as picture
p=screenshotMBS
```

Notes: For a rectangle only you can use ScreenShotRectMBS.

Plugin Version 7.2 adds Windows Vista Support.
Blog Entries

171.1.4 ScreenshotRectMBS(left as Integer, top as Integer, width as Integer, height as Integer) as picture

MBS Picture Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a picture of the screen rectangle in screen resolution.
Example:

```
// write picture of window to desktop
#if TargetMacOS then
const f = 1
#else
Var f as double = screen(0).ScaleFactor
#endif

Var p as Picture = ScreenshotRectMBS(self.left*F, self.top*F, self.Width*F, self.Height*F)
Var ff as FolderItem = SpecialFolder.Desktop.Child("test.jpg")

p.Save(ff, p.SaveAsJPEG)
```

Notes: Improved in Version 3.2 to support multiple displays on Mac OS.

Plugin Version 10.4 adds Windows support.
Coordinates given in pixel on screen, so for High DPI on Windows, you need to multiply them before passing parameters.

171.1.5 ScreenshotStringDisplayMBS(byref Width as Integer, byref Height as Integer, byref RowBytes as Integer, index as Integer) as string

MBS Picture Plugin, Plugin Version: 8.6, Platform: macOS, Targets: All.

Function: Returns a picture of the screen content in screen resolution.
Example:

```
Var s as string
Var w,h,r as Integer
Var index as Integer=0
```

s=ScreenshotStringDisplayMBS(w,h,r, index)

Notes: Returns nil on any error.
Use ScreenshotFromStringMBS to get the picture from the string.

171.1.6 ScreenshotStringMBS(byref Width as Integer, byref Height as Integer, byref RowBytes as Integer) as string

MBS Picture Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a picture of the screen content in screen resolution.
Example:

Var s as string
Var w,h,r as Integer
s=ScreenshotStringMBS(w,h,r)

Notes: Returns nil on any error.
Use ScreenshotFromStringMBS to get the picture from the string.

Chapter 172

SerialPort

172.1 class SerialPortMBS

172.1.1 class SerialPortMBS

MBS Util Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Enumerate serial ports and send/receive data.
Notes: While we compiled this class also for iOS, we don't expect anyone to find a serial port on an iPhone.

172.1.2 Methods

172.1.3 AvailableBytes as Integer

MBS Util Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries number of bytes available in buffer.

172.1.4 Clear

MBS Util Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Clears incoming buffer.

172.1.5 Close

MBS Util Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Closes serial port.
Notes: This happens automatically in the destructor.

172.1.6 Constructor

MBS Util Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The constructor.
Notes: Please call Open() to open a device.

172.1.7 HasDataAvailable as Boolean

MBS Util Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether data is available to read.

172.1.8 HasLine as Boolean

MBS Util Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Checks if a line is available.
Notes: The plugin checks the input buffer for a newline character.

172.1.9 List(Mode as Integer = 0) as String()

MBS Util Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns list of names of serial ports.
Example:

```
Var names() as string = MySerialPort.List

for each n as string in names
PopupDevice.AddRow n
next
```

Notes: Returns list of names of serial ports.
On Windows can list ports with textual name.

Mode can be 1 on Windows to return friendly names of ports.

172.1.10 Open(Name as String, Index as Integer = 0)

MBS Util Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Opens the serial port.
Example:

```
Var port as new SerialPortMBS

// open a port
port.Open("COM1")

// check the path
MessageBox port.Path
```

Notes: You get the names from List function.
The port is opened with default settings.

Even if port is not showing in list, it may still open here, e.g. virtual COM ports on Windows.
You can open several ports with different connections, e.g. by calling Open once for each SerialPortMBS object.

172.1.11 OpenPath(Path as String)

MBS Util Plugin, Plugin Version: 23.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Opens the special file/device/pipe.
Notes: This allows you to e.g. open a pipe on Windows.

172.1.12 Poll

MBS Util Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Polls to see if there is new data.
Notes: The plugin regularly checks if there is new data and raises the DataAvailable event if needed.

172.1.13 Read(MaxByteSizeToRead as Integer) as String

MBS Util Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads bytes from serial port and returns them as text.
Notes: Reads bytes from serial port and returns them as text.
The text returned may be shorter than length bytes.
See also AvailableBytes function.

172.1.14 ReadByte as Integer

MBS Util Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the byte value or an error message.
Notes: This is very useful for reading control characters which you can't easily put in a text in FileMaker. Like 13 for a LF (line feed) or 10 for CR (carriage return).
See also AvailableBytes function.

172.1.15 ReadLine as String

MBS Util Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads a line of text from serial port.
Notes: The plugin buffers input and reads text until first newline character. Returns text without that newline character.

172.1.16 Resume

MBS Util Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Resumes serial port.
Notes: While suspended, we do not trigger event and clear incoming buffer regularly.

172.1.17 Suspend

MBS Util Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Suspends serial port.
Notes: While suspended, we do not trigger event and clear incoming buffer regularly.
Please call Resume later.

172.1.18 Write(value as String) as Integer

MBS Util Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the number of bytes written or an error message.
Notes: Be aware that text encoding conversion may result in different bytes than expected, so please verify on other side the text encoding matches the expectations.

172.1.19 WriteByte(value as Integer) as Integer

MBS Util Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the number of bytes written.
Notes: This is very useful for sending control characters which you can't easily put in a text in Xojo.
Like 13 for a LF (line feed) or 10 for CR (carriage return).

172.1.20 Properties

172.1.21 Handle as Integer

MBS Util Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The internal object reference.
Notes: (Read only property)

172.1.22 Lasterror as Integer

MBS Util Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The last error code.
Notes: The error code is zero for no error.
On Windows you get the windows system error codes and on macOS and Linux the unix system error codes.

The methods and properties raise IOException in case of errors and include the error codes.
(Read only property)

172.1.23 Path as String

MBS Util Plugin, Plugin Version: 23.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The path used to open the serial port.
Example:

```
Var port as new SerialPortMBS

// open a port
port.Open("COM1")

// check the path
MessageBox port.Path
```

Notes: Set by Open() method.
Value is e.g. "COM1"
(Read only property)

172.1.24 Suspended as Boolean

MBS Util Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Checks suspension state.
Notes: Checks suspension state.
While suspended, we do not trigger event and clear incoming buffer regularly.
(Read only property)

172.1.25 Tag as Variant

MBS Util Plugin, Plugin Version: 23.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tag property.
Notes: You can store whatever you like in this property to read it later.
(Read and Write property)

172.1.26 BaudRate as Integer

MBS Util Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries or sets the baud rate.
Notes: (Read and Write computed property)

172.1.27 CTS as Boolean

MBS Util Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The current CTS mode.
Notes: If enabled, the CTS (clear-to-send) signal is monitored for output flow control.
Than if CTS is turned off, output is suspended until CTS is sent again.
(Read and Write computed property)

172.1.28 DataBits as Integer

MBS Util Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries or sets the data bit size.
Notes: Value is 5, 6, 7 or 8.
(Read and Write computed property)

172.1.29 DSR as Boolean

MBS Util Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries or sets whether DSR mode is used.
Notes: If enabled DSR (data-set-ready) signal is monitored for output flow control.
(Read and Write computed property)

172.1.30 DTR as Boolean

MBS Util Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries or sets whether DTR (data-terminal-ready) flow control is used.
Notes: (Read and Write computed property)

172.1.31 Parity as Integer

MBS Util Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries or sets parity setting.
Notes: Can be 0 (off), 1 (odd) or 2 (even), see constants.
(Read and Write computed property)

172.1.32 RTS as Boolean

MBS Util Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries or sets whether to use RTS (request-to-send) flow control.
Notes: (Read and Write computed property)

172.1.33 StopBits as Double

MBS Util Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries or sets number of stop bits.
Notes: Can be 1 or 2 on Mac/Linux and 1, 1.5 or 2 on Windows.
(Read and Write computed property)

172.1.34 WinRTSControl as Integer

MBS Util Plugin, Plugin Version: 22.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The RTS (request-to-send) flow control.
Notes: This property gives you direct access to the RTS control setting on Windows.
And this is set to either disabled or handshake by the RTS property.

Raises an exception if used on MacOS or Linux.
(Read and Write computed property)

172.1.35 XON as Boolean

MBS Util Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries or sets if XON/XOFF flow control is used.
Notes: (Read and Write computed property)

172.1.36 Events

172.1.37 DataAvailable

MBS Util Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The event called when data is available.
Notes: Please call the Read methods here to process data.

172.1.38 Constants

Parity

Constant	Value	Description
kParityEven	2	Even parity
kParityNone	0	No parity
kParityOdd	1	Odd parity

RTS Flow Control Settings

Constant	Value	Description
kWinRTSControlDisabled	0	Disables the RTS line when the device is opened and leaves it disabled.
kWinRTSControlEnabled	1	Enables the RTS line when the device is opened and leaves it on.
kWinRTSControlHandshake	2	Enables RTS handshaking. The driver raises the RTS line when the "type-ahead" (input) buffer is less than one-half full and lowers the RTS line when the buffer is more than three-quarters full.
kWinRTSControlToggle	3	Specifies that the RTS line will be high if bytes are available for transmission. After all buffered bytes have been sent, the RTS line will be low.

Chapter 173

SFPassword

173.1 class SFPasswordAssistantMBS

173.1.1 class SFPasswordAssistantMBS

MBS MacExtras Plugin, Plugin Version: 7.5, Platform: macOS, Targets: Desktop only.

Function: The class to help the user to create a new password.
Notes: This is an Apple internal class with no public interface. It works for Mac OS X 10.4 and should work on 10.3 and 10.5.

You need to keep the reference to the SFPasswordAssistantMBS object in a global property. If the object in Xojo is destroyed while the panel is still visible, it will crash.

Do not call Close or PerformClose methods to close this window, use BaseWindowWillClose.
Not supported for 64 bit target.
Subclass of the NSPanelMBS class.

Videos

- Presentation from Munich conference about MBS Plugins.

173.1.2 Methods

173.1.3 BaseWindowWillClose

MBS MacExtras Plugin, Plugin Version: 7.5, Platform: macOS, Targets: Desktop only.

Function: Tells the panel that the base window will close.
Notes: If your window which uses the panel will close, you should call that method from the CancelClose method of your window.

173.1.4 Constructor

MBS MacExtras Plugin, Plugin Version: 8.4, Platform: macOS, Targets: Desktop only.

Function: The constructor to create a new password assistant panel.

173.1.5 ShowPanel

MBS MacExtras Plugin, Plugin Version: 7.5, Platform: macOS, Targets: Desktop only.

Function: Shows the panel.
Notes: This method does a bit more than just show.
It will create the panel, create a new password and run the password quality check.

173.1.6 Properties

173.1.7 Password as string

MBS MacExtras Plugin, Plugin Version: 7.5, Platform: macOS, Targets: Desktop only.

Function: The current password.
Notes: If you set the value, the new password is checked for quality and the TextChanged event may be fired.
(Read and Write computed property)

173.1.8 Events

173.1.9 TextChanged(text as string)

MBS MacExtras Plugin, Plugin Version: 7.5, Platform: macOS, Targets: Desktop only.

Function: The text was changed.
Notes: This event fires often.
It fires if the text changed (e.g. a letter was added) or sometimes it fires if the text was not changed.

So best if you need to update GUI, to check the text parameter and use timer. Restart the timer every time you get an event with a period of maybe 500 ms. So in case you don't get new events and the timer fires, you can update your GUI.

Chapter 174

Sharing Panel

174.1 class SharingPanelMBS

174.1.1 class SharingPanelMBS

MBS MacFrameworks Plugin, Plugin Version: 21.4, Platform: iOS, Targets: Desktop & iOS.

Function: A view controller that you use to offer standard services from your app.
Notes: The system provides several standard services, such as copying items to the pasteboard, posting content to social media sites, sending items via email or SMS, and more. Apps can also define custom services.

Your app is responsible for configuring, presenting, and dismissing this view controller. Configuration for the view controller involves specifying the data objects on which the view controller should act. (You can also specify the list of custom services your app supports.)

Xojo Developer Magazine

- 19.6, page 10: News

174.1.2 Methods

174.1.3 AddData(Data as MemoryBlock, subject as string = "")

MBS MacFrameworks Plugin, Plugin Version: 21.4, Platform: iOS, Targets: iOS only.

Function: Add data to the list of items to share.

174.1.4 AddFile(File as FolderItem, subject as string = "")

MBS MacFrameworks Plugin, Plugin Version: 21.4, Platform: iOS, Targets: iOS only.

Function: Add a file as URL to the list of items to share.

174.1.5 AddImage(image as NSImageMBS, subject as string = "")

MBS MacFrameworks Plugin, Plugin Version: 21.4, Platform: iOS, Targets: iOS only.

Function: Add an image to the list of items to share.

174.1.6 AddPicture(pic as Picture, subject as string = "")

MBS MacFrameworks Plugin, Plugin Version: 21.4, Platform: iOS, Targets: iOS only.

Function: Add an image to the list of items to share.

174.1.7 AddStyledText(text as NSAttributedStringMBS, subject as string = "")

MBS MacFrameworks Plugin, Plugin Version: 21.4, Platform: iOS, Targets: iOS only.

Function: Add styled text to the list of items to share.
Notes: Subject is optional subject passed to email app.

174.1.8 AddText(text as string, subject as string = "")

MBS MacFrameworks Plugin, Plugin Version: 21.4, Platform: iOS, Targets: iOS only.

Function: Add text to the list of items to share.
Notes: Subject is optional subject passed to email app.

174.1.9 AddURL(URL as string, subject as string = "")

MBS MacFrameworks Plugin, Plugin Version: 21.4, Platform: iOS, Targets: iOS only.

Function: Add an URL to the list of items to share.

174.1.10 Constructor

MBS MacFrameworks Plugin, Plugin Version: 21.4, Platform: iOS, Targets: iOS only.

Function: The constructor.

174.1.11 Destructor

MBS MacFrameworks Plugin, Plugin Version: 21.4, Platform: iOS, Targets: iOS only.

Function: The destructor.

174.1.12 Dismiss

MBS MacFrameworks Plugin, Plugin Version: 21.4, Platform: iOS, Targets: iOS only.

Function: Dismisses the controller.

174.1.13 ExcludedActivityTypes as String()

MBS MacFrameworks Plugin, Plugin Version: 21.4, Platform: iOS, Targets: iOS only.

Function: Queries the list of excluded activity types.

174.1.14 Items as Variant()

MBS MacFrameworks Plugin, Plugin Version: 21.4, Platform: iOS, Targets: iOS only.

Function: Copies the items to share.

174.1.15 Present

MBS MacFrameworks Plugin, Plugin Version: 21.4, Platform: iOS, Targets: iOS only.

Function: Presents the controller.

174.1.16 SetExcludedActivityTypes(ActivityTypess() as String)

MBS MacFrameworks Plugin, Plugin Version: 21.4, Platform: iOS, Targets: iOS only.

Function: Sets the list of excluded activity types.

174.1.17 SetItems(items() as Variant)

MBS MacFrameworks Plugin, Plugin Version: 21.4, Platform: iOS, Targets: iOS only.

Function: Sets the items to share with an variant array.

174.1.18 UIActivityTypeAddToReadingList as String

MBS MacFrameworks Plugin, Plugin Version: 21.4, Platform: iOS, Targets: iOS only.

Function: One of the activity types.
Notes: A type of activity that adds the URL to Safari,Äôs reading list.
When using this service, you can provide an URL whose contents uses the http or https scheme that points to the page to add.

174.1.19 UIActivityTypeAirDrop as String

MBS MacFrameworks Plugin, Plugin Version: 21.4, Platform: iOS, Targets: iOS only.

Function: One of the activity types.
Notes: A type of activity that makes the provided content available through AirDrop.
When using this service, you can provide String, NSAttributedStringMBS, picture, and URLs as data for the activity items. You may also provide Array or Dictionary objects that contain the listed data types.

174.1.20 UIActivityTypeAssignToContact as String

MBS MacFrameworks Plugin, Plugin Version: 21.4, Platform: iOS, Targets: iOS only.

Function: One of the activity types.
Notes: A type of activity that assigns the image to a contact.
When using this service, you can provide a picture object as data for the activity items.

174.1.21 UIActivityTypeCopyToPasteboard as String

MBS MacFrameworks Plugin, Plugin Version: 21.4, Platform: iOS, Targets: iOS only.

Function: One of the activity types.
Notes: A type of activity that posts the provided content to the pasteboard.

When using this service, you can provide string, picture, URL, color, and Dictionary objects as data for the activity items.

174.1.22 UIActivityTypeMail as String

MBS MacFrameworks Plugin, Plugin Version: 21.4, Platform: iOS, Targets: iOS only.

Function: One of the activity types.
Notes: A type of activity that posts the provided content to a new email message.

When using this service, you can provide string and picture objects and URLs pointing to local files as data for the activity items.
Optional subject for items are passed for email subject.

174.1.23 UIActivityTypeMarkupAsPDF as String

MBS MacFrameworks Plugin, Plugin Version: 21.4, Platform: iOS, Targets: iOS only.

Function: One of the activity types.
Notes: A type of activity that marks up the provided content as a PDF file.

174.1.24 UIActivityTypeMessage as String

MBS MacFrameworks Plugin, Plugin Version: 21.4, Platform: iOS, Targets: iOS only.

Function: One of the activity types.
Notes: A type of activity that posts the provided content to the Messages app.
When using this service, you can provide string and NSAttributedStringMBS objects as data for the activity items. You may also specify URLs whose contents use the sms scheme.
If the device has MMS or FaceTime enabled, you can provide picture, and URLs as data for the activity items.

174.1.25 UIActivityTypeOpenInIBooks as String

MBS MacFrameworks Plugin, Plugin Version: 21.4, Platform: iOS, Targets: iOS only.

Function: One of the activity types.
Notes: A type of activity that opens the content in iBooks.

174.1.26 UIActivityTypePostToFacebook as String

MBS MacFrameworks Plugin, Plugin Version: 21.4, Platform: iOS, Targets: iOS only.

Function: One of the activity types.
Notes: A type of activity that posts the provided content to the user,Äôs wall on Facebook.
When using this service, you can provide String, NSAttributedStringMBS, picture, and URLs as data for the activity items.

174.1.27 UIActivityTypePostToFlickr as String

MBS MacFrameworks Plugin, Plugin Version: 21.4, Platform: iOS, Targets: iOS only.

Function: One of the activity types.
Notes: A type of activity that posts the provided image to the user,Äôs Flickr account.
When using this service, you can provide picture and URLs whose contents use the file scheme and point to an image. You can also use MemoryBlock whose contents are image data as data for the activity items.

174.1.28 UIActivityTypePostToTencentWeibo as String

MBS MacFrameworks Plugin, Plugin Version: 21.4, Platform: iOS, Targets: iOS only.

Function: One of the activity types.
Notes: A type of activity that posts the provided content to the user,Äôs Tencent Weibo feed.
When using this service, you can provide String, NSAttributedStringMBS, picture, and URL as data for the activity items.

174.1.29 UIActivityTypePostToTwitter as String

MBS MacFrameworks Plugin, Plugin Version: 21.4, Platform: iOS, Targets: iOS only.

Function: One of the activity types.
Notes: A type of activity that posts the provided content to the user,Äôs Twitter feed.
When using this service, you can provide String, NSAttributedStringMBS, picture, and URL as data for the

activity items.

174.1.30 UIActivityTypePostToVimeo as String

MBS MacFrameworks Plugin, Plugin Version: 21.4, Platform: iOS, Targets: iOS only.

Function: One of the activity types.
Notes: A type of activity that posts the provided video to the user,Äôs Vimeo account.
When using this service, you can provide data from URL/folderItem whose contents use the file scheme and point to a video. You can use MemoryBlock objects whose contents are video data as data for the activity items.

174.1.31 UIActivityTypePostToWeibo as String

MBS MacFrameworks Plugin, Plugin Version: 21.4, Platform: iOS, Targets: iOS only.

Function: One of the activity types.
Notes: A type of activity that posts the provided content to the user,Äôs Weibo feed.
When using this service, you can provide picture and URLs whose contents use the file scheme and point to an image. You can also use MemoryBlock whose contents are image data as data for the activity items.

174.1.32 UIActivityTypePrint as String

MBS MacFrameworks Plugin, Plugin Version: 21.4, Platform: iOS, Targets: iOS only.

Function: One of the activity types.
Notes: A type of activity that prints the provided content.

When using this service, you can provide picture and MemoryBlock objects and URL/folderitem pointing to local files as data for the activity items.

174.1.33 UIActivityTypeSaveToCameraRoll as String

MBS MacFrameworks Plugin, Plugin Version: 21.4, Platform: iOS, Targets: iOS only.

Function: One of the activity types.
Notes: A type of activity that assigns the image or video to the user,Äôs camera roll.

When using this service, you can provide a picture as data for image-based activity items. For image and video items, you can provide an URL/file with a path to the video.

174.1.34 Properties

174.1.35 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 21.4, Platform: iOS, Targets: iOS only.

Function: The internal object reference.
Notes: (Read and Write property)

174.1.36 isBeingPresented as Boolean

MBS MacFrameworks Plugin, Plugin Version: 21.4, Platform: iOS, Targets: iOS only.

Function: A Boolean value indicating whether the view controller is being presented.
Notes: (Read only property)

174.1.37 Events

174.1.38 Completed(activityType as String, completed as Boolean, activityError as NSErrorMBS)

MBS MacFrameworks Plugin, Plugin Version: 21.4, Platform: iOS, Targets: Desktop & iOS.

Function: The event called after the activity view controller is dismissed.
Notes: Upon the completion of an activity, or the dismissal of the activity view controller, the view controller,Äôs completion block is executed. You can use this block to execute any final code related to the service. The parameters of this block are as follows:

activityType: The type of the service that was selected by the user. For custom services, this is the value returned by the activityType method of a UIActivity object. For system-defined activities, it is one of the strings listed in "Built-in Activity Types,Äù in UIActivity.
completed: True if the service was performed or false if it was not. This parameter is also set to false when the user dismisses the view controller without selecting a service.
activityError: An error object if the activity failed to complete, or nil if the the activity completed normally.

174.2 class WindowsSharePanelMBS

174.2.1 class WindowsSharePanelMBS

MBS WinFrameworks Plugin, Plugin Version: 25.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The class to show a share panel on Windows.
Example:

```
// panel is a property in window or app

panel = New WindowsSharePanel

// add a file on disk
var f as FolderItem = SpecialFolder.Desktop.Child("test.jpg")
panel.AddFile f

// show the panel
panel.Present
```

Notes: Requires Windows 8 or newer.

What Windows can share and what application it offers depends on the local software installation on the PC.
e.g. if you have an email application, you may see contact names and the option to send an email.

174.2.2 Methods

174.2.3 AddFile(File as FolderItem)

MBS WinFrameworks Plugin, Plugin Version: 25.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Adds a file or folder to the files array.

174.2.4 Constructor

MBS WinFrameworks Plugin, Plugin Version: 25.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The constructor.

174.2.5 Destructor

MBS WinFrameworks Plugin, Plugin Version: 25.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The destructor.

174.2.6 Present

MBS WinFrameworks Plugin, Plugin Version: 25.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Displays the UI for sharing content for the specified window.
Notes: Requires Windows 8.

174.2.7 Properties

174.2.8 ApplicationLink as String

MBS WinFrameworks Plugin, Plugin Version: 25.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The application link.
Notes: A Uniform Resource Identifier (URI) with a scheme that isn't http or https that's handled by the source app.

Whenever possible, you should set this property. This Uniform Resource Identifier (URI) represents a deep link that takes the user back to the currently displayed content. A source app provides a value for this property, and a target app reads the value. Use this property to indicate the source of the shared content. The scheme of this Uniform Resource Identifier (URI) must not be http or https. The app sharing this Uniform Resource Identifier (URI) must be capable of being the default handler, although it may not be set as the default handler.
(Read and Write property)

174.2.9 ApplicationName as String

MBS WinFrameworks Plugin, Plugin Version: 25.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The name of the app that.
Notes: Part of the metadata properties.
(Read and Write property)

174.2.10 Description as String

MBS WinFrameworks Plugin, Plugin Version: 25.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The text that describes the contents.
Notes: Part of the metadata properties.
(Read and Write property)

174.2.11 Files as Variant

MBS WinFrameworks Plugin, Plugin Version: 25.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The files and folders.
Notes: (Read and Write property)

174.2.12 FilesAreReadOnly as Boolean

MBS WinFrameworks Plugin, Plugin Version: 25.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Specify true if the files are read-only; false otherwise.
Notes: (Read and Write property)

174.2.13 HtmlFormat as String

MBS WinFrameworks Plugin, Plugin Version: 25.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The HTML content.
Notes: (Read and Write property)

174.2.14 PictureData as MemoryBlock

MBS WinFrameworks Plugin, Plugin Version: 25.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The bitmap image.
Notes: (Read and Write property)

174.2.15 RTF as String

MBS WinFrameworks Plugin, Plugin Version: 25.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The Rich Text Format (RTF) content.
Notes: (Read and Write property)

174.2.16 Text as String

MBS WinFrameworks Plugin, Plugin Version: 25.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The text.
Notes: This method sets the text value for the data package.
(Read and Write property)

174.2.17 ThumbnailData as MemoryBlock

MBS WinFrameworks Plugin, Plugin Version: 25.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The thumbnail image data.
Notes: We recommend that any time you create a DataPackage that contains images, you also assign a thumbnail image. Doing so gives target apps the opportunity to display a visual representation of the images being shared to the user while the share operation completes.

The minimum recommended size is 80x80. The maximum size is 240x160. These sizes are in device-independent pixels, so if the system plateau setting is other than 1.0, appropriate multiplier should be used. For example, minimum recommended size for 1.4 plateau would be 801.4x801.4=112x112 physical pixels. If you're writing a target app, remember that while we recommend a minimum and maximum size, there is no enforcement of these sizes. Your app should have code to handle thumbnails that are an unexpected size—such as to scale them up or down as needed. Take care, however, not to alter the aspect ratio of the image.

You can use any data format (JPG, GIF, and so on) for a thumbnail. You also have the option of loading the thumbnail from the disk, or creating it on the fly.
(Read and Write property)

174.2.18 Title as String

MBS WinFrameworks Plugin, Plugin Version: 25.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The text that displays as a title for the contents.
Notes: Part of the metadata properties.
(Read and Write property)

174.2.19 URL as String

MBS WinFrameworks Plugin, Plugin Version: 25.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The Uniform Resource Identifier (URI).
Notes: Better set WebLink and ApplicationLink instead.
(Read and Write property)

174.2.20 WebLink as String

MBS WinFrameworks Plugin, Plugin Version: 25.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The web link.
Notes: A Uniform Resource Identifier (URI) with an http or https scheme that corresponds to the content being displayed to the user.

Whenever possible, you should set this property. A source app provides a value for this property, and a target app reads the value. Use this property to indicate the source of the shared content.
(Read and Write property)

174.2.21 Events

174.2.22 DataRequested

MBS WinFrameworks Plugin, Plugin Version: 25.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The data is requested.
Notes: Your last chance to edit properties to provide data.
The panel may already be showing with a progress indicator.

174.2.23 ShareCancelled

MBS WinFrameworks Plugin, Plugin Version: 25.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Raised when a share is canceled.

174.2.24 ShareCompleted

MBS WinFrameworks Plugin, Plugin Version: 25.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: An event that is triggered when a share is completed.
Notes: Shares can be sent to an app, a provider, or a contact.

Selecting "Copy link" is not considered a share and thus does not fire this event, nor ShareCanceled.

174.2.25 Shown

MBS WinFrameworks Plugin, Plugin Version: 25.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The panel is showing.

174.2.26 TargetApplicationChosen(ApplicationName as String)

MBS WinFrameworks Plugin, Plugin Version: 25.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Occurs when the user chooses a target app in the Share UI.
Notes: When the user chooses a target app to share content with, the system fires a TargetApplicationChosen event. The app receiving the event can use this event to record information about the target app for business intelligence. A common use of this event is to record which applications are used to complete different sharing actions, which in turn can help the source app create better experiences for the user.

Chapter 175

Shell

175.1 Globals

175.1.1 ConsoleExecuteMBS(path as folderitem, arguments() as string, environment() as string) as Integer

MBS Util Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Targets: Desktop, Console & Web.

Function: Executes a new application.
Notes: Use WindowsShellExecuteMBS on Windows.

Launch GUI tools on Mac OS X using /bin/open.
Returned value is the PID of the new process.
If the execution fails you still get a PID, but this process is terminated in a few milliseconds.

arguments must have at least one member.

See also WindowsProcessMBS and WindowsShellExecuteMBS (Windows only), NSTask (Mac only) and ShellMBS (cross platform).
See also:

- 175.1.2 ConsoleExecuteMBS(path as string, arguments() as string, environment() as string) as Integer 21005

175.1.2 ConsoleExecuteMBS(path as string, arguments() as string, environment() as string) as Integer

MBS Util Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Targets: Desktop, Console & Web.

Function: Executes a new application.
Example:

```
// launch an app using open

const sShellPath="/usr/bin/open"

Var a(1) as string
Var e(-1) as string

a(0)="open" // must be the application name
a(1)="/Applications/TextEdit.app" // first parameter

print str(ConsoleExecuteMBS(sShellPath,a,e))

// Launch app binary directly:

Var aa(1) as string
Var ee(-1) as string

Var f as FolderItem

f=GetFolderItem("test.app").Child("Contents").Child("MacOS").Child("test")

aa(0)=f.ShellPath

print str(ConsoleExecuteMBS(f.ShellPath,aa,ee))
```

Notes: Use WindowsShellExecuteMBS on Windows.

Launch GUI tools on Mac OS X using /bin/open.
Returned value is the PID of the new process.
If the execution fails you still get a PID, but this process is terminated in a few milliseconds.

arguments must have at least one member.

See also WindowsProcessMBS, WindowsShellExecuteAsAdminMBS and WindowsShellExecuteMBS (Windows only), NSTask (Mac only) and ShellMBS (cross platform).
Blog Entries

- MBS Xojo Plugins, version 21.5pr2

See also:

- 175.1.1 ConsoleExecuteMBS(path as folderitem, arguments() as string, environment() as string) as Integer 21005

175.2 class ShellMBS

175.2.1 class ShellMBS

MBS Util Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The class in MBS Plugins to run executables.
Example:

```
Var s As New ShellMBS

s.Execute "/usr/bin/whoami"
s.Wait 5

Var output As String = s.ReadOutput
Var errors As String = s.ReadError

Break // see in debugger

MsgBox "whoami: "+output
```

Notes: Via input stream, we can send data to the process.
And via output and error streams, we can read data coming back.

While this class does the same as Shell class in Xojo, we have the possibility to add more in the future.
For now you can benefit from an alternative implementation with stderr and stdout as two streams. Also we feature terminate methods to kill the child process.

See also WindowsProcessMBS, WindowsShellExecuteAsAdminMBS and WindowsShellExecuteMBS (Windows only), ConsoleExecuteMBS and NSTaskMBS (Mac only).

175.2.2 Methods

175.2.3 Arguments as String()

MBS Util Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Queries arguments array.
Example:

```
// query execution policy in PowerShell
Var s As New ShellMBS

s.Arguments.Append "-Command"
s.Arguments.Append "Get-ExecutionPolicy -List"

s.Execute "powershell.exe"
s.Wait 5

Var output As String = s.ReadOutput
Var errors As String = s.ReadError

Break // see in debugger
```

Notes: You can add arguments to this array.

175.2.4 CloseInput

MBS Util Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Closes stdin to the process.
Notes: Sometimes this is needed as some processes wait till stdin is closed.

175.2.5 CloseStreams

MBS Util Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Closes the streams.
Notes: Automatically done in destructor.

175.2.6 Constructor

MBS Util Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constructor.

175.2.7 Destructor

MBS Util Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The destructor.

175.2.8 Execute(Executable as String)

MBS Util Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Runs the executable.
Example:

```
// run PowerShell and get help
Var s As New ShellMBS

s.SetArguments array("/?")
s.Execute "powershell.exe"
s.Wait 5

Var output As String = s.ReadOutput
Var errors As String = s.ReadError

Break // see in debugger
```

Notes: Pass path to executable to run.

Opens the streams stdin, stdout and stderr.

175.2.9 ExitCode as Integer

MBS Util Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Queries the exit code of the terminated process.

175.2.10 Poll

MBS Util Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Polls for events.
Notes: This will check for pending event and fire events if needed.
Internally we call this with a timer for the shell object, but you can call this in a tight loop.

175.2.11 ReadError as String

MBS Util Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Reads data from stderr.
Notes: Queries available bytes to return all the data in the buffer.

175.2.12 ReadOutput as String

MBS Util Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Reads data from stdout.
Notes: Queries available bytes to return all the data in the buffer.

175.2.13 SetArguments(arguments() as String)

MBS Util Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Assigns a new array of arguments.
Example:

```
Var sh as new ShellMBS
Var args() As String

args.Append "-c"
args.Append "5"
args.Append "monkeybreadsoftware.com"

sh.SetArguments args
```

175.2.14 Terminate(WinExitCode as Integer = 255) as boolean

MBS Util Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Terminates the app with the given exit code.
Notes: ExitCode is only used on Windows.
Returns true on success.

175.2.15 Wait(TimeOut as double = 30.0)

MBS Util Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Waits for process to quit.
Example:

```
Var s As New ShellMBS

// Run Powershell to query disk serial number:

s.SetArguments Array("-c", "Get-Partition -Driveletter C | Get-Disk | Select-Object Serialnumber | ForEach { $ _.SerialNumber } ")
s.Execute "powershell.exe"
s.Wait 5

Var output As String = s.ReadOutput
Var errors As String = s.ReadError

Break // see in debugger
```

Notes: Yields time and waits until time passed or process terminates.

175.2.16 WriteInput(data as string) as Integer

MBS Util Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sends data to stdin of the running process.
Notes: Returns number of bytes written.

175.2.17 Properties

175.2.18 ApplicationName as String

MBS Util Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The path to the application.
Notes: Can be empty when application is part of command line.
Only for Windows.
(Read and Write property)

175.2.19 AvailableBytesError as Integer

MBS Util Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Queries number of available bytes on stderr.
Notes: (Read only property)

175.2.20 AvailableBytesOutput as Integer

MBS Util Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Queries number of available bytes on stdout.
Notes: (Read only property)

175.2.21 CurrentDirectory as String

MBS Util Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The current directory for the process.
Notes: You can set this before calling Execute to specify the start directory.
If this parameter is "", the new process will have the same current drive and directory as the calling process.
(Read and Write property)

175.2.22 Domain as String

MBS Util Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The domain name.
Notes: Only used on Windows.
You can set username and password to run app with different user. Domain is optional to specify network domain.
(Read and Write property)

175.2.23 Environment as Dictionary

MBS Util Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The environment variables to use.
Notes: (Read and Write property)

175.2.24 ErrorCode as Integer

MBS Util Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Last native error code.
Notes: Zero is success.
(Read only property)

175.2.25 Executable as String

MBS Util Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The command line to run.
Notes: On Mac and Linux just the path to executable.
If applicationName is set for Windows, this should only provide parameters.

(Read only property)

175.2.26 IsRunning as Boolean

MBS Util Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Checks whether process is running.
Notes: Returns true if running or false if not.

The process may not terminate if there is still output data in the pipes. So please read error/stdout regularly.
(Read only property)

175.2.27 MergeErrorAndOutput as Boolean

MBS Util Plugin, Plugin Version: 25.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether to use one pipe or two pipes for output and error.
Notes: By default this is false and we receive error and output in two different pipes.
Optionally you can merge both to output pipe.
(Read and Write property)

175.2.28 Password as String

MBS Util Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The password.
Notes: You can set username and password to run app with different user. Domain is optional to specify network domain.
Only for Windows.
(Read and Write property)

175.2.29 PID as Integer

MBS Util Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The process ID of the child process.
Notes: (Read only property)

175.2.30 ProcessHandle as Integer

MBS Util Plugin, Plugin Version: 19.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: For Windows the process handle.
Notes: (Read only property)

175.2.31 Tag as Variant

MBS Util Plugin, Plugin Version: 23.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The tag property.
Notes: You can store whatever you like in this property to read it later.
(Read and Write property)

175.2.32 ThreadHandle as Integer

MBS Util Plugin, Plugin Version: 19.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: For Windows the thread handle for the child process.
Notes: (Read only property)

175.2.33 Username as String

MBS Util Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The user name.
Notes: You can set username and password to run app with different user. Domain is optional to specify network domain.
Only for Windows.
(Read and Write property)

175.2.34 Events

175.2.35 Completed

MBS Util Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The event called when process terminated.

175.2.36 DataAvailable(AvailableBytesError as Integer, AvailableBytesOutput as Integer)

MBS Util Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Event called when new data is available on stderr or stdout.
Notes: You need to use read commands to query data.

175.3 class WindowsProcessMBS

175.3.1 class WindowsProcessMBS

MBS Win Plugin, Plugin Version: 17.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The class to run processes on Windows.
Example:

```
// run command
Var w as new WindowsProcessMBS

w.CommandLine = "cmd /c dir"
w.CurrentDirectory = "C:"

if not w.run then
MsgBox w.LastErrorMessage
Return
end if

// wait
while w.Running
app.YieldToNextThread
wend

// show result
Var a as Integer = w.AvailableBytesOutput
Var r as string = w.ReadOutput(a)
MsgBox r
```

Notes: Can be used like shell, but with more windows specific options.
For interactive shell, you need to run cmd.exe yourself.
This shell is asynchronously. For synchrones mode, please write yourself a loop waiting for process to finish.

Please read Microsoft documentation for more details:
https://msdn.microsoft.com/en-us/library/windows/desktop/ms682425(v=vs.85).aspx

See also NSTask (Mac only), WindowsShellExecuteAsAdminMBS, WindowsShellExecuteMBS (Windows only), ConsoleExecuteMBS and ShellMBS (cross platform).

175.3.2 Methods

175.3.3 Close

MBS Win Plugin, Plugin Version: 17.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Closes the process.
Notes: Same as destructor.

175.3.4 PeekError(Length as Integer = 0) as String

MBS Win Plugin, Plugin Version: 17.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Peeks in stderr.

175.3.5 PeekOutput(Length as Integer = 0) as String

MBS Win Plugin, Plugin Version: 17.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Peeks in stdout.

175.3.6 Poll

MBS Win Plugin, Plugin Version: 25.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Checks for events.
Notes: Normally we call this automatically internally, but in a tight loop, you can call this to trigger events.

175.3.7 ReadError(Length as Integer = 0) as String

MBS Win Plugin, Plugin Version: 17.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Reads data from stderr.
Notes: Please pass maximum number of bytes to read.

175.3.8 ReadOutput(Length as Integer = 0) as String

MBS Win Plugin, Plugin Version: 17.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Reads data from stdout.
Notes: Please pass maximum number of bytes to read.

175.3.9 Run as Boolean

MBS Win Plugin, Plugin Version: 17.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Starts the process.
Notes: Returns true on success or false on failure.

175.3.10 SetKillProcessWhenParentDies as boolean

MBS Win Plugin, Plugin Version: 19.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Sets process to be killed automatically.
Notes: When Xojo application ends, the process you started is killed automatically.
Returns true if option is set or false on failure.

175.3.11 Terminate(ExitCode as Integer) as Boolean

MBS Win Plugin, Plugin Version: 17.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Terminates the app with the given exit code.
Notes: Returns true on success.

175.3.12 Write(Data as MemoryBlock) as Integer

MBS Win Plugin, Plugin Version: 17.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Sends data to stdin of the running process.
Notes: Returns number of bytes written.
See also:

- 175.3.13 Write(Data as String) as Integer 21020

175.3.13 Write(Data as String) as Integer

MBS Win Plugin, Plugin Version: 17.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Sends data to stdin of the running process.
Notes: Returns number of bytes written.
See also:

- 175.3.12 Write(Data as MemoryBlock) as Integer 21020

175.3.14 Properties

175.3.15 ApplicationName as String

MBS Win Plugin, Plugin Version: 17.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The path to the application.
Notes: Can be empty when application is part of command line.
(Read and Write property)

175.3.16 AvailableBytesError as Integer

MBS Win Plugin, Plugin Version: 17.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Queries number of available bytes on stderr.
Notes: (Read only property)

175.3.17 AvailableBytesOutput as Integer

MBS Win Plugin, Plugin Version: 17.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Queries number of available bytes on stdout.
Notes: (Read only property)

175.3.18 CommandLine as String

MBS Win Plugin, Plugin Version: 17.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The command line to run.
Example:

```
// Run PowerShell to query execution policy

Var s As New WindowsProcessMBS
s.CommandLine = "powershell.exe -Command ""Get-ExecutionPolicy -List"""

if s.run then
DelayMBS 0.5

while s.Running
// wait
app.YieldToNextThread
DelayMBS 0.1
wend

Var a as Integer = s.AvailableBytesOutput
Var output As String = s.ReadOutput(a)

Break // see in debugger

else
break // failed
end if
```

Notes: If applicationName is set, this should only provide parameters.
(Read and Write property)

175.3.19 CurrentDirectory as String

MBS Win Plugin, Plugin Version: 17.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The current directory for the process.

Notes: You can set this before calling Run to specify the start directory.
If this parameter is "", the new process will have the same current drive and directory as the calling process.
(Read and Write property)

175.3.20 Domain as String

MBS Win Plugin, Plugin Version: 17.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The domain name.
Notes: You can set username and password to run app with different user. Domain is optional to specify network domain.
(Read and Write property)

175.3.21 Environment as Dictionary

MBS Win Plugin, Plugin Version: 17.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The environment variables to use.
Example:

```
// run command
Var w as new WindowsProcessMBS

w.CommandLine = "cmd /c echo %TEST%"

// set environment
Var env as new Dictionary
env.Value("TEST") = "Hello World"
w.Environment = env

if not w.run then
MsgBox w.LastErrorMessage
Return
end if

// wait
while w.Running
app.YieldToNextThread
wend

// show result
Var a as Integer = w.AvailableBytesOutput
Var r as string = w.ReadOutput(a)
MsgBox r
```

Notes: (Read and Write property)

175.3.22 ExitCode as Integer

MBS Win Plugin, Plugin Version: 17.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Queries the exit code of the terminated process.
Notes: (Read only property)

175.3.23 LastError as Integer

MBS Win Plugin, Plugin Version: 17.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Last windows error code.
Notes: (Read only property)

175.3.24 LastErrorMessage as String

MBS Win Plugin, Plugin Version: 17.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The message text for the last error.
Notes: (Read only property)

175.3.25 Password as String

MBS Win Plugin, Plugin Version: 17.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The password.
Notes: You can set username and password to run app with different user. Domain is optional to specify network domain.
(Read and Write property)

175.3.26 ProcessHandle as Integer

MBS Win Plugin, Plugin Version: 19.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: For Windows the process handle.
Notes: (Read only property)

175.3.27 ProcessID as Integer

MBS Win Plugin, Plugin Version: 17.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The process ID of the process.
Notes: (Read only property)

175.3.28 Running as Boolean

MBS Win Plugin, Plugin Version: 17.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Checks whether process is running.
Notes: Returns true if running or false if not.

The process may not terminate if there is still output data in the pipes. So please read error/stdout regularly.
(Read only property)

175.3.29 ThreadHandle as Integer

MBS Win Plugin, Plugin Version: 19.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: For Windows the thread handle for the child process.
Notes: (Read only property)

175.3.30 ThreadID as Integer

MBS Win Plugin, Plugin Version: 17.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The thread ID of the main thread for the process.
Notes: (Read only property)

175.3.31 UserName as String

MBS Win Plugin, Plugin Version: 17.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The user name.
Notes: You can set username and password to run app with different user. Domain is optional to specify network domain.
(Read and Write property)

175.3.32 Events

175.3.33 DataAvailable(AvailableBytesOutput as Integer, AvailableBytesError as Integer)

MBS Win Plugin, Plugin Version: 17.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The event called when data is available for stdout or stderr.

175.3.34 Terminated(ExitCode as Integer)

MBS Win Plugin, Plugin Version: 17.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The event called when process terminated.

Chapter 176

SmartCard

176.1 class SmartCardContextMBS

176.1.1 class SmartCardContextMBS

MBS Tools Plugin, Plugin Version: 16.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The class for a SmartCard context.
Example:

```
Var c as new SmartCardContextMBS
Var list() as string = c.Readers
MsgBox Join(list, EndOfLine)
```

Blog Entries

- MBS Xojo Plugins, version 19.6pr1

176.1.2 Methods

176.1.3 Cancel

MBS Tools Plugin, Plugin Version: 16.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Terminates all outstanding actions within a specific resource manager context.
Notes: The only requests that you can cancel are those that require waiting for external action by the smart card or user. Any such outstanding action requests will terminate with a status indication that the action was canceled. This is especially useful to force outstanding GetStatusChange calls to terminate.

Lasterror is set.

176.1.4 Connect(reader as string, ShareMode as UInt32, PreferredProtocols as UInt32) as SmartCardMBS

MBS Tools Plugin, Plugin Version: 16.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Connects to a smartcard.
Example:

```
Var c as new SmartCardContextMBS

Var s as SmartCardMBS
s = c.Connect("MyReader", SmartCardMBS.kShareShared, SmartCardMBS.kProtocolAny)
if s <>nil then
MsgBox "Connected"
else
MsgBox "Error: "+str(c.Lasterror)
end if
```

Notes: Establishes a connection (using a specific resource manager context) between the calling application and a smart card contained by a specific reader. If no card exists in the specified reader, an error is returned.

Reader: The name of the reader that contains the target card.
ShareMode: A flag that indicates whether other applications may form connections to the card. Use one of SmartCardMBS.kShare* constants. e.g. kShareExclusive
PreferredProtocols: A bitmask of acceptable protocols for the connection. Possible values may be combined with the OR operation. Use SmartCardMBS.kProtocol* constants. e.g. kProtocolT1

Lasterror and ActiveProtocol are set.
Returns on success a smartcard object, else returns nil.

176.1.5 Constructor

MBS Tools Plugin, Plugin Version: 16.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Initializes a smartcard context.

176.1.6 IsValid as boolean

MBS Tools Plugin, Plugin Version: 16.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Determines whether a smart card context handle is valid.
Notes: Returns true if valid or false if not valid.

176.1.7 ReaderGroups as string()

MBS Tools Plugin, Plugin Version: 16.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Provides the list of reader groups that have previously been introduced to the system.
Notes: The groups may be SCard$ AllReaders, SCard$ DefaultReaders, SCard$ LocalReaders and SCard$ SystemReaders.
Lasterror is set.

176.1.8 Readers as string()

MBS Tools Plugin, Plugin Version: 16.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Provides the list of readers within a set of named reader groups, eliminating duplicates.
Example:

```
Var c as new SmartCardContextMBS
Var list() as string = c.Readers
MsgBox Join(list, EndOfLine)
```

Notes: Lasterror is set.
See also:

- 176.1.9 Readers(ReaderGroups() as string) as string() 21029

176.1.9 Readers(ReaderGroups() as string) as string()

MBS Tools Plugin, Plugin Version: 16.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Provides the list of readers within a set of named reader groups, eliminating duplicates.
Notes: The caller supplies a list of reader groups, and receives the list of readers within the named groups. Unrecognized group names are ignored. This function only returns readers within the named groups that

are currently attached to the system and available for use.

ReaderGroups: The reader groups you like to query.
Lasterror is set.
See also:

- 176.1.8 Readers as string() 21029

176.1.10 Properties

176.1.11 Available as Boolean

MBS Tools Plugin, Plugin Version: 16.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether the smartcard API is available.
Notes: This should be available on Mac and Windows.

Loads on Mac the PCSC.framework.
For Linux you need pcsclite library installed. We try to load libpcsclite.so or /usr/lib/libpcsclite.so.
On Windows we use winscard.dll built into Windows.
(Read only property)

176.1.12 Handle as Integer

MBS Tools Plugin, Plugin Version: 16.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Internal object reference.
Notes: (Read and Write property)

176.1.13 Lasterror as Integer

MBS Tools Plugin, Plugin Version: 16.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The last error code.
Notes: (Read and Write property)

176.1.14 Constants

Error Codes

Constant	Value	Description
kErrorBadSeek	&H80100029	An error occurred in setting the smart card file object pointer.
kErrorCancelled	&H80100002	The action was canceled by an Cancel request.
kErrorCancelledByUser	&H8010006E	The action was canceled by the user.
kErrorCantDispose	&H8010000E	The system could not dispose of the media in the requested manner.
kErrorCardNotAuthenticated	&H8010006F	No PIN was presented to the smart card.
kErrorCardUnsupported	&H8010001C	The smart card does not meet minimal requirements for support.
kErrorCertificateUnavailable	&H8010002D	The requested certificate could not be obtained.
kErrorChvBlocked	&H8010006C	The card cannot be accessed because the maximum number of PIN entry tempts has been reached.
kErrorCommDataLost	&H8010002F	A communications error with the smart card has been detected.
kErrorCommError	&H80100013	An internal communications error has been detected.
kErrorDirNotFound	&H80100023	The specified directory does not exist in the smart card.
kErrorDuplicateReader	&H8010001B	The reader driver did not produce a unique reader name.
kErrorEof	&H8010006D	The end of the smart card file has been reached.
kErrorFileNotFound	&H80100024	The specified file does not exist in the smart card.
kErrorIccCreateorder	&H80100021	The requested order of object creation is not supported.
kErrorIccInstallation	&H80100020	No primary provider can be found for the smart card.
kErrorInsufficientBuffer	&H80100008	The data buffer for returned data is too small for the returned data.
kErrorInternalError	&H80100001	An internal consistency check failed.
kErrorInvalidAtr	&H80100015	An ATR string obtained from the registry is not a valid ATR string.
kErrorInvalidChv	&H8010002A	The supplied PIN is incorrect.
kErrorInvalidHandle	&H80100003	The supplied handle was not valid.
kErrorInvalidParameter	&H80100004	One or more of the supplied parameters could not be properly interpreted
kErrorInvalidTarget	&H80100005	Registry startup information is missing or not valid.
kErrorInvalidValue	&H80100011	One or more of the supplied parameter values could not be properly interpre
kErrorNoAccess	&H80100027	Access is denied to the file.
kErrorNoDir	&H80100025	The supplied path does not represent a smart card directory.
kErrorNoFile	&H80100026	The supplied path does not represent a smart card file.
kErrorNoKeyContainer	&H80100030	The requested key container does not exist on the smart card.
kErrorNoMemory	&H80100006	Not enough memory available to complete this command.
kErrorNoReadersAvailable	&H8010002E	No smart card reader is available.
kErrorNoService	&H8010001D	The smart card resource manager is not running.
kErrorNoSmartcard	&H8010000C	The operation requires a smart card, but no smart card is currently in device.
kErrorNoSuchCertificate	&H8010002C	The requested certificate does not exist.
kErrorNotReady	&H80100010	The reader or card is not ready to accept commands.
kErrorNotTransacted	&H80100016	An attempt was made to end a nonexistent transaction.
kErrorPciTooSmall	&H80100019	The PCI receive buffer was too small.
kErrorProtoMismatch	&H8010000F	The requested protocols are incompatible with the protocol currently in with the card.
kErrorReaderUnavailable	&H80100017	The specified reader is not currently available for use.
kErrorReaderUnsupported	&H8010001A	The reader driver does not meet minimal requirements for support.
kErrorRemovedCard	&H80100069	The smart card has been removed, so further communication is not possib
kErrorResetCard	&H80100068	The smart card was reset.
kErrorSecurityViolation	&H8010006A	Access was denied because of a security violation.
kErrorServerTooBusy	&H80100031	The smart card resource manager is too busy to complete this operation.
kErrorServiceStopped	&H8010001E	The smart card resource manager has shut down.
kErrorSharingViolation	&H8010000B	The smart card cannot be accessed because of other outstanding connecti
kErrorShutdown	&H80100018	The operation has been aborted to allow the server application to exit.
kErrorSuccess	0	No error.
kErrorSystemCancelled	&H80100012	The action was canceled by the system, presumably to log off or shut dow
kErrorTimeout	&H8010000A	The user-specified time-out value has expired.
kErrorUnexpected	&H8010001F	An unexpected card error has occurred.
kErrorUnknownCard	&H8010000D	The specified smart card name is not recognized.
kErrorUnknownError	&H80100014	An internal error has been detected, but the source is unknown.
kErrorUnknownReader	&H80100009	The specified reader name is not recognized.
kErrorUnknownResMng	&H8010002B	An unrecognized error code was returned.
kErrorUnpoweredCard	&H80100067	Power has been removed from the smart card, so that further communica

176.2 class SmartCardMBS

176.2.1 class SmartCardMBS

MBS Tools Plugin, Plugin Version: 16.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The class for a smartcard.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

- New functions for smart card reading

176.2.2 Methods

176.2.3 BeginTransaction

MBS Tools Plugin, Plugin Version: 16.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Starts a transaction.
Notes: The function waits for the completion of all other transactions before it begins. After the transaction starts, all other applications are blocked from accessing the smart card while the transaction is in progress.

If a transaction is held on the card for more than five seconds with no operations happening on that card, then the card is reset. Calling any of the Smart Card and Reader Access Functions or Direct Card Access Functions on the card that is transacted results in the timer being reset to continue allowing the transaction to be used.
The BeginTransaction function is a smart card and reader access function. For more information about other access functions, see Smart Card and Reader Access Functions.

Lasterror is set.

176.2.4 CancelTransaction

MBS Tools Plugin, Plugin Version: 16.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Cancels current transaction.
Notes: Lasterror is set.

176.2.5 Constructor

MBS Tools Plugin, Plugin Version: 16.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The private constructor.

176.2.6 Control(ControlCode as Integer, input as ptr, inputLength as UInt32, output as ptr, byref outputLength as UInt32)

MBS Tools Plugin, Plugin Version: 16.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Direct control of the reader.
Notes: You can call it any time after a successful call to SmartCard.Connect and before a successful call to SmartCard.Disconnect. The effect on the state of the reader depends on the control code.

ControlCode: Control code for the operation. This value identifies the specific operation to be performed.
Input: Pointer to a buffer that contains the data required to perform the operation. This parameter can be nil if the ControlCode parameter specifies an operation that does not require input data.
inputLength: Size, in bytes, of the buffer pointed to by Input.
output: Pointer to a buffer that receives the operation's output data. This parameter can be nil if the ControlCode parameter specifies an operation that does not produce output data.
outputLength: On input the size, in bytes, of the buffer pointed to by output. On output the receives the size, in bytes, of the data stored into the buffer pointed to by output.

Lasterror is set.

176.2.7 Disconnect(Disposition as Integer = 0)

MBS Tools Plugin, Plugin Version: 16.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Terminates a connection previously opened between the calling application and a smart card in

the target reader.
Notes: Disposition: Action to take on the card in the connected reader on close.
can be:

kUnpowerCard	Power down the card and reset it (Cold Reset).
kResetCard	Reset the card (Warm Reset).
kLeaveCard	Do not do anything special on reconnect.
kEjectCard	Eject card.

Lasterror is set.

176.2.8 EndTransaction(Disposition as Integer = 0)

MBS Tools Plugin, Plugin Version: 16.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Ends transaction.
Notes: Completes a previously declared transaction, allowing other applications to resume interactions with the card.

Disposition: Action to take on the card in the connected reader on close. Can be Eject, Leave, Reset or Unpower. See constants.

Lasterror is set.

176.2.9 GetAttrib(AttrId as UInt32) as Memoryblock

MBS Tools Plugin, Plugin Version: 16.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves the current reader attributes for the given handle.
Notes: It does not affect the state of the reader, driver, or card.
The plugin first queries for size of attribute and on success queries again to get the data and return it as a memoryblock.

AttrId: The attribute ID. See kAttribute* constants.

Lasterror is set.

176.2.10 ReadFile(FileID as MemoryBlock) as MemoryBlock

MBS Tools Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Read file from smart card with APDU protocol.
Notes: Returns data as MemoryBlock or error message.
The first two bytes are status code.

For Swiss health cards, the relevant IDs are 2F06 and 2F07.

For Belgian EID:

4031	ID RN
4032	SGN RN
4033	ID Address
4034	SGN Address
4035	ID Photo

You find the IDs for files usually in documentation or your card!
For some cards you may first need to move down a hierarchy of folders to get an item via Transmit().

176.2.11 Reconnect(ShareMode as UInt32, PreferredProtocols as UInt32, Initialization as UInt32)

MBS Tools Plugin, Plugin Version: 16.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The Reconnect function reestablishes an existing connection between the calling application and a smart card.
Notes: This function moves a card handle from direct access to general access, or acknowledges and clears an error condition that is preventing further access to the card.

Initialization can be one of the following:

kUnpowerCard	Power down the card and reset it (Cold Reset).
kResetCard	Reset the card (Warm Reset).
kLeaveCard	Do not do anything special on reconnect.

ShareMode: A flag that indicates whether other applications may form connections to the card. Use one of

SmartCardMBS.kShare* constants. e.g. kShareExclusive
PreferredProtocols: A bitmask of acceptable protocols for the connection. Possible values may be combined with the OR operation. Use SmartCardMBS.kProtocol* constants. e.g. kProtocolT1

Lasterror and ActiveProtocol are set.

176.2.12 SetAttrib(AttrId as UInt32, mem as Memoryblock)

MBS Tools Plugin, Plugin Version: 16.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the given reader attribute.
Notes: It does not affect the state of the reader, reader driver, or smart card. Not all attributes are supported by all readers (nor can they be set at all times) as many of the attributes are under direct control of the transport protocol.

AttrId: The attribute ID. See kAttribute* constants.
Mem: The data to store.

Lasterror is set.

176.2.13 SplitValues(Data as MemoryBlock) as Dictionary

MBS Tools Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Split values read from smart card.
Notes: Files on smartcard can contain key/value data.
Returns Dictionary with numbers (key) and values as strings.

176.2.14 Status(byref Reader as string, byref State as Integer, byref Protocol as Integer, byref CardID as string)

MBS Tools Plugin, Plugin Version: 16.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Provides the current status of a smart card in a reader.
Notes: You can call it any time after a successful call to SCardConnect and before a successful call to SCardDisconnect. It does not affect the state of the reader or reader driver.

Provides reader name, state of card (see kState constants), Protocol (see kProtocol constants) and CardID.

State: Current state of the smart card in the reader. Upon success, it receives one of the following state indicators.
Protocol: Current protocol, if any. The returned value is meaningful only if the returned value of pdwState is kCardStateSpecific.
CardID: 32-byte buffer that receives the ATR string from the currently inserted card, if available.

Lasterror is set.
See also:

- 176.2.15 Status(byref State as Integer, byref Protocol as Integer, byref CardID as string) 21038

176.2.15 Status(byref State as Integer, byref Protocol as Integer, byref CardID as string)

MBS Tools Plugin, Plugin Version: 16.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Provides the current status of a smart card in a reader.
Notes: Same as other Status function, but without querying the name.
Lasterror is set.
See also:

- 176.2.14 Status(byref Reader as string, byref State as Integer, byref Protocol as Integer, byref CardID as string) 21037

176.2.16 Transmit(ioSendPci as Ptr, SendBuffer as ptr, SendLength as UInt32, ioRecvPci as ptr, RecvBuffer as Ptr, byref RecvLength as UInt32)

MBS Tools Plugin, Plugin Version: 16.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sends a service request to the smart card and expects to receive data back from the card.
Example:

```
Var card as SmartCardMBS // your card

Var header as new memoryBlock(8)

header.Int32Value(0) = 2 // T1
header.Int32Value(4) = 8 // size of this block

Var command as new MemoryBlock(5)
command.Int8Value(0) = 0
```

```
command.Int8Value(1) = &hCA
command.Int8Value(2) = 1
command.Int8Value(3) = &h82
command.Int8Value(4) = 2

Var buffer as new MemoryBlock(512)
Var ReceiveHeader as new MemoryBlock(8)

Var RecvLength as UInt32
card.Transmit(header, command, command.Size, ReceiveHeader, buffer, RecvLength)

MsgBox "Received "+str(RecvLength)+" bytes"
```

Notes: ioSendPci:
A pointer to the protocol header structure for the instruction. This buffer is in the format of an SCARD_IO_REQUEST structure, followed by the specific protocol control information (PCI).
For the T=0, T=1, and Raw protocols, the PCI structure is constant. The smart card subsystem supplies a global T=0, T=1, or Raw PCI structure, which you can reference by using the symbols SCARD_PCI_T0, SCARD_PCI_T1, and SCARD_PCI_RAW respectively.

SendBuffer:
A pointer to the actual data to be written to the card.
For T=0, the data parameters are placed into the address pointed to by SendBuffer according to the following structure:

Type	name	Description
Byte	Cla	The instruction class
Byte	Ins	The instruction code
Byte	P1	Parameter to the instruction
Byte	P2	Parameter to the instruction
Byte	P3	Size of I/O transfer

The data sent to the card should immediately follow the send buffer. In the special case where no data is sent to the card and no data is expected in return, P3 is not sent.

SendLength:
The length, in bytes, of the SendBuffer parameter.
For T=0, in the special case where no data is sent to the card and no data expected in return, this length must reflect that the P3 member is not being sent; the length should be 4.

ioRecvPci:
Pointer to the protocol header structure for the instruction, followed by a buffer in which to receive any returned protocol control information (PCI) specific to the protocol in use. This parameter can be nil if no

PCI is returned.

RecvBuffer:
Pointer to any data returned from the card.
For T=0, the data is immediately followed by the SW1 and SW2 status bytes. If no data is returned from the card, then this buffer will only contain the SW1 and SW2 status bytes.

RecvLength:
Supplies the length, in bytes, of the RecvBuffer parameter and receives the actual number of bytes received from the smart card. This value cannot be SCARD_AUTOALLOCATE because Transmit does not support SCARD_AUTOALLOCATE.
For T=0, the receive buffer must be at least two bytes long to receive the SW1 and SW2 status bytes.

Lasterror is set.

176.2.17 Properties

176.2.18 ActiveProtocol as Integer

MBS Tools Plugin, Plugin Version: 16.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The active protocol.
Notes: (Read and Write property)

176.2.19 Handle as Integer

MBS Tools Plugin, Plugin Version: 16.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The internal object reference.
Notes: (Read and Write property)

176.2.20 Lasterror as Integer

MBS Tools Plugin, Plugin Version: 16.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The last error code.
Notes: (Read and Write property)

176.2.21 Constants

Attribute IDs

Constant	Value	Description
kAttributeAtrString	590595	Answer to reset (ATR) string.
kAttributeChannelId	131344	DWORD encoded as &hDDDDCCCC, where DDDD = data channel t CCCC = channel number. The following encodings are defined for DDDD: &h01 serial I/O; CCCC is a port number. &h02 parallel I/O; CCCC is a port number. &h04 PS/2 keyboard port; CCCC is zero. &h08 SCSI; CCCC is SCSI ID number. &h10 IDE; CCCC is device number. &h20 USB; CCCC is device number. &hFy vendor-defined interface with y in the range zero through 15; C vendor defined.
kAttributeCharacteristics	393552	Integer indicating which mechanical characteristics are supported. If special characteristics are supported. Note that multiple bits can be set: &h00000001 Card swallowing mechanism &h00000002 Card ejection mechanism &h00000004 Card capture mechanism All other values are reserved for future use (RFU).
kAttributeCurrentBwt	524809	Current block waiting time.
kAttributeCurrentClk	524802	Current clock rate, in kHz.
kAttributeCurrentCwt	524810	Current character waiting time.
kAttributeCurrentD	524804	Bit rate conversion factor.
kAttributeCurrentEbcEncoding	524811	Current error block control encoding. 0 = longitudinal redundancy check (LRC) 1 = cyclical redundancy check (CRC)
kAttributeCurrentF	524803	Clock conversion factor.
kAttributeCurrentIfsc	524807	Current byte size for information field size card.
kAttributeCurrentIfsd	524808	Current byte size for information field size device.
kAttributeCurrentIoState	590594	Current IO state
kAttributeCurrentN	524805	Current guard time.
kAttributeCurrentProtocolType	524801	Integer encoded as 0x0rrrpppp where rrr is RFU and should be 0x000 encodes the current protocol type. Whichever bit has been set indicate ISO protocol is currently in use. (For example, if bit zero is set, T=0 p is in effect.)
kAttributeCurrentW	524806	Current work waiting time.
kAttributeDefaultClk	196897	Default clock rate, in kHz.
kAttributeDefaultDataRate	196899	Default data rate, in bps.
kAttributeDeviceFriendlyNameA	2147418115	Reader's display name. Windows ANSI encoding.
kAttributeDeviceFriendlyNameW	2147418117	Reader's display name. Unicode encoding.
kAttributeDeviceInUse	2147418114	Reserved for future use.
kAttributeDeviceSystemNameA	2147418116	Reader's system name. Windows ANSI encoding.
kAttributeDeviceSystemNameW	2147418118	Reader's system name. Unicode encoding.
kAttributeDeviceUnit	2147418113	Instance of this vendor's reader attached to the computer. The first i will be device unit 0, the next will be unit 1 (if it is the same brand of and so on. Two different brands of readers will both have zero for this
kAttributeEscAuthrequest	499717	Esc authentication request
kAttributeEscCancel	499715	Esc cancel
kAttributeEscReset	499712	Esc reset
kAttributeExtendedBwt	524812	Extended block wait time.
kAttributeIccInterfaceStatus	590593	Single byte. Zero if smart card electrical contact is not active; nonzero if is active.
kAttributeIccPresence	590592	Single byte indicating smart card presence: 0 = not present 1 = card present but not swallowed (applies only if reader supports sma swallowing) 2 = card present (and swallowed if reader supports smart card swallow 4 = card confiscated.

Card States

Constant	Value	Description
kCardStateAbsent	2	There is no card in the reader.
kCardStateNegotiable	32	The card has been reset and is awaiting PTS negotiation.
kCardStatePowered	16	Power is being provided to the card, but the reader driver is unaware of the mode of the card.
kCardStatePresent	4	There is a card in the reader, but it has not been moved into position for use.
kCardStateSpecific	64	The card has been reset and specific communication protocols have been established.
kCardStateSwallowed	8	There is a card in the reader in position for use. The card is not powered.
kCardStateUnknown	1	Unknown state.

Card Initialization Modes

Constant	Value	Description
kEjectCard	3	Eject card.
kLeaveCard	0	Do not do anything special on reconnect.
kResetCard	1	Reset the card (Warm Reset).
kUnpowerCard	2	Power down the card and reset it (Cold Reset).

Protocols

Constant	Value	Description
kProtocolAny	3	Any protocol is welcome
kProtocolRAW	4	Raw protocol
kProtocolT0	1	T=0 is the active protocol.
kProtocolT1	2	T=1 is the active protocol.
kProtocolT15	8	T=15 protocol (not on Windows)
kProtocolUndefined	0	kShareDirect has been specified, so that no protocol negotiation has occurred. It is possible that there is no card in the reader.
kProtocolUnset	0	Unset

Share Modes

Constant	Value	Description
kShareDirect	3	This application is allocating the reader for its private use, and will be controlling it directly. No other applications are allowed access to it.
kShareExclusive	1	This application is not willing to share the card with other applications.
kShareShared	2	This application is willing to share the card with other applications.

176.3 class TKBERTLVRecordMBS

176.3.1 class TKBERTLVRecordMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: An object that parses BER-encoded data and produces DER-encoded data for TLV records.
Notes: Available in macOS 10.12 or newer.
Subclass of the TKTLVRecordMBS class.

176.3.2 Methods

176.3.3 Constructor(tag as UInt64, data as MemoryBlock)

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Initializes a BER-TLV record with the specified tag and value.
Notes: tag: The tag field of the record.
value: The value field of the record.

Returns a new TLV record containing the specified tag and value fields.
See also:

- 176.3.4 Constructor(tag as UInt64, records() as TKTLVRecordMBS) 21044

176.3.4 Constructor(tag as UInt64, records() as TKTLVRecordMBS)

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Initializes a BER-TLV record with the specified tag and an array of TLV subrecords.
Notes: tag: The tag field of the record.
records: The TLV subrecords of the record.

Returns a new TLV record containing the specified tag field and subrecords.
See also:

- 176.3.3 Constructor(tag as UInt64, data as MemoryBlock) 21044

176.3.5 dataForTag(tag as UInt64) as MemoryBlock

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Encodes a specified tag using BER-TLV tag encoding rules.
Notes: tag: The tag value to encode.

Returns a data object that encodes a tag value using BER-TLV encoding.

176.4 class TKCompactTLVRecordMBS

176.4.1 class TKCompactTLVRecordMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: An object that implements encoding using Compact-TLV encoding according to ISO 7816-4.
Notes: Subclass of the TKTLVRecordMBS class.

176.4.2 Methods

176.4.3 Constructor(tag as integer, data as MemoryBlock)

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Initializes a TLV record with the specified tag and value.
Notes: tag: The tag field of the record.
value: The value field of the record.

Returns a new TLV record containing the specified tag and value fields.

176.5 class TKSimpleTLVRecordMBS

176.5.1 class TKSimpleTLVRecordMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: An object that implements encoding using Simple-TLV encoding according to ISO 7816-4.
Notes: Subclass of the TKTLVRecordMBS class.

176.5.2 Methods

176.5.3 Constructor(tag as integer, data as MemoryBlock)

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Initializes a TLV record with the specified tag and value.
Notes: tag: The tag field of the record.
value: The value field of the record.

Returnes a new TLV record containing the specified tag and value fields.

176.6 class TKSmartCardATRInterfaceGroupMBS

176.6.1 class TKSmartCardATRInterfaceGroupMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: A single interface-bytes group for a Smart Card ATR (Answer to Reset).
Notes: You access instances of this class by calling the interfaceGroupAtIndex and interfaceGroupForProtocol methods on an TKSmartCardATRMBS object.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

176.6.2 Methods

176.6.3 Constructor

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The private constructor.

176.6.4 Properties

176.6.5 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Internal object reference.
Notes: (Read and Write property)

176.6.6 HasProtocol as Boolean

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Whether protocol is defined.
Notes: (Read only property)

176.6.7 HasTA as Boolean

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Whether we have a TA value defined.
Notes: (Read only property)

176.6.8 HasTB as Boolean

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Whether we have a TB value defined.
Notes: (Read only property)

176.6.9 HasTC as Boolean

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Whether we have a TC value defined.
Notes: (Read only property)

176.6.10 Protocol as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The protocol for this group.
Notes: This property returns the protocol number. See kProtocol* constants.
This property is zero for the first interface group (global), as it has no assigned protocol.
(Read only property)

176.6.11 TA as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The TA interface byte of ATR group.
Notes: (Read only property)

176.6.12 TB as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The TB interface byte of ATR group.
Notes: (Read only property)

176.6.13 TC as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The TC interface byte of ATR group.
Notes: (Read only property)

176.7 class TKSmartCardATRMBS

176.7.1 class TKSmartCardATRMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: A parsed ATR (Answer To Reset) message from a Smart Card.
Notes: This class declares a programmatic interface to parsing an ATR from data or a byte stream, and accessing the individual parts.

The TKSmartCardATR class parses ATR messages according to the ISO/IEC 7816-3 specification.

176.7.2 Methods

176.7.3 available as Boolean

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Whether this class is available.
Notes: Returns true on MacOS 10.10 or newer.

176.7.4 Constructor(data as MemoryBlock)

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Initializes a TKSmartCardATR object from a provided data object.
Notes: bytes: The ATR data to be parsed.

Returns a TKSmartCardATR object initialized with the parsed data. If bytes does not contain a valid ATR, raises UnsupportedOperationException.

176.7.5 historicalRecords as TKCompactTLVRecordMBS()

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: A list of compact TLV records parsed from historical bytes.

176.7.6 interfaceGroupAtIndex(index as Integer) as TKSmartCardATRInterfaceGroupMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Returns the interface group at the specified index.
Notes: index: The index of the desired interface group.

Interface group indexes start at 1, as specified by ISO 7816-3.

Returns the interface group at the specified index, or nil if not present.

176.7.7 interfaceGroupForProtocol(protocol as Integer) as TKSmartCardATRInterfaceGroupMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Returns the interface group with the specified protocol.
Notes: protocol: The protocol used by the desired interface group.

Returns the interface group with the specified protocol, or nil if none exists.

176.7.8 protocols as Integer()

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: An array of protocols indicated in the ATR.
Notes: Each element in the returned array is an integer value corresponding to a member of the kProtocol* constants.
The returned protocols are ordered such that the default protocol is at index 0, and any duplicate values are removed.

176.7.9 Properties

176.7.10 bytes as MemoryBlock

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The ATR message data.
Notes: (Read only property)

176.7.11 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Internal object reference.
Notes: (Read and Write property)

176.7.12 historicalBytes as MemoryBlock

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The ATR historical bytes, not including interface bytes or the TCK (check byte).
Notes: (Read only property)

176.7.13 Constants

Protocols

Constant	Value	Description
kProtocolAny	65535	Any available transmission protocols.
kProtocolNone	0	No transmission protocols.
kProtocolT0	1	T=0 transmission protocol.
kProtocolT1	2	T=1 transmission protocol.
kProtocolT15	32768	T=15 transmission protocol.

176.8 class TKSmartCardMBS

176.8.1 class TKSmartCardMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: A representation of a smart card.
Notes: This class provides an interface for managing sessions with a smart card, transmitting requests, and facilitating user interaction.
You can create a TKSmartCardMBS object when a smart card is inserted into a slot, by calling the makeSmartCard method on the corresponding TKSmartCardSlotMBS object. To start communicating with the smart card, call the beginSession method on the TKSmartCardMBS object. Once an exclusive session has been established, you transmit data using the transmitRequest:reply: method. After you,Äôve finished communicating with a smart card, you call the endSession method.
If the smart card is physically removed from its slot, the session object becomes invalid, and any further calls to transmitRequest will return an error.

176.8.2 Methods

176.8.3 beginSession(tag as variant = nil)

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Begins a session with the Smart Card.
Notes: This method will fail if there is already an existing session for the Smart Card.
Calls to this method must be balanced with calls to endSession.

Calls beginSessionCompleted event later.

176.8.4 beginSessionSync(byref error as NSErrorMBS) as Boolean

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Begins a session with the Smart Card.
Notes: This is the synchronous version, which waits for callback from operation system.
Returns true on success and false on failure.

This method will fail if there is already an existing session for the Smart Card.
Calls to this method must be balanced with calls to endSession.

176.8.5 beginSessionWithDelegate(handler as beginSessionCompletedDelegateMBS, tag as variant = nil)

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Transmits data in Application Protocol Data Unit (APDU) format to the Smart Card.
Notes: request: The APDU request data.

You should only call this method after a session to the Smart Card has been established using the beginSessionWithReply: method, and before the session is terminated using the endSession method.

Invokes handler later, which has this declaration:
beginSessionCompletedDelegate(success as Boolean, error as NSErrorMBS, tag as Variant)

176.8.6 Constructor

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The constructor.

176.8.7 Destructor

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The destructor.

176.8.8 endSession

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Completes any pending transmissions and ends the session to the Smart Card.
Notes: Calls to this method should balance calls to beginSession.

176.8.9 inSession(byref error as NSErrorMBS, tag as variant = nil) as boolean

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Synchronously begins a session, executes the given block, and ends the session.
Notes: error: On return, if an error occurred when attempting to create a session or execute the block,

contains details about the error.

Returns true if the session was successfully created and the inSession event returns true; otherwise, false.
See also:

- 176.8.32 inSession(byref error as NSErrorMBS, tag as Variant) as Boolean 21062

176.8.10 readFileWithDelegate(FileName as MemoryBlock, handler as readFileCompletedDelegateMBS, tag as variant = nil)

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Reads file with given filename.
Notes: This is for Belgian ID card to read a file.

You should only call this method after a session to the Smart Card has been established using the beginSessionWithReply: method, and before the session is terminated using the endSession method.

Invokes handler later, which has this declaration:
readFileCompletedDelegateMBS(FileName as MemoryBlock, Content as MemoryBlock, error as NSErrorMBS, tag as Variant)

176.8.11 sendIns(ins as UInt8, p1 as UInt8, p2 as UInt8, requestData as MemoryBlock, le as Integer = 0, byref sw as Uint16, byref error as NSErrorMBS) as Memoryblock

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Synchronously transmits an APDU command to the card and returns the response.
Notes: ins: The instruction code.
p1: The first parameter.
p2: The second parameter.
requestData: The data field of the APDU, or nil if no input data field should be present—for example, a case1 or case2 APDU.
The length of the data serves as Lc field of the APDU.
le: The expected number of bytes to be returned, or zero if no output data are expected—for example, a case1 or case3 APDU. Pass 0 to accept as many bytes as the card provides.
sw: On return, contains the result code as represented by the first two bytes (SW1SW2) of the returned data.
error: On return, if an error occurred when attempting to create a session or execute the block, contains details about the error.

Returns the returned data without the first two bytes (SW1SW2), or nil if an error occurred.
See also:

- 176.8.12 sendIns(ins as UInt8, p1 as UInt8, p2 as UInt8, requestData as MemoryBlock, le as Integer = 0, tag as variant = nil) 21057

176.8.12 sendIns(ins as UInt8, p1 as UInt8, p2 as UInt8, requestData as MemoryBlock, le as Integer = 0, tag as variant = nil)

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Asynchronously transmits an APDU command to the card, returning the response in a completion handler.
Notes: ins: The instruction code.
p1: The first parameter.
p2: The second parameter.
requestData: The data field of the APDU, or nil if no input data field should be present—for example, a case1 or case2 APDU.
The length of the data serves as Lc field of the APDU.
le: The expected number of bytes to be returned, or zero if no output data are expected—for example, a case1 or case3 APDU. Pass 0 to accept as many bytes as the card provides.

Calls sendInsCompleted event later.
See also:

- 176.8.11 sendIns(ins as UInt8, p1 as UInt8, p2 as UInt8, requestData as MemoryBlock, le as Integer = 0, byref sw as Uint16, byref error as NSErrorMBS) as Memoryblock 21056

176.8.13 SetDelegate

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Sets the observer to call validChanged event.
Notes: Called for you by constructor.

176.8.14 transmitRequest(request as MemoryBlock, tag as variant = nil)

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Transmits data in Application Protocol Data Unit (APDU) format to the Smart Card.
Notes: request: The APDU request data.

You should only call this method after a session to the Smart Card has been established using the beginSessionWithReply: method, and before the session is terminated using the endSession method.

Calls transmitRequestCompleted method later.

176.8.15 transmitRequestSync(request as MemoryBlock, byref response as MemoryBlock, byref error as NSErrorMBS)

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Transmits data in Application Protocol Data Unit (APDU) format to the Smart Card.
Notes: This is the synchronous version, which waits for callback from operation system.

request: The APDU request data.
response: The response.

You should only call this method after a session to the Smart Card has been established using the beginSessionWithReply: method, and before the session is terminated using the endSession method.

176.8.16 transmitRequestWithDelegate(request as MemoryBlock, handler as transmitRequestCompletedDelegateMBS, tag as variant = nil)

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Transmits data in Application Protocol Data Unit (APDU) format to the Smart Card.
Notes: request: The APDU request data.

You should only call this method after a session to the Smart Card has been established using the beginSessionWithReply: method, and before the session is terminated using the endSession method.

Invokes handler later, which has this declaration:
transmitRequestCompletedDelegate(request as MemoryBlock, response as MemoryBlock, error as NSErrorMBS, tag as Variant)

176.8.17 userInteractionForSecurePINChange(PINFormat as TKSmartCardPINFormatMBS, APDU as MemoryBlock, currentPINByteOffset as Integer, newPINByteOffset as Integer) as TKSmartCardUserInteractionForSecurePINChangeMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Creates a new user interaction object for secure PIN change using the smart card reader facilities (typically a HW keypad).
Notes: PINFormat: The PIN format descriptor.
APDU: The Application Protocol Data Unit (APDU) used by the Smart Card to fill in PIN data.
currentPINByteOffset: The offset, in bytes, within the Application Protocol Data Unit (APDU) field to mark a location of a PIN block for filling in the entered PIN.
newPINByteOffset: The offset, in bytes, within the Application Protocol Data Unit (APDU) field to mark a location of a PIN block for filling in the new PIN.

Returns a new user interaction object for secure PIN verification, or nil if this feature is not supported by the Smart Card reader.

You should only call this method after a session to the Smart Card has been established using the beginSession method, and before the session is terminated using the endSession method.
Once the interaction has been successfully completed, the results are available via the resultData and resultSW properties of the returned TKSmartCardUserInteractionForSecurePINVerificationMBS object.

176.8.18 userInteractionForSecurePINVerification(PINFormat as TKSmartCardPINFormatMBS, APDU as MemoryBlock, PINByteOffset as Integer) as TKSmartCardUserInteractionForSecurePINVerificationMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Creates and returns a new user interaction object for secure PIN verification using the Smart Card reader facilities.
Notes: PINFormat: The PIN format descriptor.
APDU: The Application Protocol Data Unit (APDU) used by the Smart Card to fill in PIN data.
PINByteOffset: The offset, in bytes, within the Application Protocol Data Unit (APDU) field to mark a location of a PIN block for filling in the entered PIN.

This parameter is not currently used. Pass 0.

Returns a new user interaction object for secure PIN verification, or nil if this feature is not supported by the Smart Card reader.

You should only call this method after a session to the Smart Card has been established using the beginSession method, and before the session is terminated using the endSession method.
Once the interaction has been successfully completed, the results are available via the resultData and resultSW properties of the returned TKSmartCardUserInteractionForSecurePINVerificationMBS object.

176.8.19 Properties

176.8.20 AllowedProtocols as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The protocols allowed for communication with the Smart Card.
Notes: kProtocolAny by default.
This property is consulted only when beginning a session to a Smart Card. Any changes to this property will not be reflected by the current session, if one is already established.
(Read and Write property)

176.8.21 cla as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The CLA byte used for APDU transmission.
Notes: 0 by default.
(Read and Write property)

176.8.22 Context as Variant

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: User-specified information.
Notes: This property is automatically set to nil if the Smart Card is removed or another TKSmartCardMBS object begins a session.
(Read and Write property)

176.8.23 CurrentProtocol as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The protocol used for communication with the Smart Card.
Notes: Returns kProtocolNone if no session is currently established.
(Read only property)

176.8.24 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Internal object reference.
Notes: (Read and Write property)

176.8.25 Sensitive as Boolean

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Whether sessions established for the Smart Card should be considered sensitive.
Notes: False by default.
When this property is set to true, any sessions established for the receiver will begin and end by sending a reset command to the Smart Card. This is recommended anytime potentially sensitive information is transferred.
(Read and Write property)

176.8.26 Slot as TKSmartCardSlotMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The slot in which the Smart Card is inserted.
Notes: (Read only property)

176.8.27 UseCommandChaining as Boolean

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Whether to use command chaining of APDU with a data field longer than 255 bytes.
Notes: By default, this property is set to true when the Smart Card ATR announces that command chaining is supported.
(Read and Write property)

176.8.28 UseExtendedLength as Boolean

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Whether to use extended length APDU.
Notes: By default, this property is set to true when the Smart Card slot supports transmitting extended length commands, and the ATR announces that extended length APDU is supported.
(Read and Write property)

176.8.29 Valid as Boolean

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Whether the Smart Card is valid and accessible from its slot.
Notes: (Read only property)

176.8.30 Events

176.8.31 beginSessionCompleted(success as Boolean, error as NSErrorMBS, tag as Variant)

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Event called when session begun.
Notes: success: Whether the session could be established successfully.
error: Contains information about the the error preventing the transaction from being established.
The NSError object is created in the TKErrorDomain domain with a code in the TKErrorCode enumeration.

176.8.32 inSession(byref error as NSErrorMBS, tag as Variant) as Boolean

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The event called in session.
Notes: The event to be called in the context of the created session. This event returns a Boolean value indicating whether communication was successful.

error: To indicate that an error occurred during the session, populate this with an NSError object containing details and return false.
See also:

- 176.8.9 inSession(byref error as NSErrorMBS, tag as variant = nil) as boolean 21055

176.8.33 sendInsCompleted(ins as UInt8, p1 as UInt8, p2 as UInt8, requestData as MemoryBlock, le as integer, replyData as MemoryBlock, sw as UInt16, error as NSErrorMBS, tag as Variant)

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Event called when sendIns completed.
Notes: replyData: The returned data without the first two bytes (SW1SW2), or nil if an error occurred.
sw: The result code as represented by the first two bytes (SW1SW2) of the returned data.
error: If a communication error occurred or the sw result code is anything other than &h9000, contains

details about the error.

176.8.34 transmitRequestCompleted(request as MemoryBlock, response as MemoryBlock, error as NSErrorMBS, tag as Variant)

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The event called when transmit is done.
Notes: response: The APDU response data, or nil if communication with the Smart Card failed.
error: Contains information about the the error preventing the transaction from being established.
The NSError object is created in the TKErrorDomain domain with a code in the TKErrorCode enumeration.

176.8.35 ValidChanged

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Event called when valid property changed.

176.8.36 Constants

Protocols

Constant	Value	Description
kProtocolAny	65535	Any available transmission protocols.
kProtocolNone	0	No transmission protocols.
kProtocolT0	1	T=0 transmission protocol.
kProtocolT1	2	T=1 transmission protocol.
kProtocolT15	32768	T=15 transmission protocol.

Errors

Constant	Value	Description
TKErrorCodeAuthenticationFailed	-5	Authentication failed.
TKErrorCodeAuthenticationNeeded	-9	Authentication is needed.
TKErrorCodeBadParameter	-8	An invalid parameter was provided.
TKErrorCodeCanceledByUser	-4	The operation was canceled by the user.
TKErrorCodeCommunicationError	-2	A communication error occurred.
TKErrorCodeCorruptedData	-3	The data was corrupted.
TKErrorCodeNotImplemented	-1	The functionality is not implemented.
TKErrorCodeObjectNotFound	-6	The object was not found.
TKErrorCodeTokenNotFound	-7	The token was not found.

176.8.37 Delegates

176.8.38 beginSessionCompletedDelegateMBS(success as Boolean, error as NSErrorMBS, tag as Variant)

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The delegate for the beginSessionWithDelegate method.

176.8.39 readFileCompletedDelegateMBS(FileName as MemoryBlock, Content as MemoryBlock, error as NSErrorMBS, tag as Variant)

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The delegate for the readFileWithDelegate method.

176.8.40 transmitRequestCompletedDelegateMBS(request as MemoryBlock, response as MemoryBlock, error as NSErrorMBS, tag as Variant)

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The delegate for the transmitRequestWithDelegate method.

176.9 class TKSmartCardPINFormatMBS

176.9.1 class TKSmartCardPINFormatMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The formatting properties for a PIN, such as character encoding and length constraints.
Notes: You typically interact with TKSmartCardPINFormatMBS objects when calling the userInteractionForSecurePINChange and userInteractionForSecurePINVerification methods on an instance of TKSmartCardMBS.

Available in macOS 10.11 or newer.

176.9.2 Methods

176.9.3 Constructor

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The constructor.

176.9.4 Properties

176.9.5 Charset as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The format of PIN characters.
Notes: kCharsetNumeric by default.
(Read and Write property)

176.9.6 Encoding as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The encoding of PIN characters.
Notes: kEncodingASCII by default.
(Read and Write property)

176.9.7 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Internal object reference.
Notes: (Read and Write property)

176.9.8 MaxPINLength as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The maximum number of characters to form a valid PIN.
Notes: 8 by default.
(Read and Write property)

176.9.9 MinPINLength as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The minimum number of characters to form a valid PIN.
Notes: 4 by default.
(Read and Write property)

176.9.10 PINBitOffset as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The offset, in bits, within the PIN block to mark a location for filling in the formatted PIN, which is justified with respect to the PINJustification property value.
Notes: 0 by default.

The value of PINBitOffset indirectly controls the internal system units indicator. If PINBitOffset is byte aligned (that is, PINBitOffset % 8 == 0), the internal representation of PINBitOffset gets converted from bits to bytes.
(Read and Write property)

176.9.11 PINBlockByteLength as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The total length of the PIN block in bytes.
Notes: 8 by default.
(Read and Write property)

176.9.12 PINJustification as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The justification within the PIN block.
Notes: kJustificationLeft by default.
(Read and Write property)

176.9.13 PINLengthBitOffset as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The offset, in bits, within the PIN block to mark a location for filling in the PIN length, which is always left justified.
Notes: 0 by default.

The value of PINLengthBitOffset indirectly controls the internal system units indicator. If PINLengthBitOffset is byte aligned (that is, PINLengthBitOffset % 8 == 0), the internal representation of PINLengthBitOffset gets converted from bits to bytes.
(Read and Write property)

176.9.14 PINLengthBitSize as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The size, in bits, of the PIN length field. If set to 0, PIN length is not written.
Notes: 0 by default.
(Read and Write property)

176.9.15 Constants

PIN character sets

Constant	Value	Description
kCharsetAlphanumeric	1	PIN can be composed of digits and letters.
kCharsetNumeric	0	PIN is only composed of digits.
kCharsetUpperAlphanumeric	2	PIN can be composed of digits and uppercase letters.

Encodings

Constant	Value	Description
kEncodingASCII	1	Characters are encoded in ASCII format (for example, 1234 is encoded as 31h 32h 33h 34h).
kEncodingBCD	2	Characters (only digits) are encoded in BCD format (for example, 1234 is encoded as 12h 34h).
kEncodingBinary	0	Characters are encoded in Binary format (for example, 1234 is encoded as 01h 02h 03h 04h).

PIN Justification

Constant	Value	Description
kJustificationLeft	0	Justify to the left.
kJustificationRight	1	Justify to the right.

176.10 class TKSmartCardSlotManagerMBS

176.10.1 class TKSmartCardSlotManagerMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: An interface to all available smart card reader slots.
Notes: Get a list of all known smart card reader slots in the system using the slotNames property, and access individual slots by name using the getSlotWithName method.

The com.apple.security.smartcard entitlement is required in order to use TKSmartCardSlotManager.

176.10.2 Methods

176.10.3 available as Boolean

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Whether this class is available.
Notes: Returns true on MacOS 10.11 or newer.

176.10.4 Constructor

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The constructor.

176.10.5 defaultManager as TKSmartCardSlotManagerMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The shared singleton Smart Card reader slot manager.
Notes: This method returns nil unless the com.apple.security.smartcard entitlement is enabled.

176.10.6 Destructor

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The destructor.

176.10.7 getSlotWithName(name as string, tag as variant = nil)

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Asynchronously calls a block with a Smart Card reader slot for a specified name.
Notes: name: The name of the Smart Card reader slot.

Calls gotSlotWithName later.

176.10.8 SetDelegate

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Sets the observer to call slowNamesChanged event.
Notes: Called for you by constructor.

176.10.9 slotNamed(name as string) as TKSmartCardSlotMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Returns the Smart Card slot with a given name.
Notes: Returns the slot with the specified name, or nil if no slot with that name exists.

176.10.10 slotNames as string()

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: A list of identifiers for all the Smart Card reader slots available to the system.

176.10.11 Properties

176.10.12 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Internal object reference.
Notes: (Read and Write property)

176.10.13 Events

176.10.14 gotSlotWithName(name as string, slot as TKSmartCardSlotMBS, tag as variant)

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The event called when the slow with the name is found.

176.10.15 slotNamesChanged

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Event called when slot name list changed.

176.11 class TKSmartCardSlotMBS

176.11.1 class TKSmartCardSlotMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: A single smart card reader slot in the system.
Notes: Use the TKSmartCardSlotManagerMBS class to manage all the smart card reader slots available to the system. You can retrieve the names of available smart card reader slots for a system using the slotNames property of a manager object, and access instances of TKSmartCardSlotMBS using the getSlotWithName method.

176.11.2 Methods

176.11.3 Constructor

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The constructor.

176.11.4 Destructor

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The destructor.

176.11.5 makeSmartCard as TKSmartCardMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Creates a new TKSmartCardMBS object representing the currently inserted Smart Card.
Notes: A new TKSmartCardMBS object, or nil if no Smart Card is currently inserted.

You can create multiple instances of TKSmartCardMBS that represent the same Smart Card. Exclusivity of data transfer is handled by sessions on the individual TKSmartCardMBS objects.

176.11.6 SetDelegate

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Sets the observer to call stateChanged event.
Notes: Called for you by constructor.

176.11.7 Properties

176.11.8 ATR as TKSmartCardATRMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The ATR (Answer to Reset) of the inserted Smart Card, or nil if no Smart Card is inserted or the inserted Smart Card is mute.
Notes: (Read only property)

176.11.9 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Internal object reference.
Notes: (Read and Write property)

176.11.10 maxInputLength as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The maximum length of input APDU (Application Protocol Data Unit) that the Smart Card reader slot is able to transfer to the Smart Card.
Notes: (Read only property)

176.11.11 maxOutputLength as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The maximum length of output APDU (Application Protocol Data Unit) that the Smart Card reader slot is able to transfer from the Smart Card.
Notes: (Read only property)

176.11.12 Name as String

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The name of the Smart Card reader slot.
Notes: (Read only property)

176.11.13 State as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The current state of the Smart Card reader slot.
Notes: (Read only property)

176.11.14 Events

176.11.15 StateChanged

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Event called when state changed.

176.11.16 Constants

States

Constant	Value	Description
kStateEmpty	1	The Smart Card reader slot is empty; no card is inserted.
kStateMissing	0	The Smart Card reader slot is no longer known to the system. This is the terminal state of a TKSmartCardSlotThis instance; once it has reached this state, the Smart Card reader slot cannot be reinitialized.
kStateMuteCard	3	A Smart Card is inserted, but is mute, or does not provide responses to commands.
kStateProbing	2	A Smart Card was inserted into the slot and an initial probe is in underway.
kStateValidCard	4	A Smart Card is inserted and properly answered to a reset command.

176.12 class TKSmartCardTokenDriverMBS

176.12.1 class TKSmartCardTokenDriverMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The driver that acts as an entry point for smart card app extensions.
Notes: Subclass of the TKTokenDriverMBS class.

176.12.2 Methods

176.12.3 Constructor

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The constructor.

176.13 class TKSmartCardTokenMBS

176.13.1 class TKSmartCardTokenMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: A representation of a smart card based cryptographic token.#
Notes: Subclass of the TKTokenMBS class.

176.13.2 Methods

176.13.3 Constructor(smartCard as TKSmartCardMBS, AID as MemoryBlock, instanceID as String, tokenDriver as TKSmartCardTokenDriverMBS)

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Initializes a smart card token with the specified smart card, application identifier, and token driver.
Notes: smartCard: The smart card on which the created token should operate.
AID: The ISO 7816-4 application identifier for the smart card.
instanceID: A unique, persistent identifier for this token. This value is typically generated from the serial number of the target hardware.
tokenDriver: The driver associated with the created token.
See also:

- 176.13.4 Constructor(tokenDriver as TKTokenDriverMBS, instanceID as String) 21076

176.13.4 Constructor(tokenDriver as TKTokenDriverMBS, instanceID as String)

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The private constructor.
See also:

- 176.13.3 Constructor(smartCard as TKSmartCardMBS, AID as MemoryBlock, instanceID as String, tokenDriver as TKSmartCardTokenDriverMBS) 21076

176.13.5 Properties

176.13.6 AID as MemoryBlock

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The ISO 7816-4 application identifiers of the Smart Card.
Notes: This value is specified in the Smart Card token extension's NSExtensionAttributes property list by the com.apple.ctk.aid attribute. If this attribute specifies multiple AIDs, this parameter represents the application identifier found on the card that is already preselected. If the com.apple.ctk.aid attribute is not present, no application is automatically preselected and the value of this property is nil.
(Read only property)

176.14 class TKSmartCardTokenSessionMBS

176.14.1 class TKSmartCardTokenSessionMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: A token session that is based on a smart card token.
Notes: You can use the smartCard property to access and send APDUs to the underlying smart card.

Available on MacOS 10.12 or newer.
Subclass of the TKTokenSessionMBS class.

176.14.2 Methods

176.14.3 Constructor

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The private constructor.
See also:

- 176.14.4 Constructor(token as TKTokenMBS) 21078

176.14.4 Constructor(token as TKTokenMBS)

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Initializes a token session with the specified token.
Notes: token: The token to which the initialized session is bound.

Returns a new token session created with the specified token.
See also:

- 176.14.3 Constructor 21078

176.14.5 Properties

176.14.6 smartCard as TKSmartCardMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The smart card for the active exclusive session and selected application.
Notes: This property can only be accessed in the implementation of a TKTokenSessionDelegate protocol

delegate method. If the associated token has a value set for the AID property, this property opens an exclusive session to the card, with the application already selected.

You should not call beginSession or endSession on the returned value. Instead, the system will take care of beginning the exclusive session and terminating it when the current token request servicing is finished.
You can store any kind of information representing state of the card using the context property. This property will be automatically set to nil if the card is reset or accessed by different TKSmartCard instance, such as by another process. You can check the context property for any previously stored values as a way to avoid costly state restoration before performing an operation.
(Read only property)

176.15 class TKSmartCardUserInteractionForPINOperationMBS

176.15.1 class TKSmartCardUserInteractionForPINOperationMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: A representation of user interaction for secure PIN operations on a Smart Card reader.
Notes: There are two types of user interactions: those for secure PIN change and those for secure PIN validation. These interactions are instances of the TKSmartCardUserInteractionForSecurePINChangeMBS, or TKSmartCardUserInteractionForSecurePINVerificationMBS subclasses of TKSmartCardUserInteraction-ForPINOperationMBS, respectively.

You interact with instances of one of the subclasses of TKSmartCardUserInteractionForPINOperationMBS when calling the userInteractionForSecurePINChange and userInteractionForSecurePINVerification methods on an TKSmartCard object.
The result of a user interaction is available once the interaction has completed.

Available in macOS 10.11 or newer.
Subclass of the TKSmartCardUserInteractionMBS class.

176.15.2 Methods

176.15.3 Constructor

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The constructor.

176.15.4 PINMessageIndices as Integer()

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: A list of message indices referring to a predefined message table, used to specify the type and number of messages displayed during the PIN operation. nil by default.
Notes: If nil, the reader does not display any message (reader specific). Typically, PIN verification takes 1 message; PIN modification takes 1 –3 messages.

176.15.5 Properties

176.15.6 locale as NSLocaleMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The locale for the displayed messages.
Notes: If nil, the user,Äôs current locale is used. By default, this value is the current locale of the system. (Read and Write property)

176.15.7 PINCompletion as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The conditions under which PIN entry should be considered complete.
Notes: (Read and Write property)

176.15.8 resultData as MemoryBlock

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The returned data without SW1-SW2 bytes, if any.
Notes: (Read and Write property)

176.15.9 resultSW as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The SW1-SW2 status bytes.
Notes: (Read and Write property)

176.15.10 Constants

PIN Completion

Constant	Value	Description
kPINCompletionKey	2	Key
kPINCompletionMaxLength	1	MaxLength
kPINCompletionTimeout	4	Timeout

176.16 class TKSmartCardUserInteractionForSecurePINChangeMBS

176.16.1 class TKSmartCardUserInteractionForSecurePINChangeMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: A representation of the user interaction for secure PIN change operations on a Smart Card reader.
Notes: The result of a user interaction is available once the interaction has completed.
Available in macOS 10.11+.
Subclass of the TKSmartCardUserInteractionForPINOperationMBS class.

176.16.2 Methods

176.16.3 Constructor

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The constructor.

176.16.4 Properties

176.16.5 PINConfirmation as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The way PIN confirmation is requested.
Notes: kPINConfirmationNone by default.
(Read and Write property)

176.16.6 Constants

Pin Confirmation

Constant	Value	Description
kPINConfirmationCurrent	2	Current PIN confirmation.
kPINConfirmationNew	1	New PIN confirmation.
kPINConfirmationNone	0	No PIN confirmation.

176.17 class TKSmartCardUserInteractionForSecurePINVerificationMBS

176.17.1 class TKSmartCardUserInteractionForSecurePINVerificationMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: A representation of the user interaction for secure PIN change verification on a Smart Card reader.
Notes: The result of a user interaction is available once the interaction has completed.
Subclass of the TKSmartCardUserInteractionForPINOperationMBS class.

176.17.2 Methods

176.17.3 Constructor

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The constructor.

176.18 class TKSmartCardUserInteractionMBS

176.18.1 class TKSmartCardUserInteractionMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The base class for encapsulating user interaction with a Smart Card reader.
Notes: There are two types of user interactions: those for secure PIN change and those for secure PIN validation. These interactions are instances of the TKSmartCardUserInteractionForSecurePINChangeMBS, or TKSmartCardUserInteractionForSecurePINVerificationMBS subclasses of TKSmartCardUserInteraction-ForPINOperationMBS, respectively. TKSmartCardUserInteractionForPINOperationMBS is a subclass of TKSmartCardUserInteractionMBS.

You interact with instances of one of the subclasses of TKSmartCardUserInteractionForPINOperationwhen-MBS calling the userInteractionForSecurePINChange and userInteractionForSecurePINVerification methods on an TKSmartCardMBS object.

Available in macOS 10.11+.

176.18.2 Methods

176.18.3 Cancel as Boolean

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Attempts to cancel an interaction started by calling run.
Notes: Returns false if the operation is not running, or if cancelation is not supported.
For certain interactions, cancellation may not be available.

176.18.4 Constructor

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The constructor.

176.18.5 Destructor

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The destructor.

176.18.6 Run

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Runs the user interaction and asynchronously receives a reply.
Notes: Calls RunCompleted event later.

176.18.7 Properties

176.18.8 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Internal object reference.
Notes: (Read and Write property)

176.18.9 initialTimeout as Double

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The timeout, in seconds, for initial interaction.
Notes: If set to 0, the reader-defined default timeout is used. 0 by default.
(Read and Write property)

176.18.10 interactionTimeout as Double

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The timeout, in seconds, after the first key stroke.
Notes: If set to 0, the reader-defined default timeout is used. 0 by default.
(Read and Write property)

176.18.11 Events

176.18.12 characterEnteredInUserInteraction

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Tells the delegate that a valid character has been entered.

176.18.13 correctionKeyPressedInUserInteraction

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Tells the delegate that a correction key has been pressed.

176.18.14 invalidCharacterEnteredInUserInteraction

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Tells the delegate that an invalid character has been entered.

176.18.15 newPINConfirmationRequestedInUserInteraction

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Tells the delegate that the new PIN needs to be re-entered for confirmation.

176.18.16 newPINRequestedInUserInteraction

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Tells the delegate that the new PIN needs to be entered.

176.18.17 oldPINRequestedInUserInteraction

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Tells the delegate that the old PIN needs to be entered.

176.18.18 runCompleted(success as boolean, error as NSErrorMBS)

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Called when run method is done.
Notes: success: Whether the user interaction was successful.
error: Contains information about the the error that occurred during the user interaction.
The NSError object is created in the TKErrorDomain domain with a code in the TKErrorCode enumeration.

176.18.19 validationKeyPressedInUserInteraction

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Tells the delegate that the validation key has been pressed, indicating the end of PIN entry.

176.19 class TKTLVRecordMBS

176.19.1 class TKTLVRecordMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The base class encapsulating a Tag-Length-Value record.
Notes: The CryptoTokenKit framework provides the following concrete subclasses for various TLV record encodings:

- TKBERTLVRecordMBS for BER-TLV encoding rules
- TKSimpleTLVRecordMBS for Simple-TLV encoding according to ISO 7816-4
- TKCompactTLVRecordMBS for Compact-TLV encoding according to ISO 7816-4

Requires macOS 10.12 or newer.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

176.19.2 Methods

176.19.3 available as Boolean

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Whether this class is available.
Notes: Returns true on macOS 10.12 or newer.

176.19.4 Constructor

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The private constructor.

176.19.5 recordFromData(data as MemoryBlock) as TKTLVRecordMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Creates and returns a TLV record from by parsing the specified data.
Notes: data: A data object containing the serialized representation of a TLV record.

Returns a TLV record, or nil if data does not specify a valid record.

176.19.6 sequenceOfRecordsFromData(data as MemoryBlock) as TKTLVRecordMBS()

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Creates and returns an array of TLV records from the specified data.
Notes: data: A data object containing the serialized representation of zero or more TLV records.

Returns a sequence of TLV records, or nil if data does not specify a sequence of valid records.

176.19.7 Properties

176.19.8 Data as MemoryBlock

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The record data, including the tag, length, and value fields.
Notes: (Read only property)

176.19.9 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Internal object reference.
Notes: (Read and Write property)

176.19.10 Tag as UInt64

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The tag field of the record.
Notes: (Read only property)

176.19.11 Value as MemoryBlock

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The value field of the record.
Notes: (Read only property)

176.20 class TKTokenAuthOperationMBS

176.20.1 class TKTokenAuthOperationMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: An authentication operation for a cryptographic token.
Notes: The CryptoTokenKit framework provides the following concrete subclasses: TKTokenPasswordAuthOperationMBS, for password-based authentication, and TKTokenSmartCardPINAuthOperationMBS for Smart Card PIN-based authentication.

176.20.2 Methods

176.20.3 Constructor

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The constructor.

176.20.4 finishWithError(byref error as NSErrorMBS) as Boolean

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Finishes the authentication operation.
Notes: error: On return, if an error occurred, contains an object with details of the error.
The NSError object is created in the TKErrorDomain domain with a code in the TKErrorCode enumeration.

Return true if the authentication operation finished successfully; otherwise false.

176.20.5 Properties

176.20.6 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Internal object reference.
Notes: (Read and Write property)

176.21 class TKTokenDriverMBS

176.21.1 class TKTokenDriverMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The abstract base class for building token drivers.
Notes: When working with Smart Card tokens, use or inherit from the TKSmartCardTokenDriverMBS subclass instead.

176.21.2 Methods

176.21.3 Constructor

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The constructor.

176.21.4 Destructor

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The destructor.

176.21.5 SetDelegate

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Sets delegate, so events fire.
Notes: Called by constructor for you.

176.21.6 Properties

176.21.7 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Internal object reference.
Notes: (Read and Write property)

176.21.8 Events

176.21.9 createTokenForSmartCard(smartCard as TKSmartCardMBS, AID as MemoryBlock, byref error as NSErrorMBS) as TKSmartCardTokenMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Tells the delegate that a new Smart Card is detected.
Notes: self: The Smart Card token driver.
smartCard: The detected Smart Card.
AID: The ISO 7816-4 application identifier that is selected on the Smart Card. If the com.apple.ctk.aid attributes is not present in the Smart Card token extension property list, no application is selected.
error: If an error occured, this parameter should be populated with an NSError object containing details about the error.

Return the token created for the Smart Card, or nil if an error occurs or the delegate decides not to provide a token.

This event is only for TKSmartCardTokenDriverMBS class.

176.21.10 terminateToken(token as TKTokenMBS)

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Tells the delegate to terminate the specified token.

176.22 class TKTokenKeyAlgorithmMBS

176.22.1 class TKTokenKeyAlgorithmMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Cryptographic algorithms used by token keys.
Notes: Typically, the supported algorithm for a token key can be represented by a value of the SecKeyAlgorithm enumeration. However, tokens such as Smart Cards require that input data for operations take the format of a more specific algorithm. For example, a token may accept raw data to generate a cryptographic signature, but require that raw data to be formatted according to PKCS1 padding rules. To express such a requirement, a TKTokenKeyAlgorithm object defines a target algorithm and a set of other algorithms that were used. In the previous example, the target algorithm is kSecKeyAlgorithmRSASignatureRaw and the kSecKeyAlgorithmRSASignatureDigestPKCS1v15SHA1 algorithm is also reported as being used.

Requires macOS 10.12+ or newer.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

176.22.2 Methods

176.22.3 Constructor

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The private constructor.

176.22.4 isAlgorithm(algorithm as string) as Boolean

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Returns whether the specified algorithm is the target operation algorithm.
Notes: algorithm: The algorithm to be checked.

Returns true if algorithm is the target operation algorithm; otherwise, false.

176.22.5 supportsAlgorithm(algorithm as string) as Boolean

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Whether the specified algorithm is the target operation algorithm, or one of the other algorithms used.

Notes: algorithm: The algorithm to be checked.

Returns true if algorithm is the target operation algorithm or one of the other algorithms used; otherwise, false.

176.22.6 Properties

176.22.7 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Internal object reference.
Notes: (Read and Write property)

176.23 class TKTokenKeychainCertificateMBS

176.23.1 class TKTokenKeychainCertificateMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: A token,Äôs certificate as stored in the keychain.
Notes: Subclass of the TKTokenKeychainItemMBS class.

176.23.2 Methods

176.23.3 Constructor(CertificateData as MemoryBlock, TKTokenObjectID as Variant)

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Initializes a token keychain certificate with data from the specified certificate reference and a given object ID.
Notes: CertificateData: The certificate as data block.
objectID: The object ID.

Returns a new token keychain certificate.
See also:

- 176.23.4 Constructor(TKTokenObjectID as Variant) 21096

176.23.4 Constructor(TKTokenObjectID as Variant)

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The private constructor.
See also:

- 176.23.3 Constructor(CertificateData as MemoryBlock, TKTokenObjectID as Variant) 21096

176.23.5 Properties

176.23.6 data as MemoryBlock

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Returns a DER-encoded representation of an X.509 certificate.
Notes: (Read only property)

176.24 class TKTokenKeychainContentsMBS

176.24.1 class TKTokenKeychainContentsMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: A representation of the state of the keychain for a particular token.
Notes: Available on macOS 10.12+.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

176.24.2 Methods

176.24.3 certificateForObjectID(TKTokenObjectID as Variant, byref error as NSErrorMBS) as TKTokenKeychainCertificateMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Returns the key for a specified object identifier.
Notes: objectID: The object identifier for the keychain item.
error: On return, if no such certificate exists, contains information about the error.

Returns the certificate, or nil if no certificate exists.

176.24.4 Constructor

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The private constructor.

176.24.5 fillWithItems(items() as TKTokenKeychainItemMBS)

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Fills the keychain with the specified items.
Notes: items: The items to be added to the keychain.

All existing items for the token are first removed from the keychain before filling the keychain with items.

176.24.6 items as TKTokenKeychainItemMBS()

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Returns all items for token in the keychain.

176.24.7 keyForObjectID(TKTokenObjectID as Variant, byref error as NSErrorMBS) as TKTokenKeychainKeyMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Returns the key for a specified object identifier.
Notes: objectID: The object identifier for the keychain item.
error: On return, if no such key exists, contains information about the error.

Returns the key, or nil if no key exists.

176.24.8 Properties

176.24.9 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Internal object reference.
Notes: (Read and Write property)

176.25 class TKTokenKeychainItemMBS

176.25.1 class TKTokenKeychainItemMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: An abstract base class for managing a token,Äôs contents as keychain items.
Notes: Don't use this base class directly. Instead, use one of its subclasses, such as TKTokenKeychainCertificateMBS for managing certificates or TKTokenKeychainKeyMBS for managing cryptographic keys.
Available on macOS 10.12+.

176.25.2 Methods

176.25.3 Constructor(TKTokenObjectID as Variant)

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Initializes a token keychain item with the specified object ID.

176.25.4 Properties

176.25.5 constraints as Dictionary

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Access constraints for the keychain item, keyed by TKTokenOperation values wrapped in integers.
Notes: (Read and Write property)

176.25.6 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Internal object reference.
Notes: (Read and Write property)

176.25.7 Label as String

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The user-visible label for the keychain item.
Notes: This property is equivalent to the kSecAttrLabel attribute type.
(Read and Write property)

176.25.8 objectID as Variant

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Returns the object ID used for keychain item identification.
Notes: (Read only property)

176.26 class TKTokenKeychainKeyMBS

176.26.1 class TKTokenKeychainKeyMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: A token's key as stored in the keychain.
Notes: Available on macOS 10.12+.
Subclass of the TKTokenKeychainItemMBS class.

176.26.2 Methods

176.26.3 Constructor(CertificateData as MemoryBlock, TKTokenObjectID as Variant)

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Initializes a token keychain key with data from the specified certificate and a given object ID.
Notes: certificateData: The certificate data.
objectID: The object ID.

Returns a new token keychain certificate.

176.26.5 Properties

176.26.6 applicationTag as MemoryBlock

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The private tag data.
Notes: This property is equivalent to the kSecAttrApplicationTag type attribute.
(Read and Write property)

176.26.7 canDecrypt as Boolean

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Whether the key can be used to decrypt data.
Notes: This property is equivalent to the kSecAttrCanDecrypt type attribute.
(Read and Write property)

176.26.8 canPerformKeyExchange as Boolean

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Whether the key can be used to perform Diffie-Hellman style cryptographic key exchange.
Notes: (Read and Write property)

176.26.9 canSign as Boolean

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Whether the key can be used to sign data.
Notes: (Read and Write property)

176.26.10 keySizeInBits as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The key size in bits.
Notes: (Read and Write property)

176.26.11 keyType as String

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The type of the key.
Notes: Currently, only kSecAttrKeyTypeRSA and kSecAttrKeyTypeECSECPrimeRandom are supported values.

(Read and Write property)

176.26.12 publicKeyData as MemoryBlock

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The public key data.
Notes: (Read and Write property)

176.26.13 publicKeyHash as MemoryBlock

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The SHA1 hash of the raw public key.
Notes: This property is equivalent to the kSecAttrApplicationLabel type attribute.
(Read and Write property)

176.26.14 SuitableForLogin as Boolean

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Whether the key can be used for system login.
Notes: (Read and Write property)

176.27 class TKTokenKeyExchangeParametersMBS

176.27.1 class TKTokenKeyExchangeParametersMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Parameters used to perform specific key exchange operations.
Notes: Available on macOS 10.12+.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

176.27.2 Methods

176.27.3 Constructor

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The private constructor.

176.27.4 Properties

176.27.5 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Internal object reference.
Notes: (Read and Write property)

176.27.6 requestedSize as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Returns the requested output size, in bytes, of key exchange result.
Notes: This property should be ignored if the output size is not configurable for the specified key exchange algorithm.
(Read only property)

176.27.7 sharedInfo as MemoryBlock

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Returns shared information typically used during the key derivation (KDF) step of a key exchange algorithm.
Notes: This property should be ignored if shared information isn,Äôt used by the specified key exchange algorithm.
(Read only property)

176.28 class TKTokenMBS

176.28.1 class TKTokenMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: A representation of a hardware-based cryptographic token.
Notes: When working with Smart Card tokens, use or inherit from the TKSmartCardToken subclass instead.
Available in macOS 10.12+.

176.28.2 Methods

176.28.3 Constructor

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The private constructor.
See also:

- 176.28.4 Constructor(tokenDriver as TKTokenDriverMBS, instanceID as String) 21107

176.28.4 Constructor(tokenDriver as TKTokenDriverMBS, instanceID as String)

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Initializes a token using the specified driver.
Notes: tokenDriver: The driver of the token.
instanceID: A unique, persistent identifier for this token. This value is typically generated from the serial number of the target hardware.

Returns a new token object.
See also:

- 176.28.3 Constructor 21107

176.28.5 Destructor

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The destructor.

176.28.6 SetDelegate

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Sets the delegate, so you receive events.
Notes: Called by Constructor for you.

176.28.7 Properties

176.28.8 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Internal object reference.
Notes: (Read and Write property)

176.28.9 keychainContents as TKTokenKeychainContentsMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The contents of the keychain for this token.
Notes: (Read only property)

176.28.10 tokenDriver as TKTokenDriverMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The token driver.
Notes: (Read only property)

176.28.11 Events

176.28.12 createSession(byref error as NSErrorMBS) as TKTokenSessionMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Tells the delegate to create a session for the specified token.
Notes: token: The token.
error: If an error occurred, this method should return nil and populate this parameter with an object containing details of the error. The error object should have a domain equal to TKErrorDomain and a code

equal to a value defined by the TKErrorCode enumeration.

Return a new token session, or nil if an error occurred.

All operations for a token are performed within a session representing an authentication context. This delegate method is called whenever new authentication context is needed. For example, a client may want to perform a token operation using a keychain object that has an associated LAContext.

176.28.13 terminateSession(session as TKTokenSessionMBS)

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Tells the delegate to terminate the specified token session.

176.29 class TKTokenPasswordAuthOperationMBS

176.29.1 class TKTokenPasswordAuthOperationMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: An authentication operation for a cryptographic token.
Notes: The CryptoTokenKit framework provides the following concrete subclasses: TKTokenPasswordAuthOperationMBS, for password-based authentication, and TKTokenSmartCardPINAuthOperationMBS for Smart Card PIN-based authentication.
Subclass of the TKTokenAuthOperationMBS class.

176.29.2 Methods

176.29.3 Constructor

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The constructor.

176.29.4 Properties

176.29.5 password as String

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The password to be filled in when the finishWithError method is called.
Notes: (Read and Write property)

176.30 class TKTokenSessionMBS

176.30.1 class TKTokenSessionMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: A token session that manages the authentication state of a token.
Notes: A token session communicates with its delegate to perform operations with its token that are bound to the authentication state.

A session is always instantiated by a TKTokenMBS instance through the token's delegate when the framework detects access to the token from a new authentication session.

Never share the authentication status of a token, such as the PIN entered to unlock a smart card, with other token sessions.

176.30.2 Methods

176.30.3 Constructor

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The private constructor.
See also:

- 176.30.4 Constructor(token as TKTokenMBS) 21111

176.30.4 Constructor(token as TKTokenMBS)

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Initializes a token session with the specified token.
Notes: token: The token to which the initialized session is bound.

Returns a new token session created with the specified token.
See also:

- 176.30.3 Constructor 21111

176.30.5 Destructor

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The destructor.

176.30.6 SetDelegate

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Sets the delegat, so events fire.
Notes: Called for you by constructor.

176.30.7 Properties

176.30.8 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Internal object reference.
Notes: (Read and Write property)

176.30.9 token as TKTokenMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The token to which the session is bound.
Notes: (Read only property)

176.30.10 Events

176.30.11 beginAuthForOperation(operation as Integer, constraint as Variant, byref error as NSErrorMBS) as TKTokenAuthOperationMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Tells the delegate that authentication has begun for the specified operation and constraint.
Notes: self: The token session.
operation: The kind of operation.
constraint: The constraint to be satisfied.
error: If an error occurred, this method should return nil and populate this parameter with an object containing details of the error. The error object should have a domain equal to TKErrorDomain and a code equal to a value defined by the TKErrorCode enumeration.

Return the resulting context of the operation, or nil if an error occurred.

If you return an instance of a subclass of TKTokenAuthOperation that is provided by the CryptoTokenKit framework, the system will first fill in the context-specific properties, such as the password, before calling the finishWithError: method on the context.

176.30.12 decryptData(ciphertext as MemoryBlock, keyObjectID as Variant, algorithm as TKTokenKeyAlgorithmMBS, byref error as NSErrorMBS) as MemoryBlock

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Tells the delegate to decrypt a data object using the specified key and algorithm.
Notes: self: The token session.
ciphertext: The data to decrypt.
keyObjectID: The identifier of the public key object.
algorithm: The algorithm to be used for decryption.
error: If an error occurred, this method should return nil and populate this parameter with an object containing details of the error. The error object should have a domain equal to TKErrorDomain and a code equal to a value defined by the TKErrorCode enumeration.

Returns the decrypted data, or nil if an error occurred.

176.30.13 performKeyExchangeWithPublicKey(otherPartyPublicKeyData as MemoryBlock, keyObjectID as Variant, algorithm as TKTokenKeyAlgorithmMBS, parameters as TKTokenKeyExchangeParametersMBS, byref error as NSErrorMBS) as MemoryBlock

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Tells the delegate to perform a key exchange using the specified key and algorithm.
Notes: self: The token session.
otherPartyPublicKeyData: The public key of the other party.
keyObjectID: The identifier of the private key object.
algorithm: The algorithm to be used for key exchange.
parameters: Additional parameters used by algorithm to perform the key exchange.
error: If an error occurred, this method should return nil and populate this parameter with an object containing details of the error. The error object should have a domain equal to TKErrorDomain and a code equal to a value defined by the TKErrorCode enumeration.

Returns the result of the key exchange, or nil if an error occurred.

176.30.14 signData(dataToSign as MemoryBlock, keyObjectID as Variant, algorithm as TKTokenKeyAlgorithmMBS, byref error as NSErrorMBS) as MemoryBlock

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Tells the delegate to sign a data object using the specified key and algorithm.
Notes: self: The token session.
data: The data to sign.
keyObjectID: The identifier of the private key object.
algorithm: The algorithm to be used for signing.
error: If an error occurred, this method should return nil and populate this parameter with an object containing details of the error. The error object should have a domain equal to TKErrorDomain and a code equal to a value defined by the TKErrorCode enumeration.

Return the signed data, or nil if an error occurred.

176.30.15 supportsOperation(operation as Integer, keyObjectID as Variant, algorithm as TKTokenKeyAlgorithmMBS) as Boolean

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Asks the delegate whether the token session supports a given operation using the specified key and algorithm.
Notes: self: The token session.
operation: The operation to perform. For possible values, see kTokenOperation* constants.
keyObjectID: The identifier of the private key object.
algorithm: The algorithm to be used by the operation.

Returns true if the operation is supported; otherwise, false.

176.30.16 Constants

Token Operations

Constant	Value	Description
kTokenOperationDecryptData	3	Decrypt data using a private key.
kTokenOperationNone	0	No operation.
kTokenOperationPerformKeyExchange	4	Perform a Diffie-Hellman style cryptographic key exchange using a priva
kTokenOperationReadData	1	Read raw data of a certificate.
kTokenOperationSignData	2	Create a cryptographic signature using a private key.

176.31 class TKTokenSmartCardPINAuthOperationMBS

176.31.1 class TKTokenSmartCardPINAuthOperationMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: A Smart Card PIN authentication operation.
Notes: Subclass of the TKTokenAuthOperationMBS class.

176.31.2 Methods

176.31.3 Constructor

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The constructor.

176.31.4 Properties

176.31.5 APDUTemplate as MemoryBlock

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The template into which the PIN is filled in. nil by default.
Notes: If nil, the system will not attempt to authenticate by sending the formatted APDU to the Smart Card. Instead, the token itself is expected to perform the authentication. You are encouraged to provide an APDU template, if possible, as it allows the use of a hardware interface for secure PIN entry, provided one exists.
(Read and Write property)

176.31.6 PIN as String

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The PIN value resulting from performing the operation.
Notes: This property is set to the result of the operation after finishWithError: is called.

If the APDUTemplate property has a set value, this property is not set, as the PIN is automatically sent to the Smart Card using the specified template.
(Read and Write property)

176.31.7 PINByteOffset as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The offset, in bytes, within the APDU template to mark the location for filling in the PIN.
Notes: (Read and Write property)

176.31.8 PINFormat as TKSmartCardPINFormatMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The PIN format.
Notes: By default, this property is set to a TKSmartCardPINFormatMBS object initialized without any further configuration.
(Read and Write property)

176.31.9 smartCard as TKSmartCardMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: A Smart Card to which the formatted APDU is sent in order to authenticate.
Notes: This property is only used if the APDUTemplate property has a set value.
(Read and Write property)

176.32 class TKTokenWatcherMBS

176.32.1 class TKTokenWatcherMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: An object that tracks the tokens available in the system.
Notes: Create a token watcher and register an insertion handler to be notified when tokens are added to the system. You can also add removal handlers for specific tokens to be notified when those tokens are removed from the system.

176.32.2 Methods

176.32.3 Constructor

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Initializes a token watcher.

176.32.4 Destructor

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The destructor.

176.32.5 SetDelegate

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Sets the observer to call tokenIDsChanged event.
Notes: Called for you by constructor.

176.32.6 tokenIDs as String()

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The token IDs currently available in the system.
Notes: Each string in tokenIDs corresponds to the name of the token instance.

176.32.7 Properties

176.32.8 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Internal object reference.
Notes: (Read and Write property)

176.32.9 Events

176.32.10 Inserted(tokenID as string)

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The event called when the given token is inserted.

176.32.11 Removed(tokenID as string)

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The event called when the given token is removed.

176.32.12 tokenIDsChanged

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Event called when tokenID list changed.

Chapter 177

Social

177.1 class ACAccountCredentialMBS

177.1.1 class ACAccountCredentialMBS

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

Function: An ACAccountCredential object encapsulates the information needed to authenticate a user.
Notes: To create an account credential that uses the OAuth open authentication standard, use the Constructor.

177.1.2 Methods

177.1.3 Constructor(token as string, refreshToken as string, expiryDate as date)

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: Initializes an account credential using OAuth 2.
Notes: token: The client application,Äôs token.
refreshToken: The client application,Äôs refresh token.
expiryDate: The date the token expires.

Accounts can optionally use the OAuth open authentication standard to authenticate your client application. Instead of the user giving their username and password to log in, the server authenticates the user, and your client application receives a token that grants it access to specific resources for a defined duration. The authentication mechanism uses a key and secret scheme similar to the public and private keys used by ssh. A token is a unique, random string of letters and numbers that is paired with a secret to protect the token from being abused. You initialize account credentials using this token and secret token.

To learn more about OAuth, go to Hueniverse OAuth.
http://hueniverse.com/oauth/

- 177.1.5 Constructor(token as string, tokenSecret as string) 21120

177.1.4 Constructor(token as string, refreshToken as string, expiryDate as dateTime)

MBS Mac64bit Plugin, Plugin Version: 20.5, Platform: macOS, Targets: All.

Function: Initializes an account credential using OAuth 2.
See also:

- 177.1.3 Constructor(token as string, refreshToken as string, expiryDate as date) 21119
- 177.1.5 Constructor(token as string, tokenSecret as string) 21120

177.1.5 Constructor(token as string, tokenSecret as string)

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

Function: Initializes an account credential using OAuth.
Notes: Accounts can optionally use the OAuth open authentication standard to authenticate your client application. Instead of the user giving their username and password to log in, the server authenticates the user, and your client application receives a token that grants it access to specific resources for a defined duration. The authentication mechanism uses a key and secret scheme similar to the public and private keys used by ssh. A token is a unique, random string of letters and numbers that is paired with a secret to protect the token from being abused. You initialize account credentials using this token and secret token.

To learn more about OAuth, go to Hueniverse OAuth.
http://hueniverse.com/oauth/
See also:

- 177.1.3 Constructor(token as string, refreshToken as string, expiryDate as date) 21119
- 177.1.4 Constructor(token as string, refreshToken as string, expiryDate as dateTime) 21120

177.1.6 Properties

177.1.7 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

177.1.8 oauthToken as String

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

Function: The token used for the credential.
Notes: (Read and Write property)

177.2 class ACAccountMBS

177.2.1 class ACAccountMBS

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

Function: The account class.
Notes: An ACAccount object encapsulates information about a user account stored in the Accounts database. You can create and retrieve accounts using an ACAccountStore object. The ACAccountStore object provides an interface to the persistent Accounts database. For each user, all account objects belong to a single ACAccountStore object.

Available in OS X v10.8 and later in 64-bit applications.

177.2.2 Methods

177.2.3 Constructor(type as ACAccountTypeMBS)

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

Function: Initializes a new account of the specified type.
Notes: Available in OS X v10.8 and later.

177.2.4 Destructor

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

Function: The destructor.

177.2.5 Properties

177.2.6 accountDescription as String

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

Function: A human-readable description of the account.
Notes: This property is available if the user grants the application access to this account; otherwise it is "". (Read and Write property)

177.2.7 accountType as ACAccountTypeMBS

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

Function: The type of service account.
Notes: This property is required. You specify the account type using the Constructor. You can use the accountsWithAccountType method to retrieve all accounts of a particular type.
(Read and Write property)

177.2.8 credential as ACAccountCredentialMBS

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

Function: The credential used to authenticate the user of this account.
Notes: This property is required and must be set before the account is saved. For privacy reasons, this property is inaccessible after the account is saved.
(Read and Write property)

177.2.9 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

Function: Internal object reference.
Notes: (Read and Write property)

177.2.10 identifier as String

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

Function: A unique identifier for this account.
Notes: Use the accountWithIdentifier method to get an account with the specified identifier.
(Read only property)

177.2.11 Parent as ACAccountStoreMBS

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

Function: The account store for this account.
Notes: (Read only property)

177.2.12 username as String

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

Function: The username for this account.
Notes: This property must be set before the account is saved. After the account is saved, this property is available if the user grants the application access to this account; otherwise it is "".
(Read and Write property)

177.3 class ACAccountStoreMBS

177.3.1 class ACAccountStoreMBS

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

Function: The ACAccountStore class provides an interface for accessing, manipulating, and storing accounts.
Notes: To create and retrieve accounts from the Accounts database, you must create an ACAccountStore object. Each ACAccount object belongs to a single ACAccountStore object.

Available on Mac OS X 10.8 and later in 64-bit applications.

177.3.2 Methods

177.3.3 ACAccountStoreDidChangeNotification as string

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

Function: One of the notification names.
Notes: Posted when the accounts managed by this account store changed in the database. There is no userInfo dictionary associated with this notification.

This notification is sent if an account is saved or removed locally or externally. If you receive this notification, you should refetch all account objects.

The plugin automatically registeres this for the Changed event.

177.3.4 accounts as ACAccountMBS()

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

Function: The accounts managed by this account store.

177.3.5 accountsWithAccountType(type as ACAccountTypeMBS) as ACAccountMBS()

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

Function: Returns all accounts of the specified type.

177.3.6 accountTypeWithAccountTypeIdentifier(identifier as string) as ACAccountTypeMBS

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

Function: Returns an account type that matches the specified identifier.
Notes: typeIdentifier: The account type identifier.

177.3.7 accountWithIdentifier(identifier as string) as ACAccountMBS

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

Function: Returns the account with the specified identifier.

177.3.8 ACErrorDomain as string

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

Function: The error domain for account framework.

177.3.9 available as boolean

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

Function: Whether class is available.
Notes: Returns true on Mac OS X 10.8 in a 64-bit application.

177.3.10 Constructor

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

Function: The constructor.

177.3.11 Destructor

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

Function: The destructor.

177.3.12 removeAccount(account as ACAccountMBS, tag as Variant = nil)

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

Function: Removes an account from the account store.
Notes: account: The account to remove.

This call will fail if you don't have sufficient rights to remove the account.

177.3.13 renewCredentialsForAccount(account as ACAccountMBS, tag as Variant = nil)

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

Function: Renews account credentials when the credentials are no longer valid.
Notes: account: The account to renew credentials.

For Twitter and Sina Weibo accounts, this method will prompt the user to go to Settings to re-enter their password.
For Facebook accounts, if the access token has become invalid due to a regular expiration, this method will obtain a new one.
If the user has deauthorized your app, this renewal request will return ACAccountCredentialRenewResultRejected.

177.3.14 requestAccessToAccountsWithType(accountType as ACAccountTypeMBS, dic as dictionary, tag as Variant = nil)

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

Function: Obtains permission to access protected user properties.
Notes: accountType: The account type.
options: The account options.

Certain account types (such as Facebook) require an options dictionary. This method will throw an NSInvalidArgumentException if the options dictionary is not provided for such account types. Conversely, if the account type does not require an options dictionary, the options parameter must be nil.

177.3.15 saveAccount(account as ACAccountMBS, tag as Variant = nil)

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

Function: Saves an account to the Accounts database.
Notes: account: The account to save.

If the account type supports authentication and the account is not authenticated, the account server uses the account's credentials to authenticate it. If the authentication is successful, the account is saved; otherwise it is not saved.

177.3.16 Properties

177.3.17 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

177.3.18 Events

177.3.19 Changed

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

Function: Event called when database changed.
Notes: Posted when the accounts managed by this account store changed in the database. There is no userInfo dictionary associated with this notification.

This notification is sent if an account is saved or removed locally or externally. If you receive this notification, you should refetch all account objects.

177.3.20 removeAccountCompleted(account as ACAccountMBS, success as boolean, error as NSErrorMBS, tag as Variant)

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

Function: The event called when account removing completed.

177.3.21 renewCredentialsForAccountCompleted(account as ACAccountMBS, renewResult as Integer, error as NSErrorMBS, tag as Variant)

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

Function: Event called when renew credentials completed.

177.3.22 requestAccessCompleted(granted as boolean, error as NSErrorMBS, accountType as ACAccountTypeMBS, tag as Variant)

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

Function: The event called when requestAccessToAccountsWithType completed.

177.3.23 saveAccountCompleted(success as boolean, error as NSErrorMBS, account as ACAccountMBS, tag as Variant)

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

Function: The account save completed.

177.3.24 Constants

Renew Status Codes

Constant	Value	Description
ACAccountCredentialRenewResultFailed	2	A non-user-initiated cancel of the prompt. Try again.
ACAccountCredentialRenewResultRejected	1	Renewal failed because the user revoked your access to their accou
ACAccountCredentialRenewResultRenewed	0	The account,Äôs credentials have been renewed and are now asso the account.

Errors

Constant	Value	Description
ACErrorAccessDeniedByProtectionPolicy	10	Due to the current protection policy in effect, we couldn't fetch a cr
ACErrorAccessInfoInvalid	8	The client's access info dictionary has incorrect or missing values.
ACErrorAccountAlreadyExists	5	Account wasn't added because it already exists.
ACErrorAccountAuthenticationFailed	3	Account wasn't saved because authentication of the supplied credent
ACErrorAccountMissingRequiredProperty	2	Account wasn't saved because it is missing a required property.
ACErrorAccountNotFound	6	Account wasn't deleted because it could not be found.
ACErrorAccountTypeInvalid	4	Account wasn't saved because the account type is invalid.
ACErrorClientPermissionDenied	9	Your client does not have access to the requested data.
ACErrorCredentialNotFound	11	Yo, I tried to find your credential, but it must have run off!
ACErrorFetchCredentialFailed	12	Something bad happened on the way to the keychain
ACErrorInvalidClientBundleID	16	The client making the request does not have a valid bundle ID.
ACErrorPermissionDenied	7	The operation didn't complete because the user denied permission.
ACErrorRemoveCredentialFailed	14	Unable to remove credential
ACErrorStoreCredentialFailed	13	Unable to store credential
ACErrorUnknown	1	Unknown error
ACErrorUpdatingNonexistentAccount	15	Account save failed because the account being updated has been ren

177.4 class ACAccountTypeMBS

177.4.1 class ACAccountTypeMBS

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

Function: An ACAccountType object encapsulates information about all accounts of a particular type.
Notes: You do not create account type objects directly. To obtain an account type, use the Constructor or the accountType property of an account object. Account Type Identifiers describes the identifiers for currently supported account types. You can also use the accountsWithAccountType method to obtain all accounts of a particular type.

Available in OS X v10.8 and later in 64-bit applications.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

- MBS Xojo Plugins, version 18.5pr3

177.4.2 Methods

177.4.3 ACAccountTypeIdentifierFacebook as string

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

Function: Identifier for the Facebook account type.

177.4.4 ACAccountTypeIdentifierLinkedIn as string

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

Function: Identifier for the LinkedIn account type.
Notes: Available in OS X v10.9 and later.

177.4.5 ACAccountTypeIdentifierSinaWeibo as string

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

Function: Identifier for the Sina Weibo account type.

177.4.6 ACAccountTypeIdentifierTencentWeibo as string

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

Function: Identifier for the Tencent Weibo account type.
Notes: Available in OS X v10.9 and later.

177.4.7 ACAccountTypeIdentifierTwitter as string

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

Function: Identifier for the Twitter account type.

177.4.8 accessGranted as boolean

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

Function: A Boolean value indicating whether the user granted the application access to accounts of this type.
Notes: True if the application has access to accounts of this type; otherwise false.

177.4.9 accountTypeDescription as string

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

Function: A human-readable description of the account type.

177.4.10 ACFacebookAppIdKey as string

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

Function: Your Facebook App ID, as it appears on the Facebook website.

177.4.11 ACFacebookAudienceEveryone as string

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

Function: Posts from your app are visible to everyone.

177.4.12 ACFacebookAudienceFriends as string

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

Function: Posts are visible only to friends.

177.4.13 ACFacebookAudienceKey as string

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

Function: Only required when posting permissions are requested.

177.4.14 ACFacebookAudienceOnlyMe as string

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

Function: Posts are visible to the user only.

177.4.15 ACFacebookPermissionsKey as string

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

Function: An array of of the permissions you're requesting.

177.4.16 ACLinkedInAppIdKey as string

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

Function: Your LinkedIn App ID (or API Key), as it appears on the LinkedIn website.

177.4.17 ACLinkedInPermissionsKey as string

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

Function: An array of of the LinkedIn permissions you're requesting.

177.4.18 ACTencentWeiboAppIdKey as string

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

Function: Tencent App ID

177.4.19 Constructor

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

Function: The private constructor.

177.4.20 identifier as string

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

Function: The unique identifier for the account type.

177.4.21 Properties

177.4.22 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

177.5 class CustomNSSharingServiceMBS

177.5.1 class CustomNSSharingServiceMBS

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: The class for a custom sharing service.
Notes: You only use it to get your own service inside your app into sharing picker.

Please call Close method when you want to stop the service.
Subclass of the NSSharingServiceMBS class.

177.5.2 Methods

177.5.3 Constructor(title as string, image as NSImageMBS, alternateImage as NSImageMBS = nil, DelegateHandler as NSSharingServiceDelegateMBS = nil, tag as Variant = nil)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Creates a custom sharing service object.
Notes: title: The custom sharing service name.
image: The image that represents the sharing service
alternateImage: The alternate image that represents the sharing service
Delegate: The delegate where events are called for this service.

Custom sharing services can be added to the NSSharingServicePicker with the sharingServicesForItems event.
Available in OS X v10.8 and later.

Please call Close method when you want to stop the service.

177.5.4 Events

177.5.5 performCustomService(tag as Variant)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Called when user selected this service and you need to perform your work.

177.6 class NSSharingServiceDelegateMBS

177.6.1 class NSSharingServiceDelegateMBS

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: The NSSharingServiceDelegate protocol allows customization of the position and animation of the share sheet as well as be notified of the success or failure of the item being shared.
Notes: Available in OS X v10.8 and later.

177.6.2 Methods

177.6.3 Constructor

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: The constructor.

177.6.4 Destructor

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: The destructor.

177.6.5 Properties

177.6.6 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: The internal object reference.
Notes: (Read and Write property)

177.6.7 Events

177.6.8 didCompleteForItems(service as NSSharingServiceMBS, items as NSSharingServiceItemsMBS, error as NSErrorMBS)

MBS MacFrameworks Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Sharing did complete.
Notes: When an NSSharingServiceNameCloudSharing sharing service is dismissed it will invoke this method on the delegate, with an error if there was any. If the delegate implements this method, NSSharingServiceNameCloudSharing will not send didFailToShareItems or didShareItems events.

177.6.9 didFailToShareItems(service as NSSharingServiceMBS, items as NSSharingServiceItemsMBS, error as NSErrorMBS)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Invoked when the sharing service encountered an error when sharing items.
Notes: sharingService: The sharing service.
items: The items being shared.
error: The error that was encountered when trying to share the item. If the error is NSUserCancelledError, the user simply cancelled the error.

Available in OS X v10.8 and later.

177.6.10 didSaveShare(service as NSSharingServiceMBS, share as Variant)

MBS MacFrameworks Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Cloud sharing did save.
Notes: When an NSSharingServiceNameCloudSharing sharing service successfully saves modifications to the CKShare, it will invoke this method on the delegate with the last-known state of the CKShareMBS on the server.

177.6.11 didShareItems(service as NSSharingServiceMBS, items as NSSharingServiceItemsMBS)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Invoked when the sharing service has finished sharing the items.
Notes: sharingService: The sharing service.

items: The items being shared.

Available in OS X v10.8 and later.

177.6.12 didStopSharing(service as NSSharingServiceMBS, share as Variant)

MBS MacFrameworks Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Cloud sharing did stop.
Notes: When an NSSharingServiceNameCloudSharing sharing service stops sharing it will delete the CKShare from the server, then invoke this method on the delegate with the last-known state of the CKShareMBS.

177.6.13 optionsForSharingService(service as NSSharingServiceMBS, provider as Variant) as Integer

MBS MacFrameworks Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Queries what options are allowed for the share.
Notes: The options returned by this method describe how the user is allowed to configure the share: whether the share is public or private, and whether participants have read-only or read/write permissions. If this method is not implemented, NSCloudKitSharingServiceStandard is assumed.

177.6.14 sourceFrameOnScreenForShareItem(service as NSSharingServiceMBS, item as Variant) as NSRectMBS

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Invoked when the sharing service is performed and the sharing window is displayed, to present a transition between the original items and the sharing window.
Notes: sharingService: The sharing service.
item: The item being shared.

Return the rectangle, in screen coordinates, to display the transition.

177.6.15 sourceWindowForShareItems(service as NSSharingServiceMBS, items as NSSharingServiceItemsMBS, scope as Integer) as NSWindowMBS

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Returns the window that contained the share items.
Notes: sharingService: The sharing service.
items: The items being shared.
sharingContentScope: The sharing content scope. The sharing scope can be modified from the default value of NSSharingContentScopeItem by setting a different value in the out parameter sharingContentScope.

Return the window of the shared items.

177.6.16 transitionImageForShareItem(service as NSSharingServiceMBS, item as Variant, contentRect as NSRectMBS) as NSImageMBS

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Invoked to allow returning a custom transition image when sharing an item.
Notes: sharingService: The sharing service.
item: The shared item.
contentRect: The content rectangle is the frame of the actual content inside the transition image, excluding all decorations. For example, if the transition image is a QuickLook thumbnail, the value would be QLThumbnailGetContentRect.

Return the image to display for the sharing transition. Its size should exactly match that of the original image.

177.6.17 willShareItems(service as NSSharingServiceMBS, items as NSSharingServiceItemsMBS)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Invoked when the sharing service will share the specified items.
Notes: sharingService: The sharing service.
items: The items being shared.
Available in OS X v10.8 and later.

177.6.18 Constants

Cloud Sharing Service Options

Constant	Value	Description
NSCloudKitSharingServiceAllowPrivate	2	The user is allowed to share privately.
NSCloudKitSharingServiceAllowPublic	1	The user is allowed to share publicly.
NSCloudKitSharingServiceAllowReadOnly	16	The user is allowed to grant participants read-only permissions.
NSCloudKitSharingServiceAllowReadWrite	32	The user is allowed to grant participants read/write permissions.
NSCloudKitSharingServiceStandard	0	Allow the user to configure the share with the standard set of optic

Sharing Scope Constants

Constant	Value	Description
NSSharingContentScopeFull	2	Used when sharing the whole content of the current document, for example, the URL of the webpage. Available in OS X v10.8 and later.
NSSharingContentScopeItem	0	Used when sharing a clearly identified item, for example, a file represented by its icon. Available in OS X v10.8 and later.
NSSharingContentScopePartial	1	Used when sharing a portion of a more global content, for example, part of a webpage. Available in OS X v10.8 and later.

177.7 class NSSharingServiceItemsMBS

177.7.1 class NSSharingServiceItemsMBS

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: A collection class for files, images, texts and URLs.
Example:

```
Var p as Picture = LogoMBS(500)
Var t as new NSSharingServiceItemsMBS
Var image as new NSImageMBS(p)
t.AddImage image
t.AddText "Hello World. This is a great app!"
```

Notes: Create an object from this class, add some items and pass to the share methods.

177.7.2 Methods

177.7.3 AddAttributedString(AttributedString as NSAttributedStringMBS)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Adds one attributed string to the collection.
See also:

- 177.7.4 AddAttributedString(AttributedStrings() as NSAttributedStringMBS) 21142

177.7.4 AddAttributedString(AttributedStrings() as NSAttributedStringMBS)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Adds attributed strings to the collection.
See also:

- 177.7.3 AddAttributedString(AttributedString as NSAttributedStringMBS) 21142

177.7.5 AddFile(file as folderitem)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Adds one file to the collection.

177.7.6 AddFiles(files() as folderitem)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Adds an array of files to the collection.

177.7.7 AddImage(image as NSImageMBS)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Adds one image to the collection.

177.7.8 AddImages(images() as NSImageMBS)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Adds an array of images to the collection.

177.7.9 AddText(text as string)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Adds one text to the collection.
See also:

- 177.7.10 AddText(texts() as string) 21143

177.7.10 AddText(texts() as string)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Adds an array of texts to the collection.
See also:

- 177.7.9 AddText(text as string) 21143

177.7.11 AddURL(URL as string)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Add one URL to the collection.
See also:

• 177.7.12 AddURL(URLs() as string) 21144

177.7.12 AddURL(URLs() as string)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Adds an array of URLs to the collection.
See also:

• 177.7.11 AddURL(URL as string) 21143

177.7.13 Constructor

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: The constructor.

177.7.14 count as Integer

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Returns the number of items in this collection.

177.7.15 Images as NSImageMBS()

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Returns all images in the collection.

177.7.16 objectAtIndex(index as Integer) as Variant

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Returns object at the given index.
Notes: Index is from 0 to count-1.
Returns URLs and files as string with URL.

177.7.17 Texts as string()

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Returns array with all texts in this collection.

177.7.18 URLs as string()

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Returns array with all URLs.
Notes: As files are also handled as URLs, the array contains also files in the collections as URLs.

177.7.19 Properties

177.7.20 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: The internal object reference.
Notes: (Read and Write property)

177.8 class NSSharingServiceMBS

177.8.1 class NSSharingServiceMBS

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: The NSSharingService class is used to provide a consistent user experience when sharing items on OS X.
Notes: For example, items can be: NSURL objects, NSString objects, NSImage objects, video (through file URLs), or any object which implements the NSPasteboardWriting protocol.

For any item or group of items, the NSSharingServiceMBS will display a sharing sheet to allow the user to pre-visualize what will be shared to the service. A sharing service can: create a post on a social network like Twitter or Facebook, send a message by email or iMessage, upload videos to viewing services, or send a file by AirDrop.

177.8.2 Methods

177.8.3 attachmentFileURLs as String()

MBS MacFrameworks Plugin, Plugin Version: 21.2, Platform: macOS, Targets: Desktop only.

Function: Array of file URLs representing the files that were shared.

177.8.4 Available as boolean

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Whether sharing services are available.
Notes: Returns true on Mac OS X 10.8.

177.8.5 canPerformWithItems(items as NSSharingServiceItemsMBS) as Boolean

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Returns whether the service can share all the specified items.
Notes: items: The items to share.

Return true if the service can share all the items; false otherwise. If items is nil, the method will return true when the service is configured.

This method can be used to validate a custom user interface such as a dedicated Twitter button. Therefore you could call it once at launch time with nil items to check whether to display the button or not, and then with real items to enable and disable the button depending on the context or selection.

Available in OS X v10.8 and later.

177.8.6 Close

MBS MacFrameworks Plugin, Plugin Version: 14.2, Platform: macOS, Targets: Desktop only.

Function: Closes the sharing services.
Notes: Same as destructor, but closes now, not later.

177.8.7 Constructor(name as string)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Create a sharing service instance representing the specified service name.
Notes: name: The service name. See NSSharingServiceName* methods.

177.8.8 Destructor

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: The destructor.

177.8.9 NSSharingServiceNameAddToAperture as string

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: One of the sharing service names.
Notes: Adds the content to Aperture.
Available in OS X v10.8 and later.

177.8.10 NSSharingServiceNameAddToIPhoto as string

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: One of the sharing service names.
Notes: Adds the content to iPhoto.
Available in OS X v10.8 and later.

177.8.11 NSSharingServiceNameAddToSafariReadingList as string

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: One of the sharing service names.
Notes: Add the content to the Safari Reading List.
Available in OS X v10.8 and later.

177.8.12 NSSharingServiceNameCloudSharing as string

MBS MacFrameworks Plugin, Plugin Version: 21.3, Platform: macOS, Targets: Desktop only.

Function: One of the sharing service names.
Notes: Share via iCloud.
Available in macOS 10.12 and later.

177.8.13 NSSharingServiceNameComposeEmail as string

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: One of the sharing service names.
Notes: Creates an email messages with the content.
Available in OS X v10.8 and later.

177.8.14 NSSharingServiceNameComposeMessage as string

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: One of the sharing service names.
Notes: Creates a Messages methods with the content.
Available in OS X v10.8 and later.

177.8.15 NSSharingServiceNamePostImageOnFlickr as string

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: One of the sharing service names.
Notes: Posts the image on Flickr.
Available in OS X v10.8 and later.

177.8.16 NSSharingServiceNamePostOnFacebook as string

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: One of the sharing service names.
Notes: Post the content to Facebook.
Available in OS X v10.8 and later.

177.8.17 NSSharingServiceNamePostOnSinaWeibo as string

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: One of the sharing service names.
Notes: Posts the content on a Sina Weibo, Chinese microblogging (weibo) website. Akin to a hybrid of Twitter and Facebook.
Available in OS X v10.8 and later.

177.8.18 NSSharingServiceNamePostOnTwitter as string

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: One of the sharing service names.
Notes: Posts the content on Twitter.
Available in OS X v10.8 and later.

177.8.19 NSSharingServiceNamePostVideoOnTudou as string

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: One of the sharing service names.
Notes: Posts the video on the video sharing service Tudou, based in the People's Republic of China.
Available in OS X v10.8 and later.

177.8.20 NSSharingServiceNamePostVideoOnVimeo as string

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: One of the sharing service names.
Notes: Posts the video on the video sharing service Vimeo.
Available in OS X v10.8 and later.

177.8.21 NSSharingServiceNamePostVideoOnYouku as string

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: One of the sharing service names.
Notes: Posts the video on the video sharing service Youku, based in the People's Republic of China.
Available in OS X v10.8 and later.

177.8.22 NSSharingServiceNameSendViaAirDrop as string

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: One of the sharing service names.
Notes: Sends the file via Air Drop.
Available in OS X v10.8 and later.

177.8.23 NSSharingServiceNameUseAsDesktopPicture as string

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: One of the sharing service names.
Notes: Replaces the user's desktop image with the content.
Available in OS X v10.8 and later.

177.8.24 NSSharingServiceNameUseAsTwitterProfileImage as string

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: One of the sharing service names.
Notes: Replaces the Twitter profile image with the content.
Available in OS X v10.8 and later.

177.8.25 performWithItems(items as NSSharingServiceItemsMBS)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Manually performs the service on the provided items.
Notes: items: The items to share.

In most cases this will display a sharing window.
Available in OS X v10.8 and later.

177.8.26 recipients as String()

MBS MacFrameworks Plugin, Plugin Version: 21.2, Platform: macOS, Targets: Desktop only.

Function: The list of recipients.

177.8.27 SetDelegate(DelegateHandler as NSSharingServiceDelegateMBS)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Specifies the delegate of the sharing service.

177.8.28 setRecipients(recipients() as String)

MBS MacFrameworks Plugin, Plugin Version: 21.2, Platform: macOS, Targets: Desktop only.

Function: Sets the list of recipients.
Example:

```
// compose email
Var items As New NSSharingServiceItemsMBS

// styled text from text area control
Var tv As NSTextViewMBS = TextArea1.NSTextViewMBS
items.AddAttributedString tv.textStorage

// find service
Var service As New NSSharingServiceMBS("com.apple.share.Mail.compose")

service.subject = "Test Email"
service.setRecipients Array("test@test.test")
```

service.performWithItems items

Notes: List of emails for sending an email message.

177.8.29 sharingServiceNamed(name as string) as NSSharingServiceMBS

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Returns a sharing service instance representing the specified service name.
Notes: serviceName: The service name. See NSSharingServiceName* methods.

Returns an instance of NSSharingService for the specified service name.
Available in OS X v10.8 and later.

177.8.30 sharingServicesForItems(items as NSSharingServiceItemsMBS) as NSSharingServiceMBS()

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Returns a list of sharing services which could share all the provided items together.
Example:

```
// get an image
Var logo as Picture = LogoMBS(500)
Var nsi as new NSImageMBS( logo )

// make items object
Var nshi as new NSSharingServiceItemsMBS
nshi.AddImage nsi

// query services which are supported
Var ssl(-1) as NSSharingServiceMBS = NSSharingServiceMBS.sharingServicesForItems( nshi )

// show services
for each s as NSSharingServiceMBS in ssl
msgBox s.title
next
```

Notes: items: The items to share.

Returns an array of sharing services to allow for items.
This method can be used to build a custom user interface or to populate a contextual menu.

Available in OS X v10.8 and later.

177.8.31 Properties

177.8.32 accountName as String

MBS MacFrameworks Plugin, Plugin Version: 21.2, Platform: macOS, Targets: Desktop only.

Function: Account name used for sending on Twitter or Sina Weibo
Notes: (Read only property)

177.8.33 alternateImage as NSImageMBS

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: The alternate image representing the sharing service. (read-only)
Notes: Available in OS X v10.8 and later.
(Read only property)

177.8.34 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: The internal object reference.
Notes: (Read and Write property)

177.8.35 image as NSImageMBS

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: The primary image representing the sharing service. (read-only)
Notes: (Read only property)

177.8.36 menuItemTitle as String

MBS MacFrameworks Plugin, Plugin Version: 21.2, Platform: macOS, Targets: Desktop only.

Function: Title of the service in the Share menu.
Notes: Can be modified.

(Read and Write property)

177.8.37 messageBody as String

MBS MacFrameworks Plugin, Plugin Version: 21.2, Platform: macOS, Targets: Desktop only.

Function: Message body as string.
Notes: (Read only property)

177.8.38 permanentLink as String

MBS MacFrameworks Plugin, Plugin Version: 21.2, Platform: macOS, Targets: Desktop only.

Function: URL to access the post on Facebook, Twitter, Sina Weibo, etc. (also known as permalink)
Notes: (Read only property)

177.8.39 subject as String

MBS MacFrameworks Plugin, Plugin Version: 21.2, Platform: macOS, Targets: Desktop only.

Function: Subject for email or text message.
Example:

```
// compose email
Var items As New NSSharingServiceItemsMBS

// styled text from text area control
Var tv As NSTextViewMBS = TextArea1.NSTextViewMBS
items.AddAttributedString tv.textStorage

// find service
Var service As New NSSharingServiceMBS("com.apple.share.Mail.compose")

service.subject = "Test Email"
service.setRecipients Array("test@test.test")

service.performWithItems items
```

Notes: (Read and Write property)

177.8.40 title as string

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: The title of the sharing service. (read-only)
Example:

```
// get an image
Var logo as Picture = LogoMBS(500)
Var nsi as new NSImageMBS( logo )

// make items object
Var nshi as new NSSharingServiceItemsMBS
nshi.AddImage nsi

// query services which are supported
Var ssl(-1) as NSSharingServiceMBS = NSSharingServiceMBS.sharingServicesForItems( nshi )

// show services
for each s as NSSharingServiceMBS in ssl
msgBox s.title
next
```

Notes: (Read only property)

177.9 class NSSharingServicePickerMBS

177.9.1 class NSSharingServicePickerMBS

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: The NSSharingServicePicker class presents a list of sharing services, so that the user can choose a service to share an item.
Notes: When a service is chosen, the picker automatically executes it, which presents the sharing window.

The events in this class allows customizing the picker's available services, where it appears, and allows assigning the delegate object for the NSSharingService delegate.

Available in OS X v10.8 and later.

177.9.2 Methods

177.9.3 Available as boolean

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Whether sharing services are available.
Notes: Returns true on Mac OS X 10.8.

177.9.4 Constructor(items as NSSharingServiceItemsMBS)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Initializes a new sharing service picker for the selected items.
Notes: Available in OS X v10.8 and later.

177.9.5 Destructor

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: The destructor.

177.9.6 showRelativeToRect(r as NSRectMBS, view as NSViewMBS, preferredEdge as Integer)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Shows the picker, populated with sharing services related to the instance items.
Notes: rect: The rectangle the picker should be shown relative to. The coordinates are in the view coordinate system. Passing NSRectMBS.Zero causes the view bounds to be used.
view: The view.
preferredEdge: The preferred edge of the view to display the picker. See edge constants for the possible values.

When the user selects one of the sharing services, the sharing service will be performed. This method must be called on mouseDown.

Available in OS X v10.8 and later.

177.9.7 Properties

177.9.8 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: The internal object reference.
Notes: (Read and Write property)

177.9.9 Events

177.9.10 delegateForSharingService(service as NSSharingServiceMBS) as NSSharingServiceDelegateMBS

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Invoked to provide the delegate to the sharing service when the user has selected a service.
Notes: sharingServicePicker: The sharing service picker.
sharingService: The selected sharing service.

Return a NSSharingServiceDelegateMBS object the sharing service should use for this item's transfer.
Available in OS X v10.8 and later.

177.9.11 didChooseSharingService(service as NSSharingServiceMBS)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Invoked when the user has selected a service and before it is executed.
Notes: sharingServicePicker: The sharing service picker.
service: The sharing service the user selected. Invoked to give the delegate to the sharing service that is about to be executed.

Available in OS X v10.8 and later.

177.9.12 sharingServicesForItems(items as NSSharingServiceItemsMBS, proposedServices() as NSSharingServiceMBS) as NSSharingServiceMBS()

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Invoked to allow the delegate to customize exactly what appears in the sharing service picker before it is presented.
Notes: sharingServicePicker: The sharing service picker.
items: The items to share.
proposedServices: The proposed services to share the content.

Return the sharing services to use.
If you have no code in the event, the proposedServices are returned automatically.

The delegate can reorder, remove default services or add custom services before the picker is presented. It's possible to add custom services by mutating the proposedSharingServices array and adding new NSSharingService instances.

Available in OS X v10.8 and later.

177.9.13 Constants

Edge Constants

Constant	Value	Description
NSMaxXEdge	2	the maximum X edge. Typically right side.
NSMaxYEdge	3	The maximum Y edge. Topically the top edge of a window.
NSMinXEdge	0	the minimum X edge. Typically left side.
NSMinYEdge	1	Minimum Y. As coordinates are upside down in the Cocoa world, this is the bottom edge of a window.

177.10 class SLRequestMBS

177.10.1 class SLRequestMBS

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

Function: The SLRequest object encapsulates the properties of an HTTP request, providing a convenient template for you to make requests.
Notes: You send a request to a social networking service to perform some operation on behalf of the user or to retrieve user information.

HTTP requests have these common components: an HTTP request method (GET, POST, PUT, or DELETE), a URL identifying the operation to perform, a set of query parameters, and an optional multipart POST body containing additional data. The values for these properties depend on the request you are sending and the target service provider. Refer to each supported social networking site,Äôs documentation for possible values. Links to documentation are provided in Table 1.

Use the requestForServiceType:requestMethod:URL:parameters: method to initialize a newly created SLRequest object passing the required property values. Use the addMultipartData:withName:type: to optionally specify a multipart POST body. After you create your request, use the performRequestWithHandler: method to send the request, specifying the handler to call when the request is done.

If you already have a sending mechanism, you can use the preparedURLRequest method to create the request that you send using an NSURLConnection object. If the request requires user authorization, set the account property to an ACAccount object.

Available in OS X v10.8 and later. 64bit only.

177.10.2 Methods

177.10.3 addMultipartData(data as memoryblock, name as string, type as string, filename as string)

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

Function: Specifies a named multipart POST body for this request.
Notes: data: The data for the multipart POST body, such as an image or text.
name: The name of the multipart POST body. This is the name that a specific social service expects.
type: The type of the multipart POST body. This is the MIME content type of the multipart data.
filename: The filename of the attachment that you want to POST. Many social services require a filename in order to accept certain POST requests, such as uploading an image or video. If your multipart data does not require a filename, pass in nil.

Possible parameter values are dependent on the target service. This information, as well as guidance on when to use a multipart POST body, is documented by the service provider.

177.10.4 Available as boolean

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

Function: Whether this class is available.
Notes: Returns true on OS X 10.8 and newer in a 64-bit app.

177.10.5 Constructor(serviceType as string, requestMethod as Integer, URL as string, parameters as dictionary)

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

Function: Initializes a newly created request object with the specified properties.
Notes: serviceType: The social networking service type. e.g. SLServiceTypeTwitter
requestMethod: The method to use for this HTTP request. e.g. SLRequestMethodPOST
url: The destination URL for this HTTP request. The values and formatting for the URL are dependent on the target service and are documented by the service provider.
parameters: The parameters for this HTTP request. The values and formatting are dependent on the target service and are documented by the service provider.

The newly initialized request object.
Use this method to initialize an SLRequest. The value and formatting of each parameter is dependent on the target service.

177.10.6 performRequest(tag as Variant = nil)

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

Function: Performs an asynchronous request and calls the RequestHandler event when done.

177.10.7 preparedURLRequest as NSURLRequestMBS

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

Function: Returns an authorized URL request that can be sent using an NSURLConnectionMBS object.
Notes: An OAuth-compatible NSURLRequest object that allows an app to act on behalf of the user while keeping the user,Äôs password private. The NSURLRequest is signed as OAuth1 by default, or OAuth2 by

adding the appropriate token based on the user,Äôs account.

Use this method to modify your request before sending. By setting the account correctly, this method will automatically add any necessary tokens.

177.10.8 SLServiceTypeFacebook as string

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

Function: A string constant that identifies the social networking site, Facebook.

177.10.9 SLServiceTypeLinkedIn as string

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

Function: A string constant that identifies the social networking site, LinkedIn.

177.10.10 SLServiceTypeSinaWeibo as string

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

Function: A string constant that identifies the social networking site, Sina Weibo.

177.10.11 SLServiceTypeTencentWeibo as string

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

Function: A string constant that identifies the social networking site, Tencent Weibo.

177.10.12 SLServiceTypeTwitter as string

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

Function: A string constant that identifies the social networking site, Twitter.

177.10.13 Properties

177.10.14 account as ACAccountMBS

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

Function: Account information used to authenticate the request.
Notes: The account is used to sign a request with OAuth1 services or to add an access token for OAuth2 services. By associating the account with the request, the necessary tokens are added automatically. The default value is nil.
(Read and Write property)

177.10.15 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

177.10.16 parameters as Dictionary

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

Function: The parameters for this request.
Notes: Use this property to look up the query parameters of the HTTP request that was set in Constructor. Possible values are dependent on the target service and are documented by the service provider.
(Read only property)

177.10.17 requestMethod as Integer

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

Function: The method to use for this request.
Notes: Use this property to look up the method of the HTTP request that was set in requestForServiceType.
(Read only property)

177.10.18 URL as String

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

Function: The destination URL for this request.
Notes: (Read only property)

177.10.19 Events

177.10.20 performRequestCompleted(responseData as memoryblock, urlResponse as NSURLResponseMBS, error as NSErrorMBS, tag as Variant)

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

Function: The callback handler for a request..
Notes: responseData: The data returned by the request. The format of this data is dependent on the target service.
urlResponse: The URL response returned by the request that includes the HTTP response codes.
error: An error identifier.
Possible values are dependent on the target service and are documented by the service provider.

177.10.21 Constants

Constants

Constant	Value	Description
SLRequestMethodDELETE	2	One of the request types. Deletes the specified resource. Available in OS X v10.8 and later.
SLRequestMethodGET	0	One of the request types. Requests information from the specified resource. Use a GET request to fetch information from the specified server such as character limits or a user,Äôs timeline. Available in OS X v10.8 and later.
SLRequestMethodPOST	1	One of the request types. Submits data to be processed. Use a POST request to submit information to the specified server such as a status update or an image. Available in OS X v10.8 and later.
SLRequestMethodPUT	3	One of the request types. Uses a PUT request to submit the data. Available in OS X v10.9 and later.

Chapter 178

Sort

178.1 module SortMBS

178.1.1 module SortMBS

MBS Util Plugin, Plugin Version: 24.0, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Useful sort methods for Xojo arrays.
Example:

```
// fill two arrays
Var test1() As String
Var test2() As String

For i As Integer = 1 To 100000
test1.append Str(i)
test2.append Str(i)
Next

// now sort using Xojo and MBS
Var m1 As Double = Microseconds
test1.Sort
Var m2 As Double = Microseconds
sortArrayMBS test2
Var m3 As Double = Microseconds

// check times
Var d1 As Double = m2-m1
Var d2 As Double = m3-m2

MessageBox d1.ToString+" in Xojo, "+d2.ToString+" in MBS"
```

Notes: Functions to sum up values in arrays, copying values or comparing values is much faster inside the plugin, than if you code this yourself in Xojo. Methods are available as method in SortMBS module as well as using extends on the Array directly.

Allows the usage of delegates for deciding how to sort yourself.

178.1.2 Methods

178.1.3 AddArrayMBS(array1() as Boolean, array2() as Boolean)

MBS Util Plugin, Plugin Version: 24.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Adds the content of the second array to the first one.
See also:

- 178.1.5 AddArrayMBS(array1() as Currency, array2() as Currency) 21167
- 178.1.6 AddArrayMBS(array1() as Date, array2() as Date) 21168
- 178.1.7 AddArrayMBS(array1() as DateTime, array2() as DateTime) 21168
- 178.1.8 AddArrayMBS(array1() as Double, array2() as Double) 21169
- 178.1.9 AddArrayMBS(array1() as Int32, array2() as Int32) 21169
- 178.1.12 AddArrayMBS(array1() as Ptr, array2() as Ptr) 21171
- 178.1.13 AddArrayMBS(array1() as Single, array2() as Single) 21171
- 178.1.14 AddArrayMBS(array1() as String, array2() as String) 21172
- 178.1.15 AddArrayMBS(array1() as UInt32, array2() as UInt32) 21172
- 178.1.16 AddArrayMBS(array1() as UInt64, array2() as UInt64) 21173

178.1.4 AddArrayMBS(array1() as Color, array2() as Color)

MBS Util Plugin, Plugin Version: 24.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Adds the content of the second array to the first one.
See also:

- 178.1.3 AddArrayMBS(array1() as Boolean, array2() as Boolean) 21166
- 178.1.5 AddArrayMBS(array1() as Currency, array2() as Currency) 21167
- 178.1.6 AddArrayMBS(array1() as Date, array2() as Date) 21168
- 178.1.7 AddArrayMBS(array1() as DateTime, array2() as DateTime) 21168
- 178.1.9 AddArrayMBS(array1() as Int32, array2() as Int32) 21169
- 178.1.10 AddArrayMBS(array1() as Int64, array2() as Int64) 21170
- 178.1.11 AddArrayMBS(array1() as Object, array2() as Object) 21170
- 178.1.13 AddArrayMBS(array1() as Single, array2() as Single) 21171
- 178.1.14 AddArrayMBS(array1() as String, array2() as String) 21172
- 178.1.17 AddArrayMBS(array1() as Variant, array2() as Variant) 21173

178.1.5 AddArrayMBS(array1() as Currency, array2() as Currency)

MBS Util Plugin, Plugin Version: 24.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Adds the content of the second array to the first one.
See also:

- 178.1.3 AddArrayMBS(array1() as Boolean, array2() as Boolean) 21166
- 178.1.4 AddArrayMBS(array1() as Color, array2() as Color) 21167
- 178.1.7 AddArrayMBS(array1() as DateTime, array2() as DateTime) 21168
- 178.1.8 AddArrayMBS(array1() as Double, array2() as Double) 21169
- 178.1.9 AddArrayMBS(array1() as Int32, array2() as Int32) 21169
- 178.1.10 AddArrayMBS(array1() as Int64, array2() as Int64) 21170
- 178.1.11 AddArrayMBS(array1() as Object, array2() as Object) 21170
- 178.1.13 AddArrayMBS(array1() as Single, array2() as Single) 21171
- 178.1.14 AddArrayMBS(array1() as String, array2() as String) 21172
- 178.1.15 AddArrayMBS(array1() as UInt32, array2() as UInt32) 21172

178.1.6 AddArrayMBS(array1() as Date, array2() as Date)

MBS Util Plugin, Plugin Version: 25.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Adds the content of the second array to the first one.
See also:

- 178.1.5 AddArrayMBS(array1() as Currency, array2() as Currency) 21167
- 178.1.7 AddArrayMBS(array1() as DateTime, array2() as DateTime) 21168
- 178.1.8 AddArrayMBS(array1() as Double, array2() as Double) 21169
- 178.1.10 AddArrayMBS(array1() as Int64, array2() as Int64) 21170
- 178.1.11 AddArrayMBS(array1() as Object, array2() as Object) 21170
- 178.1.12 AddArrayMBS(array1() as Ptr, array2() as Ptr) 21171
- 178.1.13 AddArrayMBS(array1() as Single, array2() as Single) 21171
- 178.1.14 AddArrayMBS(array1() as String, array2() as String) 21172
- 178.1.15 AddArrayMBS(array1() as UInt32, array2() as UInt32) 21172
- 178.1.17 AddArrayMBS(array1() as Variant, array2() as Variant) 21173

178.1.7 AddArrayMBS(array1() as DateTime, array2() as DateTime)

MBS Util Plugin, Plugin Version: 25.1, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Adds the content of the second array to the first one.
See also:

- 178.1.3 AddArrayMBS(array1() as Boolean, array2() as Boolean) 21166
- 178.1.4 AddArrayMBS(array1() as Color, array2() as Color) 21167
- 178.1.5 AddArrayMBS(array1() as Currency, array2() as Currency) 21167
- 178.1.6 AddArrayMBS(array1() as Date, array2() as Date) 21168
- 178.1.9 AddArrayMBS(array1() as Int32, array2() as Int32) 21169
- 178.1.10 AddArrayMBS(array1() as Int64, array2() as Int64) 21170
- 178.1.12 AddArrayMBS(array1() as Ptr, array2() as Ptr) 21171
- 178.1.13 AddArrayMBS(array1() as Single, array2() as Single) 21171
- 178.1.14 AddArrayMBS(array1() as String, array2() as String) 21172
- 178.1.15 AddArrayMBS(array1() as UInt32, array2() as UInt32) 21172

178.1.8 AddArrayMBS(array1() as Double, array2() as Double)

MBS Util Plugin, Plugin Version: 24.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Adds the content of the second array to the first one.
See also:

- 178.1.3 AddArrayMBS(array1() as Boolean, array2() as Boolean) 21166
- 178.1.4 AddArrayMBS(array1() as Color, array2() as Color) 21167
- 178.1.5 AddArrayMBS(array1() as Currency, array2() as Currency) 21167
- 178.1.6 AddArrayMBS(array1() as Date, array2() as Date) 21168
- 178.1.7 AddArrayMBS(array1() as DateTime, array2() as DateTime) 21168

- 178.1.10 AddArrayMBS(array1() as Int64, array2() as Int64) 21170
- 178.1.11 AddArrayMBS(array1() as Object, array2() as Object) 21170
- 178.1.14 AddArrayMBS(array1() as String, array2() as String) 21172
- 178.1.15 AddArrayMBS(array1() as UInt32, array2() as UInt32) 21172

178.1.9 AddArrayMBS(array1() as Int32, array2() as Int32)

MBS Util Plugin, Plugin Version: 24.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Adds the content of the second array to the first one.
See also:

- 178.1.3 AddArrayMBS(array1() as Boolean, array2() as Boolean) 21166
- 178.1.4 AddArrayMBS(array1() as Color, array2() as Color) 21167
- 178.1.5 AddArrayMBS(array1() as Currency, array2() as Currency) 21167
- 178.1.6 AddArrayMBS(array1() as Date, array2() as Date) 21168
- 178.1.7 AddArrayMBS(array1() as DateTime, array2() as DateTime) 21168
- 178.1.11 AddArrayMBS(array1() as Object, array2() as Object) 21170
- 178.1.12 AddArrayMBS(array1() as Ptr, array2() as Ptr) 21171
- 178.1.13 AddArrayMBS(array1() as Single, array2() as Single) 21171
- 178.1.14 AddArrayMBS(array1() as String, array2() as String) 21172
- 178.1.16 AddArrayMBS(array1() as UInt64, array2() as UInt64) 21173

178.1.10 AddArrayMBS(array1() as Int64, array2() as Int64)

MBS Util Plugin, Plugin Version: 24.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Adds the content of the second array to the first one.
Example:

```
Var n() As Integer = Array(1,2)
Var a() As Integer = Array(3,4)

AddArrayMBS n, a

Break // check n in debugger
```

178.1.33 CopyArrayMBS(source() as Boolean, dest() as Boolean, sourceIndex as Integer = 0, sourceCount as Integer = -2, destIndex as Integer = 0)

MBS Util Plugin, Plugin Version: 24.0, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Copies the content of one array to another array.
Notes: Does nothing if sourceCount is 0 or source array is empty.
SourceCount can be -2 to use array count - sourceIndex.
destIndex lets you pick where to store in the destination array.

Performs bounds checking and may raise an OutOfBoundsException. You may need to resize the destination array to be big enough.

178.1.40 CopyArrayMBS(source() as Int64, dest() as Int64, sourceIndex as Integer = 0, sourceCount as Integer = -2, destIndex as Integer = 0)

MBS Util Plugin, Plugin Version: 24.0, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Copies the content of one array to another array.
Example:

```
Var s() As Integer
Var d() As Integer

Redim s(100)

For i As Integer = 1 To 100
s(i) = i
Next

Redim d(s.ubound)

// copy all starting 20th and put at 10th in destination
CopyArrayMBS s, d, 20, -2, 10

// copy 10 entries starting 30th and put at 40th in destination
CopyArrayMBS s, d, 30, 10, 40

// copy all
CopyArrayMBS s, d
```

Break

Notes: Does nothing if sourceCount is 0 or source array is empty.
SourceCount can be -2 to use array count - sourceIndex.
destIndex lets you pick where to store in the destination array.

Performs bounds checking and may raise an OutOfBoundsException. You may need to resize the destination array to be big enough.

MBS Util Plugin, Plugin Version: 24.0, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Copies the content of one array to another array.
Example:

```
Var s() As Pair
Var d() As Pair
```

```
Redim s(100)

For i As Integer = 1 To 100
s(i) = New pair(i,i)
Next

Redim d(s.ubound)

// copy all starting 20th and put at 10th in destination
CopyArrayMBS s, d, 20, -2, 10

// copy 10 entries starting 30th and put at 40th in destination
CopyArrayMBS s, d, 30, 10, 40

// copy all
CopyArrayMBS s, d

Break
```

Notes: Does nothing if sourceCount is 0 or source array is empty.
SourceCount can be -2 to use array count - sourceIndex.
destIndex lets you pick where to store in the destination array.

Performs bounds checking and may raise an OutOfBoundsException. You may need to resize the destination array to be big enough.

178.1.51 CopyMBS(extends source() as Date, dest() as Date, sourceIndex as Integer = 0, sourceCount as Integer = -2, destIndex as Integer = 0)

MBS Util Plugin, Plugin Version: 25.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Copies the content of one array to another array.
Notes: Does nothing if sourceCount is 0 or source array is empty.
SourceCount can be -2 to use array count - sourceIndex.
destIndex lets you pick where to store in the destination array.

Performs bounds checking and may raise an OutOfBoundsException. You may need to resize the destination array to be big enough.

MBS Util Plugin, Plugin Version: 24.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Copies the content of one array to another array.
Example:

```
Var n() As Integer = Array(1,2)
Var a() As Integer = Array(3,4)

Call n.CopyMBS(a)

Break // check n in debugger
```

Notes: Does nothing if sourceCount is 0 or source array is empty.
SourceCount can be -2 to use array count - sourceIndex.
destIndex lets you pick where to store in the destination array.

Performs bounds checking and may raise an OutOfBoundsException. You may need to resize the destination array to be big enough.

178.1.62 CopyMBS(extends source() as Variant, dest() as Variant, sourceIndex as Integer = 0, sourceCount as Integer = -2, destIndex as Integer = 0)

MBS Util Plugin, Plugin Version: 24.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Copies the content of one array to another array.
Notes: Does nothing if sourceCount is 0 or source array is empty.
SourceCount can be -2 to use array count - sourceIndex.
destIndex lets you pick where to store in the destination array.

Performs bounds checking and may raise an OutOfBoundsException. You may need to resize the destination array to be big enough.

178.1.63 CountValueMBS(extends source() as Boolean, value as Boolean, sourceIndex as Integer = 0, sourceCount as Integer = -2) as Integer

MBS Util Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Counts how often the given value is inside the array.
Example:

```
Var values1() As Integer = Array(546, 453, 345, 453, 878)
Var values2() As Boolean = Array(True, False, True, False, True)

Var c1 As Integer = values1.CountValueMBS(453) // 2
Var c2 As Integer = values2.CountValueMBS(True) // 3
Var c3 As Integer = values2.CountValueMBS(False) // 2

MessageBox c1.ToString+EndOfLine+c2.ToString+EndOfLine+c3.ToString
```

Notes: You can limit range by passing in a source index and source count.
If sourceCount is -2, we sum up whole array - sourceIndex.

178.1.73 EqualsArrayMBS(array1() as Boolean, array2() as Boolean, array1offset as Integer = 0, count as Integer = -2, array2offset as Integer = 0) as Boolean

MBS Util Plugin, Plugin Version: 24.0, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Compares the content of one array to another array.
Notes: Returns true if they are equal in the given range.

SourceCount can be -2 to use array count - sourceIndex.
destIndex lets you pick where to start in the destination array.

Performs bounds checking and may raise an OutOfBoundsException.

178.1.74 EqualsArrayMBS(array1() as Color, array2() as Color, array1offset as Integer = 0, count as Integer = -2, array2offset as Integer = 0) as Boolean

MBS Util Plugin, Plugin Version: 24.0, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Compares the content of one array to another array.
Notes: Returns true if they are equal in the given range.

SourceCount can be -2 to use array count - sourceIndex.
destIndex lets you pick where to start in the destination array.

Performs bounds checking and may raise an OutOfBoundsException.

178.1.76 EqualsArrayMBS(array1() as Double, array2() as Double, array1offset as Integer = 0, count as Integer = -2, array2offset as Integer = 0) as Boolean

MBS Util Plugin, Plugin Version: 24.0, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Compares the content of one array to another array.
Example:

```
Const u = 99999

Var v1(u) As Double
Var v2(u) As Double

For i As Integer = 0 To u
v1(i) = i
v2(i) = i
Next

// should be equal
Var b1 As Boolean = EqualsArrayMBS(v1, v2)

v1(123) = 0

// should not be equal
Var b2 As Boolean = EqualsArrayMBS(v1, v2)

// should be equal
Var b3 As Boolean = EqualsArrayMBS(v1, v2, 200, -2, 200)
Var b4 As Boolean = EqualsArrayMBS(v1, v2, 0, 100, 0)

// and this should be false
Var b5 As Boolean = EqualsArrayMBS(v1, v2, 0, 200, 0)
Var b6 As Boolean = EqualsArrayMBS(v1, v2, 1) // <- offet one in first array

Break
```

Notes: Returns true if they are equal in the given range.

SourceCount can be -2 to use array count - sourceIndex.
destIndex lets you pick where to start in the destination array.

Performs bounds checking and may raise an OutOfBoundsException.

178.1.83 EqualsArrayMBS(array1() as UInt64, array2() as UInt64, array1offset as Integer = 0, count as Integer = -2, array2offset as Integer = 0) as Boolean

MBS Util Plugin, Plugin Version: 24.0, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Compares the content of one array to another array.
Notes: Returns true if they are equal in the given range.

SourceCount can be -2 to use array count - sourceIndex.
destIndex lets you pick where to start in the destination array.

Performs bounds checking and may raise an OutOfBoundsException.

178.1.89 EqualsMBS(extends array1() as Int64, array2() as Int64, array1offset as Integer = 0, count as Integer = -2, array2offset as Integer = 0) as Boolean

MBS Util Plugin, Plugin Version: 24.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Compares the content of one array to another array.
Example:

```
Const u = 99999

Var v1(u) As Integer
Var v2(u) As Integer

For i As Integer = 0 To u
v1(i) = i
v2(i) = i
```

```
Next

// should be equal
Var b1 As Boolean = v1.EqualsMBS(v2)

v1(123) = 0

// should not be equal
Var b2 As Boolean = v1.EqualsMBS(v2)

// should be equal
Var b3 As Boolean = v1.EqualsMBS(v2, 200, -2, 200)
Var b4 As Boolean = v1.EqualsMBS(v2, 0, 100, 0)

// and this should be false
Var b5 As Boolean = v1.EqualsMBS(v2, 0, 200, 0)
Var b6 As Boolean = v1.EqualsMBS(v2, 1) // <- offet one in first array

Break
```

Notes: Returns true if they are equal in the given range.

SourceCount can be -2 to use array count - sourceIndex.
destIndex lets you pick where to start in the destination array.

Performs bounds checking and may raise an OutOfBoundsException.

178.1.93 EqualsMBS(extends array1() as UInt32, array2() as UInt32, array1offset as Integer = 0, count as Integer = -2, array2offset as Integer = 0) as Boolean

MBS Util Plugin, Plugin Version: 24.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Compares the content of one array to another array.
Notes: Returns true if they are equal in the given range.

SourceCount can be -2 to use array count - sourceIndex.
destIndex lets you pick where to start in the destination array.

Performs bounds checking and may raise an OutOfBoundsException.

- 178.1.107 ReverseMBS(extends theArray() as UInt32) 21248
- 178.1.108 ReverseMBS(extends theArray() as UInt64) 21248
- 178.1.109 ReverseMBS(extends theArray() as Variant) 21249

178.1.100 ReverseMBS(extends theArray() as Double)

MBS Util Plugin, Plugin Version: 25.1, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Reverses the order of items in array.
Example:

```
Var a() As Double = Array(1.1,2.2,3.3,4.4,5.5)

a.ReverseMBS

Break // check in debugger
```

- 178.1.109 ReverseMBS(extends theArray() as Variant) 21249

178.1.106 ReverseMBS(extends theArray() as String)

MBS Util Plugin, Plugin Version: 25.1, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Reverses the order of items in array.
Example:

```
Var a() As String = Array("a", "b", "c", "d")

a.ReverseMBS

Break // check in debugger
```

- 178.1.108 ReverseMBS(extends theArray() as UInt64) 21248

178.1.110 SortArrayMBS(theArray() as Boolean, descending as boolean = false)

MBS Util Plugin, Plugin Version: 24.0, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Sorts a boolean array.
Example:

```
Var test() As Boolean = Array(False, True, False, True, False)

SortArrayMBS test

Break // see in debugger
```

// now reverse it
SortArrayMBS test, True

Break // see in debugger

Notes: Does nothing for arrays with theArray.count <2.
Pass true for descending to reverse the order.

- 178.1.135 SortArrayMBS(theArray() as Variant, theDelegate as SortVariantDelegateVariantMBS, descending as boolean = false) 21270

178.1.111 SortArrayMBS(theArray() as Boolean, theDelegate as SortVariantDelegateBooleanMBS, descending as boolean = false)

MBS Util Plugin, Plugin Version: 24.0, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Sorts a boolean array using a delegate to compare.
Notes: Does nothing for arrays with theArray.count <2.
Pass true for descending to reverse the order.

Your delegate should be fast and return 0 if both values are equal, 1 if first value is bigger or -1 if first value is smaller.

- 178.1.130 SortArrayMBS(theArray() as String, theDelegate as SortVariantDelegateStringMBS, descending as boolean = false) 21266
- 178.1.131 SortArrayMBS(theArray() as UInt32, descending as boolean = false) 21267

178.1.112 SortArrayMBS(theArray() as Color, descending as boolean = false)

MBS Util Plugin, Plugin Version: 24.0, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Sorts a color array.
Example:

```
Var test() As Color = Array(&cFF000, &c00FF00, &c0000FF, &c000000, &cFFFFFF)

SortArrayMBS test

Break // see in debugger

// now reverse it
SortArrayMBS test, True

Break // see in debugger
```

Notes: Does nothing for arrays with theArray.count <2.
Pass true for descending to reverse the order.

178.1.114 SortArrayMBS(theArray() as Currency, descending as boolean = false)

MBS Util Plugin, Plugin Version: 24.0, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Sorts a currency array.
Example:

```
Var test() As Currency
test.Append 1.2
test.Append -1.2
test.Append 12345
test.Append 3456

SortArrayMBS test

Break // see in debugger

// now reverse it
SortArrayMBS test, True

Break // see in debugger
```

Notes: Does nothing for arrays with theArray.count <2.
Pass true for descending to reverse the order.

178.1.116 SortArrayMBS(theArray() as Date, descending as boolean = false)

MBS Util Plugin, Plugin Version: 24.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sorts a date array.
Example:

```
Var test() As Date
test.Append New date
test.Append New date(2023, 4, 5)
test.Append New date(2011, 3, 10)
test.Append New date(2033, 6, 22)

SortArrayMBS test

Break // see in debugger

// now reverse it
SortArrayMBS test, True

Break // see in debugger
```

Notes: Does nothing for arrays with theArray.count <2.
Pass true for descending to reverse the order.

- 178.1.133 SortArrayMBS(theArray() as UInt64, descending as boolean = false) 21269

178.1.117 SortArrayMBS(theArray() as DateTime, descending as boolean = false)

MBS Util Plugin, Plugin Version: 24.0, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Sorts a DateTime array.
Example:

```
Var test() As DateTime
test.Append DateTime.Now
test.Append DateTime.FromString("2011-04-24")
test.Append DateTime.FromString("2022-03-21")
test.Append DateTime.FromString("2033-10-10")

SortArrayMBS test

Break // see in debugger

// now reverse it
SortArrayMBS test, True

Break // see in debugger
```

Notes: Does nothing for arrays with theArray.count <2.

178.1.123 SortArrayMBS(theArray() as Int64, descending as boolean = false)

MBS Util Plugin, Plugin Version: 24.0, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Sorts an Int64 array.
Example:

```
Var test() As Integer = Array(5, -2, 3, -4, 1)

SortArrayMBS test

Break // see in debugger
```

// now reverse it
SortArrayMBS test, True

Break // see in debugger

Notes: Does nothing for arrays with theArray.count <2.
Pass true for descending to reverse the order.
See also:

- 178.1.112 SortArrayMBS(theArray() as Color, descending as boolean = false) 21251

178.1.124 SortArrayMBS(theArray() as Int64, theDelegate as SortVariantDelegateInt64MBS, descending as boolean = false)

MBS Util Plugin, Plugin Version: 24.0, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Sorts an Int64 array using a delegate to compare.
Example:

```
Public Function CompareNumber(v1 as Integer, v2 as Integer) As integer
// we compare the absolute values, so 3 and -3 are next to each other in the result
v1 = Abs(v1)
v2 = Abs(v2)

If v1 = v2 Then
Return 0
ElseIf v1 <v2 Then
```

```
Return -1
Else
Return 1
End If
End Function

Sub Test
Var testInteger() As Integer = Array(1,3,6,1,2,-3,0,9)
SortArrayMBS testInteger, AddressOf CompareNumber

Break // see in debugger
End Sub
```

Notes: Does nothing for arrays with theArray.count <2.
Pass true for descending to reverse the order.

Your delegate should be fast and return 0 if both values are equal, 1 if first value is bigger or -1 if first value is smaller.

- 178.1.132 SortArrayMBS(theArray() as UInt32, theDelegate as SortVariantDelegateUInt32MBS, descending as boolean = false) 21268

178.1.125 SortArrayMBS(theArray() as Ptr, descending as boolean = false)

MBS Util Plugin, Plugin Version: 24.0, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Sorts a ptr array.
Notes: Does nothing for arrays with theArray.count <2.
Pass true for descending to reverse the order.

178.1.126 SortArrayMBS(theArray() as Ptr, theDelegate as SortVariantDelegatePtrMBS, descending as boolean = false)

MBS Util Plugin, Plugin Version: 24.0, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Sorts a Ptr array using a delegate to compare.
Notes: Does nothing for arrays with theArray.count <2.
Pass true for descending to reverse the order.

Your delegate should be fast and return 0 if both values are equal, 1 if first value is bigger or -1 if first value is smaller.

178.1.128 SortArrayMBS(theArray() as Single, theDelegate as SortVariantDelegateSingleMBS, descending as boolean = false)

MBS Util Plugin, Plugin Version: 24.0, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Sorts a single array using a delegate to compare.
Notes: Does nothing for arrays with theArray.count <2.
Pass true for descending to reverse the order.

Your delegate should be fast and return 0 if both values are equal, 1 if first value is bigger or -1 if first value is smaller.

- 178.1.135 SortArrayMBS(theArray() as Variant, theDelegate as SortVariantDelegateVariantMBS, descending as boolean = false) 21270

178.1.129 SortArrayMBS(theArray() as String, descending as boolean = false)

MBS Util Plugin, Plugin Version: 24.0, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Sorts a string array.
Example:

```
Var testString() As String = Array("c", "b", "e", "d", "a")

SortArrayMBS testString
```

```
Break // see in debugger

// now reverse it
SortArrayMBS testString, True

Break // see in debugger
```

Notes: Does nothing for arrays with theArray.count <2.
Pass true for descending to reverse the order.

See also NSStringArraySortMBS function.

- 178.1.127 SortArrayMBS(theArray() as Single, descending as boolean = false) 21264

178.1.130 SortArrayMBS(theArray() as String, theDelegate as SortVariantDelegateStringMBS, descending as boolean = false)

MBS Util Plugin, Plugin Version: 24.0, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Sorts a string array using a delegate to compare.
Example:

```
Public Function CompareString2ndWord(s1 as string, s2 as string) As integer
// sort by second word

s1 = s1.NthField(" ",2)
s2 = s2.NthField(" ",2)
```

```
Return s1.Compare(s2)
End Function

Sub Test
Var testString() As String = Array("Hello World", "Hallo Leute", "World Test", "First Entry", "abc def",
"abc xyz")
SortArrayMBS testString, AddressOf CompareString2ndWord

Break // see in debugger
End Sub
```

Notes: Does nothing for arrays with theArray.count <2.
Pass true for descending to reverse the order.

Your delegate should be fast and return 0 if both values are equal, 1 if first value is bigger or -1 if first value is smaller.

- 178.1.159 SortMBS(extends theArray() as UInt64, descending as boolean = false) 21289

178.1.145 SortMBS(extends theArray() as Double, descending as boolean = false)

MBS Util Plugin, Plugin Version: 24.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Sorts an array.
Example:

```
// disable background threads, which would slow us down
#Pragma BackgroundTasks False

Var a(10000000) As Double
Var b(10000000) As Double
Var c(10000000) As Double

Var u As Integer = a.ubound
For i As Integer = 0 To u
Var n As Integer = i Mod 1000
a(i) = n
b(i) = n
c(i) = n

Next

Var m1 As Double = Microseconds
a.Sort
Var m2 As Double = Microseconds
b.SortMBS
Var m3 As Double = Microseconds
c.SortMBS True // reverse
Var m4 As Double = Microseconds

Var XojoSort As Double = (m2 - m1) / 1000.0 // e.g. 142
Var MBSSort As Double = (m3 - m2) / 1000.0 // e.g. 128
Var MBSSortReverse As Double = (m4 - m3) / 1000.0 // e.g. 120

MessageBox "Xojo: "+XojoSort.ToString+EndOfLine+"MBS Sort: "+MBSSort.ToString+EndOfLine+"MBS
Sort reverse: "+MBSSortReverse.ToString
Break
```

Notes: Does nothing for arrays with theArray.count <2.
Pass true for descending to reverse the order.

178.1.155 SortMBS(extends theArray() as String, descending as boolean = false)

MBS Util Plugin, Plugin Version: 24.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Sorts an array.
Notes: Does nothing for arrays with theArray.count <2.
Pass true for descending to reverse the order.

See also NSStringArraySortMBS function.

178.1.156 SortMBS(extends theArray() as String, theDelegate as SortVariantDelegateStringMBS, descending as boolean = false)

MBS Util Plugin, Plugin Version: 24.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Sorts an array using a delegate to compare.
Notes: Does nothing for arrays with theArray.count <2.
Pass true for descending to reverse the order.

Your delegate should be fast and return 0 if both values are equal, 1 if first value is bigger or -1 if first value is smaller.

178.1.162 SumArrayMBS(source() as Boolean, sourceIndex as Integer = 0, sourceCount as Integer = -2) as Int64

MBS Util Plugin, Plugin Version: 24.0, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Sums up all the numbers in the array.
Notes: You can limit range by passing in a source index and source count.
If sourceCount is -2, we sum up whole array - sourceIndex.

Returns the sum of all values.
See also:

- 178.1.163 SumArrayMBS(source() as Currency, sourceIndex as Integer = 0, sourceCount as Integer = -2, CheckOverflow as Boolean = false) as Currency 21291
- 178.1.164 SumArrayMBS(source() as Double, sourceIndex as Integer = 0, sourceCount as Integer = -2) as Double 21293
- 178.1.165 SumArrayMBS(source() as Int32, sourceIndex as Integer = 0, sourceCount as Integer = -2) as Int64 21294
- 178.1.166 SumArrayMBS(source() as Int64, sourceIndex as Integer = 0, sourceCount as Integer = -2, CheckOverflow as Boolean = false) as Int64 21295
- 178.1.167 SumArrayMBS(source() as Single, sourceIndex as Integer = 0, sourceCount as Integer = -2) as Double 21296
- 178.1.168 SumArrayMBS(source() as UInt32, sourceIndex as Integer = 0, sourceCount as Integer = -2, CheckOverflow as Boolean = false) as UInt64 21297
- 178.1.169 SumArrayMBS(source() as UInt64, sourceIndex as Integer = 0, sourceCount as Integer = -2, CheckOverflow as Boolean = false) as UInt64 21297

178.1.163 SumArrayMBS(source() as Currency, sourceIndex as Integer = 0, sourceCount as Integer = -2, CheckOverflow as Boolean = false) as Currency

MBS Util Plugin, Plugin Version: 24.0, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Sums up all the numbers in the array.
Example:

```
Var v() As Currency

// just sum up some currency values
v.Add 123.4567
v.Add 1
v.add 0
v.add -56
v.add 4567

Var m1 As Double = Microseconds
Var sum1 As Currency = SumArrayMBS(v, True)
Var m2 As Double = Microseconds
Var sum2 As Currency = SumArrayMBS(v, False)
Var m3 As Double = Microseconds

Var d1 As Double = m2-m1
Var d2 As Double = m3-m2
// overflow checking can make it 100 times slower

// try to cause an overflow with huge numbers
v.add 100000000000000.0000
v.add 200000000000000.0000
v.add 300000000000000.0000
v.add 400000000000000.0000

Var sum3 As Currency = SumArrayMBS(v, False)
Var sum4 As Currency = SumArrayMBS(v, True)

Break
```

Notes: You can limit range by passing in a source index and source count.
If sourceCount is -2, we sum up whole array - sourceIndex.
Pass true for overflow check to detect overflows for each addition. Otherwise pass false for better performance.
Returns the sum of all values.
See also:

- 178.1.162 SumArrayMBS(source() as Boolean, sourceIndex as Integer = 0, sourceCount as Integer = -2) as Int64 21291
- 178.1.164 SumArrayMBS(source() as Double, sourceIndex as Integer = 0, sourceCount as Integer = -2) as Double 21293

- 178.1.166 SumArrayMBS(source() as Int64, sourceIndex as Integer = 0, sourceCount as Integer = -2,

CheckOverflow as Boolean = false) as Int64 21295

- 178.1.167 SumArrayMBS(source() as Single, sourceIndex as Integer = 0, sourceCount as Integer = -2) as Double 21296
- 178.1.168 SumArrayMBS(source() as UInt32, sourceIndex as Integer = 0, sourceCount as Integer = -2, CheckOverflow as Boolean = false) as UInt64 21297
- 178.1.169 SumArrayMBS(source() as UInt64, sourceIndex as Integer = 0, sourceCount as Integer = -2, CheckOverflow as Boolean = false) as UInt64 21297

178.1.164 SumArrayMBS(source() as Double, sourceIndex as Integer = 0, sourceCount as Integer = -2) as Double

MBS Util Plugin, Plugin Version: 24.0, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Sums up all the numbers in the array.
Example:

```
Const u = 99999
Var v(u) As Double

For i As Integer = 0 To u
v(i) = i
Next

Var m1 As Double = Microseconds
Var sumPlugin As Int64 = SumArrayMBS(v)
Var m2 As Double = Microseconds
Var sumXojo As Double
For i As Integer = 0 To u
sumXojo = sumXojo + v(i)
next
Var m3 As Double = Microseconds

Var timePlugin As Double = m2-m1
Var timeXojo As Double = m3-m2
// plugin is faster than Xojo code

Break
```

Notes: You can limit range by passing in a source index and source count.
If sourceCount is -2, we sum up whole array - sourceIndex.
Returns the sum of all values.

178.1.165 SumArrayMBS(source() as Int32, sourceIndex as Integer = 0, sourceCount as Integer = -2) as Int64

MBS Util Plugin, Plugin Version: 24.0, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Sums up all the numbers in the array.
Notes: You can limit range by passing in a source index and source count.
If sourceCount is -2, we sum up whole array - sourceIndex.
We use Int64 as result may be bigger than Int32.
Returns the sum of all values.

178.1.166 SumArrayMBS(source() as Int64, sourceIndex as Integer = 0, sourceCount as Integer = -2, CheckOverflow as Boolean = false) as Int64

MBS Util Plugin, Plugin Version: 24.0, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Sums up all the numbers in the array.
Example:

```
Var v() As Int64

// just sum up some currency values
v.Add 1234567
v.Add 1
v.add 0
v.add -56
v.add 4567

Var m1 As Double = Microseconds
Var sum1 As Int64 = SumArrayMBS(v, True)
Var m2 As Double = Microseconds
Var sum2 As Int64 = SumArrayMBS(v, False)
Var m3 As Double = Microseconds

Var d1 As Double = m2-m1
Var d2 As Double = m3-m2
// overflow checking can make it 100 times slower

// try to cause an overflow with huge numbers
v.add 1000000000000000000
v.add 2000000000000000000
v.add 3000000000000000000
v.add 4000000000000000000

Var sum3 As Int64 = SumArrayMBS(v, False)
Var sum4 As Int64 = SumArrayMBS(v, True)

Break
```

Notes: You can limit range by passing in a source index and source count.
If sourceCount is -2, we sum up whole array - sourceIndex.
Pass true for overflow check to detect overflows for each addition. Otherwise pass false for better performance.
Returns the sum of all values.

- 178.1.165 SumArrayMBS(source() as Int32, sourceIndex as Integer = 0, sourceCount as Integer = -2) as Int64 21294
- 178.1.166 SumArrayMBS(source() as Int64, sourceIndex as Integer = 0, sourceCount as Integer = -2, CheckOverflow as Boolean = false) as Int64 21295
- 178.1.167 SumArrayMBS(source() as Single, sourceIndex as Integer = 0, sourceCount as Integer = -2) as Double 21296
- 178.1.169 SumArrayMBS(source() as UInt64, sourceIndex as Integer = 0, sourceCount as Integer = -2, CheckOverflow as Boolean = false) as UInt64 21297

178.1.169 SumArrayMBS(source() as UInt64, sourceIndex as Integer = 0, sourceCount as Integer = -2, CheckOverflow as Boolean = false) as UInt64

MBS Util Plugin, Plugin Version: 24.0, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Sums up all the numbers in the array.
Example:

```
Const u = 99999
Var v(u) As UInt64

For i As Integer = 0 To u
v(i) = i
Next

Var m1 As Double = Microseconds
Var sumPlugin As UInt64 = SumArrayMBS(v, False)
```

```
Var m2 As Double = Microseconds
Var sumPluginOverflowChecked As UInt64 = SumArrayMBS(v, True)
Var m3 As Double = Microseconds
Var sumXojo As UInt64
For i As Integer = 0 To u
sumXojo = sumXojo + v(i)
Next
Var m4 As Double = Microseconds

Var timePlugin As Double = m2-m1
Var timePluginOverflowChecked As Double = m3-m2
Var timeXojo As Double = m4-m3
// plugin is faster than Xojo code

Break
```

Notes: You can limit range by passing in a source index and source count.
If sourceCount is -2, we sum up whole array - sourceIndex.
Pass true for overflow check to detect overflows for each addition. Otherwise pass false for better performance.
Returns the sum of all values.

178.1.178 Delegates

178.1.179 SortVariantDelegateBooleanMBS(v1 as Boolean, v2 as Boolean) as Integer

MBS Util Plugin, Plugin Version: 24.0, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The delegate to compare two boolean values.
Notes: Return 0 if equal, 1 if first value is bigger or -1 if first value is smaller.
Blog Entries

- The SortMBS module

178.1.180 SortVariantDelegateColorMBS(v1 as Color, v2 as Color) as Integer

MBS Util Plugin, Plugin Version: 24.0, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The delegate to compare two color values.
Notes: Return 0 if equal, 1 if first value is bigger or -1 if first value is smaller.

178.1.181 SortVariantDelegateCurrencyMBS(v1 as Currency, v2 as Currency) as Integer

MBS Util Plugin, Plugin Version: 24.0, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The delegate to compare two currency values.
Notes: Return 0 if equal, 1 if first value is bigger or -1 if first value is smaller.

178.1.182 SortVariantDelegateDateTimeMBS(v1 as DateTime, v2 as DateTime) as Integer

MBS Util Plugin, Plugin Version: 24.0, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The delegate to compare two DateTime values.
Notes: Return 0 if equal, 1 if first value is bigger or -1 if first value is smaller.
Requires Xojo 2019r2 or newer.

178.1.183 SortVariantDelegateDoubleMBS(v1 as Double, v2 as Double) as Integer

MBS Util Plugin, Plugin Version: 24.0, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The delegate to compare two double values.
Notes: Return 0 if equal, 1 if first value is bigger or -1 if first value is smaller.

178.1.184 SortVariantDelegateInt32MBS(v1 as Int32, v2 as Int32) as Integer

MBS Util Plugin, Plugin Version: 24.0, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The delegate to compare two int32 values.
Notes: Return 0 if equal, 1 if first value is bigger or -1 if first value is smaller.

178.1.185 SortVariantDelegateInt64MBS(v1 as Int64, v2 as Int64) as Integer

MBS Util Plugin, Plugin Version: 24.0, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The delegate to compare two Int64 values.
Example:

```
Public Function CompareNumber(v1 as Integer, v2 as Integer) As integer
// we compare the absolute values, so 3 and -3 are next to each other in the result
v1 = Abs(v1)
v2 = Abs(v2)

If v1 = v2 Then
Return 0
ElseIf v1 <v2 Then
Return -1
Else
Return 1
End If
End Function

Sub Test
Var testInteger() As Integer = Array(1,3,6,1,2,-3,0,9)
SortArrayMBS testInteger, AddressOf CompareNumber
```

```
Break // see in debugger
End Sub
```

Notes: Return 0 if equal, 1 if first value is bigger or -1 if first value is smaller.

178.1.186 SortVariantDelegatePtrMBS(v1 as Ptr, v2 as Ptr) as Integer

MBS Util Plugin, Plugin Version: 24.0, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The delegate to compare two Ptr values.
Notes: Return 0 if equal, 1 if first value is bigger or -1 if first value is smaller.

178.1.187 SortVariantDelegateSingleMBS(v1 as Single, v2 as Single) as Integer

MBS Util Plugin, Plugin Version: 24.0, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The delegate to compare two Single values.
Notes: Return 0 if equal, 1 if first value is bigger or -1 if first value is smaller.

178.1.188 SortVariantDelegateStringMBS(v1 as String, v2 as String) as Integer

MBS Util Plugin, Plugin Version: 24.0, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The delegate to compare two string values.
Example:

```
Public Function CompareString2ndWord(s1 as string, s2 as string) As integer
// sort by second word

s1 = s1.NthField(" ",2)
s2 = s2.NthField(" ",2)

Return s1.Compare(s2)
End Function

Sub Test
Var testString() As String = Array("Hello World", "Hallo Leute", "World Test", "First Entry", "abc def",
"abc xyz")
SortArrayMBS testString, AddressOf CompareString2ndWord

Break // see in debugger
```

```
End Sub
```

Notes: Return 0 if equal, 1 if first value is bigger or -1 if first value is smaller.

178.1.189 SortVariantDelegateUInt32MBS(v1 as UInt32, v2 as UInt32) as Integer

MBS Util Plugin, Plugin Version: 24.0, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The delegate to compare two UInt32 values.
Notes: Return 0 if equal, 1 if first value is bigger or -1 if first value is smaller.

178.1.190 SortVariantDelegateUInt64MBS(v1 as UInt64, v2 as UInt64) as Integer

MBS Util Plugin, Plugin Version: 24.0, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The delegate to compare two UInt64 values.
Notes: Return 0 if equal, 1 if first value is bigger or -1 if first value is smaller.

178.1.191 SortVariantDelegateVariantMBS(v1 as Variant, v2 as Variant) as Integer

MBS Util Plugin, Plugin Version: 24.0, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The delegate to compare two variant values.
Notes: Return 0 if equal, 1 if first value is bigger or -1 if first value is smaller.

Chapter 179

Spamsum

179.1 class SpamSumMBS

179.1.1 class SpamSumMBS

MBS Util Plugin, Plugin Version: 4.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: A class for the spamsum tool.
Notes: Overview

---

spamsum is a tool for generating and testing signatures on files. The signature is designed to be particularly suitable for producing a result that can be used to compare two emails and see if they are 'similar'. This can provide the core of a SPAM detection system.

The algorithms in spamsum are in two parts. The first part generates a signature which is encoded as a string of ascii characters less than 72 characters long. The second part takes a new signature and a database of existing signatures (actually just a text file with one signature per line) and finds the existing signature that best matches the new signature. A match result in the range of 0 to 100 is generated, where 100 is a perfect match and 0 is a complete mismatch.

Signature Algorithm

The signature algorithm in spamsum has a number of interesting properties that make is especially suitable for SPAM detection.

- non-propogation

In most hash algorithms a change in any part of a plaintext will either change the resulting hash completely or will change all parts of the hash after the part corresponding with the changed plaintext. In the spamsum algorithm only the part of the spamsum signature that corresponds linearly with the changed part of the plaintext will be changed. This means that small changes in any part of the plaintext will leave most of the signature the same. This is essential for SPAM detection as it is common for varients of the same SPAM to have small changes in their body and we need to ensure that the matching algorithm can cope with these changes.

- alignment robustness

Most hash algorithms are very alignment sensitive. If you shift the plaintext by a byte (say by inserting a character at the start) then a completely different hash is generated. The spamsum algorithm is robust to alignment changes, and will automatically re-align the resulting signature after insertions or deletions. This works in combination with the non-propogation property to make spamsum suitable for telling if two emails are 'similar'.

The core of the spamsum algorithm is a rolling hash similar to the rolling hash used in 'rsync'. The rolling hash is used to produce a series of 'reset points' in the plaintext that depend only on the immediate context (with a default context width of seven characters) and not on the earlier or later parts of the plaintext. A stronger hash based on the FNV algorithm is then used to produce hash values of the areas between two reset points. The resulting signature comes from the concatenation of a single character from the FNV hash per reset point.

The frequency of the reset points determines how many characters in the plaintext will be used for each character of output in the signature. At startup spamsum scans the plaintext to determine how many valid input characters are in the plaintext (whitespace is ignored). The algorithm then estimates the reset frequency needed to produce a signature of length 64 and starts producing the
signature. If after the signature is produced the result is less than a third of the desired length then the reset frequency is adjusted and the signature re-generated.

Similarity Testing

Once a set of signatures has been generated you need to be able to take a new plaintext and see if it matches one of the signatures. The way this is done is to generate a spamsum signature of the new plaintext then compute a distance measure between each of the existing signatures and the new signature.

The distance measure that spamsum uses is based on the 'string edit distance'. The string edit distance is a measure of how many edit operations are required to take one of the signatures and turn it into the other. In spamsum the 'insert' and 'delete' edit operations are given a weight of 1 while substitution is given a weight of 3 and transposition is given a weight of 5.

The resulting string edit distance is then scaled to produce a 'score' in the range 0-100. A score of 100

indicates a perfect match and a score of 0 indicates a complete mismatch. If the two signatures used a different 'reset frequency' (also known as block_size) then the score is automatically set as 0.

The score is weighted so that a value of 50 is a reasonable threshold to use for a 'good match'.

Dual hashes

A significant problem with the above algorithm is the sensitivity to the chosen hash strength of the rolling hash. The initial implementation used a single hash strength chosen based on the file size and rounded to a power of 2. This works, but it means that if the two files being compared cross over a boundary then they will not be able to be compared. To reduce this problem the current implementation chooses two different hash strengths and generates two hashes for each file. This means that the two files will have to have very different lengths for their respected spamsum signatures not to share a common hash strength.

Infrastructure

spamsum is useless without a good quality database of signatures for known spam. I am hoping that the spamsum algorithm will be incorportated into a online system for capturing known SPAM (such as razor).

Author

spamsum was written by Andrew Tridgell tridge @ samba.org

179.1.2 Methods

179.1.3 Match(sum1 as string, sum2 as string) as Integer

MBS Util Plugin, Plugin Version: 4.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates a percent value representing
Example:

```
Var s as SpamSumMBS
Var t1,t2 as string

s=new SpamSumMBS

t1=S.Spamsum("Hello Welt, wie geht es? Mir geht es manchmal gut.",0,0)
t2=S.Spamsum("Hallo Welt, wie geht es? Mir geht es manchmal gut.",0,0)
```

```
MsgBox t1+" "+t2+" "+str(s.Match(t1,t2))
// 17 percent here. This needs longer texts...
```

Notes: Returns a value from 0 (not equal) to 100 (equal).

179.1.4 Spamsum(text as string, flags as Integer, blocksize as Integer) as string

MBS Util Plugin, Plugin Version: 4.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates a checksum for a given text.
Notes: You can specify for flags a combination of FlagsIgnoreWhitespace=1 and FlagsIgnoreHeaders=2.
Blocksize is linked to the length of the checksum. You can try values like 0, 3 or 90 and check what is best for you.
The text strings must be longer than just a few words as they are designed to take whole emails.

179.1.5 Properties

179.1.6 FlagsIgnoreHeaders as Integer

MBS Util Plugin, Plugin Version: 4.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The value used for the Spamsum call as flags.
Notes: Value is 2.
(Read only property)

179.1.7 FlagsIgnoreWhitespace as Integer

MBS Util Plugin, Plugin Version: 4.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The value used for the Spamsum call as flags.
Notes: Value is 1.
(Read only property)

Chapter 180

Sparkle

180.1 class SUAppcastItemMBS

180.1.1 class SUAppcastItemMBS

MBS MacExtras Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop only.

Function: The class for items in the appcast file.

180.1.5 Constructor(dict as dictionary, byref error as string)

MBS MacExtras Plugin, Plugin Version: 14.4, Platform: macOS, Targets: Desktop only.

Function: Initializes with data from a dictionary provided by the RSS class.
See also:

- 180.1.3 Constructor 21313
- 180.1.4 Constructor(dict as dictionary) 21314
- 180.1.6 Constructor(dict as dictionary, relativeToAppcastURL as string, byref error as string) 21314

180.1.6 Constructor(dict as dictionary, relativeToAppcastURL as string, byref error as string)

MBS MacExtras Plugin, Plugin Version: 22.2, Platform: macOS, Targets: Desktop only.

Function: Initializes with data from a dictionary provided by the RSS class.
See also:

- 180.1.3 Constructor 21313
- 180.1.4 Constructor(dict as dictionary) 21314
- 180.1.5 Constructor(dict as dictionary, byref error as string) 21314

180.1.7 emptyAppcastItem as SUAppcastItemMBS

MBS MacExtras Plugin, Plugin Version: 22.2, Platform: macOS, Targets: Desktop only.

Function: An empty appcast item.
Notes: This may be used as a potential return value in bestValidUpdateInAppcast event.

180.1.8 Properties

180.1.9 channel as String

MBS MacExtras Plugin, Plugin Version: 22.2, Platform: macOS, Targets: Desktop only.

Function: The channel the update item is on if provided.
Notes: An update item may specify a custom channel name (such as beta) that can only be found by updaters that filter for that channel.
If no channel is provided, the update item is assumed to be on the default channel.

This is extracted from the <sparkle:channel>element.
Old applications must be using Sparkle 2 or later to interpret the channel element and to ignore unmatched channels.
(Read only property)

180.1.10 ContentLength as Int64

MBS MacExtras Plugin, Plugin Version: 20.3, Platform: macOS, Targets: Desktop only.

Function: The content length.
Notes: (Read only property)

180.1.11 CriticalUpdate as Boolean

MBS MacExtras Plugin, Plugin Version: 16.1, Platform: macOS, Targets: Desktop only.

Function: Whether this is a critical update.
Notes: (Read only property)

180.1.12 date as date

MBS MacExtras Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: The release date for this app cast item.
Notes: (Read only property)

180.1.13 DateString as String

MBS MacExtras Plugin, Plugin Version: 20.3, Platform: macOS, Targets: Desktop only.

Function: The date string.
Notes: (Read only property)

180.1.14 DateTime as DateTime

MBS MacExtras Plugin, Plugin Version: 20.5, Platform: macOS, Targets: Desktop only.

Function: The release date for this app cast item.
Notes: (Read only property)

180.1.15 DeltaUpdate as Boolean

MBS MacExtras Plugin, Plugin Version: 16.1, Platform: macOS, Targets: Desktop only.

Function: Whether this is a delta update.
Notes: (Read only property)

180.1.16 DeltaUpdates as Dictionary

MBS MacExtras Plugin, Plugin Version: 14.4, Platform: macOS, Targets: Desktop only.

Function: Dictionary with properties about delta updates.
Notes: (Read only property)

180.1.17 displayVersionString as string

MBS MacExtras Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop only.

Function: The display version number for this app cast item.
Notes: Maybe "1.1de"
(Read only property)

180.1.18 fileURL as string

MBS MacExtras Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop only.

Function: The file URL for this app cast item.
Notes: (Read only property)

180.1.19 fullReleaseNotesURL as String

MBS MacExtras Plugin, Plugin Version: 22.2, Platform: macOS, Targets: Desktop only.

Function: The full release notes URL of the appcast item if provided.
Notes: The link should point to the product's full changelog.

Sparkle's standard user interface offers to show these full release notes when a user checks for a new update and no new update is available.

This is extracted from the <sparkle:fullReleaseNotesLink>element.
(Read only property)

180.1.20 Handle as Integer

MBS MacExtras Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop only.

Function: The internal handle used for this object.
Notes: (Read and Write property)

180.1.21 ignoreSkippedUpgradesBelowVersion as String

MBS MacExtras Plugin, Plugin Version: 22.2, Platform: macOS, Targets: Desktop only.

Function: Previously skipped upgrades by the user will be ignored if they skipped an update whose version precedes this version.
Notes: This can only be applied if the update is a 'majorUpgrade'.

This version string corresponds to the application's CFBundleVersion

This is extracted from the <sparkle:ignoreSkippedUpgradesBelowVersion>element.

Old applications must be using Sparkle 2.1 or later, otherwise this property will be ignored.

(Read only property)

180.1.22 InformationOnlyUpdate as Boolean

MBS MacExtras Plugin, Plugin Version: 16.1, Platform: macOS, Targets: Desktop only.

Function: Whether this is only an information only update.
Notes: Only available in newer Sparkle in 64-bit.
For older version this is always false.
(Read only property)

180.1.23 InfoURL as String

MBS MacExtras Plugin, Plugin Version: 14.4, Platform: macOS, Targets: Desktop only.

Function: The info URL.
Notes: (Read only property)

180.1.24 installationType as String

MBS MacExtras Plugin, Plugin Version: 22.2, Platform: macOS, Targets: Desktop only.

Function: The installation type of the update at file URL.
Notes: This may be:

- application - indicates this is a regular application update.
- package - indicates this is a guided package installer update.
- interactive-package - indicates this is an interactive package installer update (deprecated; use ”package” instead)

This is extracted from the sparkle:installationType attribute in the <enclosure>element.

If no installation type is provided in the enclosure, the installation type is inferred from the ‘fileURL‘ file extension instead.

If the file extension is pkg or mpkg, the installation type is package otherwise it is application

Hence, the installation type in the enclosure element only needs to be specified for package based updates distributed inside of a zip or other archive format.

Old applications must be using Sparkle 1.26 or later to support downloading bare package updates (‘pkg‘ or ‘mpkg‘) that are not additionally archived inside of a zip or other archive format.
(Read only property)

180.1.25 itemDescription as string

MBS MacExtras Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop only.

Function: The description for this app cast item.
Notes: (Read only property)

180.1.26 MacOsUpdate as Boolean

MBS MacExtras Plugin, Plugin Version: 20.3, Platform: macOS, Targets: Desktop only.

Function: Whether this is a MacOS update.
Notes: (Read only property)

180.1.27 majorUpgrade as Boolean

MBS MacExtras Plugin, Plugin Version: 22.2, Platform: macOS, Targets: Desktop only.

Function: Indicates whether or not the update item is a major upgrade.
Notes: An update is a major upgrade if the application’s bundle version doesn’t meet the ‘minimumAutoupdateVersion‘ requirement.
(Read only property)

180.1.28 maximumOperatingSystemVersionIsOK as Boolean

MBS MacExtras Plugin, Plugin Version: 22.2, Platform: macOS, Targets: Desktop only.

Function: Indicates whether or not the current running system passes the ‘maximumSystemVersion‘ requirement.
Notes: (Read only property)

180.1.29 MaximumSystemVersion as String

MBS MacExtras Plugin, Plugin Version: 14.4, Platform: macOS, Targets: Desktop only.

Function: The maximum system version for this app cast item.
Notes: The update will not be offered to users with newer system versions.
(Read only property)

180.1.30 minimumAutoupdateVersion as String

MBS MacExtras Plugin, Plugin Version: 22.2, Platform: macOS, Targets: Desktop only.

Function: The minimum bundle version string this update requires for automatically downloading and installing updates if provided.
Notes: If an application's bundle version meets this version requirement, it can install the new update item in the background automatically.

Otherwise if the requirement is not met, the user is always prompted to install the update. In this case, the update is assumed to be a 'majorUpgrade'.

If the update is a 'majorUpgrade' and the update is skipped by the user, other future update alerts with the same 'minimumAutoupdateVersion' will also be skipped automatically unless an update specifies 'ignoreSkippedUpgradesBelowVersion'.

This version string corresponds to the application's CFBundleVersion

This is extracted from the <sparkle:minimumAutoupdateVersion>element.
(Read only property)

180.1.31 minimumOperatingSystemVersionIsOK as Boolean

MBS MacExtras Plugin, Plugin Version: 22.2, Platform: macOS, Targets: Desktop only.

Function: Indicates whether or not the current running system passes the 'minimumSystemVersion' requirement.
Notes: (Read only property)

180.1.32 minimumSystemVersion as string

MBS MacExtras Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop only.

Function: The minimum system version for this app cast item.
Notes: The update will not be offered to users with older system versions.
(Read only property)

180.1.33 OSString as String

MBS MacExtras Plugin, Plugin Version: 20.3, Platform: macOS, Targets: Desktop only.

Function: The operation system string.
Notes: (Read only property)

180.1.34 phasedRolloutInterval as Variant

MBS MacExtras Plugin, Plugin Version: 20.3, Platform: macOS, Targets: Desktop only.

Function: The phased rollout interval.
Notes: May be nil.
(Read only property)

180.1.35 propertiesDictionary as dictionary

MBS MacExtras Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

Function: A dictionary with all the properties for this item.
Notes: (Read only property)

180.1.36 releaseNotesURL as string

MBS MacExtras Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop only.

Function: The release notes URL for this app cast item.
Notes: (Read only property)

180.1.37 title as string

MBS MacExtras Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop only.

Function: The title for this app cast item.
Example:

```
Var a as SUAppcastItemMBS

// get item somehow
MsgBox a.title
```

Notes: (Read only property)

180.1.38 versionString as string

MBS MacExtras Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop only.

Function: The version string for this app cast item.
Notes: (Read only property)

180.2 class SUAppcastMBS

180.2.1 class SUAppcastMBS

MBS MacExtras Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop only.

Function: The class for an appcast.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

180.2.2 Methods

180.2.3 Constructor

MBS MacExtras Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop only.

Function: The private construtor.

180.2.4 items as SUAppcastItemMBS()

MBS MacExtras Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

Function: The items in this appcast.

180.2.5 Properties

180.2.6 Handle as Integer

MBS MacExtras Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop only.

Function: The internal handle for the appcast.
Notes: (Read and Write property)

180.3 class SUUpdaterMBS

180.3.1 class SUUpdaterMBS

MBS MacExtras Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop only.

Function: The class for Sparkle.
Notes: This class is for use with the Sparkle framework and implements the Cocoa classes inside this framework.

180.3.2 Methods

180.3.3 checkForUpdateInformation

MBS MacExtras Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop only.

Function: Checks for new update information.
Notes: This begins a "probing" check for updates which will not actually offer to update to that version. The events, though, (up to didFindValidUpdate and updaterDidNotFindUpdate), are called, so you can use that information in your UI.

180.3.4 checkForUpdates

MBS MacExtras Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop only.

Function: Performs a check for updates.
Notes: Call this method from a menu item where the user can check for updates manually. Sparkle will check for updates and report back its findings verbosely.

180.3.5 checkForUpdatesInBackground

MBS MacExtras Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop only.

Function: This kicks off an update meant to be programmatically initiated.
Notes: That is, it will display no UI unless it actually finds an update, in which case it proceeds as usual. If the fully automated updating is turned on, however, this will invoke that behavior, and if an update is found, it will be downloaded and prepped for installation.

180.3.6 Constructor

MBS MacExtras Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop only.

Function: The constructor for the updater.
Notes: Please create only one instance of the SUUpdaterMBS class in your application using this constructor.
See also:

- 180.3.7 Constructor(Bundle as folderitem) 21325

180.3.7 Constructor(Bundle as folderitem)

MBS MacExtras Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop only.

Function: The constructor for the updater.
Notes: Targets for the update the bundle you specify. This can be used to update a preference panel for example.

Please create only one instance of the SUUpdaterMBS class in your application using this constructor.
See also:

- 180.3.6 Constructor 21325

180.3.8 installUpdatesIfAvailable

MBS MacExtras Plugin, Plugin Version: 16.1, Platform: macOS, Targets: Desktop only.

Function: Checks for updates and, if available, immediately downloads and installs them.
Notes: A progress dialog is shown but the user will never be prompted to read the release notes.

You may want to respond to the userDidCancelDownload event in case the user clicks the "Cancel" button while the update is downloading.

Only available in newer Sparkle version for 64-bit.

Not available in newer Sparkle versions.

180.3.9 InvokeImmediateInstallation

MBS MacExtras Plugin, Plugin Version: 14.4, Platform: macOS, Targets: Desktop only.

Function: If installation was moved to quit of app, you can call this method to update now.
Notes: New in version 1.6 of Sparkle.

180.3.10 InvokeUpdate

MBS MacExtras Plugin, Plugin Version: 14.0, Platform: macOS, Targets: Desktop only.

Function: Invokes a postponed updated.
Notes: Call this after you returned true in shouldPostponeRelaunchForUpdate event and have time to restart.

180.3.11 IsFrameworkLoaded as boolean

MBS MacExtras Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop only.

Function: Whether the framework has been loaded.
Notes: Returns true if the Sparkle framework has been loaded.

180.3.12 LoadFramework(path as folderitem) as boolean

MBS MacExtras Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop only.

Function: Loads the Sparkle framework from the given folderitem.
Notes: Returns false on Windows and Linux or on Mac OS X if the framework failed to load.
Return true if the framework was loaded already or was loaded successfully.

Be aware that the Sparkle Framework needs correct file permissions:

$ { APPFILENAME } /Contents/Frameworks/Sparkle.framework/Versions/A/Sparkle”
$ { APPFILENAME } /Contents/Frameworks/Sparkle.framework/Versions/A/Resources/relaunch”

If the permissions are set wrong the relaunch does not work.

You can run app from Terminal to see any error message while loading framework. You may need to code sign both the Sparkle framework and the app with your code signing certificate. Finally make sure platform (32 or 64bit) match between app and framework.

180.3.13 resetUpdateCycle

MBS MacExtras Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop only.

Function: Resets the update cycle.
Notes: Call this to appropriately schedule or cancel the update checking timer according to the preferences for time interval and automatic checks. This call does not change the date of the next check, but only the internal timer.

180.3.14 SUSparkleErrorDomain as String

MBS MacExtras Plugin, Plugin Version: 16.1, Platform: macOS, Targets: Desktop only.

Function: The error domain for all Sparkle errors.

180.3.15 SUUpdaterAppcastItemNotificationKey as String

MBS MacExtras Plugin, Plugin Version: 14.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys for user info dictionary.
Notes: Key for the SUAppcastItem object in the SUUpdaterDidFindValidUpdateNotification userInfo dictionaries.

180.3.16 SUUpdaterAppcastNotificationKey as String

MBS MacExtras Plugin, Plugin Version: 14.4, Platform: macOS, Targets: Desktop only.

Function: Key for the SUAppcast object in the SUUpdaterDidFinishLoadingAppCastNotification userInfo.

180.3.17 SUUpdaterDidFindValidUpdateNotification as String

MBS MacExtras Plugin, Plugin Version: 14.4, Platform: macOS, Targets: Desktop only.

Function: One of the notification constants for use with NSNotificationObserverMBS class.
Notes: Object for this notification is the updater.

180.3.18 SUUpdaterDidFinishLoadingAppCastNotification as String

MBS MacExtras Plugin, Plugin Version: 14.4, Platform: macOS, Targets: Desktop only.

Function: One of the notification constants for use with NSNotificationObserverMBS class.
Notes: Object for this notification is the updater.

180.3.19 SUUpdaterDidNotFindUpdateNotification as String

MBS MacExtras Plugin, Plugin Version: 14.4, Platform: macOS, Targets: Desktop only.

Function: One of the notification constants for use with NSNotificationObserverMBS class.
Notes: Object for this notification is the updater.

180.3.20 SUUpdaterWillRestartNotification as String

MBS MacExtras Plugin, Plugin Version: 16.1, Platform: macOS, Targets: Desktop only.

Function: The notification sent when updater will restart app.

180.3.21 validateMenuItem(menuItem as NSMenuItemMBS) as Boolean

MBS MacExtras Plugin, Plugin Version: 20.3, Platform: macOS, Targets: Desktop only.

Function: he menu item validation used for the checkForUpdates action

180.3.22 Properties

180.3.23 automaticallyChecksForUpdates as boolean

MBS MacExtras Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop only.

Function: Whether update checks are performed automatically.
Notes: (Read and Write property)

180.3.24 automaticallyDownloadsUpdates as boolean

MBS MacExtras Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop only.

Function: Whether downloads should be downloaded automatically.
Notes: (Read and Write property)

180.3.25 decryptionPassword as String

MBS MacExtras Plugin, Plugin Version: 20.3, Platform: macOS, Targets: Desktop only.

Function: A property indicating the decryption password used for extracting updates shipped as Apple Disk Images (dmg)
Notes: (Read and Write property)

180.3.26 feedURL as string

MBS MacExtras Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop only.

Function: The URL of the appcast feed.
Notes: (Read and Write property)

180.3.27 Handle as Integer

MBS MacExtras Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop only.

Function: The internal handle to the object used.
Notes: (Read and Write property)

180.3.28 hostBundle as Variant

MBS MacExtras Plugin, Plugin Version: 16.1, Platform: macOS, Targets: Desktop only.

Function: The target application to update.
Notes: Value is a NSBundleMBS. We use variant to reduce dependency to other plugins.

You can query BundleFolder on the NSBundle object to know where your app is.
(Read only property)

180.3.29 httpHeaders as Dictionary

MBS MacExtras Plugin, Plugin Version: 16.1, Platform: macOS, Targets: Desktop only.

Function: The HTTP headers to include with fetchAppcastFromURL call.
Notes: You can check this dictionary for HTTP headers.
Or make a new dictionary and assign it to this property to set http headers to include in transfer.
(Read and Write property)

180.3.30 lastUpdateCheckDate as date

MBS MacExtras Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: The date of the last update check.
Notes: Returns nil if no check has been performed.
(Read only property)

180.3.31 lastUpdateCheckDateTime as DateTime

MBS MacExtras Plugin, Plugin Version: 20.5, Platform: macOS, Targets: Desktop only.

Function: The date of the last update check.
Notes: Returns nil if no check has been performed.
(Read only property)

180.3.32 sendsSystemProfile as boolean

MBS MacExtras Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop only.

Function: Whether the system profile is sent to the server.
Notes: (Read and Write property)

180.3.33 sparkleBundle as Variant

MBS MacExtras Plugin, Plugin Version: 16.1, Platform: macOS, Targets: Desktop only.

Function: The sparkle bundle.
Notes: Value is a NSBundleMBS. We use variant to reduce dependency to other plugins.

You can query BundleFolder on the NSBundle object to know where your app is.
(Read only property)

180.3.34 updateCheckInterval as Double

MBS MacExtras Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop only.

Function: After which time the next update check is performed.
Notes: (Read and Write property)

180.3.35 updateInProgress as boolean

MBS MacExtras Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop only.

Function: Whether an update is in progress.
Notes: (Read only property)

180.3.36 userAgentString as String

MBS MacExtras Plugin, Plugin Version: 14.4, Platform: macOS, Targets: Desktop only.

Function: Which user agent string to use for the http download.
Notes: (Read and Write property)

180.3.37 Events

180.3.38 bestValidUpdateInAppcast(appcast as SUAppcastMBS) as SUAppcastItemMBS

MBS MacExtras Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop only.

Function: The event called to decide which appcast item is the best to use.
Notes: If you're using special logic or extensions in your appcast, implement this to use your own logic for finding a valid update, if any, in the given appcast.

If you leave this event empty the default handler will be called. If you add code here, the default handle will not be called!

180.3.39 didAbortWithError(error as NSErrorMBS)

MBS MacExtras Plugin, Plugin Version: 16.1, Platform: macOS, Targets: Desktop only.

Function: Called after an update is aborted due to an error.
Notes: error: The error that caused the abort

This is a newer event which is only called in 64-bit version.

180.3.40 didCancelInstallUpdateOnQuit(update as SUAppcastItemMBS)

MBS MacExtras Plugin, Plugin Version: 14.4, Platform: macOS, Targets: Desktop only.

Function: Called when an update is scheduled to be silently installed on quit and cancelled.
Notes: New in version 1.6 of Sparkle.

180.3.41 didDismissUpdateAlertPermanently(permanently as boolean, item as SUAppcastItemMBS)

MBS MacExtras Plugin, Plugin Version: 20.3, Platform: macOS, Targets: Desktop only.

Function: Called after the user dismisses the update alert.
Notes: permanently: true if the alert will not appear again for this update; false if it may reappear.

180.3.42 didDownloadUpdate(item as SUAppcastItemMBS)

MBS MacExtras Plugin, Plugin Version: 20.3, Platform: macOS, Targets: Desktop only.

Function: Called immediately after succesfull download of the specified update.
Notes: item: The appcast item corresponding to the update that has been downloaded.

180.3.43 didExtractUpdate(item as SUAppcastItemMBS)

MBS MacExtras Plugin, Plugin Version: 20.3, Platform: macOS, Targets: Desktop only.

Function: Called immediately after extracting the specified downloaded update.
Notes: item: The appcast item corresponding to the update that has been extracted.

180.3.44 didFindValidUpdate(update as SUAppcastItemMBS)

MBS MacExtras Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop only.

Function: This event is called when a valid update is found by the update driver.
Notes: If you leave this event empty the default handler will be called. If you add code here, the default handle will not be called!

Plugin version 8.7 makes sure this method is executed on the main thread.

180.3.45 didFinishLoadingAppcast(update as SUAppcastMBS)

MBS MacExtras Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop only.

Function: The event called when the appcast has been loaded.
Notes: Implement this if you want to do some special handling with the appcast once it finishes loading.

If you leave this event empty the default handler will be called. If you add code here, the default handle will not be called!

Plugin version 8.7 makes sure this method is executed on the main thread.

180.3.46 failedToDownloadUpdate(item as SUAppcastItemMBS, error as NSErrorMBS)

MBS MacExtras Plugin, Plugin Version: 16.1, Platform: macOS, Targets: Desktop only.

Function: Called after the specified update failed to download.
Notes: item: The appcast item corresponding to the update that failed to download.
error: The error generated by the failed download.

This is a newer event which is only called in 64-bit version.

180.3.47 feedParametersForUpdater(sendingProfile as boolean) as dictionary()

MBS MacExtras Plugin, Plugin Version: 14.0, Platform: macOS, Targets: Desktop only.

Function: Provide additional parameters for updater.
Notes: This method allows you to add extra parameters to the appcast URL, potentially based on whether or not Sparkle will also be sending along the system profile. This method should return an array of dictionaries with keys: "key", "value", "displayKey", "displayValue", the latter two being specifically for display

to the user.

180.3.48 feedURLStringForUpdater as String

MBS MacExtras Plugin, Plugin Version: 14.4, Platform: macOS, Targets: Desktop only.

Function: Override this to dynamically specify the entire feed URL.
Notes: New in version 1.6 of Sparkle.

180.3.49 pathToRelaunchForUpdater as string

MBS MacExtras Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop only.

Function: This event is called so you can customize the installation destination of the update.
Notes: This event returns the path which is used to relaunch the client after the update is installed. By default, the path of the host bundle.

If you leave this event empty the default handler will be called. If you add code here, the default handle will not be called!

180.3.50 shouldPostponeRelaunchForUpdate(sendingProfile as SUAppcastItemMBS) as boolean

MBS MacExtras Plugin, Plugin Version: 14.0, Platform: macOS, Targets: Desktop only.

Function: Return true to delay the relaunch until you do some processing.
Notes: Invoke the update later by calling InvokeUpdate method.
This is not called if the user didn't relaunch on the previous update, in that case it will immediately restart.

180.3.51 updaterDidNotFindUpdate

MBS MacExtras Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop only.

Function: The event called when a valid update is not found.
Notes: Plugin version 8.7 makes sure this method is executed on the main thread.

180.3.52 updaterDidRelaunchApplication

MBS MacExtras Plugin, Plugin Version: 20.3, Platform: macOS, Targets: Desktop only.

Function: Called immediately after relaunching. SUUpdater delegate must be set before applicationDidFinishLaunching: to catch this event.

180.3.53 updaterDidShowModalAlert

MBS MacExtras Plugin, Plugin Version: 14.4, Platform: macOS, Targets: Desktop only.

Function: Called after an updater shows a modal alert window, to give the host the opportunity to hide attached windows etc. that may get in the way.
Notes: New in version 1.6 of Sparkle.

180.3.54 updaterMayCheckForUpdates as boolean

MBS MacExtras Plugin, Plugin Version: 14.4, Platform: macOS, Targets: Desktop only.

Function: Use this to keep Sparkle from popping up e.g. while your setup assistant is showing.
Notes: New in version 1.6 of Sparkle.

180.3.55 updaterShouldPromptForPermissionToCheckForUpdates as boolean

MBS MacExtras Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop only.

Function: The event to decide whether the updater should prompt for permission to check for updates.
Notes: Use this to override the default behavior for Sparkle prompting the user about automatic update checks.

If you leave this event empty the default handler will be called. If you add code here, the default handle will not be called!

180.3.56 updaterShouldRelaunchApplication as boolean

MBS MacExtras Plugin, Plugin Version: 14.4, Platform: macOS, Targets: Desktop only.

Function: Whether app should be relaunched.
Notes: Some apps *can not* be relaunched in certain circumstances. They can use this method to prevent a relaunch "hard".
New in version 1.6 of Sparkle.

180.3.57 updaterShouldShowUpdateAlertForScheduledUpdate(item as SUAppcastItemMBS) as boolean

MBS MacExtras Plugin, Plugin Version: 20.3, Platform: macOS, Targets: Desktop only.

Function: Called just before the scheduled update driver prompts the user to install an update.
Notes: Yes to allow the update prompt to be shown (the default behavior), or no to suppress it.

180.3.58 updaterWillRelaunchApplication

MBS MacExtras Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop only.

Function: The event called immediately before relaunching.
Notes: Plugin version 8.7 makes sure this method is executed on the main thread.

The current Sparkle implementation seems to force quit the application so this method is the last chance for your application to clean up.

180.3.59 updaterWillShowModalAlert

MBS MacExtras Plugin, Plugin Version: 14.4, Platform: macOS, Targets: Desktop only.

Function: Called before an updater shows a modal alert window, to give the host the opportunity to hide attached windows etc. that may get in the way.
Notes: New in version 1.6 of Sparkle.

180.3.60 userDidCancelDownload

MBS MacExtras Plugin, Plugin Version: 16.1, Platform: macOS, Targets: Desktop only.

Function: Called when the user clicks the cancel button while and update is being downloaded.
Notes: This is a newer event which is only called in 64-bit version.

180.3.61 userDidSkipThisVersion(item as SUAppcastItemMBS)

MBS MacExtras Plugin, Plugin Version: 20.3, Platform: macOS, Targets: Desktop only.

Function: Called when the user clicks the Skip This Version button.

180.3.62 versionComparatorForUpdater as SUVersionComparisonMBS

MBS MacExtras Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop only.

Function: This event allows you to provide a custom version comparator.
Notes: If you don't implement this event or return nil, the standard version comparator will be used.

Please makes ure that the SUVersionComparisonMBS object lives longer, so it can be used later. e.g. keep a reference in an app property.

180.3.63 willDownloadUpdate(item as SUAppcastItemMBS, request as Variant)

MBS MacExtras Plugin, Plugin Version: 16.1, Platform: macOS, Targets: Desktop only.

Function: Called immediately before downloading the specified update.
Notes: item: The appcast item corresponding to the update that is proposed to be downloaded.
request: The mutable URL request that will be used to download the update. (NSMutableURLRequestMBS object)

This is a newer event which is only called in 64-bit version.

180.3.64 willExtractUpdate(item as SUAppcastItemMBS)

MBS MacExtras Plugin, Plugin Version: 20.3, Platform: macOS, Targets: Desktop only.

Function: Called immediately before extracting the specified downloaded update.
Notes: item: The appcast item corresponding to the update that is proposed to be extracted.

180.3.65 willInstallUpdate(update as SUAppcastItemMBS)

MBS MacExtras Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop only.

Function: This event is called immediately before installing the specified update.
Notes: If you leave this event empty the default handler will be called. If you add code here, the default handle will not be called!

Plugin version 8.7 makes sure this method is executed on the main thread.

180.3.66 willInstallUpdateOnQuit(update as SUAppcastItemMBS)

MBS MacExtras Plugin, Plugin Version: 14.4, Platform: macOS, Targets: Desktop only.

Function: Called when an update is scheduled to be silently installed on quit.
Notes: New in version 1.6 of Sparkle.
If you like to install now instead, you can call InvokeImmediateInstallation method.

180.3.67 Constants

Errors

Constant	Value	Description
SUAppcastError	1002	An error occurred in retrieving update information.
SUAppcastParseError	1000	An error occurred while parsing the update feed. The appcast must be valid xml.
SUAuthenticationFailure	4001	Unable to grant authorization to perform action because it is explicitly turned off.
SUDowngradeError	4006	The update contains an older version.
SUDownloadError	2001	Download error.
SUFileCopyFailure	4000	File copy failed.
SUInstallationCancelledError	4007	Installation was cancelled.
SUInstallationError	4005	An error occurred while installing the update.
SUMissingInstallerToolError	4003	The installer tool is missing.
SUMissingUpdateError	4002	Couldn't find an appropriate update in the downloaded package. App name or bundle ID must match to current app.
SUNoUpdateError	1001	You already have the newest version.
SURelaunchError	4004	Failed to relaunch.
SURunningFromDiskImageError	1003	The app runs from disk image and can't update.
SURunningTranslocated	1004	The application got translocated.
SUSignatureError	3001	The signture doesn't match.
SUSystemPowerOffError	5000	The update will not be installed because the user requested for the system to power off.
SUTemporaryDirectoryError	2000	Failed to get temp file.
SUUnarchivingError	3000	Failed to unarchive the update.

180.4 class SUVersionComparisonMBS

180.4.1 class SUVersionComparisonMBS

MBS MacExtras Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop only.

Function: Implement this class to provide version comparison facilities for Sparkle.
Notes: Or use the default implementation by not implementing the versionComparatorForUpdater event.

180.4.2 Methods

180.4.3 Constructor

MBS MacExtras Plugin, Plugin Version: 12.5, Platform: macOS, Targets: Desktop only.

Function: The constructor.

180.4.4 Destructor

MBS MacExtras Plugin, Plugin Version: 12.5, Platform: macOS, Targets: Desktop only.

Function: The destructor.

180.4.5 Properties

180.4.6 Handle as Integer

MBS MacExtras Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop only.

Function: The internal handle for this object.
Notes: (Read and Write property)

180.4.7 Events

180.4.8 compareVersion(VersionA as string, VersionB as string) as Integer

MBS MacExtras Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop only.

Function: The method to compare two version strings.
Notes: Should return NSOrderedAscending if b >a, NSOrderedDescending if b <a, and NSOrderedSame if

they are equivalent.

This function may be called on the main thread or some other thread, so disable stack checking in your event.

180.4.9 Constants

Constants

Constant	Value	Description
NSOrderedAscending	-1	One of the order constants.
NSOrderedDescending	1	One of the order constants.
NSOrderedSame	0	One of the order constants.

180.5 class WinSparkleMBS

180.5.1 class WinSparkleMBS

MBS Win Plugin, Plugin Version: 17.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: The class for WinSparkle library.
Notes: Please first use LoadLibrary, than set properties and finally call Initialize.
Optionally you can later call Check methods.

- MBS Xojo Plugins, version 25.2pr5

180.5.2 Methods

180.5.3 CheckUpdateWithoutUI

MBS Win Plugin, Plugin Version: 17.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: Checks if an update is available.
Example:

WinSparkleMBS.CheckUpdateWithoutUI

Notes: No progress UI is shown to the user when checking. If an update is available, the usual "update available" window is shown; this function is *not* completely UI-less.
Use with caution, it usually makes more sense to use the automatic update checks on interval option or manual check with visible UI.
This function returns immediately.
This function respects "Skip this version" choice by the user.

180.5.4 CheckUpdateWithUI

MBS Win Plugin, Plugin Version: 17.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: Checks if an update is available, showing progress UI to the user.
Example:

WinSparkleMBS.CheckUpdateWithUI

Notes: Normally, WinSparkle checks for updates on startup and only shows its UI when it finds an update. If the application disables this behavior, it can hook this function to "Check for updates..." menu item.

When called, background thread is started to check for updates. A small window is shown to let the user know the progress. If no update is found, the user is told so. If there is an update, the usual "update available" window is shown.
This function returns immediately.

Because this function is intended for manual, user-initiated checks for updates, it ignores "Skip this version" even if the user checked it previously.

180.5.5 CheckUpdateWithUIAndInstall

MBS Win Plugin, Plugin Version: 17.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: Checks if an update is available, showing progress UI to the user and immediately installing the update if one is available.
Example:

WinSparkleMBS.CheckUpdateWithUIAndInstall

Notes: This is useful for the case when users should almost always use the newest version of your software. When called, WinSparkle will check for updates showing a progress UI to the user. If an update is found the update prompt will be skipped and the update will be installed immediately.
If your application expects to do something after checking for updates you may wish to use DidNotFindUpdate and UpdateCancelled events.

180.5.6 Cleanup

MBS Win Plugin, Plugin Version: 17.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: Cleans up after WinSparkle.
Example:

WinSparkleMBS.Cleanup

Notes: Should be called by the app when it's shutting down. Cancels any pending Sparkle operations and shuts down its helper threads.

180.5.7 ClearHTTPHeaders

MBS Win Plugin, Plugin Version: 25.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Clears all custom HTTP headers previously added using SetHTTPHeader().

180.5.8 Initialize

MBS Win Plugin, Plugin Version: 17.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: Starts WinSparkle.
Example:

```
WinSparkleMBS.Initialize
```

Notes: If WinSparkle is configured to check for updates on startup, proceeds to perform the check. You should only call this function when your app is initialized and shows its main window.

This call doesn't block and returns almost immediately. If an update is available, the respective UI is shown later from a separate thread.

180.5.9 LoadLibrary(File as folderitem) as boolean

MBS Win Plugin, Plugin Version: 17.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: Loads the WinSparkle DLL.
Example:

```
Var f as FolderItem = GetFolderItem("WinSparkle.dll")

if WinSparkleMBS.LoadLibrary(f) then
MsgBox "OK"
else
MsgBox "Failed to load DLL."
end if
```

Notes: Returns true on success.
See also:

- 180.5.10 LoadLibrary(Path as string) as boolean

180.5.10 LoadLibrary(Path as string) as boolean

MBS Win Plugin, Plugin Version: 17.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: Loads the WinSparkle DLL.
Example:

```
if WinSparkleMBS.LoadLibrary("Libs\WinSparkle.dll") then
MsgBox "OK"
else
MsgBox "Failed to load DLL."
end if
```

Notes: Returns true on success.
See also:

- 180.5.9 LoadLibrary(File as folderitem) as boolean 21343

180.5.11 SetHTTPHeader(Name as String, Value as String)

MBS Win Plugin, Plugin Version: 25.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Set custom HTTP header for appcast checks.
Notes: See also ClearHTTPHeaders method.

180.5.12 Properties

180.5.13 AppCastURL as String

MBS Win Plugin, Plugin Version: 17.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: Sets URL for the app's appcast.
Example:

```
WinSparkleMBS.AppCastURL = "https://www.monkeybreadsoftware.test/test/test.xml"
```

Notes: Only http and https schemes are supported.

If this function isn't called by the app, the URL is obtained from Windows resource named "FeedURL" of type "APPCAST".

Always use HTTPS feeds, do not use unencrypted HTTP! This is necessary to prevent both leaking user information and preventing various MITM attacks.

See https://github.com/vslavik/winsparkle/wiki/Appcast-Feeds for more information about appcast feeds.
(Read and Write property)

180.5.14 AppName as String

MBS Win Plugin, Plugin Version: 17.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: Application name.
Example:

WinSparkleMBS.CompanyName = "Monkeybread Software"
WinSparkleMBS.AppName = "Test App"
WinSparkleMBS.AppVersion = "1.2.3"

Notes: This is both shown to the user and used in HTTP User-Agent header.

CompanyName and AppName are used to determine the location of WinSparkle settings in registry. (HKCU\Software\<CompanyName>\<AppName>\WinSparkle is used.)

If not set, this value is read from VERSIONINFO/StringFileInfo resources.
(Read and Write property)

180.5.15 AppVersion as String

MBS Win Plugin, Plugin Version: 17.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: Version of the app, as string (e.g. "1.2" or "1.2rc1").
Example:

WinSparkleMBS.CompanyName = "Monkeybread Software"
WinSparkleMBS.AppName = "Test App"
WinSparkleMBS.AppVersion = "1.2.3"

Notes: If not set, this value is read from VERSIONINFO/StringFileInfo resources.
(Read and Write property)

180.5.16 AutomaticCheckForUpdates as Boolean

MBS Win Plugin, Plugin Version: 17.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether updates are checked automatically or only through a manual call.

Example:

WinSparkleMBS.AutomaticCheckForUpdates = true

Notes: If disabled, CheckUpdateWithUI must be used explicitly.

True to have updates checked automatically, false otherwise.
Defaults to false when not yet configured (as happens on first start).
(Read and Write property)

180.5.17 BuildVersion as String

MBS Win Plugin, Plugin Version: 17.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: Sets application build version number.
Example:

WinSparkleMBS.BuildVersion = "123"

Notes: This is the internal version number that is not normally shown to the user. It can be used for finer granularity that official release versions, e.g. for interim builds.

If this function is called, then the provided *build* number is used for comparing versions; it is compared to the "version" attribute in the appcast and corresponds to OS X Sparkle's CFBundleVersion handling. If used, then the appcast must also contain the "shortVersionString" attribute with human-readable display version string. The version passed to AppVersion property corresponds to this and is used for display.
(Read and Write property)

180.5.18 CanShutdown as Boolean

MBS Win Plugin, Plugin Version: 17.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether your app can shutdown now.
Example:

WinSparkleMBS.CanShutdown = false

Notes: By default false.
Set to false when you have something like an open edited document.
(Read and Write property)

180.5.19 CompanyName as String

MBS Win Plugin, Plugin Version: 17.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: The name of the vendor.
Example:

WinSparkleMBS.CompanyName = "Monkeybread Software"
WinSparkleMBS.AppName = "Test App"
WinSparkleMBS.AppVersion = "1.2.3"

Notes: CompanyName and AppName are used to determine the location of WinSparkle settings in registry. (HKCU\Software\<CompanyName>\<AppName>\WinSparkle is used.)

If not set, this value is read from VERSIONINFO/StringFileInfo resources.
(Read and Write property)

180.5.20 DSAPubPEM as String

MBS Win Plugin, Plugin Version: 19.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The public key in PEM format.
Notes: If not set, the framework will look into the app resources.
(Read and Write property)

180.5.21 eddsaPublicKey as String

MBS Win Plugin, Plugin Version: 25.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Sets EdDSA public key.
Notes: Only base64 encoded format is supported.

Public key will be used to verify EdDSA signature of the update file. It will be set only if it contains valid EdDSA public key.

If this function isn't called by the app, public key is obtained from Windows resource named "EdDSAPub" of type "EDDSA".

If this function is called, DSA public key set with DSAPubPEM property or present in the resources will be ignored; so will DSA signatures in the appcast.
(Read and Write property)

180.5.22 Language as String

MBS Win Plugin, Plugin Version: 17.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: Sets UI language from its ISO code.
Example:

WinSparkleMBS.Language = "en-US"

Notes: Language and LanguageID properties set user interface language. One must be set before Initialize to have any effect. If none of them is called, WinSparkle detects the UI language automatically.

ISO 639 language code with an optional ISO 3116 country code, e.g. "fr", "pt-PT", "pt-BR" or "pt_BR", (Read and Write property)

180.5.23 LanguageID as Integer

MBS Win Plugin, Plugin Version: 17.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: Sets UI language from its Win32 LANGID code.
Notes: Language and LanguageID properties set user interface language. One must be set before Initialize to have any effect. If none of them is called, WinSparkle detects the UI language automatically.
(Read and Write property)

180.5.24 LastCheckTime as Integer

MBS Win Plugin, Plugin Version: 17.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: Gets the time for the last update check.
Notes: Default value is -1, indicating that the update check has never run.
(Read only property)

180.5.25 RegistryPath as String

MBS Win Plugin, Plugin Version: 17.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: The registry path where settings will be stored.
Example:

WinSparkleMBS.RegistryPath = "Software\My App\Updates"

Notes: Normally, these are stored in "HKCU\Software\<company_name>\<app_name>\WinSparkle"

but if your application needs to store the data elsewhere for some reason, using this function is an alternative.
Note that path is relative to HKCU/HKLM root and the root is not part of it. For example:
(Read and Write property)

180.5.26 UpdateCheckInterval as Integer

MBS Win Plugin, Plugin Version: 17.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: The automatic update interval.
Example:

WinSparkleMBS.UpdateCheckInterval = 7200

Notes: The interval in seconds between checks for updates. The minimum update interval is 3600 seconds (1 hour).
(Read and Write property)

180.5.27 Events

180.5.28 DidFindUpdate

MBS Win Plugin, Plugin Version: 17.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: Called when an update was found.

180.5.29 DidNotFindUpdate

MBS Win Plugin, Plugin Version: 17.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: Called when an update was not found.

180.5.30 Error

MBS Win Plugin, Plugin Version: 17.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: Called when an update failed due to an error.

180.5.31 ShutdownRequest

MBS Win Plugin, Plugin Version: 17.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: The event to ask the host to shut down immediately after launching the installer.
Notes: Its implementation should gracefully terminate the application.

180.5.32 UpdateCancelled

MBS Win Plugin, Plugin Version: 17.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: The update was cancelled.

180.5.33 UpdateDismissed

MBS Win Plugin, Plugin Version: 25.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The event to be called when the user dismisses (closes) update dialog, including when there were no updates or an error occured.
Notes: See UpdateCancelled for a subtly different event that may be more appropriate.

This is useful in combination with CheckUpdateWithUI or similar as it allows you to perform some action when the update dialog is closed.

180.5.34 UpdatePostponed

MBS Win Plugin, Plugin Version: 25.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The update was postponed.
Notes: Set event to be called when the user postpones an update by pressing 'remind me later' button.

This is useful in combination with CheckUpdateWithUI or similar as it allows you to perform some action when the download is postponed.

180.5.35 UpdateSkipped

MBS Win Plugin, Plugin Version: 25.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The update was skipped.
Notes: The event to be called when the user skips an update.

This is useful in combination with CheckUpdateWithUI or similar as it allows you to perform some action when the update is skipped.

Chapter 181

Special Folders

181.1 Globals

181.1.1 ALMLocationsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = ALMLocationsFolderMBS(kUserDomain)
```

Notes: Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateALMLocationsFolder function.

181.1.2 ALMModulesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = ALMModulesFolderMBS(kUserDomain)
```

Notes: Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateALMModulesFolder function.

181.1.3 ALMPreferencesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = ALMPreferencesFolderMBS(kUserDomain)
```

Notes: Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the CreateALMPreferencesFolder function.

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

181.1.4 AppearanceFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = AppearanceFolderMBS(kUserDomain)
```

Notes: Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateAppearanceFolder function.

181.1.5 AppleExtrasFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = AppleExtrasFolderMBS(kUserDomain)
```

Notes: Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateAppleExtrasFolder function.

181.1.6 AppleMenuFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = AppleMenuFolderMBS(kUserDomain)
```

Notes: Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateAppleMenuFolder function.

181.1.7 AppleShareAuthenticationFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = AppleShareAuthenticationFolderMBS(kUserDomain)
```

Notes: Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateAppleShareAuthenticationFolder function.

181.1.8 AppleshareAutomountServerAliasesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = AppleshareAutomountServerAliasesFolderMBS(kUserDomain)
```

Notes: Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateAppleshareAutomountServerAliasesFolderMBS function.

181.1.9 AppleShareSupportFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = AppleShareSupportFolderMBS(kUserDomain)
```

Notes: Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateAppleShareSupportFolder function.

181.1.10 ApplicationsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platforms: macOS, Windows, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = ApplicationsFolderMBS(kUserDomain)
```

Notes: Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateApplicationsFolder function.
On Windows, only the System Domain is supported.

181.1.11 ApplicationSupportFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platforms: macOS, Windows, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
Var f as folderitem

f=preferencesFolderMBS(-32763)
if f=nil then // On Windows always nil
f=applicationsupportFolderMBS(-32763)
end if

msgBox f.NativePath

// example output:
```

```
// "Mac OS X:Users:cs:Library:Preferences:" on Mac OS X
// "Mac OS 9:Systemordner:Preferences" on a german Mac OS 9
// "C:\Dokumente und Einstellungen\Christian\Anwendungsdaten\" on a german Windows XP.
```

Notes: Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateApplicationSupportFolder function.

Xojo ApplicationSupport function points to "/Library/Application Support" while ApplicationSupportFolderMBS points to different locations on my test system depending on the domain code:

```
-32768 ->"/Library/Application Support"
-32767 ->"/Library/Application Support"
-32766 ->nil
-32765 ->"/Library/Application Support"
-32764 ->nil
-32763 ->"/Users/cs/Library/Application Support"
-32762 ->"/Volumes/Mac OS 9/Systemordner/Application Support"
0 ->"/Library/Application Support"
```

At last it is your decision to use the correct one!

181.1.12 AssistantsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = AssistantsFolderMBS(kUserDomain)
```

Notes: Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateAssistantsFolder function.

181.1.13 AudioAlertSoundsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = AudioAlertSoundsFolderMBS(kUserDomain)
```

Notes: Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateAudioAlertSoundsFolder function.

181.1.14 AudioComponentsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = AudioComponentsFolderMBS(kUserDomain)
```

Notes: Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateAudioComponentsFolder function.

181.1.15 AudioDigidesignFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = AudioDigidesignFolderMBS(kUserDomain)
```

Notes: Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the CreateAudioDigidesignFolderMBS function.

MBS Util Plugin, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = ColorSyncCMMFolderMBS(kUserDomain)
```

Notes: Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateColorSyncCMMFolder function.

181.1.32 ColorSyncFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = ColorSyncFolderMBS(kUserDomain)
```

Notes: Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the CreateColorSyncFolder function.

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

181.1.33 ColorSyncProfilesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = ColorSyncProfilesFolderMBS(kUserDomain)
```

Notes: Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateColorSyncProfilesFolder function.

181.1.34 ColorSyncScriptingFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = ColorSyncScriptingFolderMBS(kUserDomain)
```

Notes: Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateColorSyncScriptingFolder function.

181.1.35 ComponentsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = ComponentsFolderMBS(kUserDomain)
```

Notes: Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateComponentsFolder function.

181.1.36 CompositionsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = CompositionsFolderMBS(kUserDomain)
```

Notes: Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateCompositionsFolderMBS function.

181.1.37 ContextualMenuItemsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = ContextualMenuItemsFolderMBS(kUserDomain)
```

Notes: Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateContextualMenuItemsFolder function.

181.1.38 ControlPanelDisabledFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = ControlPanelDisabledFolderMBS(kUserDomain)
```

Notes: Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateControlPanelDisabledFolder function.

181.1.39 ControlPanelFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = ControlPanelFolderMBS(kUserDomain)
```

Notes: Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateControlPanelFolder function.

181.1.40 ControlStripModulesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = ControlStripModulesFolderMBS(kUserDomain)
```

Notes: Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the CreateControlStripModulesFolder function.

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

181.1.41 CoreServicesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = CoreServicesFolderMBS(kUserDomain)
```

Notes: Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateCoreServicesFolder function.

181.1.42 CreateALMLocationsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = CreateALMLocationsFolderMBS(kUserDomain)
```

Notes: If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the ALMLocationsFolder function.

181.1.43 CreateALMModulesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = CreateALMModulesFolderMBS(kUserDomain)
```

Notes: If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the ALMModulesFolder function.

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

181.1.44 CreateALMPreferencesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = CreateALMPreferencesFolderMBS(kUserDomain)
```

Notes: If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the ALMPreferencesFolder function.

181.1.45 CreateAppearanceFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module

instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = CreateAppearanceFolderMBS(kUserDomain)
```

Notes: If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the AppearanceFolder function.

181.1.46 CreateAppleExtrasFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = CreateAppleExtrasFolderMBS(kUserDomain)
```

Notes: If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the AppleExtrasFolder function.

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

181.1.47 CreateAppleMenuFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = CreateAppleMenuFolderMBS(kUserDomain)
```

Notes: If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the AppleMenuFolder function.

181.1.48 CreateAppleShareAuthenticationFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module

instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = CreateAppleShareAuthenticationFolderMBS(kUserDomain)
```

Notes: If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the AppleShareAuthenticationFolder function.

181.1.49 CreateAppleshareAutomountServerAliasesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = CreateAppleshareAutomountServerAliasesFolderMBS(kUserDomain)
```

Notes: If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the AppleshareAutomountServerAliasesFolderMBS function.

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

181.1.50 CreateAppleShareSupportFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = CreateAppleShareSupportFolderMBS(kUserDomain)
```

Notes: If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the AppleShareSupportFolder function.

181.1.51 CreateApplicationsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platforms: macOS, Windows, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module

instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = CreateApplicationsFolderMBS(kUserDomain)
```

Notes: If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the ApplicationsFolder function.
On Windows, only the System Domain is supported.

181.1.52 CreateApplicationSupportFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platforms: macOS, Windows, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = CreateApplicationSupportFolderMBS(kUserDomain)
```

Notes: If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the ApplicationSupportFolder function.

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Xojo ApplicationSupport function points to "/Library/Application Support" while ApplicationSupportFolderMBS points to different locations on my test system depending on the domain code:

-32768 ->"/Library/Application Support"
-32767 ->"/Library/Application Support"
-32766 ->nil
-32765 ->"/Library/Application Support"
-32764 ->nil
-32763 ->"/Users/cs/Library/Application Support"
-32762 ->"/Volumes/Mac OS 9/Systemordner/Application Support"
0 ->"/Library/Application Support"

At last it is your decision to use the correct one!

181.1.53 CreateAssistantsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = CreateAssistantsFolderMBS(kUserDomain)
```

Notes: If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the AssistantsFolder function.

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

181.1.54 CreateAudioAlertSoundsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = CreateAudioAlertSoundsFolderMBS(kUserDomain)
```

Notes: If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the AudioAlertSoundsFolder function.

181.1.55 CreateAudioComponentsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module

instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = CreateAudioComponentsFolderMBS(kUserDomain)
```

Notes: If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the AudioComponentsFolder function.

181.1.56 CreateAudioDigidesignFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = CreateAudioDigidesignFolderMBS(kUserDomain)
```

Notes: If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the AudioDigidesignFolderMBS function.

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

181.1.57 CreateAudioPlugInsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = CreateAudioPlugInsFolderMBS(kUserDomain)
```

Notes: If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the AudioPlugInsFolder function.

181.1.58 CreateAudioPresetsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module

instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = CreateAudioPresetsFolderMBS(kUserDomain)
```

Notes: If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the AudioPresetsFolderMBS function.

181.1.59 CreateAudioSoundBanksFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = CreateAudioSoundBanksFolderMBS(kUserDomain)
```

Notes: If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the AudioSoundBanksFolder function.

-32768	On System Disk

-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

181.1.60 CreateAudioSoundsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = CreateAudioSoundsFolderMBS(kUserDomain)
```

Notes: If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the AudioSoundsFolder function.

181.1.61 CreateAudioSupportFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module

instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = CreateAudioSupportFolderMBS(kUserDomain)
```

Notes: If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the AudioSupportFolder function.

181.1.62 CreateAudioVSTFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = CreateAudioVSTFolderMBS(kUserDomain)
```

Notes: If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!

Also take a look on the AudioVSTFolderMBS function.

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

181.1.63 CreateAutomatorWorkflowsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = CreateAutomatorWorkflowsFolderMBS(kUserDomain)
```

Notes: If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the AutomatorWorkflowsFolderMBS function.

181.1.64 CreateAutosaveInformationFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module

instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = CreateAutosaveInformationFolderMBS(kUserDomain)
```

Notes: If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the AutosaveInformationFolderMBS function.

181.1.65 CreateBootTimeStartupItemsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = CreateBootTimeStartupItemsFolderMBS(kUserDomain)
```

Notes: If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!

Also take a look on the BootTimeStartupItemsFolderMBS function.

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

181.1.66 CreateCachedDataFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = CreateCachedDataFolderMBS(kUserDomain)
```

Notes: If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CachedDataFolder function.

181.1.67 CreateCarbonLibraryFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module

instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = CreateCarbonLibraryFolderMBS(kUserDomain)
```

Notes: If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CarbonLibraryFolder function.

181.1.68 CreateChewableItemsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = CreateChewableItemsFolderMBS(kUserDomain)
```

Notes: If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the ChewableItemsFolder function.

-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

181.1.69 CreateClassicDesktopFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = CreateClassicDesktopFolderMBS(kUserDomain)
```

Notes: If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the ClassicDesktopFolder function.

181.1.70 CreateClassicPreferencesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module

instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = CreateClassicPreferencesFolderMBS(kUserDomain)
```

Notes: If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the ClassicPreferencesFolderMBS function.

181.1.71 CreateColorPickersFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = CreateColorPickersFolderMBS(kUserDomain)
```

Notes: If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!

-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

181.1.72 CreateColorSyncCMMFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = CreateColorSyncCMMFolderMBS(kUserDomain)
```

Notes: If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the ColorSyncCMMFolder function.

181.1.73 CreateColorSyncFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module

instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = CreateColorSyncFolderMBS(kUserDomain)
```

Notes: If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the ColorSyncFolder function.

181.1.74 CreateColorSyncProfilesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = CreateColorSyncProfilesFolderMBS(kUserDomain)
```

Notes: If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the ColorSyncProfilesFolder function.

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

181.1.75 CreateColorSyncScriptingFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = CreateColorSyncScriptingFolderMBS(kUserDomain)
```

Notes: If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the ColorSyncScriptingFolder function.

181.1.76 CreateComponentsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module

instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = CreateComponentsFolderMBS(kUserDomain)
```

Notes: If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the ComponentsFolder function.

181.1.77 CreateCompositionsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = CreateCompositionsFolderMBS(kUserDomain)
```

Notes: If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the CompositionsFolderMBS function.

-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

181.1.78 CreateContextualMenuItemsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = CreateContextualMenuItemsFolderMBS(kUserDomain)
```

Notes: If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the ContextualMenuItemsFolder function.

181.1.79 CreateControlPanelDisabledFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module

instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = CreateControlPanelDisabledFolderMBS(kUserDomain)
```

Notes: If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the ControlPanelDisabledFolder function.

181.1.80 CreateControlPanelFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = CreateControlPanelFolderMBS(kUserDomain)
```

Notes: If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the ControlPanelFolder function.

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

181.1.81 CreateControlStripModulesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = CreateControlStripModulesFolderMBS(kUserDomain)
```

Notes: If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the ControlStripModulesFolder function.

181.1.82 CreateCoreServicesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module

instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = CreateCoreServicesFolderMBS(kUserDomain)
```

Notes: If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CoreServicesFolder function.

181.1.83 CreateCurrentUserFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = CreateCurrentUserFolderMBS(kUserDomain)
```

Notes: If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the CurrentUserFolder function.

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

181.1.84 CreateCurrentUserRemoteFolderLocationFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = CreateCurrentUserRemoteFolderMBS(kUserDomain)
```

Notes: If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CurrentUserRemoteFolder function.

181.1.85 CreateCurrentUserRemoteFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = CreateCurrentUserRemoteFolderMBS(kUserDomain)
```

Notes: If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CurrentUserRemoteFolder function.

181.1.86 CreateDesktopFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platforms: macOS, Windows, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = CreateDesktopFolderMBS(kUserDomain)
```

Notes: If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the SpecialFolder.Desktop function.

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

181.1.87 CreateDesktopPicturesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = CreateDesktopPicturesFolderMBS(kUserDomain)
```

Notes: If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the DesktopPicturesFolder function.

181.1.88 CreateDeveloperApplicationsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 3.4, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module

instead. **Function:** The developer application folder.
Example:

```
const kUserDomain = -32763
Var f as folderitem = CreateDeveloperApplicationsFolderMBS(kUserDomain)
```

Notes: If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the DeveloperApplicationsFolderMBS function.

181.1.89 CreateDeveloperDocsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = CreateDeveloperDocsFolderMBS(kUserDomain)
```

Notes: If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the DeveloperDocsFolder function.

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

181.1.90 CreateDeveloperFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = CreateDeveloperFolderMBS(kUserDomain)
```

Notes: If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the DeveloperFolder function.

181.1.91 CreateDeveloperHelpFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module

instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = CreateDeveloperHelpFolderMBS(kUserDomain)
```

Notes: If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the DeveloperHelpFolder function.

181.1.92 CreateDictionariesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 3.4, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Function:** The folder for the dictionaries.
Example:

```
const kUserDomain = -32763
Var f as folderitem = CreateDictionariesFolderMBS(kUserDomain)
```

Notes: If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the DictionariesFolderMBS function.

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

181.1.93 CreateDirectoryServicesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = CreateDirectoryServicesFolderMBS(kUserDomain)
```

Notes: If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the DirectoryServicesFolder function.

181.1.94 CreateDirectoryServicesPlugInsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module

instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = CreateDirectoryServicesPlugInsFolderMBS(kUserDomain)
```

Notes: If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the DirectoryServicesPlugInsFolder function.

181.1.95 CreateDisplayExtensionsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = CreateDisplayExtensionsFolderMBS(kUserDomain)
```

Notes: If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the DisplayExtensionsFolder function.

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

181.1.96 CreateDocumentationFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = CreateDocumentationFolderMBS(kUserDomain)
```

Notes: If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the DocumentationFolder function.

181.1.97 CreateDocumentsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platforms: macOS, Windows, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module

instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = CreateDocumentsFolderMBS(kUserDomain)
```

Notes: If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the DocumentsFolder function.
On Windows only the user and the system domain are supported.

181.1.98 CreateDomainLibraryFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = CreateDomainLibraryFolderMBS(kUserDomain)
```

Notes: If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the DomainLibraryFolder function.

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

181.1.99 CreateDomainTopLevelFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = CreateDomainTopLevelFolderMBS(kUserDomain)
```

Notes: If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the DomainTopLevelFolder function.

181.1.100 CreateDownloadsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module

instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = CreateDownloadsFolderMBS(kUserDomain)
```

Notes: If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the DownloadsFolderMBS function.

181.1.101 CreateEditorsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = CreateEditorsFolderMBS(kUserDomain)
```

Notes: If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the EditorsFolder function.

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

181.1.102 CreateExtensionDisabledFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = CreateExtensionDisabledFolderMBS(kUserDomain)
```

Notes: If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the ExtensionDisabledFolder function.

181.1.103 CreateExtensionFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module

instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = CreateExtensionFolderMBS(kUserDomain)
```

Notes: If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the ExtensionFolder function.

181.1.104 CreateFavoritesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = CreateFavoritesFolderMBS(kUserDomain)
```

Notes: If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the FavoritesFolder function.

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

181.1.105 CreateFileSystemSupportFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = CreateFileSystemSupportFolderMBS(kUserDomain)
```

Notes: If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the FileSystemSupportFolder function.

181.1.106 CreateFindByContentFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module

instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = CreateFindByContentFolderMBS(kUserDomain)
```

Notes: If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the FindByContentFolder function.

181.1.107 CreateFindByContentIndexesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = CreateFindByContentIndexesFolderMBS(kUserDomain)
```

Notes: If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the FindByContentIndexesFolderMBS function.

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

181.1.108 CreateFindByContentPluginsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = CreateFindByContentPluginsFolderMBS(kUserDomain)
```

Notes: If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the FindByContentPluginsFolder function.

181.1.109 CreateFindSupportFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module

instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = CreateFindSupportFolderMBS(kUserDomain)
```

Notes: If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the FindSupportFolder function.

181.1.110 CreateFolderActionsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = CreateFolderActionsFolderMBS(kUserDomain)
```

Notes: If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the FolderActionsFolder function.

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

181.1.111 CreateFontCollectionsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = CreateFontCollectionsFolderMBS(kUserDomain)
```

Notes: If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the FontCollectionsFolderMBS function.

181.1.112 CreateFontsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module

instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = CreateFontsFolderMBS(kUserDomain)
```

Notes: If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the FontsFolder function.

181.1.113 CreateFrameworksFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = CreateFrameworksFolderMBS(kUserDomain)
```

Notes: If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the FrameworksFolder function.

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

181.1.114 CreateGenEditorsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = CreateGenEditorsFolderMBS(kUserDomain)
```

Notes: If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the GenEditorsFolder function.

181.1.115 CreateHelpFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module

instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = CreateHelpFolderMBS(kUserDomain)
```

Notes: If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the HelpFolder function.

181.1.116 CreateiMovieFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = CreateiMovieFolderMBS(kUserDomain)
```

Notes: If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the iMovieFolderMBS function.

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

181.1.117 CreateiMoviePlugInsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = CreateiMoviePlugInsFolderMBS(kUserDomain)
```

Notes: If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the iMoviePlugInsFolderMBS function.

181.1.118 CreateiMovieSoundEffectsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module

instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = iMovieSoundEffectsFolderMBS(kUserDomain)
```

Notes: If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateiMovieSoundEffectsFolderMBS function.

181.1.119 CreateIndexFilesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = IndexFilesFolderMBS(kUserDomain)
```

Notes: If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the CreateIndexFilesFolderMBS function.

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.

-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

181.1.120 CreateInputManagersFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = CreateInputManagersFolderMBS(kUserDomain)
```

Notes: If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the InputManagersFolderMBS function.

181.1.121 CreateInputMethodsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module

instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = InputMethodsFolderMBS(kUserDomain)
```

Notes: If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateInputMethodsFolderMBS function.

181.1.122 CreateInstallerLogsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = CreateInstallerLogsFolderMBS(kUserDomain)
```

Notes: If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the InstallerLogsFolder function.

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

181.1.123 CreateInstallerReceiptsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = CreateInstallerReceiptsFolderMBS(kUserDomain)
```

Notes: If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the InstallerReceiptsFolder function.

181.1.124 CreateInternetFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module

instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = CreateInternetFolderMBS(kUserDomain)
```

Notes: If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the InternetFolder function.

181.1.125 CreateInternetPlugInFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = CreateInternetPlugInFolderMBS(kUserDomain)
```

Notes: If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the InternetPlugInFolder function.

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

181.1.126 CreateInternetSearchSitesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = CreateInternetSearchSitesFolderMBS(kUserDomain)
```

Notes: If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the InternetSearchSitesFolder function.

181.1.127 CreateInternetSitesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module

instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = CreateInternetSitesFolderMBS(kUserDomain)
```

Notes: If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the InternetSitesFolder function.

181.1.128 CreateISSDownloadsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = CreateISSDownloadsFolderMBS(kUserDomain)
```

Notes: If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the ISSDownloadsFolder function.

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

181.1.129 CreateKernelExtensionsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = CreateKernelExtensionsFolderMBS(kUserDomain)
```

Notes: If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the KernelExtensionsFolder function.

181.1.130 CreateKeyboardLayoutsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module

instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = KeyboardLayoutsFolderMBS(kUserDomain)
```

Notes: If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateKeyboardLayoutsFolderMBS function.

181.1.131 CreateKeychainFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = CreateKeychainFolderMBS(kUserDomain)
```

Notes: If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the KeychainFolder function.

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

181.1.132 CreateLauncherItemsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = CreateLauncherItemsFolderMBS(kUserDomain)
```

Notes: If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the LauncherItemsFolder function.

181.1.133 CreateLibraryAssistantsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module

instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = LibraryAssistantsFolderMBS(kUserDomain)
```

Notes: If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateLibraryAssistantsFolderMBS function.

181.1.134 CreateLocalesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = CreateLocalesFolderMBS(kUserDomain)
```

Notes: If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the LocalesFolder function.

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

181.1.135 CreateLogsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 3.4, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Function:** The log files folder.
Example:

```
const kUserDomain = -32763
Var f as folderitem = CreateLogsFolderMBS(kUserDomain)
```

Notes: If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the LogsFolderMBS function.

181.1.136 CreateMacOSReadMesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module

instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = CreateMacOSReadMesFolderMBS(kUserDomain)
```

Notes: If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the MacOSReadMesFolder function.

181.1.137 CreateMagicTemporaryItemsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = MagicTemporaryItemsFolderMBS(kUserDomain)
```

Notes: If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the CreateMagicTemporaryItemsFolderMBS function.

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

181.1.138 CreateManagedItemsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = CreateManagedItemsFolderMBS(kUserDomain)
```

Notes: If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the ManagedItemsFolderMBS function.

181.1.139 CreateMIDIDriversFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module

instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = CreateMIDIDriversFolderMBS(kUserDomain)
```

Notes: If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the MIDIDriversFolder function.

181.1.140 CreateModemScriptsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = CreateModemScriptsFolderMBS(kUserDomain)
```

Notes: If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the ModemScriptsFolder function.

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

181.1.141 CreateMovieDocumentsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = CreateMovieDocumentsFolderMBS(kUserDomain)
```

Notes: If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the MovieDocumentsFolder function.

181.1.142 CreateMultiprocessingFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module

instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = CreateMultiprocessingFolderMBS(kUserDomain)
```

Notes: If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the MultiprocessingFolder function.

181.1.143 CreateMusicDocumentsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = CreateMusicDocumentsFolderMBS(kUserDomain)
```

Notes: If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the MusicDocumentsFolder function.

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

181.1.144 CreateOpenDocEditorsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = CreateOpenDocEditorsFolderMBS(kUserDomain)
```

Notes: If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the OpenDocEditorsFolder function.

181.1.145 CreateOpenDocFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module

instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = CreateOpenDocFolderMBS(kUserDomain)
```

Notes: If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the OpenDocFolder function.

181.1.146 CreateOpenDocLibrariesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = CreateOpenDocLibrariesFolderMBS(kUserDomain)
```

Notes: If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the OpenDocLibrariesFolder function.

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

181.1.147 CreateOpenDocShellPlugInsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = CreateOpenDocShellPlugInsFolderMBS(kUserDomain)
```

Notes: If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the OpenDocShellPlugInsFolder function.

181.1.148 CreatePictureDocumentsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platforms: macOS, Windows, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module

instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = CreatePictureDocumentsFolderMBS(kUserDomain)
```

Notes: If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the PictureDocumentsFolder function.
As there is no such folder on Mac OS Classic, you always get nil there.

181.1.149 CreatePreferencePanesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 3.4, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Function:** The preferences panes folder.
Example:

```
const kUserDomain = -32763
Var f as folderitem = CreatePreferencePanesFolderMBS(kUserDomain)
```

Notes: If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the PreferencePanesFolderMBS function.

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

181.1.150 CreatePreferencesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = CreatePreferencesFolderMBS(kUserDomain)
```

Notes: If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the PreferencesFolder function.

181.1.151 CreatePrinterDescriptionFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module

instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = CreatePrinterDescriptionFolderMBS(kUserDomain)
```

Notes: If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the PrinterDescriptionFolder function.

181.1.152 CreatePrinterDriverFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = CreatePrinterDriverFolderMBS(kUserDomain)
```

Notes: If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the PrinterDriverFolder function.

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

181.1.153 CreatePrintersFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = CreatePrintersFolderMBS(kUserDomain)
```

Notes: If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the PrintersFolder function.

181.1.154 CreatePrintingPlugInsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module

instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = CreatePrintingPlugInsFolderMBS(kUserDomain)
```

Notes: If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the PrintingPlugInsFolder function.

181.1.155 CreatePrintMonitorDocsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = CreatePrintMonitorDocsFolderMBS(kUserDomain)
```

Notes: If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the PrintMonitorDocsFolder function.

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

181.1.156 CreatePrivateFrameworksFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = CreatePrivateFrameworksFolderMBS(kUserDomain)
```

Notes: If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the PrivateFrameworksFolder function.

181.1.157 CreatePublicFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module

instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = CreatePublicFolderMBS(kUserDomain)
```

Notes: If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the PublicFolder function.

181.1.158 CreateQuickLookFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = CreateQuickLookFolderMBS(kUserDomain)
```

Notes: If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the QuickLookFolderMBS function.

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

181.1.159 CreateQuickTimeComponentsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = CreateQuickTimeComponentsFolderMBS(kUserDomain)
```

Notes: If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the QuickTimeComponentsFolder function.

181.1.160 CreateQuickTimeExtensionsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module

instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = CreateQuickTimeExtensionsFolderMBS(kUserDomain)
```

Notes: If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the QuickTimeExtensionsFolder function.

181.1.161 CreateRecentApplicationsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = CreateRecentApplicationsFolderMBS(kUserDomain)
```

Notes: If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the RecentApplicationsFolder function.

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

181.1.162 CreateRecentDocumentsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = CreateRecentDocumentsFolderMBS(kUserDomain)
```

Notes: If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the RecentDocumentsFolder function.

181.1.163 CreateRecentServersFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module

instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = CreateRecentServersFolderMBS(kUserDomain)
```

Notes: If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the RecentServersFolder function.

181.1.164 CreateScriptingAdditionsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = CreateScriptingAdditionsFolderMBS(kUserDomain)
```

Notes: If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the ScriptingAdditionsFolder function.

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

181.1.165 CreateScriptsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = CreateScriptsFolderMBS(kUserDomain)
```

Notes: If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the ScriptsFolder function.

181.1.166 CreateSharedLibrariesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = CreateSharedLibrariesFolderMBS(kUserDomain)
```

Notes: If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the SharedLibrariesFolder function.

181.1.167 CreateSharedUserDataFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = CreateSharedUserDataFolderMBS(kUserDomain)
```

Notes: If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the SharedUserDataFolder function.

181.1.168 CreateShutdownFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = CreateShutdownFolderMBS(kUserDomain)
```

Notes: If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the ShutdownFolder function.

181.1.169 CreateShutdownItemsDisabledFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = CreateShutdownItemsDisabledFolderMBS(kUserDomain)
```

Notes: If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the ShutdownItemsDisabledFolder function.

181.1.170 CreateSoundSetsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = CreateSoundSetsFolderMBS(kUserDomain)
```

Notes: If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the SoundSetsFolder function.

181.1.171 CreateSpeakableItemsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = CreateSpeakableItemsFolderMBS(kUserDomain)
```

Notes: If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the SpeakableItemsFolder function.

181.1.172 CreateSpeechFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = CreateSpeechFolderMBS(kUserDomain)
```

Notes: If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the SpeechFolder function.

181.1.173 CreateSpotlightImportersFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = SpotlightImportersFolderMBS(kUserDomain)
```

Notes: If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateSpotlightImportersFolderMBS function.

181.1.174 CreateSpotlightMetadataCacheFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = SpotlightMetadataCacheFolderMBS(kUserDomain)
```

Notes: If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateSpotlightMetadataCacheFolderMBS function.

181.1.175 CreateSpotlightSavedSearchesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = CreateSpotlightSavedSearchesFolderMBS(kUserDomain)
```

Notes: If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the SpotlightSavedSearchesFolderMBS function.

181.1.176 CreateStartupFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = CreateStartupFolderMBS(kUserDomain)
```

Notes: If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the StartupFolder function.

181.1.177 CreateStartupItemsDisabledFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = CreateStartupItemsDisabledFolderMBS(kUserDomain)
```

Notes: If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the StartupItemsDisabledFolder function.

181.1.178 CreateStationeryFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = CreateStationeryFolderMBS(kUserDomain)
```

Notes: If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the StationeryFolder function.

181.1.179 CreateSystemControlPanelFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = CreateSystemControlPanelFolderMBS(kUserDomain)
```

Notes: If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the SystemControlPanelFolder function.

181.1.180 CreateSystemDesktopFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = CreateSystemDesktopFolderMBS(kUserDomain)
```

Notes: If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the SystemDesktopFolder function.

181.1.181 CreateSystemExtensionDisabledFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = CreateSystemExtensionDisabledFolderMBS(kUserDomain)
```

Notes: If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the SystemExtensionDisabledFolder function.

181.1.182 CreateSystemFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = CreateSystemFolderMBS(kUserDomain)
```

Notes: If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the SystemFolder function.

181.1.183 CreateSystemPreferencesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = CreateSystemPreferencesFolderMBS(kUserDomain)
```

Notes: If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the SystemPreferencesFolder function.

181.1.184 CreateSystemSoundsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = CreateSystemSoundsFolderMBS(kUserDomain)
```

Notes: If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the SystemSoundsFolder function.

181.1.185 CreateSystemTrashFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = CreateSystemTrashFolderMBS(kUserDomain)
```

Notes: If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the SystemTrashFolder function.

181.1.186 CreateTemporaryFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = CreateTemporaryFolderMBS(kUserDomain)
```

Notes: If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the TemporaryFolder function.

181.1.187 CreateTemporaryItemsInCacheDataFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = CreateTemporaryItemsInCacheDataFolderMBS(kUserDomain)
```

Notes: If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the TemporaryItemsInCacheDataFolderMBS function.

181.1.188 CreateTemporaryItemsInUserDomainFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = CreateTemporaryItemsInUserDomainFolderMBS(kUserDomain)
```

Notes: If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the TemporaryItemsInUserDomainFolderMBS function.

181.1.189 CreateTextEncodingsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = CreateTextEncodingsFolderMBS(kUserDomain)
```

Notes: If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the TextEncodingsFolder function.

181.1.190 CreateThemesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = CreateThemesFolderMBS(kUserDomain)
```

Notes: If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the ThemesFolder function.

181.1.191 CreateTrashFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = CreateTrashFolderMBS(kUserDomain)
```

Notes: If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the TrashFolder function.

181.1.192 CreateUsersFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = CreateUsersFolderMBS(kUserDomain)
```

Notes: If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the UsersFolder function.

181.1.193 CreateUserSpecificTmpFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = CreateUserSpecificTmpFolderMBS(kUserDomain)
```

Notes: If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the UserSpecificTmpFolder function.

181.1.194 CreateUtilitiesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = CreateUtilitiesFolderMBS(kUserDomain)
```

Notes: If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the UtilitiesFolder function.

181.1.195 CreateVoicesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = CreateVoicesFolderMBS(kUserDomain)
```

Notes: If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the VoicesFolder function.

181.1.196 CreateVolumeRootFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = CreateVolumeRootFolderMBS(kUserDomain)
```

Notes: If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the VolumeRootFolder function.

181.1.197 CreateVolumeSettingsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = CreateVolumeSettingsFolderMBS(kUserDomain)
```

Notes: If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the VolumeSettingsFolder function.

181.1.198 CreateWhereToEmptyTrashFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = CreateWhereToEmptyTrashFolderMBS(kUserDomain)
```

Notes: If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the WhereToEmptyTrashFolder function.

181.1.199 CurrentUserFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = CurrentUserFolderMBS(kUserDomain)
```

Notes: Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateCurrentUserFolder function.

181.1.200 CurrentUserRemoteFolderLocationFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = CurrentUserRemoteFolderMBS(kUserDomain)
```

Notes: Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the CreateCurrentUserRemoteFolder function.

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

181.1.201 CurrentUserRemoteFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = CurrentUserRemoteFolderMBS(kUserDomain)
```

Notes: Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateCurrentUserRemoteFolder function.

181.1.202 DesktopFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platforms: macOS, Windows, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = DesktopFolderMBS(kUserDomain)
```

Notes: Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateDesktopFolder function.

181.1.203 DesktopPicturesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = DesktopPicturesFolderMBS(kUserDomain)
```

Notes: Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateDesktopPicturesFolder function.

181.1.204 DeveloperApplicationsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 3.4, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Function:** The developer application folder.
Example:

```
const kUserDomain = -32763
Var f as folderitem = DeveloperApplicationsFolderMBS(kUserDomain)
```

Notes: Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateDeveloperApplicationsFolderMBS function.

181.1.205 DeveloperDocsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = DeveloperDocsFolderMBS(kUserDomain)
```

Notes: Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the CreateDeveloperDocsFolder function.

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

181.1.206 DeveloperFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = DeveloperFolderMBS(kUserDomain)
```

Notes: Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateDeveloperFolder function.

181.1.207 DeveloperHelpFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module

instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = DeveloperHelpFolderMBS(kUserDomain)
```

Notes: Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateDeveloperHelpFolder function.

181.1.208 DictionariesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 3.4, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Function:** The folder for the dictionaries.
Example:

```
const kUserDomain = -32763
Var f as folderitem = DictionariesFolderMBS(kUserDomain)
```

Notes: Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the CreateDictionariesFolderMBSfunction.

181.1.209 DirectoryServicesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = DirectoryServicesFolderMBS(kUserDomain)
```

Notes: Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateDirectoryServicesFolder function.

181.1.210 DirectoryServicesPlugInsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = DirectoryServicesPlugInsFolderMBS(kUserDomain)
```

Notes: Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateDirectoryServicesPlugInsFolder function.

181.1.211 DisplayExtensionsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = DisplayExtensionsFolderMBS(kUserDomain)
```

Notes: Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateDisplayExtensionsFolder function.

181.1.212 DocumentationFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = DocumentationFolderMBS(kUserDomain)
```

Notes: Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateDocumentationFolder function.
On Windows only the user and the system domain are supported.

181.1.213 DocumentsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platforms: macOS, Windows, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = DocumentsFolderMBS(kUserDomain)
```

Notes: Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the CreateDocumentsFolder function.

181.1.214 DomainLibraryFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = DomainLibraryFolderMBS(kUserDomain)
```

Notes: Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateDomainLibraryFolder function.

181.1.215 DomainTopLevelFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = DomainTopLevelFolderMBS(kUserDomain)
```

Notes: Note that not every folder exists on every Mac OS Version!

The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateDomainTopLevelFolder function.

181.1.216 DownloadsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = DownloadsFolderMBS(kUserDomain)
```

Notes: Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateDownloadsFolderMBS function.

-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateFavoritesFolder function.

181.1.221 FileSystemSupportFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = FileSystemSupportFolderMBS(kUserDomain)
```

Notes: Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the CreateFileSystemSupportFolder function.

181.1.222 FindByContentFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = FindByContentFolderMBS(kUserDomain)
```

Notes: Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)

181.1.253 MagicTemporaryItemsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = MagicTemporaryItemsFolderMBS(kUserDomain)
```

Notes: Note that not every folder exists on every Mac OS Version!

The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateMagicTemporaryItemsFolderMBS function.

181.1.257 MovieDocumentsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = MovieDocumentsFolderMBS(kUserDomain)
```

Notes: Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateMovieDocumentsFolder function.

181.1.258 MultiprocessingFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = MultiprocessingFolderMBS(kUserDomain)
```

Notes: Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateMultiprocessingFolder function.

181.1.259 MusicDocumentsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = MusicDocumentsFolderMBS(kUserDomain)
```

Notes: Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the CreateMusicDocumentsFolder function.

181.1.260 OpenDocEditorsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = OpenDocEditorsFolderMBS(kUserDomain)
```

Notes: Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateOpenDocEditorsFolder function.

181.1.261 OpenDocFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = OpenDocFolderMBS(kUserDomain)
```

Notes: Note that not every folder exists on every Mac OS Version!

The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateOpenDocFolder function.

181.1.262 OpenDocLibrariesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = OpenDocLibrariesFolderMBS(kUserDomain)
```

Notes: Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateOpenDocLibrariesFolder function.

181.1.263 OpenDocShellPlugInsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = OpenDocShellPlugInsFolderMBS(kUserDomain)
```

Notes: Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateOpenDocShellPlugInsFolder function.

181.1.264 PictureDocumentsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platforms: macOS, Windows, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = PictureDocumentsFolderMBS(kUserDomain)
```

Notes: Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the CreatePictureDocumentsFolder function.
As there is no such folder on Mac OS Classic, you always get nil there.

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

181.1.265 PreferencePanesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 3.4, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Function:** The preferences panes folder.
Example:

```
const kUserDomain = -32763
Var f as folderitem = PreferencePanesFolderMBS(kUserDomain)
```

Notes: Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreatePreferencePanesFolderMBS function.

181.1.266 PreferencesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
Var f as folderitem

f=preferencesFolderMBS(-32763)
if f=nil then // On Windows always nil
f=applicationsupportFolderMBS(-32763)
end if

msgBox f.NativePath

// example output:
// "Mac OS X:Users:cs:Library:Preferences:" on Mac OS X
// "Mac OS 9:Systemordner:Preferences" on a german Mac OS 9
// "C:\Dokumente und Einstellungen\Christian\Anwendungsdaten\" on a german Windows XP.
```

Notes: Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreatePreferencesFolder function.

181.1.267 PrinterDescriptionFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = PrinterDescriptionFolderMBS(kUserDomain)
```

Notes: Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the CreatePrinterDescriptionFolder function.

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

181.1.268 PrinterDriverFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = PrinterDriverFolderMBS(kUserDomain)
```

Notes: Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreatePrinterDriverFolder function.

181.1.269 PrintersFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module

instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = PrintersFolderMBS(kUserDomain)
```

Notes: Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreatePrintersFolder function.

181.1.270 PrintingPlugInsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = PrintingPlugInsFolderMBS(kUserDomain)
```

Notes: Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the CreatePrintingPlugInsFolder function.

181.1.271 PrintMonitorDocsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = PrintMonitorDocsFolderMBS(kUserDomain)
```

Notes: Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreatePrintMonitorDocsFolder function.

181.1.272 PrivateFrameworksFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = PrivateFrameworksFolderMBS(kUserDomain)
```

Notes: Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreatePrivateFrameworksFolder function.

181.1.273 PublicFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = PublicFolderMBS(kUserDomain)
```

Notes: Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreatePublicFolder function.

181.1.274 QuickLookFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = QuickLookFolderMBS(kUserDomain)
```

Notes: Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateQuickLookFolderMBS function.

Also take a look on the CreateRecentServersFolder function.

181.1.280 ScriptingAdditionsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = ScriptingAdditionsFolderMBS(kUserDomain)
```

Notes: Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the CreateScriptingAdditionsFolder function.

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

181.1.281 ScriptsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = ScriptsFolderMBS(kUserDomain)
```

Notes: Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateScriptsFolder function.

181.1.282 SharedLibrariesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module

instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = SharedLibrariesFolderMBS(kUserDomain)
```

Notes: Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateSharedLibrariesFolder function.

181.1.283 SharedUserDataFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = SharedUserDataFolderMBS(kUserDomain)
```

Notes: Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the CreateSharedUserDataFolder function.

181.1.284 ShutdownFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = ShutdownFolderMBS(kUserDomain)
```

Notes: Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateShutdownFolder function.

181.1.285 ShutdownItemsDisabledFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = ShutdownItemsDisabledFolderMBS(kUserDomain)
```

Notes: Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateShutdownItemsDisabledFolder function.

181.1.286 SoundSetsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = SoundSetsFolderMBS(kUserDomain)
```

Notes: Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateSoundSetsFolder function.

181.1.287 SpeakableItemsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = SpeakableItemsFolderMBS(kUserDomain)
```

Notes: Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateSpeakableItemsFolder function.

181.1.288 SpeechFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = SpeechFolderMBS(kUserDomain)
```

Notes: Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the CreateSpeechFolder function.

181.1.289 SpotlightImportersFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Platform: macOS, Targets: All.

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = SpotlightImportersFolderMBS(kUserDomain)
```

Notes: Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateSpotlightImportersFolderMBS function.

-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateSystemFolder function.

181.1.299 SystemPreferencesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = SystemPreferencesFolderMBS(kUserDomain)
```

Notes: Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the CreateSystemPreferencesFolder function.

181.1.300 SystemSoundsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = SystemSoundsFolderMBS(kUserDomain)
```

Notes: Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateSystemSoundsFolder function.

181.1.301 SystemTrashFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = SystemTrashFolderMBS(kUserDomain)
```

Notes: Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateSystemTrashFolder function.

181.1.302 TemporaryFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = TemporaryFolderMBS(kUserDomain)
```

Notes: Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateTemporaryFolder function.

181.1.303 TemporaryItemsInCacheDataFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = TemporaryItemsInCacheDataFolderMBS(kUserDomain)
```

Notes: Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)

Example:

```
const kUserDomain = -32763
Var f as folderitem = TrashFolderMBS(kUserDomain)
```

Notes: Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the CreateTrashFolder function.

181.1.308 UsersFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = UsersFolderMBS(kUserDomain)
```

Notes: Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateUsersFolder function.

181.1.309 UserSpecificTmpFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = UserSpecificTmpFolderMBS(kUserDomain)
```

Notes: Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateUserSpecificTmpFolder function.

181.1.310 UtilitiesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = UtilitiesFolderMBS(kUserDomain)
```

Notes: Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateUtilitiesFolder function.

181.1.311 VoicesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = VoicesFolderMBS(kUserDomain)
```

Notes: Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateVoicesFolder function.

181.1.312 VolumeRootFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = VolumeRootFolderMBS(kUserDomain)
```

Notes: Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the CreateVolumeRootFolder function.

181.1.313 VolumeSettingsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = VolumeSettingsFolderMBS(kUserDomain)
```

Notes: Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateVolumeSettingsFolder function.

181.1.314 WhereToEmptyTrashFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
Var f as folderitem = WhereToEmptyTrashFolderMBS(kUserDomain)
```

Notes: Note that not every folder exists on every Mac OS Version!

The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateWhereToEmptyTrashFolder function.

181.1.315 WindowsBurnAreaFolderMBS as folderitem

MBS Util Plugin, Plugin Version: 8.5, Platform: Windows, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Function:** Returns the folder which Windows uses to store temporary data for burning a CD/DVD. **Notes:** Returns nil on any error.

181.1.316 WindowsFolderMBS as folderitem

MBS Util Plugin, Platform: Windows, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
Var f as folderitem
f=WindowsFolderMBS
```

181.1.317 WindowsSystemFolderMBS as folderitem

MBS Util Plugin, Platform: Windows, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
Var f as folderitem
```

f=WindowsSystemFolderMBS

Chapter 182

Speech

182.1 class AVSpeechSynthesisMarkerMBS

182.1.1 class AVSpeechSynthesisMarkerMBS

MBS AVFoundation Plugin, Plugin Version: 24.1, Platforms: macOS, iOS, Targets: All.

Function: An object that contains information about the synthesized audio.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

182.1.2 Methods

182.1.3 Constructor

MBS AVFoundation Plugin, Plugin Version: 24.1, Platforms: macOS, iOS, Targets: All.

Function: The private constructor.

182.1.4 copy as AVSpeechSynthesisMarkerMBS

MBS AVFoundation Plugin, Plugin Version: 24.1, Platforms: macOS, iOS, Targets: All.

Function: Creates a copy of the object.

182.1.5 markerWithBookmarkName(mark as string, atByteSampleOffset as Integer) as AVSpeechSynthesisMarkerMBS

MBS AVFoundation Plugin, Plugin Version: 24.1, Platforms: macOS, iOS, Targets: All.

Function: Creates a bookmark marker with a name and offset into the audio buffer.
Example:

```
Var m As AVSpeechSynthesisMarkerMBS

m = AVSpeechSynthesisMarkerMBS.markerWithBookmarkName("test", 1234)

MessageBox m.bookmarkName+" at "+m.byteSampleOffset.ToString
```

Notes: mark: The name of the bookmark.
byteSampleOffset: The byte offset into the audio buffer.

182.1.6 markerWithMarkerType(type as integer, TextRange as NSRangeMBS, byteSampleOffset as Integer) as AVSpeechSynthesisMarkerMBS

MBS AVFoundation Plugin, Plugin Version: 24.1, Platforms: macOS, iOS, Targets: All.

Function: Creates a marker with a type and location of the request,Äôs text.
Example:

```
Var m As AVSpeechSynthesisMarkerMBS

Var range As New NSRangeMBS(5, 6)
m = AVSpeechSynthesisMarkerMBS.markerWithMarkerType(AVSpeechSynthesisMarkerMBS.SpeechSynthesisMarkerMarkWord, range, 1234)

MessageBox m.textRange.String+" at "+m.byteSampleOffset.ToString
```

Notes: type: The type that describes the text.
range: The location and length of the request,Äôs text.
byteSampleOffset: The byte offset into the audio buffer.

182.1.7 markerWithParagraphRange(TextRange as NSRangeMBS, byteSampleOffset as Integer) as AVSpeechSynthesisMarkerMBS

MBS AVFoundation Plugin, Plugin Version: 24.1, Platforms: macOS, iOS, Targets: All.

Function: Creates a paragraph marker with a range of the paragraph and offset into the audio buffer.
Example:

```
Var m As AVSpeechSynthesisMarkerMBS

Var range As New NSRangeMBS(5, 6)
m = AVSpeechSynthesisMarkerMBS.markerWithParagraphRange(range, 1234)

MessageBox m.textRange.String+" at "+m.byteSampleOffset.ToString
```

Notes: range: The location and length of the paragraph.
byteSampleOffset: The byte offset into the audio buffer.

182.1.8 markerWithPhonemeString(phoneme as string, atByteSampleOffset as Integer) as AVSpeechSynthesisMarkerMBS

MBS AVFoundation Plugin, Plugin Version: 24.1, Platforms: macOS, iOS, Targets: All.

Function: Creates a phoneme marker with a range of the phoneme and offset into the audio buffer.
Example:

```
Var m As AVSpeechSynthesisMarkerMBS

m = AVSpeechSynthesisMarkerMBS.markerWithPhonemeString("I", 1234)

MessageBox m.phoneme+" at "+m.byteSampleOffset.ToString
```

Notes: phoneme: A string that represents a distinct sound.
byteSampleOffset: The byte offset into the audio buffer.

182.1.9 markerWithSentenceRange(TextRange as NSRangeMBS, byteSampleOffset as Integer) as AVSpeechSynthesisMarkerMBS

MBS AVFoundation Plugin, Plugin Version: 24.1, Platforms: macOS, iOS, Targets: All.

Function: Creates a sentence marker with a range of the sentence and offset into the audio buffer.
Example:

```
Var m As AVSpeechSynthesisMarkerMBS

Var range As New NSRangeMBS(5, 6)
m = AVSpeechSynthesisMarkerMBS.markerWithSentenceRange(range, 1234)

MessageBox m.textRange.String+" at "+m.byteSampleOffset.ToString
```

Notes: range: The location and length of the word.

byteSampleOffset: The byte offset into the audio buffer.

182.1.10 markerWithWordRange(TextRange as NSRangeMBS, byteSampleOffset as Integer) as AVSpeechSynthesisMarkerMBS

MBS AVFoundation Plugin, Plugin Version: 24.1, Platforms: macOS, iOS, Targets: All.

Function: Creates a word marker with a range of the word and offset into the audio buffer.
Example:

```
Var m As AVSpeechSynthesisMarkerMBS

Var range As New NSRangeMBS(5, 6)
m = AVSpeechSynthesisMarkerMBS.markerWithWordRange(range, 1234)

MessageBox m.textRange.String+" at "+m.byteSampleOffset.ToString
```

Notes: range: The location and length of the word.
byteSampleOffset: The byte offset into the audio buffer.

182.1.11 Properties

182.1.12 bookmarkName as String

MBS AVFoundation Plugin, Plugin Version: 24.1, Platforms: macOS, iOS, Targets: All.

Function: A string that represents the name of a bookmark.
Notes: (Read and Write property)

182.1.13 byteSampleOffset as Integer

MBS AVFoundation Plugin, Plugin Version: 24.1, Platforms: macOS, iOS, Targets: All.

Function: The byte offset into the audio buffer.
Notes: (Read and Write property)

182.1.14 Handle as Integer

MBS AVFoundation Plugin, Plugin Version: 24.1, Platforms: macOS, iOS, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

182.1.15 mark as Integer

MBS AVFoundation Plugin, Plugin Version: 24.1, Platforms: macOS, iOS, Targets: All.

Function: The type that describes the text.
Notes: (Read and Write property)

182.1.16 phoneme as String

MBS AVFoundation Plugin, Plugin Version: 24.1, Platforms: macOS, iOS, Targets: All.

Function: A string that represents a distinct sound.
Notes: (Read and Write property)

182.1.17 textRange as NSRangeMBS

MBS AVFoundation Plugin, Plugin Version: 24.1, Platforms: macOS, iOS, Targets: All.

Function: The location and length of the request,Äôs text.
Notes: (Read and Write property)

182.1.18 Constants

Marker Types

Constant	Value	Description
SpeechSynthesisMarkerMarkBookmark	4	A type of text that represents a bookmark.
SpeechSynthesisMarkerMarkParagraph	3	A type of text that represents a paragraph.
SpeechSynthesisMarkerMarkPhoneme	0	A type of text that represents a phoneme.
SpeechSynthesisMarkerMarkSentence	2	A type of text that represents a sentence.
SpeechSynthesisMarkerMarkWord	1	A type of text that represents a word.

182.2 class AVSpeechSynthesisVoiceMBS

182.2.1 class AVSpeechSynthesisVoiceMBS

MBS AVFoundation Plugin, Plugin Version: 24.1, Platforms: macOS, iOS, Targets: All.

Function: A distinct voice for use in speech synthesis.
Notes: The primary factors that distinguish a voice in speech synthesis are language, locale, and quality. Create an instance of AVSpeechSynthesisVoice to select a voice that,Äôs appropriate for the text and the language, and set it as the value of the voice property on an AVSpeechUtterance instance. The voice may optionally reflect a local variant of the language, such as Australian or South African English.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

Xojo Developer Magazine

- 23.6, pages 49 to 50: Let your application speak for you, Teach your applications on Windows and Mac to speak by Stefanie Juchmes-Simonis

182.2.2 Methods

182.2.3 Constructor

MBS AVFoundation Plugin, Plugin Version: 24.1, Platforms: macOS, iOS, Targets: All.

Function: The private constructor.

182.2.4 SpeechUtteranceDefaultSpeechRate as Single

MBS AVFoundation Plugin, Plugin Version: 24.1, Platforms: macOS, iOS, Targets: All.

Function: The default speech rate.

182.2.5 SpeechUtteranceMaximumSpeechRate as Single

MBS AVFoundation Plugin, Plugin Version: 24.1, Platforms: macOS, iOS, Targets: All.

Function: The maximum speech rate.

182.2.6 SpeechUtteranceMinimumSpeechRate as Single

MBS AVFoundation Plugin, Plugin Version: 24.1, Platforms: macOS, iOS, Targets: All.

Function: The minimum speech rate.

182.2.7 speechVoices as AVSpeechSynthesisVoiceMBS()

MBS AVFoundation Plugin, Plugin Version: 24.1, Platforms: macOS, iOS, Targets: All.

Function: Retrieves all available voices on the device.
Example:

```
Var voices() As AVSpeechSynthesisVoiceMBS = AVSpeechSynthesisVoiceMBS.speechVoices

Var Names() As String
For Each voice As AVSpeechSynthesisVoiceMBS In voices
names.append voice.name
Next

MessageBox Join(names, ", ")
```

Notes: Use the language property to identify each voice by its language and locale.

182.2.8 VoiceIdentifierAlex as String

MBS AVFoundation Plugin, Plugin Version: 24.1, Platforms: macOS, iOS, Targets: All.

Function: The voice that the system identifies as Alex.
Notes: The Alex voice is only available for the en-US language code.

182.2.9 voiceWithIdentifier(identifier as string) as AVSpeechSynthesisVoiceMBS

MBS AVFoundation Plugin, Plugin Version: 24.1, Platforms: macOS, iOS, Targets: All.

Function: Retrieves a voice for the identifier you specify.
Example:

```
Var voice As AVSpeechSynthesisVoiceMBS = AVSpeechSynthesisVoiceMBS.voiceWithIdentifier("com.apple.voice.compact.en-GB.Daniel")

MessageBox voice.name
```

Notes: identifier: The unique identifier for a voice.

A voice for the specified identifier if the identifier is valid and the voice is available on the device; otherwise, nil.

182.2.10 voiceWithLanguage(languageCode as string) as AVSpeechSynthesisVoiceMBS

MBS AVFoundation Plugin, Plugin Version: 24.1, Platforms: macOS, iOS, Targets: All.

Function: Retrieves a voice for the BCP 47 code language code you specify.
Example:

```
Var voice As AVSpeechSynthesisVoiceMBS = AVSpeechSynthesisVoiceMBS.voiceWithLanguage("en-GB")

MessageBox voice.name
```

Notes: language: A BCP 47 code that identifies the language and locale for a voice.

Returns a voice for the specified language and locale code if the code is valid; otherwise, nil.

Pass "" for languageCode to receive the default voice for the system,Äôs language and region.

182.2.11 Properties

182.2.12 audioFileSettings as Dictionary

MBS AVFoundation Plugin, Plugin Version: 24.1, Platforms: macOS, iOS, Targets: All.

Function: A dictionary that contains audio file settings.
Notes: If you want to generate speech and save it as an audio file to share or play later, use this dictionary to create an AVAudioFile instance and pass it as the settings parameter.
You can determine the AVAudioCommonFormat and interleaved properties of a voice from this dictionary. The format of this dictionary matches the data that SpeechSynthesizerBuffer event provides for the same voice.
(Read only property)

182.2.13 currentLanguageCode as String

MBS AVFoundation Plugin, Plugin Version: 24.1, Platforms: macOS, iOS, Targets: All.

Function: Returns the language and locale code for the user,Äôs current locale.
Example:

MessageBox AVSpeechSynthesisVoiceMBS.currentLanguageCode

Notes: A string that contains the BCP 47 language and locale code for the user,Äôs current locale.
(Read only property)

182.2.14 gender as Integer

MBS AVFoundation Plugin, Plugin Version: 24.1, Platforms: macOS, iOS, Targets: All.

Function: The gender for a voice.
Notes: (Read only property)

182.2.15 Handle as Integer

MBS AVFoundation Plugin, Plugin Version: 24.1, Platforms: macOS, iOS, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

182.2.16 identifier as String

MBS AVFoundation Plugin, Plugin Version: 24.1, Platforms: macOS, iOS, Targets: All.

Function: The unique identifier of a voice.
Notes: (Read only property)

182.2.17 language as String

MBS AVFoundation Plugin, Plugin Version: 24.1, Platforms: macOS, iOS, Targets: All.

Function: A BCP 47 code that contains the voice,Äôs language and locale.
Notes: The language of a voice controls the conversion of text to spoken phonemes. For best results, ensure that the language of an utterance,Äôs text matches the voice for the utterance. The locale of a voice reflects regional variations in pronunciation or accent. For example, a voice with a language code of en-US speaks English text with a North American accent, and a language code of en-AU speaks English text with an Australian accent.
(Read only property)

182.2.18 name as String

MBS AVFoundation Plugin, Plugin Version: 24.1, Platforms: macOS, iOS, Targets: All.

Function: The name of a voice.
Notes: (Read only property)

182.2.19 quality as Integer

MBS AVFoundation Plugin, Plugin Version: 24.1, Platforms: macOS, iOS, Targets: All.

Function: The speech quality of a voice.
Notes: (Read only property)

182.2.20 voiceTraits as Integer

MBS AVFoundation Plugin, Plugin Version: 24.1, Platforms: macOS, iOS, Targets: All.

Function: The traits of a voice.
Notes: (Read only property)

182.2.21 Constants

Gender

Constant	Value	Description
SpeechSynthesisVoiceGenderFemale	2	The female voice option.
SpeechSynthesisVoiceGenderMale	1	The male voice option.
SpeechSynthesisVoiceGenderUnspecified	0	The nonspecific gender option.

Quality

Constant	Value	Description
SpeechSynthesisVoiceQualityDefault	1	A basic quality voice that,Äôs available on the device by default.
SpeechSynthesisVoiceQualityEnhanced	2	An enhanced quality voice that you must download to use.
SpeechSynthesisVoiceQualityPremium	3	A premium quality voice that you must download to use.

Voice Traits

Constant	Value	Description
SpeechSynthesisVoiceTraitIsNoveltyVoice	1	The trait that indicates a voice is a novelty voice. An example of a novelty voice is a character,Äôs voice in a game.
SpeechSynthesisVoiceTraitIsPersonalVoice	2	The trait that indicates a voice is a personal voice. A user generates and owns a personal voice.
SpeechSynthesisVoiceTraitNone	0	The trait that indicates a voice is a regular voice.

182.3 class AVSpeechSynthesizerMBS

182.3.1 class AVSpeechSynthesizerMBS

MBS AVFoundation Plugin, Plugin Version: 24.1, Platforms: macOS, iOS, Targets: All.

Function: An object that produces synthesized speech from text utterances and enables monitoring or controlling of ongoing speech.
Notes: To speak some text, create an AVSpeechUtteranceMBS instance that contains the text and pass it to speakUtterance on a speech synthesizer instance. You can optionally also retrieve an AVSpeechSynthesisVoiceMBS and set it on the utterance,Äôs voice property to have the speech synthesizer use that voice when speaking the utterance,Äôs text.

The speech synthesizer maintains a queue of utterances that it speaks. If the synthesizer isn,Äôt speaking, calling speakUtterance: begins speaking that utterance either immediately or after pausing for its preUtteranceDelay, if necessary. If the synthesizer is speaking, the synthesizer adds utterances to a queue and speaks them in the order it receives them.
After speech begins, you can use the synthesizer object to pause or stop speech. After pausing, you can resume the speech from its paused point or stop the speech entirely and remove all remaining utterances in the queue.
You can monitor the speech synthesizer by examining its speaking and paused properties, or by adding events.

An AVSpeechSynthesizerMBS also controls the route where the speech plays. For more information, see Directing speech output.

The system doesn,Äôt automatically retain the speech synthesizer, so you need to manually retain it until speech concludes.

Xojo Developer Magazine

- 23.6, page 51: Let your application speak for you, Teach your applications on Windows and Mac to speak by Stefanie Juchmes-Simonis

182.3.2 Methods

182.3.3 Constructor

MBS AVFoundation Plugin, Plugin Version: 24.1, Platforms: macOS, iOS, Targets: All.

Function: The constructor.

182.3.4 continueSpeaking as Boolean

MBS AVFoundation Plugin, Plugin Version: 24.1, Platforms: macOS, iOS, Targets: All.

Function: Resumes speech from its paused point.
Notes: Returns true if speech resumes; otherwise, false.

This method only has an effect if the speech synthesizer is in a paused state.

182.3.5 Destructor

MBS AVFoundation Plugin, Plugin Version: 24.1, Platforms: macOS, iOS, Targets: All.

Function: The destructor.

182.3.6 IPANotationAttribute as String

MBS AVFoundation Plugin, Plugin Version: 24.1, Platforms: macOS, iOS, Targets: All.

Function: A string that contains International Phonetic Alphabet (IPA) symbols the speech synthesizer uses to control pronunciation of certain words or phrases.
Notes: For example, the speech synthesizer uses an AVSpeechSynthesisIPANotationAttribute instance to control pronunciation of a proper name.

182.3.7 pauseSpeakingAtBoundary(SpeechBoundary as Integer) as Boolean

MBS AVFoundation Plugin, Plugin Version: 24.1, Platforms: macOS, iOS, Targets: All.

Function: Pauses speech at the boundary you specify.
Notes: boundary: An enumeration that describes whether to pause speech immediately or only after the synthesizer finishes speaking the current word.

Returns true if speech pauses; otherwise, false.

The boundary parameter also affects how the speech synthesizer resumes speaking text after a pause and call to continueSpeaking. If the boundary is SpeechBoundaryImmediate, speech resumes from the exact point where it pauses, even if that point occurs in the middle of speaking a word. If the boundary is SpeechBoundaryWord, speech resumes from the word that follows the last spoken word where it pauses.

182.3.8 requestPersonalVoiceAuthorization

MBS AVFoundation Plugin, Plugin Version: 24.1, Platforms: macOS, iOS, Targets: All.

Function: Prompts the user to authorize your app to use personal voices.

182.3.9 speakUtterance(utterance as AVSpeechUtteranceMBS)

MBS AVFoundation Plugin, Plugin Version: 24.1, Platforms: macOS, iOS, Targets: All.

Function: Adds the utterance you specify to the speech synthesizer,Äôs queue.
Notes: utterance: An AVSpeechUtteranceMBS instance that contains text to speak.
Discussion

Warning: Attempting to enqueue the same utterance more than once throws an exception.

182.3.10 stopSpeakingAtBoundary(SpeechBoundary as Integer) as Boolean

MBS AVFoundation Plugin, Plugin Version: 24.1, Platforms: macOS, iOS, Targets: All.

Function: Stops speech at the boundary you specify.
Notes: boundary: An enumeration that describes whether to stop speech immediately or only after the synthesizer finishes speaking the current word.

Returns true if speech stops; otherwise, false.

Unlike pausing a speech synthesizer, which can resume after a pause, stopping the synthesizer immediately cancels speech and removes all unspoken utterances from the synthesizer,Äôs queue.

182.3.11 writeUtterance(utterance as AVSpeechUtteranceMBS)

MBS AVFoundation Plugin, Plugin Version: 24.1, Platforms: macOS, iOS, Targets: All.

Function: Generates speech for the utterance and invokes the callback with the audio buffer.
Notes: utterance: The utterance for synthesizing speech.

Call this method to receive audio buffers to store or further process synthesized speech.

Calls SpeechSynthesizerBuffer and SpeechSynthesizerMarker events later.

182.3.12 Properties

182.3.13 Handle as Integer

MBS AVFoundation Plugin, Plugin Version: 24.1, Platforms: macOS, iOS, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

182.3.14 isPaused as Boolean

MBS AVFoundation Plugin, Plugin Version: 24.1, Platforms: macOS, iOS, Targets: All.

Function: A Boolean value that indicates whether a speech synthesizer is in a paused state.
Notes: If true, the speech synthesizer is in a paused state after beginning to speak an utterance; otherwise, false.
(Read only property)

182.3.15 isSpeaking as Boolean

MBS AVFoundation Plugin, Plugin Version: 24.1, Platforms: macOS, iOS, Targets: All.

Function: A Boolean value that indicates whether the speech synthesizer is speaking or is in a paused state and has utterances to speak.
Notes: If true, the synthesizer is speaking or is in a paused state with utterances in its queue. If false, the synthesizer isn,Äôt speaking and it doesn,Äôt have any utterances in its queue.
(Read only property)

182.3.16 mixToTelephonyUplink as Boolean

MBS AVFoundation Plugin, Plugin Version: 24.1, Platforms: macOS, iOS, Targets: iOS only.

Function: A Boolean value that specifies whether to send synthesized speech to an active call.
Notes: This property has no effect when there isn,Äôt an active call.
(Read and Write property)

182.3.17 personalVoiceAuthorizationStatus as Integer

MBS AVFoundation Plugin, Plugin Version: 24.1, Platforms: macOS, iOS, Targets: All.

Function: Your app,Äôs authorization to use personal voices.
Notes: The user can grant or deny your app,Äôs request to use personal voices when they,Äôre initially prompted, and change the authorization in the Settings app. Additionally, the framework denies the request if the device doesn,Äôt support using personal voices.
(Read only property)

182.3.18 usesApplicationAudioSession as Boolean

MBS AVFoundation Plugin, Plugin Version: 24.1, Platforms: macOS, iOS, Targets: iOS only.

Function: A Boolean value that specifies whether the app manages the audio session.
Notes: If you set this value to false, the system creates a separate audio session to automatically manage speech, interruptions, and mixing and ducking the speech with other audio sources.
(Read and Write property)

182.3.19 Events

182.3.20 availableVoicesDidChange

MBS AVFoundation Plugin, Plugin Version: 24.1, Platforms: macOS, iOS, Targets: All.

Function: An event that indicates a change in available voices for speech synthesis.
Notes: The system posts this notification when available voices for speech synthesis on the system change. For example, a new personal voice becomes available and the user authorized the app to access personal voices. Or new 3rd party voices become available through an app the user downloads.

182.3.21 didCancelSpeechUtterance(utterance as AVSpeechUtteranceMBS)

MBS AVFoundation Plugin, Plugin Version: 24.1, Platforms: macOS, iOS, Targets: All.

Function: Tells you when the synthesizer cancels speaking an utterance.
Notes: utterance: The utterance that the speech synthesizer cancels speaking.

The system only calls this method if a speech synthesizer is speaking an utterance and the system calls its stopSpeakingAtBoundary method. The system doesn,Äôt call this method if the synthesizer is in a delay between utterances when speech stops, and it doesn,Äôt call it for unspoken utterances.

182.3.22 didContinueSpeechUtterance(utterance as AVSpeechUtteranceMBS)

MBS AVFoundation Plugin, Plugin Version: 24.1, Platforms: macOS, iOS, Targets: All.

Function: Tells you when the synthesizer resumes speaking an utterance after pausing.
Notes: utterance: The utterance that the speech synthesizer resumes speaking.

The system only calls this method if a speech synthesizer pauses speaking and the system calls its pauseSpeakingAtBoundary method. The system doesn,Äôt call this method if the synthesizer pauses while in a delay between utterances.

182.3.23 didFinishSpeechUtterance(utterance as AVSpeechUtteranceMBS)

MBS AVFoundation Plugin, Plugin Version: 24.1, Platforms: macOS, iOS, Targets: All.

Function: Tells you when the synthesizer finishes speaking an utterance.
Notes: utterance: The utterance that the speech synthesizer finishes speaking.

The system ignores the final utterance,Äôs postUtteranceDelay and calls this method immediately when speech ends.

182.3.24 didPauseSpeechUtterance(utterance as AVSpeechUtteranceMBS)

MBS AVFoundation Plugin, Plugin Version: 24.1, Platforms: macOS, iOS, Targets: All.

Function: Tells you when the synthesizer pauses while speaking an utterance.
Notes: utterance: The utterance that the speech synthesizer pauses speaking.

The system only calls this method if a speech synthesizer is speaking an utterance and the system calls its pauseSpeakingAtBoundary method. The system doesn,Äôt call this method if the synthesizer is in a delay between utterances when speech pauses.

182.3.25 didStartSpeechUtterance(utterance as AVSpeechUtteranceMBS)

MBS AVFoundation Plugin, Plugin Version: 24.1, Platforms: macOS, iOS, Targets: All.

Function: Tells you when the synthesizer begins speaking an utterance.
Notes: utterance: The utterance that the speech synthesizer starts speaking.

If the utterance,Äôs preUtteranceDelay property is greater than zero, the system calls this method after the delay completes and speech begins.

182.3.26 requestPersonalVoiceAuthorizationCompleted(status as Integer)

MBS AVFoundation Plugin, Plugin Version: 24.1, Platforms: macOS, iOS, Targets: All.

Function: A completion event that the system calls after the user responds to a request to authorize use of personal voices, which receives the authorization status as an argument.

182.3.27 SpeechSynthesizerBuffer(buffer as AVAudioBufferMBS)

MBS AVFoundation Plugin, Plugin Version: 24.1, Platforms: macOS, iOS, Targets: All.

Function: The event that receives a buffer of generated speech.

182.3.28 SpeechSynthesizerMarker(markers() as AVSpeechSynthesisMarkerMBS)

MBS AVFoundation Plugin, Plugin Version: 24.1, Platforms: macOS, iOS, Targets: All.

Function: The event that receives speech markers.

182.3.29 willSpeakMarker(marker as AVSpeechSynthesisMarkerMBS, utterance as AVSpeechUtteranceMBS)

MBS AVFoundation Plugin, Plugin Version: 24.1, Platforms: macOS, iOS, Targets: All.

Function: Tells you when the synthesizer is about to speak a marker of an utterance,Äôs text.
Notes: marker: The synthesized audio that the speech synthesizer is about to speak.
utterance: The utterance that the speech synthesizer pauses speaking.

182.3.30 willSpeakRangeOfSpeechString(characterRange as NSRangeMBS, utterance as AVSpeechUtteranceMBS)

MBS AVFoundation Plugin, Plugin Version: 24.1, Platforms: macOS, iOS, Targets: All.

Function: Tells you when the synthesizer is about to speak a portion of an utterance,Äôs text.
Notes: characterRange: The range of characters in the utterance,Äôs speechString that correspond to the unit of speech the synthesizer is about to speak.
utterance: The utterance that the speech synthesizer is about to speak.

The system calls this method once for each unit of speech in the utterance,Äôs text, which is generally a word.

Tip
Implement this method if you want to provide a user interface to visually highlight each word as the synthesizer speaks it.

182.3.31 Constants

Speech Boundaries

Constant	Value	Description
SpeechBoundaryImmediate	0	Indicates to pause or stop speech immediately.
SpeechBoundaryWord	1	Indicates to pause or stop speech after the synthesizer finishes speaking the current word.

Authorization Status

Constant	Value	Description
SpeechSynthesisPersonalVoiceAuthorizationStatusAuthorized	3	The user granted your app,Äôs request to use
SpeechSynthesisPersonalVoiceAuthorizationStatusDenied	1	The user denied your app,Äôs request to use
SpeechSynthesisPersonalVoiceAuthorizationStatusNotDetermined	0	The app hasn,Äôt requested authorization to
SpeechSynthesisPersonalVoiceAuthorizationStatusUnsupported	2	The device doesn,Äôt support personal voices

182.4 class AVSpeechUtteranceMBS

182.4.1 class AVSpeechUtteranceMBS

MBS AVFoundation Plugin, Plugin Version: 24.1, Platforms: macOS, iOS, Targets: All.

Function: An object that encapsulates the text for speech synthesis and parameters that affect the speech.
Notes: An AVSpeechUtterance is the basic unit of speech synthesis.

To synthesize speech, create an AVSpeechUtterance instance with text you want a speech synthesizer to speak. Optionally, change the voice, pitchMultiplier, volume, rate, preUtteranceDelay, or postUtteranceDelay parameters for the utterance. Pass the utterance to an instance of AVSpeechSynthesizer to begin speech, or enqueue the utterance to speak later if the synthesizer is already speaking.

Split a body of text into multiple utterances if you want to apply different speech parameters. For example, you can emphasize a sentence by increasing the pitch and decreasing the rate of that utterance relative to others, or you can introduce pauses between sentences by putting each into an utterance with a leading or trailing delay.

Set and use the AVSpeechSynthesizerMBS events to receive notifications when the synthesizer starts or finishes speaking an utterance. Create an utterance for each meaningful unit in a body of text if you want to receive notifications as its speech progresses.

182.4.2 Methods

182.4.3 Constructor(s as NSAttributedStringMBS)

MBS AVFoundation Plugin, Plugin Version: 24.1, Platforms: macOS, iOS, Targets: All.

Function: Creates an utterance with the attributed text string that you specify for the speech synthesizer to speak.
Notes: To speak the text, pass the utterance to an instance of AVSpeechSynthesizerMBS.
See also:

- 182.4.4 Constructor(s as string)

182.4.4 Constructor(s as string)

MBS AVFoundation Plugin, Plugin Version: 24.1, Platforms: macOS, iOS, Targets: All.

Function: Creates an utterance with the text string that you specify for the speech synthesizer to speak.
Example:

```
Var s As New AVSpeechUtteranceMBS("test")

MessageBox s.speechString
```

See also:

- 182.4.3 Constructor(s as NSAttributedStringMBS) 21578

182.4.5 copy as AVSpeechUtteranceMBS

MBS AVFoundation Plugin, Plugin Version: 24.1, Platforms: macOS, iOS, Targets: All.

Function: Creates a copy of the object.

182.4.6 speechUtteranceWithAttributedString(s as NSAttributedStringMBS) as AVSpeechUtteranceMBS

MBS AVFoundation Plugin, Plugin Version: 24.1, Platforms: macOS, iOS, Targets: All.

Function: Creates an utterance with the attributed text string that you specify for the speech synthesizer to speak.

182.4.7 speechUtteranceWithSSMLRepresentation(s as string) as AVSpeechUtteranceMBS

MBS AVFoundation Plugin, Plugin Version: 24.1, Platforms: macOS, iOS, Targets: All.

Function: Returns a new speech utterance with an Speech Synthesis Markup Language (SSML) string.
Notes: string: A string to speak that contains valid SSML markup. The initializer returns nil if you pass an invalid SSML string.

Returns a new speech utterance, or nil if the SSML string is invalid.

If using SSML to request voices that fall under certain attributes, the system may split a single utterance into multiple parts and send each to an appropriate synthesizer.

If no voice matches the properties, the utterance uses the voice set in its voice property. If you don,Äôt specify a voice, the system uses its default voice.

Note
Speech utterance properties that affect the prosody of a voice, such as its rate and pitchMultiplier, don,Äôt apply to an utterance that uses an SSML representation.

182.4.8 speechUtteranceWithString(s as string) as AVSpeechUtteranceMBS

MBS AVFoundation Plugin, Plugin Version: 24.1, Platforms: macOS, iOS, Targets: All.

Function: Creates an utterance with the text string that you specify for the speech synthesizer to speak.

182.4.9 Properties

182.4.10 attributedSpeechString as NSAttributedStringMBS

MBS AVFoundation Plugin, Plugin Version: 24.1, Platforms: macOS, iOS, Targets: All.

Function: An attributed string that contains the text for speech synthesis.
Notes: You can,Äôt change an utterance,Äôs text after initializaiton. If you want the speech synthesizer to speak different text, create a new utterance.
(Read only property)

182.4.11 Handle as Integer

MBS AVFoundation Plugin, Plugin Version: 24.1, Platforms: macOS, iOS, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

182.4.12 pitchMultiplier as Single

MBS AVFoundation Plugin, Plugin Version: 24.1, Platforms: macOS, iOS, Targets: All.

Function: The baseline pitch the speech synthesizer uses when speaking the utterance.
Notes: Before enqueing the utterance, set this property to a value within the range of 0.5 for lower pitch to 2.0 for higher pitch. The default value is 1.0. Setting this after enqueing the utterance has no effect.
(Read and Write property)

182.4.13 postUtteranceDelay as Double

MBS AVFoundation Plugin, Plugin Version: 24.1, Platforms: macOS, iOS, Targets: All.

Function: The amount of time the speech synthesizer pauses after speaking an utterance before handling the next utterance in the queue.
Notes: When multiple utterances exist in the queue, the speech synthesizer pauses a minimum amount of time equal to the sum of the current utterance,Äôs postUtteranceDelay and the next utterance,Äôs preUtteranceDelay.
(Read and Write property)

182.4.14 prefersAssistiveTechnologySettings as Boolean

MBS AVFoundation Plugin, Plugin Version: 24.1, Platforms: macOS, iOS, Targets: All.

Function: A Boolean that specifies whether assistive technology settings take precedence over the property values of this utterance.
Notes: If this property is true, but no assistive technology, such as VoiceOver, is on, the speech synthesizer uses the utterance property values.
(Read and Write property)

182.4.15 preUtteranceDelay as Double

MBS AVFoundation Plugin, Plugin Version: 24.1, Platforms: macOS, iOS, Targets: All.

Function: The amount of time the speech synthesizer pauses before speaking the utterance.
Notes: When multiple utterances exist in the queue, the speech synthesizer pauses a minimum amount of time equal to the sum of the current utterance,Äôs postUtteranceDelay and the next utterance,Äôs preUtteranceDelay.
(Read and Write property)

182.4.16 rate as Single

MBS AVFoundation Plugin, Plugin Version: 24.1, Platforms: macOS, iOS, Targets: All.

Function: The rate the speech synthesizer uses when speaking the utterance.
Notes: The speech rate is a decimal representation within the range of AVSpeechUtteranceMinimumSpeechRate and AVSpeechUtteranceMaximumSpeechRate. Lower values correspond to slower speech, and higher values correspond to faster speech. The default value is AVSpeechUtteranceDefaultSpeechRate. Set this property before enqueing the utterance because setting it afterward has no effect.
(Read and Write property)

182.4.17 speechString as String

MBS AVFoundation Plugin, Plugin Version: 24.1, Platforms: macOS, iOS, Targets: All.

Function: A string that contains the text for speech synthesis.
Notes: You can,Äôt change an utterance,Äôs text after initializaiton. If you want the speech synthesizer to speak different text, create a new utterance.
(Read only property)

182.4.18 voice as AVSpeechSynthesisVoiceMBS

MBS AVFoundation Plugin, Plugin Version: 24.1, Platforms: macOS, iOS, Targets: All.

Function: The voice the speech synthesizer uses when speaking the utterance.
Notes: If you don,Äôt specify a voice, the speech synthesizer uses the system,Äôs default voice to speak the utterance.
(Read and Write property)

182.4.19 volume as Single

MBS AVFoundation Plugin, Plugin Version: 24.1, Platforms: macOS, iOS, Targets: All.

Function: The volume the speech synthesizer uses when speaking the utterance.
Notes: Before enqueing the utterance, set this property to a value within the range of 0.0 for silent to 1.0 for loudest volume. The default value is 1.0. Setting this after enqueing the utterance has no effect.
(Read and Write property)

182.5 class NSSpeechRecognizerMBS

182.5.1 class NSSpeechRecognizerMBS

MBS MacCocoa Plugin, Plugin Version: 6.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: The class to handle the cocoa speech recognition.
Notes: Available in Mac OS X v10.3 and later.

See newer SFSpeechRecognizerMBS class.
Blog Entries

- MBS Xojo / Real Studio Plugins, version 13.2pr7

182.5.2 Methods

182.5.3 commands as string()

MBS MacCocoa Plugin, Plugin Version: 7.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns the current list of commands.

182.5.4 Destructor

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: The destructor.

182.5.5 SetCommands(commands() as string)

MBS MacCocoa Plugin, Plugin Version: 6.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: Sets the list of commands for which the receiver should listen to commands.
Notes: If the receiver is already listening, the current command list is updated and listening continues. commands should be an array of strings. The commands must be in U.S. English.

182.5.6 StartListening

MBS MacCocoa Plugin, Plugin Version: 6.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: Tells the speech recognition engine to begin listening for commands.
Notes: When a command is recognized the message didRecognizeCommand is called.

182.5.7 StopListening

MBS MacCocoa Plugin, Plugin Version: 6.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: Tells the speech recognition engine to suspend listening for commands.

182.5.8 Properties

182.5.9 BlocksOtherRecognizers as boolean

MBS MacCocoa Plugin, Plugin Version: 6.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: Whether the receiver should block all other recognizers (that is, other applications attempting to understand spoken commands) when listening.
Notes: (Read and Write property)

182.5.10 DisplayedCommandsTitle as string

MBS MacCocoa Plugin, Plugin Version: 6.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns the title of the commands section or "" if there is no title.
Notes: Commands are displayed in the Speech Commands window indented under a section with this title. (Read and Write property)

182.5.11 ListensInForegroundOnly as boolean

MBS MacCocoa Plugin, Plugin Version: 6.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: Whether the receiver should only enable its commands when the receiver's application is the frontmost one.
Notes: (Read and Write property)

182.5.12 Events

182.5.13 DidRecognizeCommand(command as string)

MBS MacCocoa Plugin, Plugin Version: 6.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: Invoked when the recognition engine has recognized the application command command.
Notes: command is one of the strings from the array passed to setCommands. The delegate typically evaluates which command was recognized and performs the related action.

182.6 class NSSpeechSynthesizerMBS

182.6.1 class NSSpeechSynthesizerMBS

MBS MacCocoa Plugin, Plugin Version: 6.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: The class to handle the cocoa speech synthesizing.
Notes: Available in Mac OS X v10.3 and later.

More details on Apple's website:
https://developer.apple.com/library/mac/documentation/Cocoa/Reference/ApplicationKit/Classes/NSSpeech-Synthesizer_Class/
Blog Entries

- MBS Xojo / Real Studio Plugins, version 15.0pr9
- MBS Xojo / Real Studio Plugins, version 13.2pr7
- MBS Real Studio Plugins, version 13.1pr11

182.6.2 Methods

182.6.3 addSpeechDictionary(speechDictionary as dictionary)

MBS MacCocoa Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Registers the given speech dictionary with the receiver.
Notes: speechDictionary: Speech dictionary to add to the receiver's dictionaries.

See the discussion of UseSpeechDictionary in Speech Synthesis Manager Reference for more information.
Available in OS X v10.5 and later.

182.6.4 attributesForVoice(voice as String) as NSVoiceMBS

MBS MacCocoa Plugin, Plugin Version: 7.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns information about a voice or nil.

182.6.5 availableVoice(index as Integer) as String

MBS MacCocoa Plugin, Plugin Version: 7.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns name of a voice.
Notes: The available voices can be listed using this function.
Index is from 0 to count-1.

182.6.6 availableVoices as String()

MBS MacCocoa Plugin, Plugin Version: 10.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns the array with the identifiers for the available voices.
Example:

MsgBox Join(NSSpeechSynthesizerMBS.availableVoices)

Notes: Same as availableVoice() and availableVoicesCount, but this function returns an array which is very useful for for-each-loops.

182.6.7 availableVoicesCount as Integer

MBS MacCocoa Plugin, Plugin Version: 7.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Number of voices available.

182.6.8 Constructor

MBS MacCocoa Plugin, Plugin Version: 6.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: Initializes the class with the default voice.
Notes: This constructor is needed for the events to fire.
The given voice must be valid!
See also:

- 182.6.9 Constructor(voice as string) 21587

182.6.9 Constructor(voice as string)

MBS MacCocoa Plugin, Plugin Version: 6.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: Initializes the class with a voice.
Notes: This constructor is needed for the events to fire.
See also:

- 182.6.8 Constructor 21587

182.6.10 continueSpeaking

MBS MacCocoa Plugin, Plugin Version: 7.7, Platform: macOS, Targets: Desktop, Console & Web.

Function: Continues speaking after it has been paused.
Notes: Mac OS X 10.5 only.

182.6.11 defaultVoice as String

MBS MacCocoa Plugin, Plugin Version: 6.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: Provides the identifier of the default voice.
Example:

```
Var s as NSSpeechSynthesizerMBS

s=new NSSpeechSynthesizerMBS

MsgBox s.defaultVoice
```

182.6.12 Destructor

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: The destructor.

182.6.13 isAnyApplicationSpeaking as boolean

MBS MacCocoa Plugin, Plugin Version: 6.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: Indicates whether any other application is currently speaking through the sound output device.

182.6.14 NSSpeechCharacterModeProperty as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the constants used with setObjectForProperty and objectForProperty to get or set the characteristics of a synthesizer.
Example:

```
Var s as new NSSpeechSynthesizerMBS
Var e as NSErrorMBS
```

call s.setObjectForProperty(s.NSSpeechModeLiteral, s.NSSpeechCharacterModeProperty, e)
msgBox s.objectForProperty(s.NSSpeechCharacterModeProperty, e)

call s.setObjectForProperty(s.NSSpeechModeNormal, s.NSSpeechCharacterModeProperty, e)
msgBox s.objectForProperty(s.NSSpeechCharacterModeProperty, e)

Notes: Get or set the synthesizer's current text-processing mode. A string that specifies whether the channel is currently in text input mode or phoneme input mode.
When the character-processing mode is NSSpeechModeNormal, input characters are spoken as you would expect to hear them. When the mode is NSSpeechModeLiteral, each character is spoken literally, so that the word "cat" is spoken "C–A–T".
Available in OS X v10.5 and later.

182.6.15 NSSpeechCommandDelimiterProperty as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the constants used with setObjectForProperty and objectForProperty to get or set the characteristics of a synthesizer.
Notes: Set the embedded speech command delimiter characters to be used for the synthesizer. A dictionary that contains the delimiter information. See "Command Delimiter Keys" for the keys you can use to specify values in this dictionary.
By default, the opening delimiter is " [[" and the closing delimiter is "]] ". Your application might need to change these delimiters temporarily if those character sequences occur naturally in a text buffer that is to be spoken. Your application can also disable embedded command processing by passing empty delimiters (as empty strings). See "Speech Command Delimiter" for the keys you can use to specify values in this dictionary.
Available in OS X v10.5 and later.

182.6.16 NSSpeechCommandPrefix as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the constants speech-command delimiters keys used in NSSpeechCommandDelimiterProperty.
Notes: The command delimiter string that prefixes a command, by default, this is [[.
Available in OS X v10.5 and later.

182.6.17 NSSpeechCommandSuffix as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the constants speech-command delimiters keys used in NSSpeechCommandDelimiter-Property.
Notes: The command delimiter string that suffixes a command,by default, this is]] .
Available in OS X v10.5 and later.

182.6.18 NSSpeechCurrentVoiceProperty as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the constants used with setObjectForProperty and objectForProperty to get or set the characteristics of a synthesizer.
Notes: Set the current voice on the synthesizer to the specified voice. A dictionary that contains the phoneme symbols and example words defined for the current synthesizer.
Your application might use this information to show the user what symbols to use when entering phonemic text directly. See "NSSpeechPhonemeSymbolsProperty Dictionary Keys" for the keys you can use to specify values in this dictionary.
Available in OS X v10.5 and later.

182.6.19 NSSpeechDictionaryAbbreviations as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the constants identify key-value pairs used to add vocabulary to the dictionary using addSpeechDictionary.
Notes: An array of dictionary objects containing the keys NSSpeechDictionaryEntrySpelling and NSSpeech-DictionaryEntryPhonemes.
Available in OS X v10.5 and later.

182.6.20 NSSpeechDictionaryEntryPhonemes as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the constants identify key-value pairs used to add vocabulary to the dictionary using addSpeechDictionary.
Notes: The phonemic representation of an entry. A string.
Available in OS X v10.5 and later.

182.6.21 NSSpeechDictionaryEntrySpelling as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the constants identify key-value pairs used to add vocabulary to the dictionary using addSpeechDictionary.
Notes: The spelling of an entry. A string.
Available in OS X v10.5 and later.

182.6.22 NSSpeechDictionaryLocaleIdentifier as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the constants identify key-value pairs used to add vocabulary to the dictionary using addSpeechDictionary.
Notes: The canonical locale identifier string describing the dictionary's locale. A locale is generally composed of three pieces of ordered information: a language code, a region code, and a variant code. Refer to documentation about NSLocale or Locales Programming Guide for more information
Available in OS X v10.5 and later.

182.6.23 NSSpeechDictionaryModificationDate as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the constants identify key-value pairs used to add vocabulary to the dictionary using addSpeechDictionary.
Notes: A string representation of the dictionary's last modification date in the international format (YYYY-MM-DD HH:MM:SS ¬±HHMM). If the same word appears across multiple dictionaries, the one from the dictionary with the most recent date will be used.
Available in OS X v10.5 and later.

182.6.24 NSSpeechDictionaryPronunciations as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the constants identify key-value pairs used to add vocabulary to the dictionary using addSpeechDictionary.
Notes: An array of dictionary objects containing the keys NSSpeechDictionaryEntrySpelling and NSSpeech-DictionaryEntryPhonemes.

182.6.25 NSSpeechErrorCount as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the key constants identify errors that may occur during speech synthesis. They are used

with NSSpeechErrorsProperty.
Notes: The number of errors that have occurred in processing the current text string, since the last call to objectForProperty with the NSSpeechErrorsProperty property. A Number
Using the NSSpeechErrorOldestCode keys and the NSSpeechErrorNewestCode keys, you can get information about the oldest and most recent errors that occurred since the last call to objectForProperty, but you cannot get information about any intervening errors.
Available in OS X v10.5 and later.

182.6.26 NSSpeechErrorNewestCharacterOffset as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the key constants identify errors that may occur during speech synthesis. They are used with NSSpeechErrorsProperty.
Notes: The position in the text string of the most recent error that occurred since the last call to objectForProperty with the NSSpeechErrorsProperty property. A Number.
Available in OS X v10.5 and later.

182.6.27 NSSpeechErrorNewestCode as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the key constants identify errors that may occur during speech synthesis. They are used with NSSpeechErrorsProperty.
Notes: The error code of the most recent error that occurred since the last call to objectForProperty with the NSSpeechErrorsProperty property. A number
Available in OS X v10.5 and later.

182.6.28 NSSpeechErrorOldestCharacterOffset as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the key constants identify errors that may occur during speech synthesis. They are used with NSSpeechErrorsProperty.
Notes: The position in the text string of the first error that occurred since the last call to objectForProperty with the NSSpeechErrorsProperty property. A number
Available in OS X v10.5 and later.

182.6.29 NSSpeechErrorOldestCode as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the key constants identify errors that may occur during speech synthesis. They are used with NSSpeechErrorsProperty.
Notes: The error code of the first error that occurred since the last call to objectForProperty with the NSSpeechErrorsProperty property. A Number
Available in OS X v10.5 and later.

182.6.30 NSSpeechErrorsProperty as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the constants used with setObjectForProperty and objectForProperty to get or set the characteristics of a synthesizer.
Notes: Get speech-error information for the synthesizer. An Dictionary object that contains speech-error information. See "NSSpeechErrorProperty Dictionary Keys" for a description of the keys present in the dictionary.
This property lets you get information about various run-time errors that occur during speaking, such as the detection of badly formed embedded commands. Errors returned directly by the Speech Synthesis Manager are not reported here.
If your application implements the didEncounterErrorAtIndex event, the event can use this property to get error information.
Available in OS X v10.5 and later.

182.6.31 NSSpeechInputModeProperty as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the constants used with setObjectForProperty and objectForProperty to get or set the characteristics of a synthesizer.
Notes: Get or set the synthesizer's current text-processing mode. A string that specifies whether the channel is currently in text input mode or phoneme input mode.The supported values are listed in "Speaking Modes for NSSpeechInputModeProperty."
When in phoneme-processing mode, a text string is interpreted to be a series of characters representing various phonemes and prosodic controls. Some synthesizers might support additional input-processing modes and define constants for these modes.
Available in OS X v10.5 and later.

182.6.32 NSSpeechModeLiteral as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the constants defining the available text-processing and number-processing modes for a synthesizer. This key is used with NSSpeechInputModeProperty and NSSpeechNumberModeProperty)
Notes: Indicates that each digit or character is spoken literally (so that 12 is spoken as "one, two", or the

word "cat" is spoken as "C A T").
Available in OS X v10.5 and later.

182.6.33 NSSpeechModeNormal as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the constants defining the available text-processing and number-processing modes for a synthesizer. This key is used with NSSpeechInputModeProperty and NSSpeechNumberModeProperty)
Notes: Indicates that the synthesizer assembles digits into numbers (so that 12 is spoken as "twelve") and text into words.
Available in OS X v10.5 and later.

182.6.34 NSSpeechModePhoneme as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the constants identify input modes are used with NSSpeechInputModeProperty.
Notes: Indicates that the synthesizer is in phoneme-processing mode. When in phoneme-processing mode, a text buffer is interpreted to be a series of characters representing various phonemes and prosodic controls.
Available in OS X v10.5 and later.

182.6.35 NSSpeechModeText as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the constants identify input modes are used with NSSpeechInputModeProperty.
Notes: Indicates that the synthesizer is in text-processing mode.
Available in OS X v10.5 and later.

182.6.36 NSSpeechNumberModeProperty as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the constants used with setObjectForProperty and objectForProperty to get or set the characteristics of a synthesizer.
Example:

```
Var s as new NSSpeechSynthesizerMBS
Var e as NSErrorMBS

call s.setObjectForProperty(s.NSSpeechModeLiteral, s.NSSpeechNumberModeProperty, e)
```

msgBox s.objectForProperty(s.NSSpeechNumberModeProperty, e)

call s.setObjectForProperty(s.NSSpeechModeNormal, s.NSSpeechNumberModeProperty, e)
msgBox s.objectForProperty(s.NSSpeechNumberModeProperty, e)

Notes: Get or set the synthesizer's current number-processing mode. A string that specifies whether the synthesizer is currently in normal or literal number-processing mode. The constants NSSpeechModeNormal and NSSpeechModeLiteral are the possible values of this string.
When the number-processing mode is NSSpeechModeNormal, the synthesizer assembles digits into numbers (so that "12" is spoken as "twelve"). When the mode is NSSpeechModeLiteral, each digit is spoken literally (so that "12" is spoken as "one, two").
Available in OS X v10.5 and later.

182.6.37 NSSpeechOutputToFileURLProperty as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the constants used with setObjectForProperty and objectForProperty to get or set the characteristics of a synthesizer.
Notes: Set the speech output destination to a file or to the computer's speakers. A NSURL object. To write the speech output to a file, use the file's NSURL; to generate the sound through the computer's speakers, use nil.
Available in OS X v10.5 and later.

182.6.38 NSSpeechPhonemeInfoExample as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the keys used in the NSSpeechPhonemeSymbolsProperty dictionary.
Notes: An example word that illustrates the use of the phoneme.
Available in OS X v10.5 and later.

182.6.39 NSSpeechPhonemeInfoHiliteEnd as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the keys used in the NSSpeechPhonemeSymbolsProperty dictionary.
Notes: The character offset into the example word that identifies the location of the end of the phoneme.
Available in OS X v10.5 and later.

182.6.40 NSSpeechPhonemeInfoHiliteStart as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the keys used in the NSSpeechPhonemeSymbolsProperty dictionary.
Notes: The character offset into the example word that identifies the location of the beginning of the phoneme.
Available in OS X v10.5 and later.

182.6.41 NSSpeechPhonemeInfoOpcode as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the keys used in the NSSpeechPhonemeSymbolsProperty dictionary.
Notes: The opcode as Number.
Available in OS X v10.5 and later.

182.6.42 NSSpeechPhonemeInfoSymbol as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the keys used in the NSSpeechPhonemeSymbolsProperty dictionary.
Notes: The symbol used to represent the phoneme.
The symbol does not necessarily have a phonetic connection to the phoneme, but might simply be an abstract textual representation of it.
Available in OS X v10.5 and later.

182.6.43 NSSpeechPhonemeSymbolsProperty as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the constants used with setObjectForProperty and objectForProperty to get or set the characteristics of a synthesizer.
Notes: Get a list of phoneme symbols and example words defined for the synthesizer. A Dictionary object that contains the phoneme symbols and example words defined for the current synthesizer
Your application might use this information to show the user what symbols to use when entering phonemic text directly. See "NSSpeechPhonemeSymbolsProperty Dictionary Keys" for a description of the keys present in the dictionary.
Available in OS X v10.5 and later.

182.6.44 NSSpeechPitchBaseProperty as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the constants used with setObjectForProperty and objectForProperty to get or set the characteristics of a synthesizer.
Example:

```
Var s as new NSSpeechSynthesizerMBS
Var e as NSErrorMBS

Var n as Integer = s.objectForProperty(s.NSSpeechPitchBaseProperty, e)
msgBox str(n)
```

Notes: Get or set a synthesizer's baseline speech pitch. An number that specifies the baseline speech pitch. Typical voice frequencies range from around 90 hertz for a low-pitched male voice to perhaps 300 hertz for a high-pitched child's voice. These frequencies correspond to approximate pitch values in the ranges of 30.000 to 40.000 and 55.000 to 65.000, respectively.
Note: The change in speech pitch may not be noticeable until the next sentence or paragraph is spoken.
Available in OS X v10.5 and later.

182.6.45 NSSpeechPitchModProperty as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the constants used with setObjectForProperty and objectForProperty to get or set the characteristics of a synthesizer.
Example:

```
Var s as new NSSpeechSynthesizerMBS
Var e as NSErrorMBS

Var n as Double = s.objectForProperty(s.NSSpeechPitchModProperty, e)
msgBox str(n)
```

Notes: Get or set a synthesizer's pitch modulation. A number object that specifies the synthesizer's pitch modulation.
Pitch modulation is also expressed as a floating-point value in the range of 0.000 to 127.000. These values correspond to MIDI note values, where 60.000 is equal to middle C on a piano scale. The most useful speech pitches fall in the range of 40.000 to 55.000. A pitch modulation value of 0.000 corresponds to a monotone in which all speech is generated at the frequency corresponding to the speech pitch. Given a speech pitch value of 46.000, a pitch modulation of 2.000 would mean that the widest possible range of pitches corresponding to the actual frequency of generated text would be 44.000 to 48.000.

Note: The change in pitch modulation may not be noticeable until the next sentence or paragraph is spoken.

Available in OS X v10.5 and later.

182.6.46 NSSpeechRateProperty as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the constants used with setObjectForProperty and objectForProperty to get or set the characteristics of a synthesizer.
Example:

```
Var s as new NSSpeechSynthesizerMBS
Var e as NSErrorMBS
Var value as Double = s.objectForProperty(s.NSSpeechRateProperty, e)
MsgBox str(value)
```

Notes: Get or set the synthesizer's baseline speech pitch. A number that specifies the synthesizer's baseline speech pitch.
Typical voice frequencies range from around 90 hertz for a low-pitched male voice to perhaps 300 hertz for a high-pitched child's voice. These frequencies correspond to approximate pitch values in the ranges of 30.000 to 40.000 and 55.000 to 65.000, respectively.
Available in OS X v10.5 and later.

182.6.47 NSSpeechRecentSyncProperty as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the constants used with setObjectForProperty and objectForProperty to get or set the characteristics of a synthesizer.
Notes: Get the message code for the most recently encountered synchronization command. A number that specifies the most recently encountered synchronization command.

Available in OS X v10.5 and later.

182.6.48 NSSpeechResetProperty as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the constants used with setObjectForProperty to get or set the characteristics of a synthesizer.
Notes: Set a synthesizer back to its default state. There is no value associated with this property; to reset the channel to its default state, set the key to nil.
You can use this function to, for example, set speech pitch and speech rate to default values.

Available in OS X v10.5 and later.

182.6.49 NSSpeechStatusNumberOfCharactersLeft as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the constants identify speech status keys used with NSSpeechStatusProperty.
Notes: The number of characters left in the input string of text.
When the value of this key is zero, you can destroy the input string.
Available in OS X v10.5 and later.

182.6.50 NSSpeechStatusOutputBusy as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the constants identify speech status keys used with NSSpeechStatusProperty.
Notes: Indicates whether the synthesizer is currently producing speech.
A synthesizer is considered to be producing speech even at some times when no audio data is being produced through the computer's speaker. This occurs, for example, when the synthesizer is processing input, but has not yet initiated speech or when speech output is paused.
Available in OS X v10.5 and later.

182.6.51 NSSpeechStatusOutputPaused as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the constants identify speech status keys used with NSSpeechStatusProperty.
Notes: Indicates whether speech output in the synthesizer has been paused by sending the message pauseSpeakingAtBoundary.
Available in OS X v10.5 and later.

182.6.52 NSSpeechStatusPhonemeCode as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the constants identify speech status keys used with NSSpeechStatusProperty.
Notes: Indicates that the synthesizer is in phoneme-processing mode. When in phoneme-processing mode, a text buffer is interpreted to be a series of characters representing various phonemes and prosodic controls.
Available in OS X v10.5 and later.

182.6.53 NSSpeechStatusProperty as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the constants used with setObjectForProperty and objectForProperty to get or set the characteristics of a synthesizer.
Example:

```
Var s as new NSSpeechSynthesizerMBS
Var e as NSErrorMBS

call s.startSpeakingString "Hello"

Var status as Dictionary = s.objectForProperty(s.NSSpeechStatusProperty, e)
Var CharactersLeft as Integer = status.Value(s.NSSpeechStatusNumberOfCharactersLeft)

MsgBox str(CharactersLeft)+" Characters left"
```

Notes: Get speech-status information for the synthesizer. A dictionary that contains speech-status information for the synthesizer. See "NSSpeechStatusProperty Dictionary Keys" for a description of the keys present in the dictionary.
Available in OS X v10.5 and later.

182.6.54 NSSpeechSynthesizerInfoIdentifier as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the constants are keys used in the NSSpeechSynthesizerInfoProperty dictionary.
Notes: The identifier of the speech synthesizer.
Available in OS X v10.5 and later.

182.6.55 NSSpeechSynthesizerInfoProperty as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the constants used with setObjectForProperty and objectForProperty to get or set the characteristics of a synthesizer.
Notes: Get information about the speech synthesizer being used on the specified synthesizer. A dictionary object that contains information about the speech synthesizer being used on the specified synthesizer. See "Speech Synthesizer Property Keys" for a description of the keys present in the dictionary.
Available in OS X v10.5 and later.

182.6.56 NSSpeechSynthesizerInfoVersion as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the constants are keys used in the NSSpeechSynthesizerInfoProperty dictionary.
Notes: The version of the speech synthesizer.
Available in OS X v10.5 and later.

182.6.57 NSSpeechVolumeProperty as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the constants used with setObjectForProperty and objectForProperty to get or set the characteristics of a synthesizer.
Example:

```
Var s as new NSSpeechSynthesizerMBS
Var e as NSErrorMBS
Var value as Double = s.objectForProperty(s.NSSpeechVolumeProperty, e)
MsgBox str(value)
```

Notes: Get or set the speech volume for a synthesizer. A Number that specifies the synthesizer's speech volume.
Volumes are expressed in floating-point values ranging from 0.0 through 1.0. A value of 0.0 corresponds to silence, and a value of 1.0 corresponds to the maximum possible volume. Volume units lie on a scale that is linear with amplitude or voltage. A doubling of perceived loudness corresponds to a doubling of the volume.
Available in OS X v10.5 and later.

You may prefer to simply use the volume property.

182.6.58 objectForProperty(PropertyName as string, byref error as NSErrorMBS) as Variant

MBS MacCocoa Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Provides the value of a receiver's property.
Notes: PropertyName: Property to get.
error: On output, error that occurred while obtaining the value of speechProperty.

Returns the value of speechProperty.
Available in OS X v10.5 and later.

182.6.59 pauseSpeakingAtBoundary(boundary as Integer)

MBS MacCocoa Plugin, Plugin Version: 7.7, Platform: macOS, Targets: Desktop, Console & Web.

Function: Pauses the speaking on the given boundary.
Example:

```
Var s as NSSpeechSynthesizerMBS // your synthesizer
s.pauseSpeakingAtBoundary s.NSSpeechSentenceBoundary // pause on end of sentence.
```

Notes: Mac OS X 10.5 only.
boundary can be NSSpeechImmediateBoundary, NSSpeechSentenceBoundary or NSSpeechWordBoundary.

182.6.60 phonemesFromText(text as string) as string

MBS MacCocoa Plugin, Plugin Version: 7.7, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns the phonems from a given text.
Example:

```
Var s as new NSSpeechSynthesizerMBS

MsgBox s.phonemesFromText("Hello")

// shows "_hEHl1OW."
```

Notes: Mac OS X 10.5 only.

182.6.61 setObjectForProperty(value as Variant, PropertyName as string, byref error as NSErrorMBS) as boolean

MBS MacCocoa Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Specifies the value of a receiver's property.
Notes: PropertyName: Property to set.
Error: On output, error that occurred while setting speechProperty.

Returns true when the speechProperty was set. False when there was an error, specified in error.
Available in OS X v10.5 and later.

182.6.62 SetVoice(voice as string) as boolean

MBS MacCocoa Plugin, Plugin Version: 6.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: Sets the receiver's current voice.
Notes: Returns true on success.

182.6.63 StartSpeakingString(text as string) as boolean

MBS MacCocoa Plugin, Plugin Version: 6.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: Begins speaking synthesized text through the system's default sound output device.
Example:

```
Var s as new NSSpeechSynthesizerMBS

s.rate=300 // not slow
s.volume=0.5 // not loud
call s.startSpeakingString "Hello World"
```

Notes: Returns true when synthesis starts successfully, false otherwise.

If the receiver is currently speaking synthesized speech when startSpeakingString is called, that process is stopped before text is spoken.

When synthesis of text finishes normally or is stopped, the message didFinishSpeaking(true) is called.
See also:

- 182.6.64 StartSpeakingString(text as string, file as folderitem) as boolean 21603
- 182.6.65 startSpeakingString(Text as String, URL as string) as boolean 21604

182.6.64 StartSpeakingString(text as string, file as folderitem) as boolean

MBS MacCocoa Plugin, Plugin Version: 6.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: Begins synthesizing text into a sound (AIFF) file.
Notes: Returns true when synthesis starts successfully, false otherwise.

When synthesis of text finishes normally or is stopped, the message didFinishSpeaking(True) is called.

One example of how you might use this method is in an email program that automatically converts new messages into sound files that can be stored on an iPod for later listening.
See also:

- 182.6.63 StartSpeakingString(text as string) as boolean 21603
- 182.6.65 startSpeakingString(Text as String, URL as string) as boolean 21604

182.6.65 startSpeakingString(Text as String, URL as string) as boolean

MBS MacCocoa Plugin, Plugin Version: 7.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Begins synthesizing text into a sound (AIFF) file.
Notes: Returns true when synthesis starts successfully, false otherwise.

When synthesis of text finishes normally or is stopped, the message didFinishSpeaking(True) is called.

One example of how you might use this method is in an email program that automatically converts new messages into sound files that can be stored on an iPod for later listening.
See also:

- 182.6.63 StartSpeakingString(text as string) as boolean 21603
- 182.6.64 StartSpeakingString(text as string, file as folderitem) as boolean 21603

182.6.66 StopSpeaking

MBS MacCocoa Plugin, Plugin Version: 6.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: Stops synthesis in progress.
Notes: If the receiver is currently generating speech, synthesis is halted, and the message didFinishSpeaking(false) is called.

182.6.67 stopSpeakingAtBoundary(boundary as Integer)

MBS MacCocoa Plugin, Plugin Version: 7.7, Platform: macOS, Targets: Desktop, Console & Web.

Function: Stops speech on the next w
Notes: Mac OS X 10.5 only.

182.6.68 Properties

182.6.69 IsSpeaking as boolean

MBS MacCocoa Plugin, Plugin Version: 6.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: Indicates whether the receiver is currently generating synthesized speech.
Notes: true when the receiver is generating synthesized speech, false otherwise.
(Read only property)

182.6.70 rate as Double

MBS MacCocoa Plugin, Plugin Version: 7.7, Platform: macOS, Targets: Desktop, Console & Web.

Function: The current rate of the speech.
Example:

```
Var s as NSSpeechSynthesizerMBS
s=new NSSpeechSynthesizerMBS
MsgBox str(s.rate)
// shows e.g. "160"
```

Notes: Mac OS X 10.5 only.
The range of supported rates is not predefined by the Speech Synthesis framework; but the synthesizer may only respond to a limited range of speech rates. Average human speech occurs at a rate of 180 to 220 words per minute.
(Read and Write property)

182.6.71 UsesFeedbackWindow as boolean

MBS MacCocoa Plugin, Plugin Version: 6.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: Indicates whether the receiver uses the speech feedback window.
Notes: (Read and Write property)

182.6.72 Voice as string

MBS MacCocoa Plugin, Plugin Version: 6.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: The current voice.
Example:

```
Var s as new NSSpeechSynthesizerMBS
MsgBox s.voice
// shows e.g. "com.apple.speech.synthesis.voice.Zarvox"
```

Notes: (Read and Write property)

182.6.73 volume as Double

MBS MacCocoa Plugin, Plugin Version: 7.7, Platform: macOS, Targets: Desktop, Console & Web.

Function: The volume of the speech.
Example:

```
Var s as new NSSpeechSynthesizerMBS
MsgBox str(s.volume)
// shows e.g. 1
```

Notes: No sound is zero, full sound one.
Mac OS X 10.5 only.

Volumes are expressed in floating-point units ranging from 0.0 through 1.0. A value of 0.0 corresponds to silence, and a value of 1.0 corresponds to the maximum possible volume. Volume units lie on a scale that is linear with amplitude or voltage. A doubling of perceived loudness corresponds to a doubling of the volume.

Setting a value outside this range is undefined.
(Read and Write property)

182.6.74 Events

182.6.75 didEncounterErrorAtIndex(characterIndex as Integer, text as string, message as string)

MBS MacCocoa Plugin, Plugin Version: 7.7, Platform: macOS, Targets: Desktop, Console & Web.

Function: An event called when an error has been found in the text while speaking.
Notes: Mac OS X 10.5 only.

182.6.76 didEncounterSyncMessage(message as string)

MBS MacCocoa Plugin, Plugin Version: 7.7, Platform: macOS, Targets: Desktop, Console & Web.

Function: A sync message was found in the text.
Notes: See Apple Speech documentation about the special tags you need to place in the text to get this event.
Mac OS X 10.5 only.

182.6.77 didFinishSpeaking(finishedSpeaking as boolean)

MBS MacCocoa Plugin, Plugin Version: 6.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: Called when speaking through the sound output device is done.
Notes: finishedSpeaking is true when finished normally and false when StopSpeaking was called.

182.6.78 willSpeakPhoneme(phonemeOpcode as Integer)

MBS MacCocoa Plugin, Plugin Version: 6.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: Sent just before a synthesized phoneme is spoken through the sound output device.
Notes: phonemeOpcode: Phoneme that sender is about to speak into the sound output device.

One use of this method might be to animate a mouth on screen to match the generated speech.

Important: The delegate is not sent this message when the SpeechSynthesizer object is synthesizing speech to a file (startSpeakingString).

182.6.79 willSpeakWord(Position as Integer, Length as Integer, Text as String)

MBS MacCocoa Plugin, Plugin Version: 6.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: Sent just before a synthesized word is spoken through the sound output device.
Notes: Position and Length: Word that sender is about to speak into the sound output device.
text: Text that is being synthesized by sender.

One use of this method might be to visually highlight the word being spoken.

Important: The delegate is not sent this message when the SpeechSynthesizer object is synthesizing speech to a file (startSpeakingString).

182.6.80 Constants

Constants

Constant	Value	Description
NSSpeechImmediateBoundary	0	One of the constants for the pauseSpeakingAtBoundary method. Mac OS X 10.5 only.
NSSpeechSentenceBoundary	2	One of the constants for the pauseSpeakingAtBoundary method. Mac OS X 10.5 only.
NSSpeechWordBoundary	1	One of the constants for the pauseSpeakingAtBoundary method. Mac OS X 10.5 only.

182.7 class NSVoiceMBS

182.7.1 class NSVoiceMBS

MBS MacCocoa Plugin, Plugin Version: 6.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: A voice on Mac OS X with its attributes.
Notes: Available in Mac OS X v10.3 and later.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.
Blog Entries

- MBS Xojo / Real Studio Plugins, version 13.2pr7

182.7.2 Methods

182.7.3 Age as Integer

MBS MacCocoa Plugin, Plugin Version: 6.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: The perceived age (in years) of the voice.

182.7.4 Constructor

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: The private constructor.

182.7.5 Demotext as String

MBS MacCocoa Plugin, Plugin Version: 6.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: A demonstration string to speak.

182.7.6 Gender as String

MBS MacCocoa Plugin, Plugin Version: 6.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: The perceived gender of the voice.
Notes: May be either GenderNeuter ("VoiceGenderNeuter), GenderFemale ("VoiceGenderFemale"), or GenderMale ("VoiceGenderMale").

182.7.7 GenderFemale as String

MBS MacCocoa Plugin, Plugin Version: 7.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the possible values for the gender property.

182.7.8 GenderMale as String

MBS MacCocoa Plugin, Plugin Version: 7.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the possible values for the gender property.

182.7.9 GenderNeuter as String

MBS MacCocoa Plugin, Plugin Version: 7.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the possible values for the gender property.

182.7.10 Identifier as String

MBS MacCocoa Plugin, Plugin Version: 6.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: A unique string identifying the voice. The identifiers of the system voices are listed below.
Notes: Identifiers of the Mac OS X system voices
com.apple.speech.synthesis.voice.Agnes
com.apple.speech.synthesis.voice.Albert
com.apple.speech.synthesis.voice.BadNews
com.apple.speech.synthesis.voice.Bahh
com.apple.speech.synthesis.voice.Bells
com.apple.speech.synthesis.voice.Boing
com.apple.speech.synthesis.voice.Bruce
com.apple.speech.synthesis.voice.Bubbles
com.apple.speech.synthesis.voice.Cellos
com.apple.speech.synthesis.voice.Deranged
com.apple.speech.synthesis.voice.Fred
com.apple.speech.synthesis.voice.GoodNews
com.apple.speech.synthesis.voice.Hysterical
com.apple.speech.synthesis.voice.Junior
com.apple.speech.synthesis.voice.Kathy
com.apple.speech.synthesis.voice.Organ
com.apple.speech.synthesis.voice.Princess
com.apple.speech.synthesis.voice.Ralph
com.apple.speech.synthesis.voice.Trinoids

com.apple.speech.synthesis.voice.Vicki
com.apple.speech.synthesis.voice.Victoria
com.apple.speech.synthesis.voice.Whisper
com.apple.speech.synthesis.voice.Zarvox

182.7.11 Language as String

MBS MacCocoa Plugin, Plugin Version: 6.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: The language of the voice (currently US English only).
Notes: Language has been replaced by LocaleIdentifier in Mac OS X 10.5.

182.7.12 LocaleIdentifier as String

MBS MacCocoa Plugin, Plugin Version: 7.7, Platform: macOS, Targets: Desktop, Console & Web.

Function: The locale identifier.
Example:

```
Var v as NSVoiceMBS
Var s as NSSpeechSynthesizerMBS
Var n as string

s=new NSSpeechSynthesizerMBS

n=s.voice
v=s.attributesForVoice(n)

MsgBox n+EndOfLine+v.LocaleIdentifier
// shows for example "en_US"
```

Notes: Mac OS X 10.5 only.

Language has been replaced by LocaleIdentifier in Mac OS X 10.5.

182.7.13 Name as String

MBS MacCocoa Plugin, Plugin Version: 6.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: The name of the voice suitable for display.

182.7.14 NSVoiceAge as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the properties names.
Notes: The perceived age (in years) of the voice. A string.

182.7.15 NSVoiceDemoText as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the properties names.
Notes: A demonstration string to speak. A String.

182.7.16 NSVoiceGender as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the properties names.
Notes: The perceived gender of the voice.

182.7.17 NSVoiceIdentifier as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the properties names.
Notes: A unique string identifying the voice.

Identifiers of the OS X system voices:
com.apple.speech.synthesis.voice.Agnes
com.apple.speech.synthesis.voice.Albert
com.apple.speech.synthesis.voice.Alex
com.apple.speech.synthesis.voice.BadNews
com.apple.speech.synthesis.voice.Bahh
com.apple.speech.synthesis.voice.Bells
com.apple.speech.synthesis.voice.Boing
com.apple.speech.synthesis.voice.Bruce
com.apple.speech.synthesis.voice.Bubbles
com.apple.speech.synthesis.voice.Cellos
com.apple.speech.synthesis.voice.Deranged
com.apple.speech.synthesis.voice.Fred
com.apple.speech.synthesis.voice.GoodNews
com.apple.speech.synthesis.voice.Hysterical

com.apple.speech.synthesis.voice.Junior
com.apple.speech.synthesis.voice.Kathy
com.apple.speech.synthesis.voice.Organ
com.apple.speech.synthesis.voice.Princess
com.apple.speech.synthesis.voice.Ralph
com.apple.speech.synthesis.voice.Trinoids
com.apple.speech.synthesis.voice.Vicki
com.apple.speech.synthesis.voice.Victoria
com.apple.speech.synthesis.voice.Whisper
com.apple.speech.synthesis.voice.Zarvox

182.7.18 NSVoiceIndividuallySpokenCharacters as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the properties names.
Notes: A list of unicode character id ranges that define the unicode characters that can be spoken in character-by-character mode by this voice. ach list entry is a dictionary containing two keys: "UnicodeCharBegin", an integer value containing the beginning unicode id of this range; and "UnicodeCharBegin", an integer value containing the ending unicode id of this range.
These ranges can be used by your application to determine if the voice can speak the name of an individual character when spoken in character-by-character mode.
Some voices may not provide this attribute.
Available in OS X v10.5 and later.

182.7.19 NSVoiceLanguage as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the properties names.
Notes: The language of the voice (currently US English only). A string
Deprecated: Use NSVoiceLocaleIdentifier instead.
Deprecated in OS X v10.5.

182.7.20 NSVoiceLocaleIdentifier as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the properties names.
Notes: The language of the voice. A string
The canonical locale identifier string describing the voice's locale. A locale is generally composed of three pieces of ordered information: a language code, a region code, and a variant code. Refer to documentation about the NSLocale class or Locales Programming Guide for more information.

Available in OS X v10.5 and later.

182.7.21 NSVoiceName as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the properties names.
Notes: The name of the voice suitable for display. A String.

182.7.22 NSVoiceSupportedCharacters as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the properties names.
Notes: A list of unicode character id ranges that define the unicode characters supported by this voice. a dictionary containing two keys: "UnicodeCharBegin", an integer value containing the beginning unicode id of this range; and "UnicodeCharBegin", an integer value containing the ending unicode id of this range. The synthesizer will convert or ignore any characters not contained in the range of supported characters.
Some voices may not provide this attribute.
Available in OS X v10.5 and later.

182.7.23 Properties as Dictionary

MBS MacCocoa Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns dictionary with all the properties for this voice.
Notes: This dictionary may contain additional information if Apple adds more features in newer Mac OS X versions.

182.8 class SpeechChannelMBS

182.8.1 class SpeechChannelMBS

MBS MacClassic Plugin, Platform: macOS, Targets: Desktop only.

Deprecated: This item is deprecated and should no longer be used. You can use NSSpeechSynthesizerMBS instead. **Function:** A SpeechMBS channel.
Example:

```
Var s as new SpeechMBS
Var c as SpeechChannelMBS = s.Voice(1).NewChannel

call c.Speak("Hello")

MsgBox str(c.TextBytesToSpeak)
```

Blog Entries

- MBS Xojo / Real Studio Plugins, version 15.0pr9

182.8.2 Methods

182.8.3 close

MBS MacClassic Plugin, Plugin Version: 3.4, Platform: macOS, Targets: Desktop only.

Function: The destructor.
Notes: There is no need to call this method except you want to free all resources of this object now without waiting for Xojo to do it for you.

182.8.4 ContinueSpeech as Boolean

MBS MacClassic Plugin, Platform: macOS, Targets: Desktop only.

Function: Continue speaking.
Example:

```
Var c as SpeechChannelMBS // your channel

MsgBox str(C.ContinueSpeech)
```

Notes: Renamed from Continue to ContinueSpeech in v5.3 to fix a problem with Xojo 2005r3.

182.8.5 PauseEndOfSentence as Boolean

MBS MacClassic Plugin, Platform: macOS, Targets: Desktop only.

Function: Pauses speaking at the end of the current sentence.
Example:

```
Var c as SpeechChannelMBS // your channel

MsgBox str(C.PauseEndOfSentence)
```

182.8.6 PauseEndOfWord as Boolean

MBS MacClassic Plugin, Platform: macOS, Targets: Desktop only.

Function: Pauses speaking at the end of the current word.
Example:

```
Var c as SpeechChannelMBS // your channel

MsgBox str(C.PauseEndOfWord)
```

182.8.7 PauseImmediate as Boolean

MBS MacClassic Plugin, Platform: macOS, Targets: Desktop only.

Function: Pauses speaking.
Example:

```
Var c as SpeechChannelMBS // your channel

MsgBox str(C.PauseImmediate)
```

182.8.8 Reset

MBS MacClassic Plugin, Platform: macOS, Targets: Desktop only.

Function: Resets the SpeechMBS channel to some default values.
Example:

```
Var c as SpeechChannelMBS // your channel

c.reset
```

Notes: Resets e.g. pitchbase, pitchmodulation, volume, rate.

182.8.9 SetOutputFile(file as folderitem) as boolean

MBS MacClassic Plugin, Plugin Version: 4.1, Platform: macOS, Targets: Desktop only.

Function: Sets the destination file.
Example:

```
Var s as new SpeechMBS
Var c as SpeechChannelMBS = s.Voice(1).NewChannel
Var f as FolderItem = SpecialFolder.Desktop.Child("test.aiff")

call c.SetOutputFile(f)
call c.Speak("Hello")

MsgBox str(c.TextBytesToSpeak)
```

Notes: Returns true on success and false on any error.
Requires Mac OS X 10.3.

182.8.10 Speak(s as string) as Boolean

MBS MacClassic Plugin, Platform: macOS, Targets: Desktop only.

Function: Speak the given text.
Example:

```
Var s as new SpeechMBS
Var c as SpeechChannelMBS = s.Voice(1).NewChannel

MsgBox str(c.Speak("Hello"))
```

Notes: v5.1: Now encoding safe and stores result in lasterror property.

182.8.11 SpeechBusy as Integer

MBS MacClassic Plugin, Platform: macOS, Targets: Desktop only.

Function: Returns how much SpeechChannels are currently in use of you application.
Example:

```
Var c as SpeechChannelMBS // your channel
```

MsgBox str(c.SpeechBusy)

182.8.12 SpeechBusySystemWide as Integer

MBS MacClassic Plugin, Platform: macOS, Targets: Desktop only.

Function: Returns how much SpeechChannels are currently in use on this Mac.
Example:

```
Var c as SpeechChannelMBS // your channel

MsgBox str(c.SpeechBusySystemWide)
```

182.8.13 Stop as Boolean

MBS MacClassic Plugin, Platform: macOS, Targets: Desktop only.

Function: Stops speaking.
Example:

```
Var c as SpeechChannelMBS // your channel

MsgBox str(c.Stop)
```

182.8.14 StopEndOfSentence as Boolean

MBS MacClassic Plugin, Platform: macOS, Targets: Desktop only.

Function: Stops speaking at the end of the current sentence.
Example:

```
Var c as SpeechChannelMBS // your channel

MsgBox str(c.StopEndOfSentence)
```

182.8.15 StopEndOfWord as Boolean

MBS MacClassic Plugin, Platform: macOS, Targets: Desktop only.

Function: Stops speaking at the end of the current word.
Example:

```
Var c as SpeechChannelMBS // your channel

MsgBox str(c.StopEndOfWord)
```

182.8.16 StopImmediate as Boolean

MBS MacClassic Plugin, Platform: macOS, Targets: Desktop only.

Function: Stops speaking.
Example:

```
Var c as SpeechChannelMBS // your channel

MsgBox str(c.StopImmediate)
```

182.8.17 Properties

182.8.18 Lasterror as Integer

MBS MacClassic Plugin, Plugin Version: 5.1, Platform: macOS, Targets: Desktop only.

Function: The last error code.
Example:

```
Var c as SpeechChannelMBS // your channel

MsgBox str(c.Lasterror)
```

Notes: A Mac OS error code.
from the plugin -1 is bad parameter and 0 is success.
(Read only property)

182.8.19 Paused as boolean

MBS MacClassic Plugin, Platform: macOS, Targets: Desktop only.

Function: Are we paused?
Example:

```
Var s as new SpeechMBS
Var c as SpeechChannelMBS = s.Voice(1).NewChannel

MsgBox str(c.Paused)
```

Notes: (Read only property)

182.8.20 PitchBase as Double

MBS MacClassic Plugin, Platform: macOS, Targets: Desktop only.

Function: The pich base used for speaking.
Example:

```
Var c as SpeechChannelMBS // your channel

MsgBox str(C.PitchBase)
```

Notes: (Read and Write property)

182.8.21 PitchModulation as Double

MBS MacClassic Plugin, Platform: macOS, Targets: Desktop only.

Function: The pich modulation used for speaking.
Example:

```
Var c as SpeechChannelMBS // your channel

MsgBox str(C.PitchModulation)
```

Notes: (Read and Write property)

182.8.22 Playing as boolean

MBS MacClassic Plugin, Platform: macOS, Targets: Desktop only.

Function: Are we playing?
Example:

```
Var c as SpeechChannelMBS // your channel

MsgBox str(C.Playing)
```

Notes: (Read only property)

182.8.23 Rate as Double

MBS MacClassic Plugin, Platform: macOS, Targets: Desktop only.

Function: The rate used for speaking.
Example:

```
Var c as SpeechChannelMBS // your channel

MsgBox str(C.Rate)
```

Notes: Normally around 175 words/minute.
(Read and Write property)

182.8.24 SpeakCharactersLiteral as Boolean

MBS MacClassic Plugin, Platform: macOS, Targets: Desktop only.

Function: whether to speak characters literal.
Example:

```
Var c as SpeechChannelMBS // your channel

MsgBox str(c.SpeakCharactersLiteral)
```

Notes: Speaks Hello like "H-E-L-L-O"
(Read and Write property)

182.8.25 SpeakNumbersLiteral as Boolean

MBS MacClassic Plugin, Platform: macOS, Targets: Desktop only.

Function: whether to speak numbers literal.
Example:

```
Var c as SpeechChannelMBS // your channel

MsgBox str(c.SpeakNumbersLiteral)
```

Notes: Speaks 11 not like "elven", but like "one, one".
(Read and Write property)

182.8.26 TextBytesToSpeak as Integer

MBS MacClassic Plugin, Platform: macOS, Targets: Desktop only.

Function: How much text is left in the text buffer?
Example:

```
Var s as new SpeechMBS
Var c as SpeechChannelMBS = s.Voice(1).NewChannel

call c.Speak("Hello")

MsgBox str(c.TextBytesToSpeak)
```

Notes: (Read only property)

182.8.27 Voice as VoiceMBS

MBS MacClassic Plugin, Platform: macOS, Targets: Desktop only.

Function: The VoiceMBS used for that SpeechChannelMBS.
Example:

```
Var c as SpeechChannelMBS // your channel

MsgBox c.Voice.Name
```

Notes: (Read and Write property)

182.8.28 Volume as Double

MBS MacClassic Plugin, Platform: macOS, Targets: Desktop only.

Function: The current volume.
Example:

```
Var c as SpeechChannelMBS // your channel

MsgBox str(c.Volume)
```

Notes: From 0 to 65535.
(Read and Write property)

182.9 class SpeechMBS

182.9.1 class SpeechMBS

MBS MacClassic Plugin, Platform: macOS, Targets: Desktop only.

Deprecated: This item is deprecated and should no longer be used. You can use NSSpeechSynthesizerMBS instead. **Function:** The class for the Mac OS speech synthesizer.
Notes: For Mac OS X you can also use the NSSpeechSynthesizerMBS class and for recognition the NSSpeechRecognizerMBS class.

You can try Speech with some declares, but your app won't start if the Speech extension is not installed. This plugin won't stop, but simply will just tell you that the Speech is not available, so you can react in your application.

- MBS Xojo / Real Studio Plugins, version 15.0pr9

182.9.2 Methods

182.9.3 close

MBS MacClassic Plugin, Plugin Version: 3.4, Platform: macOS, Targets: Desktop only.

Function: The destructor.
Notes: There is no need to call this method except you want to free all resources of this object now without waiting for Xojo to do it for you.

182.9.4 DefaultVoice as VoiceMBS

MBS MacClassic Plugin, Platform: macOS, Targets: Desktop only.

Function: Returns the default VoiceMBS.
Example:

```
Var s as new SpeechMBS
Var v as VoiceMBS = s.DefaultVoice

MsgBox v.Name
```

182.9.5 Speak(s as string) as Boolean

MBS MacClassic Plugin, Platform: macOS, Targets: Desktop only.

Function: Speaks a text using the default settings.
Example:

```
Var s as new SpeechMBS

call s.Speak("Hello")

MsgBox "you hear me?"
```

Notes: Returns directly to caller.
Returns true if speaking is working.

v5.1: Now encoding safe and stores result in lasterror property.

182.9.6 SpeechBusy as Integer

MBS MacClassic Plugin, Platform: macOS, Targets: Desktop only.

Function: Returns how much SpeechChannels are currently in use of you application.
Example:

```
Var s as new SpeechMBS

MsgBox str(s.SpeechBusy)
```

182.9.7 SpeechBusySystemWide as Integer

MBS MacClassic Plugin, Platform: macOS, Targets: Desktop only.

Function: Returns how much SpeechChannels are currently in use on this Mac.
Example:

```
Var s as new SpeechMBS

MsgBox str(s.SpeechBusySystemWide)
```

182.9.8 Voice(index as Integer) as VoiceMBS

MBS MacClassic Plugin, Platform: macOS, Targets: Desktop only.

Function: Returns the VoiceMBS with this number.
Example:

```
Var s as new SpeechMBS

MsgBox s.Voice(1).Name
```

Notes: Index is from 1 to VoiceCount.

182.9.9 Properties

182.9.10 Available as Boolean

MBS MacClassic Plugin, Platform: macOS, Targets: Desktop only.

Function: Is SpeechMBS available?
Notes: (Read only property)

182.9.11 Lasterror as Integer

MBS MacClassic Plugin, Plugin Version: 5.1, Platform: macOS, Targets: Desktop only.

Function: The last error code.
Notes: A Mac OS error code.
from the plugin -1 is bad parameter and 0 is success.
(Read only property)

182.9.12 VersionMajor as Integer

MBS MacClassic Plugin, Platform: macOS, Targets: Desktop only.

Function: The major Version number.
Example:

```
Var s as SpeechMBS
s=new SpeechMBS
msgbox hex(s.VersionMajor)+"."+hex(s.versionMinor\16)+"."+hex(s.versionMinor mod 16)
```

Notes: (Read only property)

182.9.13 versionMinor as Integer

MBS MacClassic Plugin, Platform: macOS, Targets: Desktop only.

Function: The minor Version number.
Example:

```
Var s as SpeechMBS
s=new SpeechMBS
msgbox hex(s.VersionMajor)+"."+hex(s.versionMinor\16)+"."+hex(s.versionMinor mod 16)
```

Notes: (Read only property)

182.9.14 VersionRev as Integer

MBS MacClassic Plugin, Platform: macOS, Targets: Desktop only.

Function: The revision Version number.
Example:

```
Var s as new SpeechMBS

MsgBox str(s.VersionRev)
```

Notes: (Read only property)

182.9.15 VersionStage as Integer

MBS MacClassic Plugin, Platform: macOS, Targets: Desktop only.

Function: The Stage Version number.
Example:

```
Var s as new SpeechMBS

MsgBox str(s.VersionStage)
```

Notes: Some constants:

developStage	&h20
alphaStage	&h40
betaStage	&h60
finalStage	&h80

(Read only property)

182.9.16 VoiceCount as Integer

MBS MacClassic Plugin, Platform: macOS, Targets: Desktop only.

Function: How much voices are present?
Example:

```
Var s as new SpeechMBS

MsgBox str(s.VoiceCount)
```

Notes: If you add or remove VoiceMBS files, please call this function as SpeechMBS can then recognice those changes.
(Read only property)

182.10 class VoiceMBS

182.10.1 class VoiceMBS

MBS MacClassic Plugin, Platform: macOS, Targets: Desktop only.

Deprecated: This item is deprecated and should no longer be used. You can use NSVoiceMBS instead.
Function: This class represents a voice.
Example:

```
Var s as new SpeechMBS

MsgBox s.Voice(2).name
```

Blog Entries

- MBS Xojo / Real Studio Plugins, version 15.0pr9

182.10.2 Methods

182.10.3 close

MBS MacClassic Plugin, Plugin Version: 3.4, Platform: macOS, Targets: Desktop only.

Function: The destructor.
Notes: There is no need to call this method except you want to free all resources of this object now without waiting for Xojo to do it for you.

182.10.4 NewChannel as SpeechChannelMBS

MBS MacClassic Plugin, Platform: macOS, Targets: Desktop only.

Function: Creates a new SpeechChannel using the given voice.
Example:

```
Var s as new SpeechMBS
Var c as SpeechChannelMBS = s.Voice(1).NewChannel

MsgBox str(c.Speak("Hello"))
```

Notes: Returns nil on any error.

182.10.5 Properties

182.10.6 age as Integer

MBS MacClassic Plugin, Platform: macOS, Targets: Desktop only.

Function: The approximate age in years of the individual represented by the VoiceMBS.
Example:

```
Var s as new SpeechMBS

MsgBox str(s.Voice(1).age)
```

Notes: (Read only property)

182.10.7 comment as string

MBS MacClassic Plugin, Platform: macOS, Targets: Desktop only.

Function: Additional text information about the VoiceMBS. The information might indicate how much memory the VoiceMBS requires. Some synthesizers use this field to store a phrase that can be spoken.
Example:

```
Var s as new SpeechMBS
MsgBox s.Voice(1).comment
```

Notes: (Read only property)

182.10.8 file as folderitem

MBS MacClassic Plugin, Platform: macOS, Targets: Desktop only.

Function: The file of this VoiceMBS.
Notes: May be nil.
(Read only property)

182.10.9 gender as Integer

MBS MacClassic Plugin, Platform: macOS, Targets: Desktop only.

Function: The gender of this VoiceMBS.
Example:

```
Var s as new SpeechMBS

MsgBox str(s.Voice(1).gender)
```

Notes: Some constants for this property:

kNeuter	0
kMale	1
kFemale	2

(Read only property)

182.10.10 language as Integer

MBS MacClassic Plugin, Platform: macOS, Targets: Desktop only.

Function: A code that indicates the language of VoiceMBS output.
Example:

```
Var s as new SpeechMBS

MsgBox str(s.Voice(1).language)
```

Notes: Language constants:

(Read only property)

182.10.11 name as string

MBS MacClassic Plugin, Platform: macOS, Targets: Desktop only.

Function: The name of this VoiceMBS.
Example:

```
Var s as new SpeechMBS
MsgBox s.Voice(1).name
```

Notes: (Read only property)

182.10.12 region as Integer

MBS MacClassic Plugin, Platform: macOS, Targets: Desktop only.

Function: A code that indicates the region represented by the VoiceMBS.
Example:

```
Var s as new SpeechMBS

MsgBox str(s.Voice(1).region)
```

Notes: Some region constants:

(Read only property)

182.10.13 ResID as Integer

MBS MacClassic Plugin, Platform: macOS, Targets: Desktop only.

Function: There can be several voices in one file, but this VoiceMBS has this ResID.
Example:

```
Var s as new SpeechMBS

MsgBox str(s.Voice(1).ResID)
```

Notes: (Read only property)

182.10.14 script as Integer

MBS MacClassic Plugin, Platform: macOS, Targets: Desktop only.

Function: The script code of text that the VoiceMBS can process.
Example:

```
Var s as new SpeechMBS

MsgBox str(s.Voice(1).script)
```

Notes: Script constants:

(Read only property)

182.10.15 version as Integer

MBS MacClassic Plugin, Platform: macOS, Targets: Desktop only.

Function: The version of this VoiceMBS.
Example:

```
Var s as new SpeechMBS

MsgBox str(s.Voice(1).Version)
```

Notes: (Read only property)

182.11 class WinSpeechMBS

182.11.1 class WinSpeechMBS

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: A class for speech on Windows.
Notes: You need to install the "Microsoft Reader" to get this working.

see also:
http://msdn.microsoft.com/en-us/library/ms719576(v=vs.85).aspx
Blog Entries

- MBS Xojo / Real Studio Plugins, version 14.3pr6
- MBS Real Studio Plugins, version 12.3pr2

Xojo Developer Magazine

- 23.6, pages 51 to 52: Let your application speak for you, Teach your applications on Windows and Mac to speak by Stefanie Juchmes-Simonis

182.11.2 Methods

182.11.3 close

MBS Win Plugin, Plugin Version: 3.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The destructor.
Notes: There is no need to call this method except you want to free all resources of this object now without waiting for Xojo to do it for you.

182.11.4 DisplayUI(type as string, title as string, parent as DesktopWindow)

MBS Win Plugin, Plugin Version: 22.0, Platform: Windows, Targets: Desktop only.

Function: Displays the UI from the underlying text-to-speech engine's object token.
Notes: Type specifies which UI you want.
Title is optional the title of the window.
You can optionally specify a parent window.
Lasterror is set.
See also:

- 182.11.5 DisplayUI(type as string, title as string, parent as window) 21637
- 182.11.6 DisplayUI(type as string, title as string="") 21637

182.11.5 DisplayUI(type as string, title as string, parent as window)

MBS Win Plugin, Plugin Version: 8.1, Platform: Windows, Targets: Desktop only.

Function: Displays the UI from the underlying text-to-speech engine's object token.
Notes: Type specifies which UI you want.
Title is optional the title of the window.
You can optionally specify a parent window.
Lasterror is set.
See also:

- 182.11.4 DisplayUI(type as string, title as string, parent as DesktopWindow) 21636
- 182.11.6 DisplayUI(type as string, title as string="") 21637

182.11.6 DisplayUI(type as string, title as string="")

MBS Win Plugin, Plugin Version: 8.1, Platform: Windows, Targets: Desktop only.

Function: Displays the UI from the underlying text-to-speech engine's object token.
Notes: Type specifies which UI you want.
Title is optional the title of the window.
You can optionally specify a parent window.
Lasterror is set.
See also:

- 182.11.4 DisplayUI(type as string, title as string, parent as DesktopWindow) 21636
- 182.11.5 DisplayUI(type as string, title as string, parent as window) 21637

182.11.7 IsUISupported(type as string) as boolean

MBS Win Plugin, Plugin Version: 8.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Checks if the underlying text-to-speech engine's object token supports the requested UI.
Notes: Returns whether the specified UI is supported. True indicates the UI is supported, and false indicates the UI is not supported.
Lasterror is set.

182.11.8 ListVoices as boolean

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Makes a list of voices which is later returned using the NextVoice function.

182.11.9 NextVoice as WinVoiceMBS

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Returns the next voice in the list.
Notes: Returns nil on the end of the list.

182.11.10 Pause

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Pauses speech.

182.11.11 Resume

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Resumes speech.

182.11.12 Skip(sentenceCount as Integer) as Integer

MBS Win Plugin, Plugin Version: 8.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Causes the voice to skip forward or backward the specified number of items within the text of the current speak call.
Notes: sentenceCount is the number of sentences to skip. If negative, you skip backward.
Returns the actual number of items skipped.
Lasterror is set.

182.11.13 Speak(text as string, Purge as Boolean = false, ContainsXML as boolean = false)

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Speaks a string.
Notes: The string must be a 16bit unicode string.

Version 7.8 of the plugins convert to unicode automatically.

If Purge is true an existing speech will be stopped.

If ContainsXML is true, you can include xml commands in the text. See MSDN page:
http://msdn.microsoft.com/en-us/library/ms717077%28v=vs.85%29.aspx

182.11.14 SpeakFile(file as folderitem, unicodestring as string, AudioFormat as Integer = 0, ContainsXML as boolean = false)

MBS Win Plugin, Plugin Version: 4.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Speaks a string to a file.
Notes: The string must be a 16bit unicode string.
File is a valid folderitem where the WAV file is stored.
The function will not return before the speaking is complete.
Lasterror is set.

Version 7.8 of the plugins convert to unicode automatically.

For AudioFormat, please use kAudioFormat* constants. Default is 22Khz Mono which is default format for speech API.

If ContainsXML is true, you can include xml commands in the text. See MSDN page:
http://msdn.microsoft.com/en-us/library/ms717077%28v=vs.85%29.aspx

182.11.15 WaitUntilDone(msTimeout as Integer)

MBS Win Plugin, Plugin Version: 8.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Blocks the caller until either the voice has completed speaking or the specified time interval has elapsed.
Notes: msTimeout: Timeout period in milliseconds. INFINITE may be used to prevent this method from timing out.

INFINITE is -1.

Lasterror is set.

182.11.16 Properties

182.11.17 Handle as Integer

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The handle to the speech object.
Notes: If handle is 0 there is no Speech software installed.
(Read only property)

182.11.18 IsDone as Boolean

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Returns true if the voice has finished speaking.
Notes: Lasterror is set.
(Read only property)

182.11.19 IsSpeaking as Boolean

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Returns true if the voice is speaking.
Notes: Lasterror is set.
(Read only property)

182.11.20 Lasterror as Integer

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The last error code reported.
Notes: You may get the Speech SDK from Microsoft for more details.
(Read only property)

182.11.21 Priority as Integer

MBS Win Plugin, Plugin Version: 8.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The current voice priority level.
Notes: The default priority is SPVPRI_NORMAL.
Lasterror is set.

Assuming an output object which implements ISpAudio, speak requests of similar priority voices are queued, and are spoken one at a time in the order they are issued. That is, speak requests from normal priority voices are put in one queue, while speak requests from alert priority voices (with priority SPVPRI_ALERT) are put in another queue.

Alert priority voices take priority over normal voices. If one or more speak requests from alert priority voices are pending, a normal voice that is speaking will be interrupted on the next alert boundary (see ISpVoice::SetAlertBoundary). When all the queued alert priority voice speak requests have been processed, the normal voice will continue.

Voices with the SPVPRI_OVER priority speak over (mix with) all other audio in the system with no synchronization. SPVPRI_OVER priority voices only mix on Windows 2000.

If the output object does not implement ISpAudio, no serialization will occur, and all voices will be treated as if their priority is SPVPRI_OVER.
(Read and Write property)

182.11.22 Rate as Integer

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The current text rendering rate adjustment.
Notes: Ranges from kMinRate to kMaxRate.
(Read and Write property)

182.11.23 SyncSpeakTimeout as Integer

MBS Win Plugin, Plugin Version: 8.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The timeout interval in milliseconds after which, synchronous Speak calls to this instance of the voice will timeout.
Notes: Timeouts occur when waiting for access to the output object. This means that for a normal priority voice (see Priority for more information on priorities) and an output device which implements ISpAudio, a timeout may occur while waiting to reacquire the output object after an interruption by an alert priority voice. For voices of both normal and alert priorities, a timeout may also occur while waiting to reacquire the output object after the voice has been paused and resumed (see Pause and Resume).

Wait times are not accumulated - that is, if a voice waits for n milliseconds to initially acquire the output

object, and is then paused and resumed, it will again wait for up to msTimeout milliseconds to reacquire the output object, not msTimeout - n milliseconds.
(Read and Write property)

182.11.24 Voice as WinVoiceMBS

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The current used voice.
Notes: Set to nil to use the default voice.
(Read and Write property)

182.11.25 Volume as Integer

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The volume for the voice.
Notes: Ranges from kMinVolume to kMaxVolume.
(Read and Write property)

182.11.26 Constants

Constants

Constant	Value	Description
kMaxRate	10	The maximum for the rate property.
kMaxVolume	100	The maximum for the volume property.
kMinRate	-10	The minimum for the rate property.
kMinVolume	0	The minimum for the volume property.
PriorityAlert	1	One of the priority constants.
PriorityNormal	0	One of the priority constants.
PriorityOver	2	One of the priority constants.
SPDUI_AddRemoveWord	"AddRemoveWord"	One of the constants for the User Interfaces used with IsU DisplayUI.
SPDUI_AudioProperties	"AudioProperties"	One of the constants for the User Interfaces used with IsU DisplayUI.
SPDUI_AudioVolume	"AudioVolume"	One of the constants for the User Interfaces used with IsU DisplayUI.
SPDUI_EngineProperties	"EngineProperties"	One of the constants for the User Interfaces used with IsU DisplayUI.
SPDUI_MicTraining	"MicTraining"	One of the constants for the User Interfaces used with IsU DisplayUI.
SPDUI_RecoProfileProperties	"RecoProfileProperties"	One of the constants for the User Interfaces used with IsU DisplayUI.
SPDUI_UserTraining	"UserTraining"	One of the constants for the User Interfaces used with IsU DisplayUI.

Audio Formats

Constant	Value	Description
kAudioFormat_11kHz16BitMono	10	11 kHz, 16 Bit, Mono
kAudioFormat_11kHz16BitStereo	11	11 kHz, 16 Bit, Stereo
kAudioFormat_11kHz8BitMono	8	11 kHz, 8 Bit, Mono
kAudioFormat_11kHz8BitStereo	9	11 kHz, 8 Bit, Stereo
kAudioFormat_12kHz16BitMono	14	12 kHz, 16 Bit, Mono
kAudioFormat_12kHz16BitStereo	15	12 kHz, 16 Bit, Stereo
kAudioFormat_12kHz8BitMono	12	12 kHz, 8 Bit, Mono
kAudioFormat_12kHz8BitStereo	13	12 kHz, 8 Bit, Stereo
kAudioFormat_16kHz16BitMono	18	16 kHz, 16 Bit, Mono
kAudioFormat_16kHz16BitStereo	19	16 kHz, 16 Bit, Stereo
kAudioFormat_16kHz8BitMono	16	16 kHz, 8 Bit, Mono
kAudioFormat_16kHz8BitStereo	17	16 kHz, 8 Bit, Stereo
kAudioFormat_22kHz16BitMono	22	22 kHz, 16 Bit, Mono
kAudioFormat_22kHz16BitStereo	23	22 kHz, 16 Bit, Stereo
kAudioFormat_22kHz8BitMono	20	22 kHz, 8 Bit, Mono
kAudioFormat_22kHz8BitStereo	21	22 kHz, 8 Bit, Stereo
kAudioFormat_24kHz16BitMono	26	24 kHz, 16 Bit, Mono
kAudioFormat_24kHz16BitStereo	27	24 kHz, 16 Bit, Stereo
kAudioFormat_24kHz8BitMono	24	24 kHz, 8 Bit, Mono
kAudioFormat_24kHz8BitStereo	25	24 kHz, 8 Bit, Stereo
kAudioFormat_32kHz16BitMono	30	32 kHz, 16 Bit, Mono
kAudioFormat_32kHz16BitStereo	31	32 kHz, 16 Bit, Stereo
kAudioFormat_32kHz8BitMono	28	32 kHz, 8 Bit, Mono
kAudioFormat_32kHz8BitStereo	29	32 kHz, 8 Bit, Stereo
kAudioFormat_44kHz16BitMono	34	44 kHz, 16 Bit, Mono
kAudioFormat_44kHz16BitStereo	35	44 kHz, 16 Bit, Stereo
kAudioFormat_44kHz8BitMono	32	44 kHz, 8 Bit, Mono
kAudioFormat_44kHz8BitStereo	33	44 kHz, 8 Bit, Stereo
kAudioFormat_48kHz16BitMono	38	48 kHz, 16 Bit, Mono
kAudioFormat_48kHz16BitStereo	39	48 kHz, 16 Bit, Stereo
kAudioFormat_48kHz8BitMono	36	48 kHz, 8 Bit, Mono
kAudioFormat_48kHz8BitStereo	37	48 kHz, 8 Bit, Stereo
kAudioFormat_8kHz16BitMono	6	8 kHz, 16 Bit, Mono
kAudioFormat_8kHz16BitStereo	7	8 kHz, 16 Bit, Stereo
kAudioFormat_8kHz8BitMono	4	8 KHz, 8 Bit, Mono
kAudioFormat_8kHz8BitStereo	5	8 kHz, 8 Bit, Stereo
kAudioFormat_ADPCM_11kHzMono	59	ADPCM, 11 kHz, Mono
kAudioFormat_ADPCM_11kHzStereo	60	ADPCM, 11 kHz, Stereo
kAudioFormat_ADPCM_22kHzMono	61	ADPCM, 22 kHz, Mono
kAudioFormat_ADPCM_22kHzStereo	62	ADPCM, 22 kHz, Stereo
kAudioFormat_ADPCM_44kHzMono	63	ADPCM, 44 kHz, Mono
kAudioFormat_ADPCM_44kHzStereo	64	ADPCM, 44 kHz, Stereo
kAudioFormat_ADPCM_8kHzMono	57	ADPCM, 8 kHz, Mono
kAudioFormat_ADPCM_8kHzStereo	58	ADPCM, 8 kHz, Stereo
kAudioFormat_CCITT_ALaw_11kHzMono	43	CCITT, ALaw, 11 kHz, Mono
kAudioFormat_CCITT_ALaw_11kHzStereo	44	CCITT, ALaw, 11 kHz, Stereo
kAudioFormat_CCITT_ALaw_22kHzMono	45	CCITT, ALaw, 22 kHz, Mono
kAudioFormat_CCITT_ALaw_22kHzStereo	46	CCITT, ALaw, 22 kHz, Stereo
kAudioFormat_CCITT_ALaw_44kHzMono	47	CCITT, ALaw, 44 kHz, Mono
kAudioFormat_CCITT_ALaw_44kHzStereo	48	CCITT, ALaw, 44 kHz, Stereo
kAudioFormat_CCITT_ALaw_8kHzMono	41	CCITT, ALaw, 8 kHz, Mono
kAudioFormat_CCITT_ALaw_8kHzStereo	42	CCITT, ALaw, 8 kHz, Stereo
kAudioFormat_CCITT_uLaw_11kHzMono	51	CCITT, uLaw, 11 kHz, Mono
kAudioFormat_CCITT_uLaw_11kHzStereo	52	CCITT, uLaw, 11 kHz, Stereo
kAudioFormat_CCITT_uLaw_22kHzMono	53	CCITT, uLaw, 22 kHz, Mono
kAudioFormat_CCITT_uLaw_22kHzStereo	54	CCITT, uLaw, 22 kHz, Stereo
kAudioFormat_CCITT_uLaw_44kHzMono	55	CCITT, uLaw, 44 kHz, Mono
kAudioFormat_CCITT_uLaw_44kHzStereo	56	CCITT, uLaw, 44 kHz, Stereo

182.12 class WinVoiceMBS

182.12.1 class WinVoiceMBS

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: A class for a voice.
Xojo Developer Magazine

- 23.6, pages 52 to 53: Let your application speak for you, Teach your applications on Windows and Mac to speak by Stefanie Juchmes-Simonis

182.12.2 Methods

182.12.3 Description as string

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The name of the voice.
Notes: Returns a 16bit unicode string.

182.12.4 Properties

182.12.5 Handle as Integer

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The handle to the voice.
Notes: (Read only property)

182.12.6 Lasterror as Integer

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The last error code reported.
Notes: (Read only property)

Chapter 183

SpeechRecognition

183.1 class SFAcousticFeatureMBS

183.1.1 class SFAcousticFeatureMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The value of a voice analysis metric.
Notes: Requires MacOS 10.15 or later.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.
Blog Entries

- Playing with SpeechRecognition

183.1.2 Methods

183.1.3 acousticFeatureValuePerFrame as Double()

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: An array of feature values, one value per audio frame, corresponding to a transcript segment of recorded audio.

183.1.4 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The private constructor.

183.1.5 copy as SFAcousticFeatureMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Creates a copy of the object.

183.1.6 Properties

183.1.7 frameDuration as Double

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The duration of the audio frame.
Notes: In seconds.
(Read only property)

183.1.8 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Internal object reference.
Notes: (Read and Write property)

183.2 class SFSpeechAudioBufferRecognitionRequestMBS

183.2.1 class SFSpeechAudioBufferRecognitionRequestMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: A request to recognize speech from captured audio content, such as audio from the device's microphone.
Notes: Use an SFSpeechAudioBufferRecognitionRequestMBS object to perform speech recognition on live audio, or on a set of existing audio buffers. For example, use this request object to route audio from a device's microphone to the speech recognizer.

The request object contains no audio initially. As you capture audio, call appendAudioPCMBuffer or appendAudioSampleBuffer to add audio samples to the request object. The speech recognizer continuously analyzes the audio you appended, stopping only when you call the endAudio method. (You must call endAudio explicitly to stop the speech recognition process.)

Requires MacOS 10.15 or later.
Subclass of the SFSpeechRecognitionRequestMBS class.
Blog Entries

- Playing with SpeechRecognition

183.2.2 Methods

183.2.3 appendAudioPCMBuffer(audioPCMBuffer as Variant)

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Appends audio in the PCM format to the end of the recognition request.
Notes: audioPCMBuffer: An audio buffer (AVAudioPCMBufferMBS class) that contains audio in the PCM format.

The audio must be in a native format and uncompressed.

183.2.4 appendAudioSampleBuffer(sampleBuffer as Variant)

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Appends audio to the end of the recognition request.
Notes: sampleBuffer: A buffer of audio. Must be CMSampleBufferMBS class.

The audio must be in a native format.

183.2.5 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The constructor.

183.2.6 endAudio

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Marks the end of audio input for the recognition request.
Notes: Call this method explicitly to let the speech recognizer know that no more audio input is coming.

183.2.7 Properties

183.2.8 nativeAudioFormat as Variant

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The preferred audio format for optimal speech recognition.
Notes: Use the audio format in this property as a hint for optimal recording, but don't depend on the value remaining unchanged.

Value is a AVAudioFormatMBS. We use variant to reduce dependency to other plugins.
(Read only property)

183.3 class SFSpeechRecognitionRequestMBS

183.3.1 class SFSpeechRecognitionRequestMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: An abstract class representing a request to recognize speech from an audio source.
Notes: Do not create SFSpeechRecognitionRequestMBS objects directly. Create an SFSpeechURLRecognitionRequestMBS or SFSpeechAudioBufferRecognitionRequestMBS object instead. Use the properties of this class to configure various aspects of your request object before you start the speech recognition process. For example, use the shouldReportPartialResults property to specify whether you want partial results or only the final result of speech recognition.

Requires MacOS 10.15 or later.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

- Playing with SpeechRecognition

183.3.2 Methods

183.3.3 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The private constructor.

183.3.4 contextualStrings as String()

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: An array of phrases that should be recognized, even if they are not in the system vocabulary.
Notes: Use this property to specify short custom phrases that are unique to your app. You might include phrases with the names of characters, products, or places that are specific to your app. You might also include domain-specific terminology or unusual or made-up words. Assigning custom phrases to this property improves the likelihood of those phrases being recognized.
Keep phrases relatively brief, limiting them to one or two words whenever possible. Lengthy phrases are less likely to be recognized. In addition, try to limit each phrase to something the user can say without pausing. Limit the total number of phrases to no more than 100.

183.3.5 setContextualStrings(contextualStrings() as String)

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Sets array of phrases that should be recognized, even if they are not in the system vocabulary.
Notes: Use this property to specify short custom phrases that are unique to your app. You might include phrases with the names of characters, products, or places that are specific to your app. You might also include domain-specific terminology or unusual or made-up words. Assigning custom phrases to this property improves the likelihood of those phrases being recognized.
Keep phrases relatively brief, limiting them to one or two words whenever possible. Lengthy phrases are less likely to be recognized. In addition, try to limit each phrase to something the user can say without pausing. Limit the total number of phrases to no more than 100.

183.3.6 Properties

183.3.7 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Internal object reference.
Notes: (Read and Write property)

183.3.8 interactionIdentifier as String

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: An identifier string that you use to describe the type of interaction associated with the speech recognition request.
Notes: If different parts of your app have different speech recognition needs, you can use this property to identify the part of your app that is making each request. For example, if one part of your app lets users speak phone numbers and another part lets users speak street addresses, consistently identifying the part of the app that makes a recognition request may help improve the accuracy of the results.
(Read and Write property)

183.3.9 requiresOnDeviceRecognition as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: A Boolean value that determines whether a request must keep its audio data on the device.
Notes: Set this property to true to prevent an SFSpeechRecognitionRequestMBS from sending audio over the network. However, on-device requests won,Äôt be as accurate.

The request only honors this setting if the supportsOnDeviceRecognition (SFSpeechRecognizerMBS) property is also YES.
(Read and Write property)

183.3.10 shouldReportPartialResults as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: A Boolean value that indicates whether you want intermediate results returned for each utterance.
Notes: The default value of this property is true. If you want only final results (and you don't care about intermediate results), set this property to false to prevent the system from doing extra work.
(Read and Write property)

183.3.11 taskHint as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: A value that indicates the type of speech recognition being performed.
Notes: The default value of this property is kTaskHintUnspecified. See SFSpeechRecognitionResultMBS for constants.
(Read and Write property)

183.4 class SFSpeechRecognitionResultMBS

183.4.1 class SFSpeechRecognitionResultMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: An object containing the partial or final results of a speech recognition request.
Notes: Use an SFSpeechRecognitionResultMBS object to retrieve the results of a speech recognition request. You do not create these objects directly. Instead, the Speech framework creates them and passes them to the handler block or delegate object you specified when starting your speech recognition task.
A speech recognition result object contains one or more transcriptions of the current utterance. Each transcription has a confidence rating indicating how likely it is to be correct. (You can also get the transcription with the highest rating directly from the bestTranscription property.)
If you requested partial results from the speech recognizer, the transcriptions may represent only part of the total audio content. Use the final property to determine if the request contains partial or final results.

Requires MacOS 10.15 or later.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

183.4.2 Methods

183.4.3 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The private constructor.

183.4.4 copy as SFSpeechRecognitionResultMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Creates a copy of the object.

183.4.5 transcriptions as SFTranscriptionMBS()

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: An array of potential transcriptions, sorted in descending order of confidence.
Notes: All transcriptions correspond to the same utterance, which can be a partial or final result of the

overall request. The first transcription in the array has the highest confidence rating, followed by transcriptions with decreasing confidence ratings.

183.4.6 Properties

183.4.7 bestTranscription as SFTranscriptionMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The transcription with the highest confidence level.
Notes: (Read only property)

183.4.8 final as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: A Boolean value that indicates whether speech recognition is complete and whether the transcriptions are final.
Notes: When a speech recognition request is final, its transcriptions do not change.
(Read only property)

183.4.9 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Internal object reference.
Notes: (Read and Write property)

183.4.10 Constants

Task Hints

Constant	Value	Description
kTaskHintConfirmation	3	A task that uses captured speech for short, confirmation-style requests. Use this hint type when you are using speech recognition to handle confirmation commands, such as ”yes,” ”no,” or ”maybe.”
kTaskHintDictation	1	A task that uses captured speech for text entry. Use this hint type when you are using speech recognition for a task that’s similar to the keyboard’s built-in dictation function.
kTaskHintSearch	2	A task that uses captured speech to specify seach terms. Use this hint type when you are using speech recognition to identify search terms.
kTaskHintUnspecified	0	An unspecified type of task. Use this hint type when the intended use for captured speech does not match the other task types.

183.5 class SFSpeechRecognitionTaskMBS

183.5.1 class SFSpeechRecognitionTaskMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: A task object that you use to monitor the speech recognition progress.
Notes: Use an SFSpeechRecognitionTaskMBS object to determine the state of a speech recognition task, to cancel an ongoing task, or to signal the end of the task.
You do not create speech recognition task objects directly. Instead, you receive one of these objects after calling recognitionTaskWithRequest.

Requires MacOS 10.15 or later.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

- Playing with SpeechRecognition

183.5.2 Methods

183.5.3 Cancel

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Cancels the current speech recognition task.
Notes: You can cancel recognition tasks for both prerecorded and live audio input. For example, you might cancel a task in response to a user action or because the recording was interrupted.
When canceling a task, be sure to release any resources associated with the task, such as the audio input resources you are using to capture audio samples.

183.5.4 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The private constructor.

183.5.5 Finish

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Stops accepting new audio and finishes processing on the audio input that has already been accepted.
Notes: For audio buffer–based recognition, recognition does not finish until this method is called, so be sure

to call it when the audio source is exhausted.

183.5.6 Properties

183.5.7 Cancelled as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: A Boolean value that indicates whether the speech recognition task was canceled.
Notes: By default, the value of this property is false.
(Read only property)

183.5.8 Error as NSErrorMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: An error object that specifies the error that occurred during a speech recognition task.
Notes: (Read only property)

183.5.9 Finishing as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: A Boolean value that indicates whether audio input has stopped.
Notes: By default, the value of this property is false.
(Read only property)

183.5.10 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Internal object reference.
Notes: (Read and Write property)

183.5.11 State as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The current state of the speech recognition task.
Notes: Check the value of this property to get the state of the in-progress speech recognition session. For

valid values, see constants.
(Read only property)

183.5.12 Constants

States

Constant	Value	Description
kStateCanceling	3	Delivery of recognition results has finished, but audio recording may be ongoing.
kStateCompleted	4	Delivery of recognition requests has finished and audio recording has stopped.
kStateFinishing	2	Audio recording has stopped, but delivery of recognition results may continue.
kStateRunning	1	Speech recognition (potentially including audio recording) is in progress.
kStateStarting	0	Speech recognition (potentially including audio recording) has not yet started.

183.6 class SFSpeechRecognizerMBS

183.6.1 class SFSpeechRecognizerMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: An object you use to check for the availability of the speech recognition service, and to initiate the speech recognition process.
Notes: An SFSpeechRecognizerMBS object is the central object for managing the speech recognizer process. Use this object to:

- Request authorization to use speech recognition services.
- Specify the language to use during the recognition process.
- Initiate new speech recognition tasks.

Set Up Speech Recognition
Each speech recognizer supports only one language, which you specify at creation time. The successful creation of a speech recognizer does not guarantee that speech recognition services are available. For some languages, the recognizer might require an Internet connection. Use the available property to find out if speech recognition services are available for the current language.

To initiate the speech recognition process, do the following:

- Request authorization to use speech recognition.
- Create an SFSpeechRecognizerMBS object.
- Verify the availability of services using the available property of your speech recognizer object.
- Prepare your audio content.
- Create a recognition request object—an object that descends from SFSpeechRecognitionRequest.
- Call the recognitionTaskWithRequest method to begin the recognition process.

The type of recognition request object you create depends on whether you are processing an existing audio file or an incoming stream of audio. For existing audio files, create a SFSpeechURLRecognitionRequestMBS object. For audio streams, create a SFSpeechAudioBufferRecognitionRequestMBS object.

Create a Great User Experience for Speech Recognition
Here are some tips to consider when adding speech recognition support to your app.

- Be prepared to handle failures caused by speech recognition limits. Because speech recognition is a network-based service, limits are enforced so that the service can remain freely available to all apps. Individual devices may be limited in the number of recognitions that can be performed per day, and each app may be throttled globally based on the number of requests it makes per day. If a recognition request fails quickly (within a second or two of starting), check to see if the recognition service became unavailable. If it is, you may want to ask users to try again later.

- Plan for a one-minute limit on audio duration. Speech recognition places a relatively high burden on battery life and network usage. To minimize this burden, the framework stops speech recognition tasks that last longer than one minute. This limit is similar to the one for keyboard-related dictation.

- Remind the user when your app is recording. For example, display a visual indicator and play sounds at the beginning and end of speech recognition to help users understand that they're being actively recorded. You can also display speech as it is being recognized so that users understand what your app is doing and see any mistakes made during the recognition process.

- Do not perform speech recognition on private or sensitive information. Some speech is not appropriate for recognition. Don't send passwords, health or financial data, and other sensitive speech for recognition.

Requires MacOS 10.15 or later.

- Playing with SpeechRecognition

183.6.2 Methods

183.6.3 authorizationStatus as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Returns your app's current authorization to perform speech recognition.
Notes: The user can reject your app's request to perform speech recognition, but your request can also be denied if speech recognition is not supported on the device. The app can also change your app's authorization status at any time from the Settings app.

183.6.4 available as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Whether the Speech Framework was loaded.
Notes: Returns true on MacOS 10.15 or newer.

183.6.5 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Creates a speech recognizer associated with the user's default language settings.
Notes: Returns an initialized speech recognizer object, or nil if there was a problem creating the object.

If the user's default language is not supported for speech recognition, this method attempts to fall back to the language used by the keyboard for dictation. If that fails, this method returns nil.
Even if this method returns a valid speech recognizer object, the speech recognition services may be temporarily unavailable. To determine whether speech recognition services are available, check the available property.
See also:

- 183.6.6 Constructor(locale as NSLocaleMBS) 21662

183.6.6 Constructor(locale as NSLocaleMBS)

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Creates a speech recognizer associated with the specified locale.
Notes: locale: The locale object representing the language you want to use for speech recognition. For a list of languages supported by the speech recognizer, see supportedLocales.

Returns an initialized speech recognizer object, or nil if the specified language was not supported.

If you specify a language that is not supported by the speech recognizer, this method attempts to fall back to the language used by the keyboard for dictation. If that fails, this method returns nil.
Even if this method returns a valid speech recognizer object, the speech recognition services may be temporarily unavailable. To determine whether speech recognition services are available, check the available property.
See also:

- 183.6.5 Constructor 21662

183.6.7 Destructor

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The destructor.

183.6.8 recognitionTaskWithRequest(request as SFSpeechRecognitionRequestMBS) as SFSpeechRecognitionTaskMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Recognizes speech from the audio source associated with the specified request, using the specified events to manage the results.
Notes: request: A request (encapsulated in an SFSpeechRecognitionRequestMBS object) to recognize speech from an audio source.

Returns the task object you can use to manage an in-progress recognition request.

Use this method to initiate the speech recognition process on the audio contained in the request object. This method executes asynchronously and returns a SFSpeechRecognitionTaskMBS object that you can use to cancel or finalize the recognition process later. As results become available, the method calls the methods of the provided delegate object.
Note that the SFSpeechRecognitionTaskMBS object returned by this method does not retain your delegate object. You must maintain a strong reference to your delegate while speech recognition is in progress.
See also:

- 183.6.9 recognitionTaskWithRequest(request as SFSpeechRecognitionRequestMBS, delegateHandler as recognitionTaskWithRequestCompletedMBS, tag as Variant = nil) as SFSpeechRecognitionTaskMBS 21663

183.6.9 recognitionTaskWithRequest(request as SFSpeechRecognitionRequestMBS, delegateHandler as recognitionTaskWithRequestCompletedMBS, tag as Variant = nil) as SFSpeechRecognitionTaskMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Executes the speech recognition request and delivers the results to the specified handler delegate.
Notes: request: A request (in an SFSpeechRecognitionRequestMBS object) to recognize speech from an audio source.
delegateHandler: The method to call when partial or final results are available, or when an error occurs. If the shouldReportPartialResults property is true, this event may be called multiple times to deliver the partial and final results.

The delegare has no return value and takes the following parameters:
result: A SFSpeechRecognitionResultMBS containing the partial or final transcriptions of the audio content.
error: An error object if a problem occurred. This parameter is nil if speech recognition was successful.

Request and Tag parameters are passed through to delegate.

Returns the task object you can use to manage an in-progress recognition request.

Use this method to initiate the speech recognition process on the audio contained in the request object. This method executes asynchronously and returns a SFSpeechRecognitionTaskMBS object that you can use to cancel or finalize the recognition process later. As results become available, the method calls the delegate in the delegateHandler parameter.
See also:

- 183.6.8 recognitionTaskWithRequest(request as SFSpeechRecognitionRequestMBS) as SFSpeechRecognitionTaskMBS 21663

183.6.10 requestAuthorization(delegateHandler as requestAuthorizationCompletedMBS = nil, tag as variant = nil)

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Asks the user to allow your app to perform speech recognition.
Notes: delegateHandler: The delegate to execute when your app's authorization status is known. The status parameter of the delegate contains your app's authorization status.

Call this method before performing any other tasks associated with speech recognition. This method executes asynchronously, returning shortly after you call it. At some point later, the system calls the provided handler block with the results.
When your app's authorization status is SFSpeechRecognizerAuthorizationStatusNotDetermined, this method causes the system to prompt the user to grant or deny permission for your app to use speech recognition. The prompt includes the custom message you specify in the NSSpeechRecognitionUsageDescription key of your app's Info.plist file. The user's response is saved so that future calls to this method do not prompt the user again.

Your app's Info.plist file must contain the NSSpeechRecognitionUsageDescription key with a valid usage description. If this key is not present, your app will crash when you call this method.
For more information about requesting authorization, see Asking Permission to Use Speech Recognition.

183.6.11 supportedLocales as NSLocaleMBS()

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Returns the set of locales that are supported by the speech recognizer.
Notes: This method returns the locales for which speech recognition is supported. Support for a locale does not guarantee that speech recognition is currently possible for that locale. For some locales, the speech recognizer requires an active Internet connection to communicate with Apple's servers. If the speech recognizer is currently unable to process requests, available returns NO.
Speech recognition supports the same locales that are supported by the keyboard's dictation feature. For a list of these locales, see QuickType Keyboard: Dictation.

183.6.12 Properties

183.6.13 defaultTaskHint as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: A hint that indicates the type of speech recognition being requested.
Example:

```
Var recognizer as New MySFSpeechRecognizer
recognizer.defaultTaskHint = SFSpeechRecognitionResultMBS.kTaskHintDictation
```

Notes: By default, the value of this property overrides the SFSpeechRecognitionTaskHintUnspecified value for requests.
(Read and Write property)

183.6.14 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Internal object reference.
Notes: (Read and Write property)

183.6.15 isAvailable as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: A Boolean value that indicates whether the speech recognizer is currently available.
Notes: When the value of this property is true, you may create new speech recognition tasks. When value of this property is false, speech recognition services are not available.
(Read only property)

183.6.16 locale as NSLocaleMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The locale of the speech recognizer.
Notes: The locale of the speech recognizer is an NSLocaleMBS object. The default value of this property is the system locale (that is, systemLocale).
(Read only property)

183.6.17 supportsOnDeviceRecognition as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: A Boolean value that indicates whether the speech recognizer can operate without network access.
Notes: An SFSpeechRecognitionRequestMBS can only honor its requiresOnDeviceRecognition property if supportsOnDeviceRecognition is true. If supportsOnDeviceRecognition is false, the SFSpeechRecognizer requires a network in order to recognize speech.
(Read only property)

183.6.18 Events

183.6.19 availabilityDidChange(available as Boolean)

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Tells you that the availability of its associated speech recognizer changed.
Notes: available: A Boolean value that indicates the new availability of the speech recognizer.

183.6.20 didDetectSpeech(task as SFSpeechRecognitionTaskMBS)

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Tells you when the task first detects speech in the source audio.
Notes: task: The speech recognition task (an SFSpeechRecognitionTaskMBS object) that represents the request.

183.6.21 TaskDidFinishRecognition(task as SFSpeechRecognitionTaskMBS, recognitionResult as SFSpeechRecognitionResultMBS)

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Tells you when the final utterance is recognized.
Notes: task: The speech recognition task (an SFSpeechRecognitionTaskMBS object) that represents the request.
recognitionResult: A recognized utterance that contains one or more transcription hypotheses in an SFSpeechRecognitionResultMBS object.

When this method is called, the delegate should expect no further information about the utterance to be reported.

183.6.22 TaskDidFinishSuccessfully(task as SFSpeechRecognitionTaskMBS, successfully as boolean)

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Tells you when the recognition of all requested utterances is finished.
Notes: task: The speech recognition task (an SFSpeechRecognitionTaskMBS object) that represents the request.
successfully: A Boolean value that indicates whether the task was successful. When this parameter is false, use the error property of the task to get information about why the task was unsuccessful.

183.6.23 TaskDidHypothesizeTranscription(task as SFSpeechRecognitionTaskMBS, transcription as SFTranscriptionMBS)

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Tells you that a hypothesized transcription is available.
Notes: task: The speech recognition task (an SFSpeechRecognitionTaskMBS object) that represents the request.
transcription: The hypothesized transcription in an SFTranscriptionMBS object.

This method is called for all recognitions, including partial recognitions.

183.6.24 TaskFinishedReadingAudio(task as SFSpeechRecognitionTaskMBS)

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Tells you when the task is no longer accepting new audio input, even if final processing is in progress.
Notes: task: The speech recognition task (an SFSpeechRecognitionTask object) that represents the request.

183.6.25 TaskWasCancelled(task as SFSpeechRecognitionTaskMBS)

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Tells you that the task has been canceled.
Notes: task: The speech recognition task (an SFSpeechRecognitionTaskMBS object) that represents the request.

A speech recognition task can be canceled by the user, by your app, or by the system.

183.6.26 Constants

AuthorizationStatus

Constant	Value	Description
kAuthorizationStatusAuthorized	3	The user granted your app's request to perform speech recognition.
kAuthorizationStatusDenied	1	The user denied your app's request to perform speech recognition.
kAuthorizationStatusNotDetermined	0	The app's authorization status has not yet been determined.
kAuthorizationStatusRestricted	2	The device prevents your app from performing speech recognition.

183.6.27 Delegates

183.6.28 recognitionTaskWithRequestCompletedMBS(request as SFSpeechRecognitionRequestMBS, result as SFSpeechRecognitionResultMBS, error as NSErrorMBS, tag as Variant)

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The delegate for the callback when recognition is done.

183.6.29 requestAuthorizationCompletedMBS(status as integer, tag as Variant)

MBS Mac64bit Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The delegate to call when authorization request finished.

183.7 class SFSpeechURLRecognitionRequestMBS

183.7.1 class SFSpeechURLRecognitionRequestMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: A request to recognize speech in a recorded audio file.
Notes: Use an SFSpeechURLRecognitionRequest object to perform speech recognition on the contents of an existing audio file.

Requires MacOS 10.15 or later.
Subclass of the SFSpeechRecognitionRequestMBS class.

- Playing with SpeechRecognition

183.7.2 Methods

183.7.3 Constructor(File as FolderItem)

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Creates a speech recognition request, initialized with the specified folderitem.
Notes: Use this method to create a request to recognize speech in a recorded audio file that resides at the specified URL. Pass the request to the recognizer's recognitionTaskWithRequest method to start recognition.
See also:

- 183.7.4 Constructor(URL as String) 21669

183.7.4 Constructor(URL as String)

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Creates a speech recognition request, initialized with the specified URL.
Notes: Use this method to create a request to recognize speech in a recorded audio file that resides at the specified URL. Pass the request to the recognizer's recognitionTaskWithRequest method to start recognition.
See also:

- 183.7.3 Constructor(File as FolderItem) 21669

183.7.5 Properties

183.7.6 File as FolderItem

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The folderitem of the audio file.
Notes: (Read only property)

183.7.7 URL as String

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The URL of the audio file.
Notes: (Read only property)

183.8 class SFTranscriptionMBS

183.8.1 class SFTranscriptionMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: A textual representation of the given speech it its entirety, as recognized by the speech recognizer.
Notes: Use SFTranscriptionMBS to obtain all the recognized utterances from your audio content. An utterance is a vocalized word or group of words that represent a single meaning to the speech recognizer (SFSpeechRecognizerMBS).
Use the formattedString property to retrieve the entire transcription of utterances, or use the segments property to retrieve an individual utterance (SFTranscriptionSegmentMBS).
You don,Äôt create an SFTranscriptionMBS directly. Instead, you retrieve it from an SFSpeechRecognitionResultMBS instance. The speech recognizer sends a speech recognition result to your app in one of two ways, depending on how your app started a speech recognition task.
You can start a speech recognition task by using the speech recognizer,Äôs recognitionTaskWithRequest method. When the task is complete, the speech recognizer sends an SFSpeechRecognitionResult instance to your resultHandler closure. Alternatively, you can use the speech recognizer,Äôs recognitionTaskWithRequest method to start a speech recognition task. When the task is complete, the speech recognizer uses events to send a SFSpeechRecognitionResultMBS by using the TaskDidFinishRecognition event.
An SFTranscriptionMBS represents only a potential version of the speech. It might not be an accurate representation of the utterances.

Requires MacOS 10.15 or later.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

- Playing with SpeechRecognition

183.8.2 Methods

183.8.3 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The private constructor.

183.8.4 copy as SFTranscriptionMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Creates a copy of the object.

183.8.5 segments as SFTranscriptionSegmentMBS()

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: An array of transcription segments that represent the parts of the transcription, as identified by the speech recognizer.
Notes: The order of the segments in the array matches the order in which the corresponding utterances occur in the spoken content.

183.8.6 Properties

183.8.7 averagePauseDuration as Double

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The average pause duration between words, measured in seconds.
Notes: (Read only property)

183.8.8 formattedString as String

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The entire transcription of utterances, formatted into a single, user-displayable string.
Notes: (Read only property)

183.8.9 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Internal object reference.
Notes: (Read and Write property)

183.8.10 speakingRate as Double

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The number of words spoken per minute.
Notes: (Read only property)

183.9 class SFTranscriptionSegmentMBS

183.9.1 class SFTranscriptionSegmentMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: A discrete part of an entire transcription, as identified by the speech recognizer.
Notes: Use SFTranscriptionSegmentMBS to get details about a part of an overall SFTranscriptionMBS. An SFTranscriptionSegmentMBS represents an utterance, which is a vocalized word or group of words that represent a single meaning to the speech recognizer (SFSpeechRecognizerMBS).

You don,Äôt create transcription object segments directly. Instead, you access them from a transcription,Äôs segments property.
A transcription segment includes the following information:

- The text of the utterance, plus any alternative interpretations of the spoken word.
- The character range of the segment within the formattedString of its parent SFTranscriptionMBS.
- A confidence value, indicating how likely it is that the specified string matches the audible speech.
- A timestamp and duration value, indicating the position of the segment within the provided audio stream.
- A voiceAnalytics metric, indicating the likelihood of a voice in a segment, and that voice,Äôs pitch, jitter, and shimmer properties.

Requires MacOS 10.15 or later.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.
Blog Entries

- Playing with SpeechRecognition

183.9.2 Methods

183.9.3 alternativeSubstrings as String()

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: An array of alternate interpretations of the utterance in the transcription segment.

183.9.4 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The private constructor.

183.9.5 copy as SFTranscriptionSegmentMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Creates a copy of the object.

183.9.6 Properties

183.9.7 confidence as Double

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The level of confidence the speech recognizer has in its recognition of the speech transcribed for the segment.
Notes: This property reflects the overall confidence in the recognition of the entire phrase. The value is 0 if there was no recognition, and it is closer to 1 when there is a high certainty that a transcription matches the user's speech exactly. For example, a confidence value of 0.94 represents a very high confidence level, and is more likely to be correct than a transcription with a confidence value of 0.72.
(Read only property)

183.9.8 duration as Double

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The number of seconds it took for the user to speak the utterance represented by the segment.
Notes: (Read only property)

183.9.9 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Internal object reference.
Notes: (Read and Write property)

183.9.10 substring as String

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The string representation of the utterance in the transcription segment.
Notes: (Read only property)

183.9.11 substringRange as NSRangeMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The range information for the transcription segment,Äôs substring, relative to the overall transcription.
Notes: Use the range information to find the position of the segment within the formattedString property of the SFTranscription object containing this segment.
(Read only property)

183.9.12 timestamp as Double

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The start time of the segment in the processed audio stream.
Notes: The timestamp is the number of seconds between the beginning of the audio content and when the user spoke the word represented by the segment. For example, if the user said the word ,Äútime,Äù one second into the transcription ,ÄúWhat time is it,Äù, the timestamp would be equal to 1.0.
(Read only property)

183.9.13 voiceAnalytics as SFVoiceAnalyticsMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: An analysis of the transcription segment,Äôs vocal properties.
Notes: (Read only property)

183.10 class SFVoiceAnalyticsMBS

183.10.1 class SFVoiceAnalyticsMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: A collection of vocal analysis metrics.
Notes: Requires MacOS 10.15 or later.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

- Playing with SpeechRecognition

183.10.2 Methods

183.10.3 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The private constructor.

183.10.4 copy as SFVoiceAnalyticsMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Creates a copy of the object.

183.10.5 Properties

183.10.6 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Internal object reference.
Notes: (Read and Write property)

183.10.7 jitter as SFAcousticFeatureMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The variation in pitch in each frame of a transcription segment, expressed as a percentage of the frame,Äôs fundamental frequency.
Notes: (Read only property)

183.10.8 pitch as SFAcousticFeatureMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The highness or lowness of the tone (fundamental frequency) in each frame of a transcription segment, expressed as a logarithm.
Notes: The value is a logarithm (base e) of the normalized pitch estimate for each frame.
(Read only property)

183.10.9 shimmer as SFAcousticFeatureMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The variation in vocal volume stability (amplitude) in each frame of a transcription segment, expressed in decibels.
Notes: (Read only property)

183.10.10 voicing as SFAcousticFeatureMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The likelihood of a voice in each frame of a transcription segment, expressed as a probability in the range [0.0, 1.0] .
Notes: (Read only property)

Chapter 184

Spell Checking

184.1 class NSSpellCheckerMBS

184.1.1 class NSSpellCheckerMBS

MBS MacCocoa Plugin, Plugin Version: 7.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: The spell checker class.
Notes: The NSSpellChecker object is used by a client (e.g. a document in an application) to spell-check a given String.
There is only one NSSpellChecker instance per application (since spell-checking is interactive and you only have one mouse and one keyboard).

The string being spell-checked need only be valid for the duration of the call to checkSpellingOfString or countWordsInString.

Requires Mac OS X 10.2.

184.1.2 Methods

184.1.3 availableLanguages as string()

MBS MacCocoa Plugin, Plugin Version: 7.7, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns a list of the available languages.
Notes: Requires Mac OS X 10.5.

184.1.4 checkGrammarOfString(text as string, start as Integer, language as string, wrap as boolean) as NSRangeMBS

MBS MacCocoa Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: Initiates a grammatical analysis of a given string.
Notes: text: String to analyze.
start: Location within string at which to start the analysis.
language: Language use in string. When nil, the language selected in the Spelling panel is used.
wrap: true to specify that the analysis continue to the beginning of string when the end is reached. false to have the analysis stop at the end of string.
outDetails: Optional. On output, dictionaries describing grammar-analysis details within the flagged grammatical unit. See the NSSpellServer class for information about these dictionaries.

Returns Location of the first flagged grammatical unit.

Available in Mac OS X v10.5 and later.
See also:

- 184.1.5 checkGrammarOfString(text as string, start as Integer, language as string, wrap as boolean, Details() as dictionary) as NSRangeMBS

184.1.5 checkGrammarOfString(text as string, start as Integer, language as string, wrap as boolean, Details() as dictionary) as NSRangeMBS

MBS MacCocoa Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: Initiates a grammatical analysis of a given string.
Notes: text: String to analyze.
start: Location within string at which to start the analysis.
language: Language use in string. When nil, the language selected in the Spelling panel is used.
wrap: true to specify that the analysis continue to the beginning of string when the end is reached. false to have the analysis stop at the end of string.
outDetails: Optional. On output, dictionaries describing grammar-analysis details within the flagged grammatical unit. See the NSSpellServer class for information about these dictionaries.

Returns Location of the first flagged grammatical unit.

Available in Mac OS X v10.5 and later.
See also:

- 184.1.4 checkGrammarOfString(text as string, start as Integer, language as string, wrap as boolean) as NSRangeMBS 21680

184.1.6 checkSpellingOfString(text as string, start as Integer) as NSRangeMBS

MBS MacCocoa Plugin, Plugin Version: 7.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Initiates a spell-check of a string.
Notes: Returns the range of the first misspelled word.
See also:

- 184.1.7 checkSpellingOfString(text as string, start as Integer, language as string, wrap as boolean) as NSRangeMBS 21681
- 184.1.8 checkSpellingOfString(text as string, start as Integer, language as string, wrap as boolean, byref WordCount as Integer) as NSRangeMBS 21682

184.1.7 checkSpellingOfString(text as string, start as Integer, language as string, wrap as boolean) as NSRangeMBS

MBS MacCocoa Plugin, Plugin Version: 7.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Initiates a spell-check of a string.
Notes: Returns the range of the first misspelled word.
See also:

- 184.1.6 checkSpellingOfString(text as string, start as Integer) as NSRangeMBS 21681

- 184.1.8 checkSpellingOfString(text as string, start as Integer, language as string, wrap as boolean, byref WordCount as Integer) as NSRangeMBS 21682

184.1.8 checkSpellingOfString(text as string, start as Integer, language as string, wrap as boolean, byref WordCount as Integer) as NSRangeMBS

MBS MacCocoa Plugin, Plugin Version: 7.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Initiates a spell-check of a string.
Notes: Returns the range of the first misspelled word (and optionally the wordCount by reference).
See also:

- 184.1.6 checkSpellingOfString(text as string, start as Integer) as NSRangeMBS 21681
- 184.1.7 checkSpellingOfString(text as string, start as Integer, language as string, wrap as boolean) as NSRangeMBS 21681

184.1.9 checkString(text as string, range as NSRangeMBS = nil, checkingTypes as Int64 = -1, options as Dictionary = nil, byref orthography as NSOrthographyMBS, byref wordCount as Integer) as NSTextCheckingResultMBS()

MBS MacCocoa Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Requests unified text checking for the given range of the given string.
Notes: text: The string to check.
range: The range of the string to check.
checkingTypes: The type of checking to be performed. The possible constants are listed in NSTextCheckingType and can be combined using the C bit-wise OR operator to perform multiple checks at the same time.
options: The options dictionary specifying the types of checking to perform. See Spell Checking Option Dictionary Keys for the possible keys and expected values.

orthography: Returns by-reference, the orthography of the range of the string. See NSOrthographyMBS for more information.
wordCount: Returns by-reference, the word count for the range of the string.

Returns an array of NSTextCheckingResultMBS objects describing particular items found during checking and their individual ranges, sorted by range origin, then range end, then result type.

184.1.10 completionsForPartialWordRange(start as Integer, length as Integer, text as string, language as string="") as string()

MBS MacCocoa Plugin, Plugin Version: 7.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Searches possible completions for the given word.
Notes: Returns an array of strings, in the order in which they should be presented, representing complete words that the user might be trying to type when starting by typing the partial word at the given range in the given string.

Within the text, length characters are picked starting at at position (0 based) and matched agains the dictionary defined by language.
Up to around 100 words are returned.

Requires Mac OS X 10.3.
Returns an empty string on any error.

184.1.11 correctionForWordRange(range as NSRangeMBS, text as string, language as string) as string

MBS MacCocoa Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns a single proposed correction if a word is mis-spelled.
Notes: range: The range of the word to be corrected.
text: The string containing the proposed correction.
language: The language.

Returns the proposed correct string.

184.1.12 countWordsInString(word as string, language as string="") as Integer

MBS MacCocoa Plugin, Plugin Version: 7.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Just counts the words without checking spelling.
Example:

```
Var text as string = "Hello World"
Var spell as NSSpellCheckerMBS // your spellchecker

msgBox str(spell.countWordsInString(text,"en"))
```

Notes: Returns the number of words in text. The language argument specifies the language used in the string. If language is the empty string, the current selection in the Spelling panel's pop-up menu is used.

Returns -1 if text is nil or this spellchecker function is not available.

Returns -1 if counting words isn't supported by the spell server selected.

184.1.13 deletesAutospaceBetweenString(precedingString as string, followingString as string, language as String = "") as Boolean

MBS MacCocoa Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Deletes auto space between strings.
Notes: In some cases the space automatically inserted after an accepted candidate should be deleted when the next text is typed (e.g. if it is a period or comma). This method allows clients to recognize these cases in a standardized way.

184.1.14 dismissCorrectionIndicatorForView(view as NSViewMBS)

MBS MacCocoa Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop only.

Function: Dismisses the correction indicator for the specified view.

184.1.15 forgetWord(word as string)

MBS MacCocoa Plugin, Plugin Version: 7.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Removes the given word from the user dictionary.

184.1.16 guessesForWord(range as NSRangeMBS, word as string, language as string) as string()

MBS MacCocoa Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns an array of possible substitutions for the specified string.
Notes: range: The range of the string to check.
word: The string to guess
language: The language of the string

Returns an array of strings containing possible replacement words.
Available in Mac OS X v10.6 and later.
See also:

- 184.1.17 guessesForWord(word as string) as string()

184.1.17 guessesForWord(word as string) as string()

MBS MacCocoa Plugin, Plugin Version: 7.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns an array with words matching the given word.
Example:

```
Var a() as string
Var s as new NSSpellCheckerMBS
a=s.guessesForWord("Hell")

msgbox str(ubound(a)+1)+" suggestions."
```

Notes: Returns nil on any error.

Returns an array of suggested spellings for the misspelled word word. If word contains all capital letters, or its first letter is capitalized, the suggested words are capitalized in the same way.
See also:

- 184.1.16 guessesForWord(range as NSRangeMBS, word as string, language as string) as string() 21684

184.1.18 hasLearnedWord(word as string) as boolean

MBS MacCocoa Plugin, Plugin Version: 7.7, Platform: macOS, Targets: Desktop, Console & Web.

Function: Checks whether a word has been learned.
Notes: Returns true if the word is known.
Requires Mac OS X 10.5.

184.1.19 ignoredWords as string()

MBS MacCocoa Plugin, Plugin Version: 7.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: The list of ignored words.
Example:

```
Var spell as new NSSpellCheckerMBS
Var f as FolderItem
Var i,c as Integer
Var t as TextOutputStream
Var n(-1) as string

f=SpecialFolder.Preferences.Child("SpellCheck RB.pref")
t=f.CreateTextFile
if t<>nil and spell<>nil then
```

```
n=spell.ignoredWords
MsgBox Join(n,EndOfLine)
end if
```

Notes: Returns nil on any error.

184.1.20 ignoreWord(word as string)

MBS MacCocoa Plugin, Plugin Version: 7.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Adds the word to the ignore list so it will be ignored for spell checking in this NSSpellCheckerMBS object.
Notes: Requires Mac OS X 10.2.

184.1.21 isAutomaticCapitalizationEnabled as boolean

MBS MacCocoa Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Whether automatic capitalization is enabled by the user.

184.1.22 isAutomaticDashSubstitutionEnabled as boolean

MBS MacCocoa Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Whether automatic dash substitution is enabled by the user.

184.1.23 isAutomaticPeriodSubstitutionEnabled as boolean

MBS MacCocoa Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Whether automatic period substitution is enabled by the user.

184.1.24 isAutomaticQuoteSubstitutionEnabled as boolean

MBS MacCocoa Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Whether automatic quote substitution is enabled by the user.

184.1.25 isAutomaticSpellingCorrectionEnabled as boolean

MBS MacCocoa Plugin, Plugin Version: 11.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: Whether automatic spelling correction is enabled.
Notes: Available in Mac OS X v10.6 and later.

184.1.26 isAutomaticTextCompletionEnabled as boolean

MBS MacCocoa Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Whether automatic text completion is enabled by the user.

184.1.27 isAutomaticTextReplacementEnabled as boolean

MBS MacCocoa Plugin, Plugin Version: 11.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: Whether automatic spelling replacement is enabled.
Notes: Available in Mac OS X v10.6 and later.

184.1.28 languageForWordRange(range as NSRangeMBS, text as string, orthography as NSOrthographyMBS = nil) as string

MBS MacCocoa Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Clients who have an NSOrthography from NSTextCheckingTypeOrthography checking and wish to determine a specific language from it for a particular word.

184.1.29 languageMenuEntries as string()

MBS MacCocoa Plugin, Plugin Version: 7.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: The entries from the language menu of the panel.
Notes: Copies the list of menu entries from the panel.

Currently you can use this names to show to the user and see what languages are available. It uses a private property which works for Mac OS X 10.4 and 10.5.
For the language function you need the short names:

Australian English	en_AU
British English	en_GB
Canadian English	en_CA
Deutsch	de
English	en
Espa√±ol	es
Fran√ßais	fr
Italiano	it
Multilingual	Multilingual
Nederlands	nl
Portugu√™s	pt
Protugu√™s do Brasil	pt_BR
Svenska	sv

184.1.30 learnWord(word as string)

MBS MacCocoa Plugin, Plugin Version: 7.7, Platform: macOS, Targets: Desktop, Console & Web.

Function: Learns the given word.
Notes: Requires Mac OS X 10.5.

184.1.31 menuForResult(TextCheckingResult as NSTextCheckingResultMBS, checkedString as string, options as Dictionary = nil, atLocation as NSPointMBS, view as NSViewMBS) as NSMenuMBS

MBS MacCocoa Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop only.

Function: Provides a menu containing contextual menu items suitable for certain kinds of detected results.
Notes: TextCheckingResult: The NSTextCheckingResult instance for the checked string.
checkedString: The string that has been checked.
options: The options dictionary allows clients to pass in information associated with the document. See Spell Checking Option Dictionary Keys for possible key-value pairs.
location: The location, in the view,Äôs coordinate system, to display the menu.
view: The view object over which to display the contextual menu.

Returns a menu suitable for displaying as a contextual menu, or adding to another contextual menu as a submenu.

184.1.32 NSSpellCheckerDidChangeAutomaticCapitalizationNotification as string

MBS MacCocoa Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: The notification named used when automatic capitalization setting changed.

184.1.33 NSSpellCheckerDidChangeAutomaticDashSubstitutionNotification as string

MBS MacCocoa Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: The notification named used when automatic dash substitution setting changed.

184.1.34 NSSpellCheckerDidChangeAutomaticPeriodSubstitutionNotification as string

MBS MacCocoa Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: The notification named used when automatic period substitution setting changed.

184.1.35 NSSpellCheckerDidChangeAutomaticQuoteSubstitutionNotification as string

MBS MacCocoa Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: The notification named used when automatic quote substitution setting changed.

184.1.36 NSSpellCheckerDidChangeAutomaticSpellingCorrectionNotification as string

MBS MacCocoa Plugin, Plugin Version: 11.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the notification names.
Notes: Use with NSNotificationObserverMBS class.
This notification is posted when the spell checker did change text using automatic spell checking correction.
The are posted to the application's default notification center.
Available in Mac OS X v10.7 and later.

184.1.37 NSSpellCheckerDidChangeAutomaticTextCompletionNotification as string

MBS MacCocoa Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: The notification named used when automatic text completion setting changed.

184.1.38 NSSpellCheckerDidChangeAutomaticTextReplacementNotification as string

MBS MacCocoa Plugin, Plugin Version: 11.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the notification names.
Notes: Use with NSNotificationObserverMBS class.
This notification is posted when the spell checker changed text using automatic text replacement. The are posted application's to the default notification center.
Available in Mac OS X v10.7 and later.

184.1.39 NSTextCheckingDocumentAuthorKey as string

MBS MacCocoa Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the constants for the options dictionary.
Notes: An string containing the name of an author to be associated with the document

Available in Mac OS X v10.6 and later.

184.1.40 NSTextCheckingDocumentTitleKey as string

MBS MacCocoa Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the constants for the options dictionary.
Notes: A string containing the title to be associated with the document.

Available in Mac OS X v10.6 and later.

184.1.41 NSTextCheckingDocumentURLKey as string

MBS MacCocoa Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the constants for the options dictionary.
Notes: An NSURL to be associated with the document.

Available in Mac OS X v10.6 and later.

184.1.42 NSTextCheckingOrthographyKey as string

MBS MacCocoa Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the constants for the options dictionary.
Notes: An NSOrthography instance indicating an orthography to be used as a starting point for orthography checking, or as the orthography if orthography checking is not enabled.

Available in Mac OS X v10.6 and later.

184.1.43 NSTextCheckingQuotesKey as string

MBS MacCocoa Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the constants for the options dictionary.
Notes: An NSArray containing four strings to be used with NSTextCheckingTypeQuote (opening double quote, closing double quote, opening single quote, and closing single quote in that order); if not specified, values will be taken from user's preferences.

Available in Mac OS X v10.6 and later.

184.1.44 NSTextCheckingReferenceDateKey as string

MBS MacCocoa Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the constants for the options dictionary.
Notes: An NSDate to be associated with the document, used as a referent for relative dates; if not specified, the current date will be used.

Available in Mac OS X v10.6 and later.

184.1.45 NSTextCheckingReferenceTimeZoneKey as string

MBS MacCocoa Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the constants for the options dictionary.
Notes: An NSTimeZone to be associated with the document, used as a reference for dates without time

zones; if not specified, the current time zone will be used.

Available in Mac OS X v10.6 and later.

184.1.46 NSTextCheckingRegularExpressionsKey as string

MBS MacCocoa Plugin, Plugin Version: 12.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the constants for the options dictionary.
Notes: Available in Mac OS X 10.7 or newer.
Currently not directly supported with our plugins.

184.1.47 NSTextCheckingReplacementsKey as string

MBS MacCocoa Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the constants for the options dictionary.
Notes: A dictionary containing replacements to be used with NSTextCheckingTypeReplacement; if not specified, values will be taken from user's preferences.

Available in Mac OS X v10.6 and later.

184.1.48 NSTextCheckingSelectedRangeKey as string

MBS MacCocoa Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the constants for the options dictionary.
Notes: NSValueMBS containing NSRangeMBS, should be the portion of the selected range intersecting the string being checked, or a zero-length range if there is an insertion point in or adjacent to the string being checked, or New NSRangeMBS(NSNotFound, 0) if the selection is entirely outside of the string being checked.

184.1.49 preventsAutocorrectionBeforeString(text as string, language as String = "") as Boolean

MBS MacCocoa Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: In some cases the next typing should prevent a pending correction (if it is an @, for example).
Notes: This method allows clients to recognize these cases in a standardized way.

184.1.50 recordResponse(response as Integer, correction as string, word as string, language as String = "")

MBS MacCocoa Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Records the user response to the correction indicator being displayed.
Notes: response: The user,Äôs response. The possible values are shown in NSCorrectionResponse.
correction: The corrected word. This should match the original correction.
word: The original word. This should match the original correction.
language: The language being edited. This should match the original correction.

When a correction is automatically proposed, the user may respond in one of several ways. Clients may report this to the spell checker so that it can learn from the user's response and adjust future correction behavior accordingly.

Use of this method implies that the client stored the original word and original correction at least from the point at which the user accepts it until the user edits or reverts it.

184.1.51 requestCandidatesForSelectedRange(selectedRange as NSRangeMBS, stringToCheck as string, types as Int64 = -1, options as Dictionary = nil, tag as Variant = nil) as Integer

MBS MacCocoa Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Requests candidates in background.

184.1.52 requestCheckingOfString(stringToCheck as string, range as NSRangeMBS, types as Int64 = -1, options as Dictionary = nil, tag as Variant = nil) as Integer

MBS MacCocoa Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Requests that the string be checked in the background.
Notes: stringToCheck: The string to check.
range: The range of the string to check.
types: The type of checking to be performed. The possible constants are listed in NSTextCheckingType and can be combined using the C bit-wise OR operator to perform multiple checks at the same time.
options: The options dictionary specifying the types of checking to perform. See Spell Checking Option Dictionary Keys for the possible keys and expected values.
tag: An identifier unique within the application used to inform the spell checker which document that text is associated, potentially for many purposes, not necessarily just for ignored words. A value of 0 can be passed in for text not associated with a particular document.

The return value is a monotonically increasing sequence number that can be used to keep track of requests in flight.

Calls requestCheckingOfStringCompleted event later on main thread.

184.1.53 setIgnoredWords(words() as string)

MBS MacCocoa Plugin, Plugin Version: 7.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Sets the ignored word list.
Example:

```
Var spell as NSSpellCheckerMBS // your spellchecker

Var f as FolderItem
Var t as TextInputStream
Var words(-1),line as string

f=SpecialFolder.Preferences.Child("SpellCheck RB.pref")
t=f.OpenAsTextFile
if t<>nil and spell<>nil then

while not t.eof
line=t.ReadLine(encodings.UTF8)
if line<>"" then
words.Append line
end if
wend

spell.setIgnoredWords words

end if
```

184.1.54 setLanguage(language as string) as boolean

MBS MacCocoa Plugin, Plugin Version: 7.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Allows programmatic setting of the language to spell-check in.
Notes: Normally chosen by a pop-up-list in the spelling panel and defaulted to the user's preferred language, so call this with care.
Set to "" to use the language from the panel popup menu.

184.1.55 sharedSpellCheckerExists as boolean

MBS MacCocoa Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns whether the application's NSSpellChecker has already been created.
Notes: Returns true if the shared spell checker already exists, otherwise false.

184.1.56 spellingPanel as NSPanelMBS

MBS MacCocoa Plugin, Plugin Version: 7.1, Platform: macOS, Targets: Desktop only.

Function: The spelling panel used for spell checking.

184.1.57 unlearnWord(word as string)

MBS MacCocoa Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: Tells the spell checker to unlearn a given word.
Notes: Available in Mac OS X v10.5 and later.
Same as the older forgetWord.

184.1.58 updatePanels

MBS MacCocoa Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: Updates the available panels to account for user changes.
Notes: This method should be called when a client changes some relevant setting, such as what kind of spelling, grammar checking, or substitutions it uses.

Available in Mac OS X v10.6 and later.

184.1.59 updateSpellingPanelWithGrammarString(lang as string, detail as dictionary)

MBS MacCocoa Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: Specifies a grammar-analysis detail to highlight in the Spelling panel.
Notes: problemString: Problematic grammatical unit identified by checkGrammarOfString.
detail: One of the grammar-analysis details provided by checkGrammarOfString.

Available in Mac OS X v10.5 and later.

184.1.60 updateSpellingPanelWithMisspelledWord(word as string)

MBS MacCocoa Plugin, Plugin Version: 7.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Updates the panel with the word.
Notes: The checkSpellingOfString methods return the range of the misspelled word found. It is up to the client to select that word in their document and to cause the spelling panel to update itself to reflect the found misspelling. Clients can call updateSpellPanelWithMisspelledWord to insure that the spell panel is up to date.

184.1.61 userPreferredLanguages as string()

MBS MacCocoa Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: Provides a subset of the available languages to be used for spell checking.
Notes: Returns an array containing the user's preferred languages for spell checking. The order is set in the system preferences.

If automaticallyIdentifiesLanguages is true, then text checking will automatically use this method as appropriate; otherwise, it will use the language set by Language property.

The older checkSpellingOfString and checkGrammarOfString methods will use the language set by Language property, if they are called with an empty language argument.

Available in Mac OS X v10.6 and later.

184.1.62 userQuotesArrayForLanguage(lang as string) as string()

MBS MacCocoa Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns the default values for quote replacement.
Example:

```
Var n as new NSSpellCheckerMBS

Var en(-1) as string = n.userQuotesArrayForLanguage("en")

MsgBox Join(en," ")
```

Notes: An array of quote replacements used by the NSTextCheckingQuotesKey key-value pair.

Available in Mac OS X v10.6 and later.

184.1.63 userReplacementsDictionary as dictionary

MBS MacCocoa Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns the dictionary used when replacing words.
Notes: The key-value pairs in this dictionary are used by the NSTextCheckingQuotesKey when replacing characters and words.

Available in Mac OS X v10.6 and later.

184.1.64 Properties

184.1.65 accessoryView as NSViewMBS

MBS MacCocoa Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop only.

Function: The Spelling panel's accessory view.
Notes: The accessory view can be any custom view you want to display with the spelling panel. The accessory view is displayed below the spelling checker and the panel automatically resizes to accommodate the accessory view.

This method posts a notification named NSWindowDidResizeNotification with the Spelling panel object to the default notification center.

The accessory view or nil if there is none.
(Read and Write property)

184.1.66 automaticallyIdentifiesLanguages as boolean

MBS MacCocoa Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: Whether the spell checker will automatically identify languages.
Notes: Available in Mac OS X v10.6 and later.
(Read and Write property)

184.1.67 Handle as Integer

MBS MacCocoa Plugin, Plugin Version: 7.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: The handle to the used NSSpellChecker reference.
Notes: (Read and Write property)

184.1.68 language as string

MBS MacCocoa Plugin, Plugin Version: 7.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: The current language used.
Example:

```
Var c as NSSpellCheckerMBS

c=new NSSpellCheckerMBS

c.Language="en"

MsgBox c.Language // shows en

c.Language="Dutch"

MsgBox c.Language // shows nl

c.Language="Multilingual"

MsgBox c.Language // shows Multilingual
```

Notes: (Read and Write property)

184.1.69 Length as Integer

MBS MacCocoa Plugin, Plugin Version: 7.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: The last length of the position where an error was found.
Notes: Length is 0 if no location was found.
(Read and Write property)

184.1.70 Location as Integer

MBS MacCocoa Plugin, Plugin Version: 7.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: The last location where an error was found.
Notes: (Read and Write property)

184.1.71 substitutionsPanel as NSPanelMBS

MBS MacCocoa Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop only.

Function: The substitutions panel.
Notes: (Read only property)

184.1.72 substitutionsPanelAccessoryViewController as NSViewControllerMBS

MBS MacCocoa Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop only.

Function: Sets the substitutions panel,Äôs accessory view.
Notes: accessoryController: The accessory view controller or nil if there is none.

The accessory view controller can accommodate any custom view you want to display with the substitutions panel. The accessory view controller,Äôs view is displayed below the substitutions list and the panel automatically resizes to accommodate the accessory view.
This method posts a notification named NSWindowDidResizeNotification with the substitutions panel object to the default notification center.
(Read only property)

184.1.73 Tag as Integer

MBS MacCocoa Plugin, Plugin Version: 7.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: The document tag for the current document.
Notes: Every NSSpellCheckerMBS gets a new tag. The tag identifies which ignore list is used. This value is set automatically.
(Read and Write property)

184.1.74 WordFieldValue as string

MBS MacCocoa Plugin, Plugin Version: 11.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: The word textfield content string.
Notes: (Read and Write computed property)

184.1.75 Events

184.1.76 Correct

MBS MacCocoa Plugin, Plugin Version: 7.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: An event sent whenever the Correct button is pressed.

184.1.77 FindNext

MBS MacCocoa Plugin, Plugin Version: 7.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: An event sent whenever the Find Next button is pressed.

184.1.78 Ignore

MBS MacCocoa Plugin, Plugin Version: 7.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: An event sent whenever the Ignore button is pressed.

184.1.79 requestCandidatesForSelectedRangeCompleted(sequenceNumber as Integer, candidates() as NSTextCheckingResultMBS, stringToCheck as String, selectedRange as NSRangeMBS, checkingTypes as Int64, options as Dictionary, tag as Variant)

MBS MacCocoa Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Called later by requestCandidatesForSelectedRange method.

184.1.80 requestCheckingOfStringCompleted(sequenceNumber as Integer, results() as NSTextCheckingResultMBS, orthography as NSOrthographyMBS, wordCount as Integer, stringToCheck as String, Range as NSRangeMBS, checkingTypes as Int64, options as Dictionary, tag as Variant)

MBS MacCocoa Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Called later by requestCheckingOfString method.
Notes: sequenceNumber: A monotonically increasing sequence number.
results: An array of NSTextCheckingResultMBS objects describing particular items found during checking

and their individual ranges, sorted by range origin, then range end, then result type..
orthography: The orthography of the string.
wordCount: The number of words in the range of the string.

184.1.81 Constants

Constants

Constant	Value	Description
NSGrammarCorrections	"NSGrammarCorrections"	One of the key constants for the dictionaries in the detai
NSGrammarRange	"NSGrammarRange"	One of the key constants for the dictionaries in the detai
NSGrammarUserDescription	"NSGrammarUserDescription"	One of the key constants for the dictionaries in the detai

Correction indicator type Constants

Constant	Value	Description
NSCorrectionIndicatorTypeDefault	0	The default indicator that shows a proposed correction. Available in Mac OS X v10.7 and later.
NSCorrectionIndicatorTypeGuesses	2	Shows multiple alternatives from which the user may choose the approp spelling. Available in Mac OS X v10.7 and later.
NSCorrectionIndicatorTypeReversion	1	Provides the option to revert to the original form after a correction has made. Available in Mac OS X v10.7 and later.

Response Constants

Constant	Value	Description
NSCorrectionResponseAccepted	1	The user accepted the correction. Available in Mac OS X v10.7 and later.
NSCorrectionResponseEdited	4	After the correction was accepted, the user edited the corrected word (to something other than its original form. Available in Mac OS X v10.7 and later.
NSCorrectionResponseIgnored	3	The user continued in such a way as to ignore the correction. Available in Mac OS X v10.7 and later.
NSCorrectionResponseNone	0	No response was received from the user. Available in Mac OS X v10.7 and later.
NSCorrectionResponseRejected	2	The user rejected the correction by dismissing the correction indicator. Available in Mac OS X v10.7 and later.
NSCorrectionResponseReverted	5	After the correction was accepted, the user reverted the correction back to the original word. Available in Mac OS X v10.7 and later.

184.2 class WinSpellCheckerExceptionMBS

184.2.1 class WinSpellCheckerExceptionMBS

MBS WinFrameworks Plugin, Plugin Version: 21.2, Platform: Windows, Targets: Desktop only.

Function: The class for an exception with spell checking classes.
Notes: Subclass of the RuntimeException class.

184.3 class WinSpellCheckerMBS

184.3.1 class WinSpellCheckerMBS

MBS WinFrameworks Plugin, Plugin Version: 21.2, Platform: Windows, Targets: Desktop only.

Function: Represents a particular spell checker for a particular language.
Example:

```
Var w As New WinSpellCheckerMBS("en-US")

Var Text As String = "Helo World"
Var errors() As WinSpellingErrorMBS = w.Check(Text)
Var Error As WinSpellingErrorMBS = errors(0)

MsgBox "Spelling error in """ + text.Mid(error.StartIndex+1, error.Length)+"""
```

Notes: Requires Windows 8.

- 19.4, page 10: News

184.3.2 Methods

184.3.3 Add(word as String)

MBS WinFrameworks Plugin, Plugin Version: 21.2, Platform: Windows, Targets: Desktop only.

Function: Treats the provided word as though it were part of the original dictionary.
Notes: The word will no longer be considered misspelled, and will also be considered as a candidate for suggestions.

Raises WinSpellCheckerExceptionMBS in case of an error.

184.3.4 AutoCorrect(FromWord as String, ToWord as String)

MBS WinFrameworks Plugin, Plugin Version: 21.2, Platform: Windows, Targets: Desktop only.

Function: Causes occurrences of one word to be replaced by another.
Notes: FromWord: The incorrectly spelled word to be autocorrected.
ToWord: The correctly spelled word that should replace from.

Raises WinSpellCheckerExceptionMBS in case of an error.

184.3.5 Check(text as String) as WinSpellingErrorMBS()

MBS WinFrameworks Plugin, Plugin Version: 21.2, Platform: Windows, Targets: Desktop only.

Function: Checks the spelling of the supplied text and returns a collection of spelling errors.
Example:

```
Var w As New WinSpellCheckerMBS("en-US")

Var Text As String = "Helo World"
Var errors() As WinSpellingErrorMBS = w.Check(Text)
Var Error As WinSpellingErrorMBS = errors(0)

MsgBox "Spelling error in """ + text.Mid(error.StartIndex+1, error.Length)+"""
```

Notes: text: The text to check.

Returns an array of error objects.

Raises WinSpellCheckerExceptionMBS in case of an error.

184.3.6 ComprehensiveCheck(text as String) as WinSpellingErrorMBS()

MBS WinFrameworks Plugin, Plugin Version: 21.2, Platform: Windows, Targets: Desktop only.

Function: Checks the spelling of the supplied text in a more thorough manner than Check, and returns a collection of spelling errors.
Notes: Raises WinSpellCheckerExceptionMBS in case of an error.

184.3.7 Constructor(languageTag as String)

MBS WinFrameworks Plugin, Plugin Version: 21.2, Platform: Windows, Targets: Desktop only.

Function: Creates a spell checker that supports the specified language.
Notes: languageTag: A BCP47 language tag that identifies the language for the requested spell checker.

Raises WinSpellCheckerExceptionMBS in case of an error.

184.3.8 Destructor

MBS WinFrameworks Plugin, Plugin Version: 21.2, Platform: Windows, Targets: Desktop only.

Function: The destructor.

184.3.9 Ignore(word as String)

MBS WinFrameworks Plugin, Plugin Version: 21.2, Platform: Windows, Targets: Desktop only.

Function: Ignores the provided word for the rest of this session.
Notes: Until this WinSpellCheckerMBS object is released, the word will no longer be considered misspelled, but it will not be considered as a candidate for suggestions.

Raises WinSpellCheckerExceptionMBS in case of an error.

184.3.10 IsSupported(languageTag as String) as Boolean

MBS WinFrameworks Plugin, Plugin Version: 21.2, Platform: Windows, Targets: Desktop only.

Function: Determines if the specified language is supported by a registered spell checker.
Example:

```
If WinSpellCheckerMBS.IsSupported("en-US") Then
MsgBox "US-English is supported."
Else
MsgBox "US-English is not supported!"
End If

If WinSpellCheckerMBS.IsSupported("de-CH") Then
MsgBox "Swiss German is supported."
Else
MsgBox "Swiss German is not supported!"
```

End If

Notes: languageTag: A BCP47 language tag that identifies the language for the requested spell checker. e.g. "en-US"

Returns true if supported; false if not supported.

Raises WinSpellCheckerExceptionMBS in case of an error.

184.3.11 OptionDescription(optionId as String) as WinSpellCheckerOptionDescriptionMBS

MBS WinFrameworks Plugin, Plugin Version: 21.2, Platform: Windows, Targets: Desktop only.

Function: Retrieves the information (id, description, heading and labels) of a specific option.
Notes: optionId: Identifier of the option to be retrieved.
Returns WinSpellCheckerOptionDescriptionMBS interface that contains the information about optionId.

Raises WinSpellCheckerExceptionMBS in case of an error.

184.3.12 OptionIds as String()

MBS WinFrameworks Plugin, Plugin Version: 21.2, Platform: Windows, Targets: Desktop only.

Function: Gets all of the declared option identifiers.
Notes: Raises WinSpellCheckerExceptionMBS in case of an error.

184.3.13 OptionValue(optionId as String) as Integer

MBS WinFrameworks Plugin, Plugin Version: 21.2, Platform: Windows, Targets: Desktop only.

Function: Retrieves the value associated with the given option.
Notes: optionId: The option identifier.

Returns the value associated with optionId.

Raises WinSpellCheckerExceptionMBS in case of an error.

184.3.14 RegisterUserDictionary(dictionaryPath as String, languageTag as String)

MBS WinFrameworks Plugin, Plugin Version: 21.2, Platform: Windows, Targets: Desktop only.

Function: Registers a file to be used as a user dictionary for the current user, until unregistered.
Notes: dictionaryPath: The path of the dictionary file to be registered.
languageTag: The language for which this dictionary should be used. If left empty, it will be used for any language.

Raises WinSpellCheckerExceptionMBS in case of an error.

184.3.15 Remove(word as String)

MBS WinFrameworks Plugin, Plugin Version: 21.2, Platform: Windows, Targets: Desktop only.

Function: Removes a word that was previously added by Add, or set by Ignore to be ignored.
Notes: Word: The word to be removed from the list of added words, or from the list of ignored words. If the word is not present, nothing will be removed.

Raises exception if word is an empty string, or its length is greater than MAX_WORD_LENGTH (128).

Available on Windows 10 and later.

Raises WinSpellCheckerExceptionMBS in case of an error.

184.3.16 Suggest(word as String) as String()

MBS WinFrameworks Plugin, Plugin Version: 21.2, Platform: Windows, Targets: Desktop only.

Function: Retrieves spelling suggestions for the supplied text.
Example:

```
Var w As New WinSpellCheckerMBS("en-US")

Var suggestions() As String = w.Suggest("Helo")

MsgBox Join(suggestions, EndOfLine)
```

Notes: word: The word or phrase to get suggestions for.

Returns the list of suggestions, returned as string array.

Raises WinSpellCheckerExceptionMBS in case of an error.

184.3.17 SupportedLanguages as String()

MBS WinFrameworks Plugin, Plugin Version: 21.2, Platform: Windows, Targets: Desktop only.

Function: Gets the set of languages/dialects supported by any of the registered spell checkers.
Example:

MsgBox Join(WinSpellCheckerMBS.SupportedLanguages, EndOfLine)

Notes: The supported languages are specific, not neutral.
For Hebrew, for example, the supported language is "he-IL", not "he".

Raises WinSpellCheckerExceptionMBS in case of an error.

184.3.18 UnregisterUserDictionary(dictionaryPath as String, languageTag as String)

MBS WinFrameworks Plugin, Plugin Version: 21.2, Platform: Windows, Targets: Desktop only.

Function: Unregisters a previously registered user dictionary. The dictionary will no longer be used by the spell checking functionality.
Notes: dictionaryPath: The path of the dictionary file to be unregistered.
languageTag: The language for which this dictionary was used. It must match the language passed to RegisterUserDictionary.

Raises WinSpellCheckerExceptionMBS in case of an error.

184.3.19 Properties

184.3.20 Handle as Integer

MBS WinFrameworks Plugin, Plugin Version: 21.2, Platform: Windows, Targets: Desktop only.

Function: The internal object reference.
Notes: (Read only property)

184.3.21 Id as String

MBS WinFrameworks Plugin, Plugin Version: 21.2, Platform: Windows, Targets: Desktop only.

Function: Gets the identifier for this spell checker.
Example:

```
Var w As New WinSpellCheckerMBS("en-US")

MsgBox w.Id
```

Notes: Raises WinSpellCheckerExceptionMBS in case of an error.
(Read only property)

184.3.22 LanguageTag as String

MBS WinFrameworks Plugin, Plugin Version: 21.2, Platform: Windows, Targets: Desktop only.

Function: Gets the BCP47 language tag this instance of the spell checker supports.
Example:

```
Var w As New WinSpellCheckerMBS("en-US")

MsgBox w.LanguageTag
```

Notes: Raises WinSpellCheckerExceptionMBS in case of an error.
(Read only property)

184.3.23 LocalizedName as String

MBS WinFrameworks Plugin, Plugin Version: 21.2, Platform: Windows, Targets: Desktop only.

Function: Gets text, suitable to display to the user, that describes this spell checker.
Example:

```
Var w As New WinSpellCheckerMBS("en-US")

MsgBox w.LocalizedName
```

Notes: Raises WinSpellCheckerExceptionMBS in case of an error.
(Read only property)

184.3.24 Events

184.3.25 Changed

MBS WinFrameworks Plugin, Plugin Version: 21.2, Platform: Windows, Targets: Desktop only.

Function: The changed event.
Notes: The SpellCheckerChanged event fires whenever the state of the spell checker changes in a way such that any text that has been checked should be rechecked. This should happen when the contents of a word list changes, when an option changes, or when the default spell checker changes.

184.4 class WinSpellCheckerOptionDescriptionMBS

184.4.1 class WinSpellCheckerOptionDescriptionMBS

MBS WinFrameworks Plugin, Plugin Version: 21.2, Platform: Windows, Targets: Desktop only.

Function: Represents the description of a spell checker option.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.
Blog Entries

- MBS Xojo Plugins, version 21.2pr3

184.4.2 Methods

184.4.3 Constructor

MBS WinFrameworks Plugin, Plugin Version: 21.2, Platform: Windows, Targets: Desktop only.

Function: The private constructor.

184.4.4 Destructor

MBS WinFrameworks Plugin, Plugin Version: 21.2, Platform: Windows, Targets: Desktop only.

Function: The destructor.

184.4.5 Labels as String()

MBS WinFrameworks Plugin, Plugin Version: 21.2, Platform: Windows, Targets: Desktop only.

Function: Gets the label enumerator for the spell checker option.
Notes: When there is a single label, the valid values for this option are 0 (not chosen) and 1 (chosen). When there is more than one label, the first label is associated with the value 0, the second with 1, and so on, effectively forming an enumeration. The labels should be in the language of the spell checker or localized to the user's UI language.

Raises WinSpellCheckerExceptionMBS in case of an error.

184.4.6 Properties

184.4.7 Description as String

MBS WinFrameworks Plugin, Plugin Version: 21.2, Platform: Windows, Targets: Desktop only.

Function: Get the description of the spell checker option.
Notes: The description explains the implications of making the various choices associated with the option. This should be in the language of the spell checker or localized to the user's UI language.

Raises WinSpellCheckerExceptionMBS in case of an error.
(Read only property)

184.4.8 Handle as Integer

MBS WinFrameworks Plugin, Plugin Version: 21.2, Platform: Windows, Targets: Desktop only.

Function: The internal object reference.
Notes: (Read only property)

184.4.9 Heading as String

MBS WinFrameworks Plugin, Plugin Version: 21.2, Platform: Windows, Targets: Desktop only.

Function: Gets the heading for the spell checker option.
Notes: The heading can be used to group sets of options by placing the header on the first item of that group. This should be in the language of the spell checker or localized to the user's UI language.

Raises WinSpellCheckerExceptionMBS in case of an error.
(Read only property)

184.4.10 Id as String

MBS WinFrameworks Plugin, Plugin Version: 21.2, Platform: Windows, Targets: Desktop only.

Function: Gets the identifier of the spell checker option.
Notes: Option identifiers all exist in the same area. Spell checker providers should use the engine identifier and the language tag (if the option is language-specific) to disambiguate potential collisions.

Specifically, the structure for naming the option identifiers should be:

For the Microsoft spell checker engine: <language tag>:<option name>. For example, "pt-BR:2009Reform." For spell check provider engines: <engine id>:<language tag>:<option name>(the language tag may be omitted if the option is not language specific). For example, "samplespell:fr-FR:AccentedUppercase".

Spell check providers are allowed to support existing Microsoft option identifiers, but they must not create new option identifiers in the Microsoft namespace. That is, spell check providers must use the engine identifier as a prefix.

An option identifier is linked to the set of labels and the semantics associated with them. If any change needs to be made between versions to the option (adding a label to the set of labels), a new option with a new identifier must be used. The only valid change that does not require a new identifier is to change from a single label to two labels and vice-versa when the semantics for values 0 and 1 do not change.

Raises WinSpellCheckerExceptionMBS in case of an error.
(Read only property)

184.5 class WinSpellingErrorMBS

184.5.1 class WinSpellingErrorMBS

MBS WinFrameworks Plugin, Plugin Version: 21.2, Platform: Windows, Targets: Desktop only.

Function: Provides information about a spelling error.
Example:

```
Var w As New WinSpellCheckerMBS("en-US")

// tell it to capitalize Xojo!
w.AutoCorrect "xojo", "Xojo"

Var Text As String = "Hello xojo!"
Var errors() As WinSpellingErrorMBS = w.check(Text)
Var Error As WinSpellingErrorMBS = errors(0)

MsgBox "Spelling error in """ + Text.Mid(error.StartIndex+1, error.Length)+"""". Must be "+error.Replacement
```

Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

- MBS Xojo Plugins, version 21.2pr3

184.5.2 Methods

184.5.3 Constructor

MBS WinFrameworks Plugin, Plugin Version: 21.2, Platform: Windows, Targets: Desktop only.

Function: The private constructor.

184.5.4 Destructor

MBS WinFrameworks Plugin, Plugin Version: 21.2, Platform: Windows, Targets: Desktop only.

Function: The destructor.

184.5.5 Properties

184.5.6 CorrectiveAction as Integer

MBS WinFrameworks Plugin, Plugin Version: 21.2, Platform: Windows, Targets: Desktop only.

Function: Indicates which corrective action should be taken for the spelling error.
Notes: Raises WinSpellCheckerExceptionMBS in case of an error.
(Read only property)

184.5.7 Length as Integer

MBS WinFrameworks Plugin, Plugin Version: 21.2, Platform: Windows, Targets: Desktop only.

Function: Gets the length of the erroneous text.
Notes: Raises WinSpellCheckerExceptionMBS in case of an error.
(Read only property)

184.5.8 Replacement as String

MBS WinFrameworks Plugin, Plugin Version: 21.2, Platform: Windows, Targets: Desktop only.

Function: Gets the text to use as replacement text when the corrective action is replace.
Example:

```
Var w As New WinSpellCheckerMBS("en-US")

// tell it to capitalize Xojo!
w.AutoCorrect "xojo", "Xojo"

Var Text As String = "Hello xojo!"
Var errors() As WinSpellingErrorMBS = w.check(Text)
Var Error As WinSpellingErrorMBS = errors(0)

MsgBox "Spelling error in """ + Text.Mid(error.StartIndex+1, error.Length)+"""". Must be "+error.Replacement
```

Notes: If the CorrectiveAction returned by CorrectiveAction is not kCorrectiveActionReplace, value is the empty string.

Raises WinSpellCheckerExceptionMBS in case of an error.

If empty, you may better go with Suggest() function in WinSpellCheckerMBS class.

(Read only property)

184.5.9 StartIndex as Integer

MBS WinFrameworks Plugin, Plugin Version: 21.2, Platform: Windows, Targets: Desktop only.

Function: Gets the position in the checked text where the error begins.
Notes: Index is zero based!

Raises WinSpellCheckerExceptionMBS in case of an error.
(Read only property)

184.5.10 Text as String

MBS WinFrameworks Plugin, Plugin Version: 21.2, Platform: Windows, Targets: Desktop only.

Function: The text referenced.
Notes: For your convenience we prepare Text.Middle(StartIndex, Length) for you here.
(Read only property)

184.5.11 Constants

Corrective Actions

Constant	Value	Description
kCorrectiveActionDelete	3	The user should be prompted to delete the indicated erroneous text.
kCorrectiveActionGetSuggestions	1	The user should be prompted with a list of suggestions as returned by Suggest
kCorrectiveActionNone	0	There are no errors.
kCorrectiveActionReplace	2	Replace the indicated erroneous text with the text provided in the suggestion The user does not need to be prompted.

Chapter 185

Spotlight

185.1 class MDItemMBS

185.1.1 class MDItemMBS

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: This is the class that represents a file and the metadata associated with the file.
Notes: Available in Mac OS X version 10.4 and later.

185.1.2 Methods

185.1.3 AllAttributes as string()

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns a list with all possible attribute names in the system.
Notes: Var item as new MDItemMBS(SpecialFolder.Desktop)

MsgBox join(item.AllAttributes, EndOfLine)

185.1.4 AttributeBoolean(name as string) as boolean

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns the value for this attribute.

185.1.5 AttributeDouble(name as string) as Double

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns the value for this attribute.

185.1.6 AttributeMultiValued(name as string) as boolean

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: Whether the given attribute is an array of multiple values.

185.1.7 AttributeNames as string()

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns an array containing the attribute names existing in the metadata item.
Example:

Var item as new MDItemMBS(SpecialFolder.Desktop)

MsgBox join(item.AttributeNames, EndOfLine)

Notes: Available in Mac OS X version 10.4 and later.

185.1.8 AttributeString(name as string) as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns the value for this attribute.
Example:

```
Var item as new MDItemMBS(SpecialFolder.Desktop)

MsgBox item.AttributeString(item.kMDItemFSName)
```

185.1.9 AttributeStringArray(name as string) as string()

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns the value for this attribute.

185.1.10 AttributeType(name as string) as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: The type of the attribute.
Example:

```
Var item as new MDItemMBS(SpecialFolder.Desktop)

MsgBox item.AttributeType(item.kMDItemFSName) // "String"
```

Notes: Returns "Boolean", "Number", "Date" or "String".

185.1.11 Constructor(path as folderitem)

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: Creates an MDItem object for a file at the specified path.
Example:

```
Var f as FolderItem = SpecialFolder.Desktop.Child("test.rtf")
Var m as new MDItemMBS(f)

MsgBox m.DisplayName
```

Notes: path: A path to the file from which to create the MDItem.

Available in Mac OS X version 10.4 and later.

185.1.12 DisplayDescriptionForAttribute(name as string) as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: The display description for the attribute.
Notes: Var item as new MDItemMBS(SpecialFolder.Desktop)

```
MsgBox item.DisplayDescriptionForAttribute(item.kMDItemDisplayName)
// shows "Lokalisiert angezeigter Name der Datei" in German
```

185.1.13 DisplayNameForAttribute(name as string) as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: The display name for this attribute.
Example:

```
Var item as new MDItemMBS(SpecialFolder.Desktop)

MsgBox item.DisplayNameForAttribute(item.kMDItemDisplayName)
// shows "Anzeigename" in German
```

185.1.14 GetAttribute(name as string) as Variant

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns the value of the given attribute for the item.
Notes: name: The name of the desired attribute.

A variant, or nil on failure, or if the attribute does not exist, of if the attribute is not readable.

185.1.15 GetAttributes as dictionary

MBS MacOSX Plugin, Plugin Version: 17.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Queries all attributes with all names and values.
See also:

- 185.1.16 GetAttributes(names() as string) as dictionary

185.1.16 GetAttributes(names() as string) as dictionary

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns the values of the given attributes for the item.
Notes: names: An array of the names of the desired attributes.
A dictionary where the keys are the attribute names, and the values are the attribute values, or nil on failure.
If an attribute does not exist, or is unreadable, there will be no key-value pair for it in the dictionary.
See also:

- 185.1.15 GetAttributes as dictionary 21720

185.1.17 kMDItemAcquisitionMake as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: The manufacturer of the device used to aquire the document contents. A string.

185.1.18 kMDItemAcquisitionModel as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: The model of the device used to aquire the document contents. For example, 100, 200, 400, etc. A string.

185.1.19 kMDItemAlbum as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: The title for a collection of media. This is analagous to a record album, or photo album. A string.

185.1.20 kMDItemAltitude as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: The altitude of the item in meters above sea level, expressed using the WGS84 datum. Negative values lie below sea level. A number.

185.1.21 kMDItemAperture as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: The aperture setting used to acquire the document contents. This unit is the APEX value. A number.

185.1.22 kMDItemAppleLoopDescriptors as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: Specifies multiple pieces of descriptive information about a loop. An array of strings.

Besides genre and instrument, files can contain descriptive information that help users in refining searches.

185.1.23 kMDItemAppleLoopsKeyFilterType as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: Specifies key filtering information about a loop. Loops are matched against projects that often in a major or minor key. A string.

To assist users in identifying loops that will "fit" with their compositions, loops can be tagged with one of the following key filters: "AnyKey" "Minor" "Major" "NeitherKey" "BothKeys". "AnyKey" means that it fits with anything (whether in a major key, minor key or neither). "Minor" fits with compositions in a minor key. "NeitherKey" doesn't work well with compositions that are in major or minor key. "BothKeys" means it fits with major or minor key.

185.1.24 kMDItemAppleLoopsLoopMode as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: Specifies how a file should be played. A string.

Tagged files can either be loops or non-loops (e.g., a cymbal crash). "Looping" indicates if the file should be treated as a loop. "Non-looping" indicates the file should not be treated as a loop.

185.1.25 kMDItemAppleLoopsRootKey as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: Specifies the loop's original key. The key is the root note or tonic for the loop, and does not include the scale type. A string.

185.1.26 kMDItemApplicationCategories as string

MBS MacOSX Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: Available in Mac OS X 10.7 and later.

185.1.27 kMDItemAttributeChangeDate as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: The date and time of the last change made to a metadata attribute. A date.

185.1.28 kMDItemAudiences as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: The audience for which the file is intended. The audience may be determined by the creator or the publisher or by a third party. An array of strings.

185.1.29 kMDItemAudioBitRate as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: The audio bit rate. A number.

185.1.30 kMDItemAudioChannelCount as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: Number of channels in the audio data contained in the file. A number.

This integer value only represents the number of discreet channels of audio data found in the file. It does not indicate any configuration of the data in regards to a user's speaker setup.

185.1.31 kMDItemAudioEncodingApplication as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: The name of the application that encoded the data contained in the audio file. A string.

185.1.32 kMDItemAudioSampleRate as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: Sample rate of the audio data contained in the file. The sample rate is a float value representing hz (audio_frames/second). For example: 44100.0, 22254.54. A number.

185.1.33 kMDItemAudioTrackNumber as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: The track number of a song or composition when it is part of an album. A number (integer).

185.1.34 kMDItemAuthorAddresses as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: This attribute indicates the author addresses of the document.
An array of string. Requires Mac OS X 10.6.

185.1.35 kMDItemAuthorEmailAddresses as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: This attribute indicates the author of the emails message addresses. (This is always the email address, and not the human readable version). An array of string. Requires Mac OS X 10.5.

185.1.36 kMDItemAuthors as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: The author, or authors, of the contents of the file. An array of strings.
The order of the authors is preserved, but does not represent the main author or relative importance of the authors.

185.1.37 kMDItemBitsPerSample as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: The number of bits per sample. For example, the bit depth of an image (8-bit, 16-bit etc...) or the bit depth per audio sample of uncompressed audio data (8, 16, 24, 32, 64, etc..). A number.

185.1.38 kMDItemCameraOwner as string

MBS MacOSX Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: Available in Mac OS X 10.7 and later.

185.1.39 kMDItemCFBundleIdentifier as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: If this item is a bundle, then this is the CFBundleIdentifier. A string

185.1.40 kMDItemCity as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: Identifies city of origin according to guidelines established by the provider. A string.

For example, "New York", "Cupertino", or "Toronto".

185.1.41 kMDItemCodecs as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: The codecs used to encode/decode the media. An array of strings.

185.1.42 kMDItemColorSpace as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: The color space model used by the document contents. For example, "RGB", "CMYK", "YUV", or "YCbCr". A string.

185.1.43 kMDItemComment as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: A comment related to the file. This differs from the Finder comment, kMDItemFinderComment. A string.

185.1.44 kMDItemComposer as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: The composer of the music contained in the audio file. A string.

185.1.45 kMDItemContactKeywords as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: A list of contacts that are associated with this document, not including the authors. An array of strings.

185.1.46 kMDItemContentCreationDate as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: The date that the contents of the file were created. A date.

This is different than the file creation date. Its can be used to store when the file contents were first created, or first modified.

185.1.47 kMDItemContentModificationDate as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: The date and time that the contents of the file were last modified. A date.

This is not necessarily the file modification date.

185.1.48 kMDItemContentType as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: For example, a jpeg image file will have a value of public.jpeg/public.image/public.data. The value of this attribute is set by the MDImporter. Changes to this value are lost when the file attributes are next imported.

185.1.49 kMDItemContentTypeTree as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: Array of string

185.1.50 kMDItemContributors as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: The entities responsible for making contributions to the content of the resource. An array of strings.

Examples of a contributor include a person, an organization or a service.

185.1.51 kMDItemCopyright as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: The copyright owner of the file contents. A string.

185.1.52 kMDItemCountry as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: The full, publishable name of the country or primary location where the intellectual property of the item was created, according to guidelines of the provider. A string.

185.1.53 kMDItemCoverage as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: The extent or scope of the content of the resource. A string.

Coverage will typically include spatial location (a place name or geographic co-ordinates), temporal period (a period label, date, or date range) or jurisdiction (such as a named administrative entity).

Recommended best practice is to select a value from a controlled vocabulary, and that, where appropriate, named places or time periods be used in preference to numeric identifiers such as sets of co-ordinates or date ranges.

185.1.54 kMDItemCreator as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: Application used to create the document content (e.g. "Word", "AppleWorks", etc.). A string.

185.1.55 kMDItemDateAdded as string

MBS MacOSX Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: This is the date that the file was moved into the current location.
Not all files will have this attribute.
Not all file systems support this attribute.

185.1.56 kMDItemDeliveryType as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: The delivery type. Values are "Fast start" or "RTSP". A string.

185.1.57 kMDItemDescription as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: A description of the content of the resource. The description may include an abstract, table of contents, reference to a graphical representation of content or a free-text account of the content. A string.

185.1.58 kMDItemDirector as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: Director of the movie. A string. Requires Mac OS X 10.5.

185.1.59 kMDItemDisplayName as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: The localized version of the file name. A string.

185.1.60 kMDItemDownloadedDate as string

MBS MacOSX Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: Available in Mac OS X 10.7 and later.

185.1.61 kMDItemDueDate as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: Date this item is due. A date.

185.1.62 kMDItemDurationSeconds as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: The duration, in seconds, of the content of file. A value of 10.5 represents media that is 10 and 1/2 seconds long. A number.

185.1.63 kMDItemEditors as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: The list of editor/editors that has worked on this file. There could be 0 or more editors of a particular file. The order of the editors in the array is preserved, but is not intended to represent the main editor or relative importance of the editors. Type is An array of strings.

185.1.64 kMDItemEmailAddresses as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: Email addresses related to this item. An array of strings.

185.1.65 kMDItemEncodingApplications as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: Application used to convert the original content into it's current form. For example, a PDF file might have an encoding application set to "Distiller". An array of strings.

185.1.66 kMDItemExecutableArchitectures as string

MBS MacOSX Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: Available in Mac OS X 10.7 and later.

185.1.67 kMDItemEXIFGPSVersion as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: The version of GPSInfoIFD header that was used to generate the metadata. A string. Requires Mac OS X 10.5.

185.1.68 kMDItemEXIFVersion as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: The version of the EXIF header used to generate the metadata. A string.

185.1.69 kMDItemExposureMode as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: The exposure mode used to acquire the document contents. A number.

Possible values are 0 (auto exposure), 1 (manual exposure) and 2 (auto bracket).

185.1.70 kMDItemExposureProgram as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: The class of the exposure program used by the camera to set exposure when the image is taken. Possible values include: Manual, Normal, and Aperture priority. A string.

185.1.71 kMDItemExposureTimeSeconds as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: The exposure time, in seconds, used to acquire the document contents. A number.

185.1.72 kMDItemExposureTimeString as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: The time of the exposure. A string.

185.1.73 kMDItemFinderComment as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: Finder comments for this file. A string.

185.1.74 kMDItemFlashOnOff as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: Indicates if a camera flash was used. A number.

185.1.75 kMDItemFNumber as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: The diameter of the diaphragm aperture in terms of the effective focal length of the lens.

185.1.76 kMDItemFocalLength as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: The actual focal length of the lens, in millimeters. A number.

185.1.77 kMDItemFocalLength35mm as string

MBS MacOSX Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: Available in Mac OS X 10.7 and later.

185.1.78 kMDItemFonts as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: Fonts used in this item. You should store the font's full name, the postscript name, or the font family name, based on the available information. An array of strings.

185.1.79 kMDItemFSContentChangeDate as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: The date the file contents last changed. A date.

185.1.80 kMDItemFSCreationDate as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: The date and time that the file was created. A date.

185.1.81 kMDItemFSExists as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: This attribute is deprecated and was never implemented.

185.1.82 kMDItemFSHasCustomIcon as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: Boolean indicating if this file has a custom icon. Type is a boolean.

185.1.83 kMDItemFSInvisible as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: Indicates whether the file is invisible. A boolean.

185.1.84 kMDItemFSIsExtensionHidden as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: Indicates whether the file extension of the file is hidden. A boolean.

185.1.85 kMDItemFSIsReadable as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: This attribute is deprecated and was never implemented.

185.1.86 kMDItemFSIsStationery as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: Boolean indicating if this file is stationery. Type is a boolean.

185.1.87 kMDItemFSIsWriteable as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: This attribute is deprecated and was never implemented.

185.1.88 kMDItemFSLabel as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: Index of the Finder label of the file. Possible values are 0 through 7. A number.

185.1.89 kMDItemFSName as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: The file name of the item. A string.

185.1.90 kMDItemFSNodeCount as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: Number of files in a directory. A number.

185.1.91 kMDItemFSOwnerGroupID as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: The group ID of the owner of the file. A number.

185.1.92 kMDItemFSOwnerUserID as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: The user ID of the owner of the file. A number.

185.1.93 kMDItemFSSize as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: The size, in bytes, of the file on disk. A number.

185.1.94 kMDItemGenre as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: Genre of the movie. A string.
Requires Mac OS X 10.5.

185.1.95 kMDItemGPSAreaInformation as string

MBS MacOSX Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: Available in Mac OS X 10.7 and later.

185.1.96 kMDItemGPSDateStamp as string

MBS MacOSX Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: Available in Mac OS X 10.7 and later.

185.1.97 kMDItemGPSDestBearing as string

MBS MacOSX Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: Available in Mac OS X 10.7 and later.

185.1.98 kMDItemGPSDestDistance as string

MBS MacOSX Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: Available in Mac OS X 10.7 and later.

185.1.99 kMDItemGPSDestLatitude as string

MBS MacOSX Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: Available in Mac OS X 10.7 and later.

185.1.100 kMDItemGPSDestLongitude as string

MBS MacOSX Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: Available in Mac OS X 10.7 and later.

185.1.101 kMDItemGPSDifferental as string

MBS MacOSX Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: Available in Mac OS X 10.7 and later.

185.1.102 kMDItemGPSDOP as string

MBS MacOSX Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: Available in Mac OS X 10.7 and later.

185.1.103 kMDItemGPSMapDatum as string

MBS MacOSX Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: Available in Mac OS X 10.7 and later.

185.1.104 kMDItemGPSMeasureMode as string

MBS MacOSX Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: Available in Mac OS X 10.7 and later.

185.1.105 kMDItemGPSProcessingMethod as string

MBS MacOSX Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: Available in Mac OS X 10.7 and later.

185.1.106 kMDItemGPSStatus as string

MBS MacOSX Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: Available in Mac OS X 10.7 and later.

185.1.107 kMDItemGPSTrack as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: The direction of travel of the item, in degrees from true north. A number.
Requires Mac OS X 10.5.

185.1.108 kMDItemHasAlphaChannel as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: Indicates if this image file has an alpha channel. A boolean.

185.1.109 kMDItemHeadline as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: A publishable entry providing a synopsis of the contents of the file. For example, "Apple Introduces the iPod Photo". A string.

185.1.110 kMDItemIdentifier as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: A formal identifier used to reference the resource within a given context. A string.

185.1.111 kMDItemImageDirection as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: The direction of the item's image, in degrees from true north. A number.
Requires Mac OS X 10.5.

185.1.112 kMDItemInformation as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: Information about the item. A string.
Requires Mac OS X 10.5.

185.1.113 kMDItemInstantMessageAddresses as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: Instant message addresses related to this item. An array of strings.

185.1.114 kMDItemInstructions as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: Editorial instructions concerning the use of the item, such as embargoes and warnings. For example, "Second of four stories". A string.

185.1.115 kMDItemIsApplicationManaged as string

MBS MacOSX Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: Available in Mac OS X 10.7 and later.

185.1.116 kMDItemIsGeneralMIDISequence as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: Indicates whether the MIDI sequence contained in the file is setup for use with a General MIDI device. A boolean.

185.1.117 kMDItemIsLikelyJunk as string

MBS MacOSX Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: Available in Mac OS X 10.7 and later.

185.1.118 kMDItemISOSpeed as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: The ISO speed used to acquire the document contents. A number.

185.1.119 kMDItemKeySignature as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: The key of the music contained in the audio file. For example: C, Dm, F#m, Bb. A string.

185.1.120 kMDItemKeywords as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: Keywords associated with this file. For example, "Birthday", "Important", etc. An array of strings.

185.1.121 kMDItemKind as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: A description of the kind of item this file represents. A string.

185.1.122 kMDItemLabelIcon as string

MBS MacOSX Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: Available in Mac OS X 10.7 and later.

185.1.123 kMDItemLabelID as string

MBS MacOSX Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: Available in Mac OS X 10.7 and later.

185.1.124 kMDItemLabelKind as string

MBS MacOSX Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: Available in Mac OS X 10.7 and later.

185.1.125 kMDItemLabelUUID as string

MBS MacOSX Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: Available in Mac OS X 10.7 and later.

185.1.126 kMDItemLanguages as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: Indicates the languages of the intellectual content of the resource. Recommended best practice for the values of the Language element is defined by RFC 3066. An array of strings.

185.1.127 kMDItemLastUsedDate as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: The date and time that the file was last used. This value is updated automatically by LaunchServices everytime a file is opened by double clicking, or by asking LaunchServices to open a file. A date.

185.1.128 kMDItemLatitude as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: The latitude of the item in degrees north of the equator, expressed using the WGS84 datum. Negative values lie south of the equator. A number.
Requires Mac OS X 10.5.

185.1.129 kMDItemLayerNames as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: The names of the layers in the file. An array of strings.

185.1.130 kMDItemLensModel as string

MBS MacOSX Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: Available in Mac OS X 10.7 and later.

185.1.131 kMDItemLongitude as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: The longitude of the item in degrees east of the prime meridian, expressed using the WGS84 datum. Negative values lie west of the prime meridian. A number.
Requires Mac OS X 10.5.

185.1.132 kMDItemLyricist as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: The lyricist, or text writer, of the music contained in the audio file. A string.

185.1.133 kMDItemMaxAperture as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: The smallest f-number of the lens. Ordinarily it is given in the range of 00.00 to 99.99. A number.

185.1.134 kMDItemMediaTypes as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: The media types present in the content. An array of strings.

185.1.135 kMDItemMeteringMode as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: The metering mode used to take the image. A string.

Possible values are: Unknown, Average, CenterWeightedAverage, Spot, MultiSpot, Pattern, and Partial.

185.1.136 kMDItemMusicalGenre as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: The musical genre of the song or composition contained in the audio file. For example: Jazz, Pop, Rock, Classical. A string.

185.1.137 kMDItemMusicalInstrumentCategory as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: Specifies the category of an instrument. A string.

Files should have an instrument associated with them ("Other Instrument" is provided as a catch-all). For some categories, such as "Keyboards", there are instrument names which provide a more detailed instrument definition, for example "Piano" or "Organ".

185.1.138 kMDItemMusicalInstrumentName as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: Specifies the name of instrument relative to the instrument category. A string.

Files can have an instrument name associated with them if they have certain instrument categories. For example, the "Percussion" category has multiple instruments, including "Conga" and "Bongo".

185.1.139 kMDItemNamedLocation as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: The name of the location or point of interest associated with the item. The name may be user provided. A string

185.1.140 kMDItemNumberOfPages as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: Number of pages in the document. A number.

185.1.141 kMDItemOrganizations as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: The company or organization that created the document. An array of strings.

185.1.142 kMDItemOrientation as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: The orientation of the document contents. Possible values are 0 (landscape) and 1 (portrait). A number.

185.1.143 kMDItemOriginalFormat as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: Original format of the movie.
A string.
Requires Mac OS X 10.5

185.1.144 kMDItemOriginalSource as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: Original source of the movie. A string.
Requires Mac OS X 10.5.

185.1.145 kMDItemPageHeight as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: Height of the document page, in points (72 points per inch). For PDF files this indicates the height of the first page only. A number.

185.1.146 kMDItemPageWidth as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: Width of the document page, in points (72 points per inch). For PDF files this indicates the width of the first page only. A number.

185.1.147 kMDItemParticipants as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: The list of people who are visible in an image or movie or written about in a document. Type is array of strings.
Requires Mac OS X 10.6.

185.1.148 kMDItemPath as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: The complete path to the file. A string.

185.1.149 kMDItemPerformers as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: Performers in the movie. An array of string.
Requires Mac OS X 10.5.

185.1.150 kMDItemPhoneNumbers as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: Phone numbers related to this item. An array of strings.

185.1.151 kMDItemPixelCount as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: The total number of pixels in the contents. Same as kMDItemPixelWidth x kMDItemPixelHeight. A number.

185.1.152 kMDItemPixelHeight as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: The height, in pixels, of the contents. For example, the image height or the video frame height. A number.

185.1.153 kMDItemPixelWidth as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: The width, in pixels, of the contents. For example, the image width or the video frame width. A number.

185.1.154 kMDItemProducer as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: Producer of the content. A string. Requires Mac OS X 10.5.

185.1.155 kMDItemProfileName as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: The name of the color profile used by the document contents. A string.

185.1.156 kMDItemProjects as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: The list of projects that this file is part of. For example, if you were working on a movie all of the files could be marked as belonging to the project "My Movie". An array of strings.

185.1.157 kMDItemPublishers as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: The entity responsible for making the resource available. For example, a person, an organization, or a service. Typically, the name of a publisher should be used to indicate the entity. An array of strings.

185.1.158 kMDItemRecipientAddresses as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: This attribute indicates the recipient addresses of the document. array of string. Requires Mac OS X 10.6.

185.1.159 kMDItemRecipientEmailAddresses as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: This attribute indicates the reciepients email addresses. (This is always the email address, and not the human readable version). An array of string.
Requires Mac OS X 10.5.

185.1.160 kMDItemRecipients as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: Recipients of this item. An array of strings.

185.1.161 kMDItemRecordingDate as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: The recording date of the song or composition. A date.

This is in contrast to kMDItemContentCreationDate which, could indicate the creation date of an edited or 'mastered' version of the original art.

185.1.162 kMDItemRecordingYear as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: Indicates the year the item was recorded. For example, 1964, 2003, etc. A number.

185.1.163 kMDItemRedEyeOnOff as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: Indicates if red-eye reduction was used to take the picture. A boolean.

Possible values are 0 (no red-eye reduction mode or unknown) and 1 (red-eye reduction used).

185.1.164 kMDItemResolutionHeightDPI as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: Resolution height of this image in DPI. A number.

185.1.165 kMDItemResolutionWidthDPI as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: Resolution width, in DPI, of this image. A number.

185.1.166 kMDItemRights as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: Provides a link to information about rights held in and over the resource. A string.

Contains a rights management statement for the resource, or reference a service providing such information. Rights information often encompasses Intellectual Property Rights (IPR), Copyright, and various Property Rights.

If this attribute is absent, no assumptions can be made about the status of these and other rights with respect to the resource.

185.1.167 kMDItemSecurityMethod as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: The security or encryption method used for the file. A number.

185.1.168 kMDItemSpeed as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: The speed of the item, in kilometers per hour. A number.

Requires Mac OS X 10.5

185.1.169 kMDItemStarRating as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: User rating of this item. For example, the stars rating of an iTunes track. A number.

185.1.170 kMDItemStateOrProvince as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: Identifies the province or state of origin according to guidelines established by the provider. For example, "CA", "Ontario", or "Sussex". A string.

185.1.171 kMDItemStreamable as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: Whether the content is prepared for streaming. A boolean.

185.1.172 kMDItemSubject as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: Subject of the this item. Type is a string.

185.1.173 kMDItemSupportFileType as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: array of strings

185.1.174 kMDItemTempo as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: A float value that specifies the beats per minute of the music contained in the audio file. A number.

185.1.175 kMDItemTextContent as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: Contains a text representation of the content of the document. Data in multiple fields should be combined using a whitespace character as a separator. A string.

An application's Spotlight importer provides the content of this attribute. Applications can search for values in this attribute, but are not able to read the content of this attribute directly.

185.1.176 kMDItemTheme as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: Theme of the this item. Type is a string.

185.1.177 kMDItemTimeSignature as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: The time signature of the musical composition contained in the audio/MIDI file. For example: "4/4", "7/8". A string.

185.1.178 kMDItemTimestamp as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: The timestamp on the item. This generally is used to indicate the time at which the event captured by the item took place.

Mac OS X 10.5

185.1.179 kMDItemTitle as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: The title of the file. For example, this could be the title of a document, the name of an song, or the subject of an email message. A string.

185.1.180 kMDItemTotalBitRate as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: The total bit rate, audio and video combined, of the media. A number.

185.1.181 kMDItemURL as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: URL of the item.

Mac OS X 10.5

185.1.182 kMDItemVersion as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: The version number of this file. A string

185.1.183 kMDItemVideoBitRate as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: The video bit rate. A number.

185.1.184 kMDItemWhereFroms as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Example:

```
Var file as FolderItem = DownloadsFolderMBS(0).Child("test.html")
Var item as new MDItemMBS(file)
Var value as Variant = item.GetAttribute(MDItemMBS.kMDItemWhereFroms)

if value <>nil then
Var values() as Variant = value
Var Link as String = values(0)
MsgBox link
end if
```

Notes: Describes where the file was obtained from. An array of strings.

For example, a downloaded file may refer to the URL, files received by email may indicate the sender's email address, message subject, etc.

185.1.185 kMDItemWhiteBalance as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: The white balance setting used to acquire the document contents. Possible values are 0 (auto white balance) and 1 (manual). A number.

185.1.186 Properties

185.1.187 DisplayName as String

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: The localized version of the file name.
Example:

```
Var item as new MDItemMBS(SpecialFolder.Desktop)

MsgBox item.DisplayName // shows "Schreibtisch"
```

Notes: This is a shortcut for AttributeString(kMDItemDisplayName).
(Read only property)

185.1.188 FSName as String

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: The file name of the item.
Example:

```
Var item as new MDItemMBS(SpecialFolder.Desktop)

MsgBox item.FSName // shows "Desktop"
```

Notes: This is a shortcut for AttributeString(kMDItemFSName).
(Read only property)

185.1.189 FSSize as Int64

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: The size, in bytes, of the file on disk.
Example:

```
Var item as new MDItemMBS(SpecialFolder.Desktop)

MsgBox str(item.FSSize) // shows 0
```

Notes: This is a shortcut for AttributeString(kMDItemFSSize).
(Read only property)

185.1.190 Handle as Integer

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: The internal reference to the item.
Notes: (Read and Write property)

185.1.191 Path as String

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: The complete path to the file.
Example:

```
Var item as new MDItemMBS(SpecialFolder.Desktop)

MsgBox item.path // shows "/Users/cs/Desktop"
```

Notes: This is a shortcut for AttributeString(kMDItemPath).
(Read only property)

185.1.192 Tag as Variant

MBS MacOSX Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: The attached value.
Notes: You can use this property as you like.
(Read and Write property)

185.2 class MDQueryBatchingParamsMBS

185.2.1 class MDQueryBatchingParamsMBS

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: This class containing the progress notification batching parameters of an MDQuery.
Notes: The first notification can be triggered by the either firstmaxnum or firstmaxms limit being exceeded. Subsequent notifications are triggered by either the progressmaxnum or progressmaxms limit. The default batching parameters are undefined and subject to change.

185.2.2 Properties

185.2.3 firstMaxMS as Integer

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: The maximum number of milliseconds that can pass before a progress notification is sent out.
Notes: This value is advisory, in that the notification will be triggered "at some point after firstmaxms milliseconds have passed since the query began accumulating results", but generally not very long after, for the first progress notification.
(Read and Write property)

185.2.4 firstMaxNum as Integer

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: The maximum number of results that can accumulate before a progress notification is sent out by the MDQuery, for the first notification.
Notes: (Read and Write property)

185.2.5 progressMaxMS as Integer

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: The maximum number of milliseconds that can pass before a progress notification is sent out.
Notes: This value is advisory, in that the notification will be triggered "at some point after firstmaxms milliseconds have passed since the query began accumulating results", but generally not very long after, for progress notifications after the first, during the initial gathering phase of the query.
(Read and Write property)

185.2.6 progressMaxNum as Integer

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: The maximum number of results that can accumulate before a progress notification is sent out by the MDQuery, for notifications after the first, during the initial gathering phase of the query.
Notes: (Read and Write property)

185.2.7 updateMaxMS as Integer

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: The maximum number of milliseconds that can pass before a progress notification is sent out.
Notes: This value is advisory, in that the notification will be triggered "at some point after firstmaxms milliseconds have passed since the query began accumulating results", but generally not very long after, for update notifications after the gathering phase of the query has finished.
(Read and Write property)

185.2.8 updateMaxNum as Integer

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: The maximum number of results that can accumulate before an update notification is sent out by the MDQuery, for update notifications after the gathering phase of the query has finished.
Notes: (Read and Write property)

185.3 class MDQueryMBS

185.3.1 class MDQueryMBS

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: MDQuery encapsulates all queries against the MetaData database.
Example:

```
Var m as new MDQueryMBS("* == ""Hello""wcd | | kMDItemTextContent = ""Hello""c")

call m.Execute(m.kMDQuerySynchronous)

MsgBox str(m.ResultCount) // shows a lot of results
```

Notes: Depending on what and how you want to search, you can decide whether MDQueryMBS or CatSearchMBS is the better choice.

Available in Mac OS X version 10.4 and later.

Queries gather results or process updates only while the current thread's run loop is running. Queries normally operate asynchronously, and only send out progress notificiations as the list is being collected. The query list is kept up to date with respect to value lists and sorting as the progress notifications are sent out, so the query is in a good state during those events.

An MDQuery presents its results as if it were a simple array object. The results are MDItem.

Query Sorting Sorting the results from a query can be performed in one of two ways. First is to let the library sort the results for you by passing an array of attributes to sort on to constructor. The default sort provided by the constructor is a ascending sort strings are compared using CFStringCompare() with the options kCFCompareNonliteral | kCFCompareLocalized | kCFCompareNumerically.

If used in a thread, please use a loop with calling NSRunLoopMBS.currentRunLoop.runUntilDate(nil) to give time for update events to fire.

185.3.2 Methods

185.3.3 AttributeValueOfResultAtIndex(name as string, index as UInt32) as Variant

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns the value of the named attribute for the result at the given index.
Notes: name: The attribute name for which to return the values. If the attribute is not one of those requested in the valueListAttrs or sortingAttrs parameters to one of the query creation functions, the result will be nil.
index: The index into the query's result list. If the index is negative, or is equal to or larger than the current number of results in the query, the behavior is undefined.
Returns he value of the attribute, or nil if the attribute doesn't exist in the query on that result.

185.3.4 Constructor(query as MDQueryMBS, queryString as string)

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: Creates a new query, which is a subset of the given query.
Notes: Only results matched by the given query can be matched by the query expression of this query.

query: The parent query of the new query.
queryString: The query expression string for this query. This expression in effect may further restrict the matches found by the parent query. If the string is empty the behavior is undefined.
valueListAttributes: An optional array of attribute names. The query will collect the values of these attributes into uniqued lists, which can be used or displayed to summarize the results of the query, or allow a user to further qualify the items for which they are searching. This parameter may be empty if no value lists are desired. Value list collection increases CPU usage and significantly increases the memory usage of an MDQuery. The attribute names are strings.
sortingAttributes: An optional array of attribute names. The query will results of the query based on the values of these attributes. The first name in the array is used as the primary sort key, the second as the secondary key, and so on. The comparison of like-typed values is a simple, literal comparison. This parameter may be empty if no sorting is desired. Sorting increases memory usage and significantly increases the CPU usage of an MDQuery. However, when possible, it is almost always cheaper to have the MDQuery do the sorting, rather than you fetching all the results and attributes from each of them and doing the sorting yourself. The attribute names are strings.

185.3.5 Constructor(query as MDQueryMBS, queryString as string, valueListAttributes() as string)

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: Creates a new query, which is a subset of the given query.
Notes: Only results matched by the given query can be matched by the query expression of this query.

query: The parent query of the new query.
queryString: The query expression string for this query. This expression in effect may further restrict the matches found by the parent query. If the string is empty the behavior is undefined.
valueListAttributes: An optional array of attribute names. The query will collect the values of these attributes into uniqued lists, which can be used or displayed to summarize the results of the query, or allow a user to further qualify the items for which they are searching. This parameter may be empty if no value lists are desired. Value list collection increases CPU usage and significantly increases the memory usage of an MDQuery. The attribute names are strings.
sortingAttributes: An optional array of attribute names. The query will results of the query based on the values of these attributes. The first name in the array is used as the primary sort key, the second as the secondary key, and so on. The comparison of like-typed values is a simple, literal comparison. This parameter may be empty if no sorting is desired. Sorting increases memory usage and significantly increases the CPU usage of an MDQuery. However, when possible, it is almost always cheaper to have the MDQuery do the sorting, rather than you fetching all the results and attributes from each of them and doing the sorting yourself. The attribute names are strings.

185.3.6 Constructor(query as MDQueryMBS, queryString as string, valueListAttributes() as string, sortingAttributes() as string)

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: Creates a new query, which is a subset of the given query.
Notes: Only results matched by the given query can be matched by the query expression of this query.

query: The parent query of the new query.
queryString: The query expression string for this query. This expression in effect may further restrict the matches found by the parent query. If the string is empty the behavior is undefined.
valueListAttributes: An optional array of attribute names. The query will collect the values of these attributes into uniqued lists, which can be used or displayed to summarize the results of the query, or allow a user to further qualify the items for which they are searching. This parameter may be empty if no value lists are desired. Value list collection increases CPU usage and significantly increases the memory usage of an MDQuery. The attribute names are strings.
sortingAttributes: An optional array of attribute names. The query will results of the query based on the values of these attributes. The first name in the array is used as the primary sort key, the second as the secondary key, and so on. The comparison of like-typed values is a simple, literal comparison. This parameter may be empty if no sorting is desired. Sorting increases memory usage and significantly increases the CPU usage of an MDQuery. However, when possible, it is almost always cheaper to have the MDQuery do the sorting, rather than you fetching all the results and attributes from each of them and doing the sorting yourself. The attribute names are strings.

185.3.7 Constructor(queryString as string)

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: Creates a new query with the given query expression.
Notes: queryString: The query expression string for this query. The syntax for query expressions is explained above in the header overview documentation.

valueListAttributes: An optional array of attribute names. The query will collect the values of these attributes into uniqued lists, which can be used or displayed to summarize the results of the query, or allow a user to further qualify the items for which they are searching. This parameter may be empty if no value lists are desired. Value list collection increases CPU usage and significantly increases the memory usage of an MDQuery. The attribute names are string.

sortingAttributes: An optional array of attribute names. The query will results of the query based on the values of these attributes. The first name in the array is used as the primary sort key, the second as the secondary key, and so on. The comparison of like-typed values is a simple, literal comparison. This parameter may be empty if no sorting is desired. Sorting increases memory usage and significantly increases the CPU usage of an MDQuery. However, when possible, it is almost always cheaper to have the MDQuery do the sorting, rather than you fetching all the results and attributes from each of them and doing the sorting yourself. The attribute names are strings.

The handle value is zero on failure.

185.3.8 Constructor(queryString as string, valueListAttributes() as string)

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: Creates a new query with the given query expression.
Notes: queryString: The query expression string for this query. The syntax for query expressions is explained above in the header overview documentation.

valueListAttributes: An optional array of attribute names. The query will collect the values of these attributes into uniqued lists, which can be used or displayed to summarize the results of the query, or allow a user to further qualify the items for which they are searching. This parameter may be empty if no value lists are desired. Value list collection increases CPU usage and significantly increases the memory usage of an MDQuery. The attribute names are string.

sortingAttributes: An optional array of attribute names. The query will results of the query based on the values of these attributes. The first name in the array is used as the primary sort key, the second as the secondary key, and so on. The comparison of like-typed values is a simple, literal comparison. This parameter may be empty if no sorting is desired. Sorting increases memory usage and significantly increases the CPU usage of an MDQuery. However, when possible, it is almost always cheaper to have the MDQuery do the sorting, rather than you fetching all the results and attributes from each of them and doing the sorting yourself. The attribute names are strings.

The handle value is zero on failure.

185.3.9 Constructor(queryString as string, valueListAttributes() as string, sortingAttributes() as string)

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: Creates a new query with the given query expression.
Notes: queryString: The query expression string for this query. The syntax for query expressions is explained above in the header overview documentation.

valueListAttributes: An optional array of attribute names. The query will collect the values of these attributes into uniqued lists, which can be used or displayed to summarize the results of the query, or allow a user to further qualify the items for which they are searching. This parameter may be empty if no value lists are desired. Value list collection increases CPU usage and significantly increases the memory usage of an MDQuery. The attribute names are string.

sortingAttributes: An optional array of attribute names. The query will results of the query based on the values of these attributes. The first name in the array is used as the primary sort key, the second as the secondary key, and so on. The comparison of like-typed values is a simple, literal comparison. This parameter may be empty if no sorting is desired. Sorting increases memory usage and significantly increases the CPU usage of an MDQuery. However, when possible, it is almost always cheaper to have the MDQuery do the sorting, rather than you fetching all the results and attributes from each of them and doing the sorting yourself. The attribute names are strings.

The handle value is zero on failure.

- 185.3.8 Constructor(queryString as string, valueListAttributes() as string) 21764

185.3.10 CountOfResultsWithAttributeValue(name as string, Value as Variant) as UInt32

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns the number of results which have the given attribute and attribute value. Note that this count may change over time, as the query's result list is updated.
Notes: name: The attribute name for which to return the number of results with the given value. If the attribute is not one of those requested in the valueListAttrs parameter to one of the query creation functions, the behavior is undefined.

value: The attribute value for which to return the number of results with that value. This parameter may be nil, in which case the number of results that do not contain the named attribute is returned.

Returns the number of results with that attribute and value.

185.3.11 DisableUpdates

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: Disables updates to the query result list.
Notes: This should be called before iterating through the list of results to prevent the result list from changing during the iteration. The disabled state is a counter, and disabling can be done recursively and from different threads.

185.3.12 EnableUpdates

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: Re-enables updates to the query result list.
Notes: This should be called when finished iterating through the list of results, to allow changes to the result list to occur. Changes will be allowed when all the disables have been matched by a corresponding enable.

185.3.13 Execute(flags as Integer) as boolean

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: Run the query, and populate the query with the results.
Example:

```
Var q as new MDQueryMBS("kMDItemContentModificationDate>=$ time.now")
// you will want to use a MDQueryMBS subclass here to catch the events

if not q.Execute(q.kMDQueryWantsUpdates) then
MsgBox "Failed to query"
end if
```

Notes: Queries only gather results or process updates while the current thread's run loop is running. Queries normally operate asynchronously, and send out progress and update notifications to report changes to the list of results that has been collected. Queries have two phases: the initial gathering of all currently matching results, and a second live-update phase where queries monitor the state of the system and update themselves to external changes in files or the operating environment (for example, as time advances, files which did not match the query when it was started may later match the query). Query notifications are posted within the context of the same thread which executes the query. [

here are three operational modes: (1) synchronous static queries, which collect the list of current results and then do not watch for updates to the results, (2) asynchronous static queries, which collect the results asychronously after this function returns, and then do not watch for updates to the results, and (3) asynchronous live queries which collect the initial results asychronously after this function returns, and then do watch for updates to the results, until the query is destroyed. There is little reason not to allow the fourth case, synchronous collection of initial results, followed by asynchronous monitoring for updates, so this may change in the future.

Flags: Options for the query.

Returns true if the query was started (executed in the case of a synchronous query), false otherwise. Queries cannot be executed more than once.

185.3.14 GetSortOptionFlagsForAttribute(fieldName as string) as Integer

MBS MacOSX Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Gets the sort option flags for a sorting attribute.
Notes: fieldName: The attribute name for which sort option flags are to be fetched.
Returns an integer with flags. Currently can be 0 or 1.

Available on Mac OS X 10.7 or later.

185.3.15 IndexOfResult(it as MDItemMBS) as Integer

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns the current index of the given result.
Notes: Note that the index of a result will change over time, as the query's result list is updated.

Returns the index of the given result, or -1 if the value is not one of the query's existing results.

185.3.16 IsGatheringComplete as boolean

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns true if the first phase of a query, the initial result gathering, has finished.
Notes: A boolean indicating whether or not the first phase of a query has completed.

185.3.17 QueryString as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns the query string of the query.

185.3.18 ResultAtIndex(index as Integer) as MDItemMBS

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns the current result at the given index.
Notes: This function causes the result object to be created if it hasn't been created already. For performance reasons, it is not advisable to ask for results that you don't need, to avoid the cost of creating them. If possible, call this function to fetch only the results you need to display or otherwise process. Note that the index of a particular result will change over time, as the query's result list is updated.

index: The index into the query's result list.

If the index is negative, or is equal to or larger than the current number of results in the query, the behavior is undefined.

Returns the MDItem currently at the given index, or if a result-create function has been set, returns the result returned by that function.

185.3.19 ResultCount as Integer

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns the number of results currently collected by the query.
Example:

```
Var m as new MDQueryMBS("kMDItemContentModificationDate>=$ time.today")

call m.Execute(m.kMDQuerySynchronous)

MsgBox str(m.ResultCount)+" files modified today"
```

Notes: Note that the number of results in a query will change over time as the query's result list is updated.

185.3.20 Results(limit as Integer = -1) as MDItemMBS()

MBS MacOSX Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: Queries result items.
Notes: Internally does what ResultAtIndex does for up to limit entries.
Limit with -1 will cause no limit.
If possible, call this function to fetch only the results you need to display or otherwise process.

185.3.21 SetMaxCount(size as Integer)

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: Use SetMaxCount to limit the number of results returned by the query engine.
Notes: This must be called before the query is executed.
size: The maximum number of results desired.

185.3.22 SetSearchScope(paths() as folderitem, options() as string)

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: Use SetSearchScope to limit the results returned by the query engine to those MDItem that appear within the specified directories.

Example:

```
Var q as MDQueryMBS // your query

q.SetSearchScope nil, array(q.kMDQueryScopeComputer)
```

Notes: This may be used to limit searching to particular volumes. Tilde paths, or environment variables are not expanded. Calling this multiple times will replace the previous options. This must be called before the query is executed.

paths: An array of directories where you want to search. This array can be empty.
options: An array of scope options. Pass the kMDQueryScope* constants. This array can be empty.

185.3.23 SetSortOptionFlagsForAttribute(fieldName as string, flags as UInt32) as Boolean

MBS MacOSX Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Sets the sort flags for a query.
Notes: fieldName: The attribute name for which sort option flags are to be set.

The attribute name must have been part of the sortingFlags when the query was created.

flags: An integer containing MDQuerySortOptionFlags to be applied to the attribute

Returns a boolean, true on success, false on failure.

Available on Mac OS X 10.7 or later.

185.3.24 SetSortOrder(sortingAttrs() as string) as Boolean

MBS MacOSX Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Sets the sort order for a query.
Notes: sortingAttrs An array of attribute names, as in MDQueryCreate.
The query's result set will be sorted according to the order of these attributes. All names in the array have to have been passed as sortingAttrs when the query was created. The attribute names are strings.

Returns a boolean, true on success, false on failure.

Available on Mac OS X 10.7 or later.

185.3.25 SortingAttributes as string()

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns the list of attribute names the query is using to sort the results.

185.3.26 Stop

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: Stops the query from ever generating more results.
Notes: Queries may be executed only once, so a stopped query cannot be restarted. The query will also not generate any result updates. The query is static after this function returns. The query will do final processing of results that have come in but not yet been processed (because, say, the batching parameters hasn't triggered that yet). That may trigger a progress notification, so be aware of that if you are stopping a query from within your progress note handler; that is, during this function, a recursive progress and/or finished notification might occur, which might recursively call your notification handler. It is safe to call this function recursively. You would call this function to stop a query that is generating way too many results to be useful, but still want to access the results that have come in so far. If a query is stopped before the gathering phase finishes, it will not report itself as finished, nor will it send out a finished notification.

185.3.27 ValueListAttributes as string()

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns the list of attribute names for which the query is collecting the lists of values.

185.3.28 ValuesOfAttribute(name as string) as Variant()

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns the list of values, from the results of the query, of the named attribute.
Notes: The list is not ordered in any way. The list contains only one occurrence of each value. Note that this list may change over time, as the query's result list is updated.

name: The attribute name for which to return the values. If the attribute is not one of those requested in the valueListAttrs parameter to one of the query creation functions, the behavior is undefined.

Returns an array holding the value objects for that attribute.

185.3.29 Properties

185.3.30 Handle as Integer

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: The internal reference for the MDQuery.
Notes: (Read and Write property)

185.3.31 Tag as Variant

MBS MacOSX Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: The attached value.
Notes: You can use this property as you like.
(Read and Write property)

185.3.32 BatchingParameters as MDQueryBatchingParamsMBS

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: The query whose batching parameters are to be set.
Notes: (Read and Write computed property)

185.3.33 Events

185.3.34 Finish()

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: The event called when the query has finished.
Notes: Called when the query has finished with the initial result-gathering phase, and may now proceed into the live-update phase (if that option was chosen when the query was executed). This event often shortly follows after the last progress notification. It is usually not necessary to update any displayed UI in response to this event, since it doesn't indicate any change in the result list of a query.

185.3.35 Progress(AddedItems() as MDItemMBS, ChangedItems() as MDItemMBS, RemovedItems() as MDItemMBS)

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: The event sent to indicate changes to the query's results list during the initial gathering phase of a query's execution.
Notes: Mostly adds will occur during this phase, but removals and changes can also occur, as in any update.
For performance reasons the arrays are empty in newer Mac OS X SDK versions.
In that case please use the result functions.

185.3.36 Update(AddedItems() as MDItemMBS, ChangedItems() as MDItemMBS, RemovedItems() as MDItemMBS)

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: The event is sent to indicate changes to the query's results list during the second, live-update, phase of a query's execution.

185.3.37 Constants

Constants

Constant	Value	Description
kMDQueryReverseSortOrderFlag	1	A flag constant for calling SetSortOptionFla Sort the attribute in reverse order. Available on Mac OS X 10.7 or later.
kMDQueryScopeAllIndexed	”kMDQueryScopeAllIndexed”	One of the option constants for the search sc A constant, which can be passed in the scop the search should be restricted to indexed, dexed user mounted remote volumes, plus th
kMDQueryScopeComputer	”kMDQueryScopeComputer”	One of the option constants for the search sc A constant, which can be passed in the scop the search should be restricted to all locally home directory (which may be on a remote
kMDQueryScopeComputerIndexed	”kMDQueryScopeComputerIndexed”	One of the option constants for the search sc A constant, which can be passed in the scop the search should be restricted to indexed, l user’s home directory (which may be on a re
kMDQueryScopeHome	”kMDQueryScopeHome”	One of the option constants for the search sc A constant, which can be passed in the scop the search should be restricted to the volum current user’s home directory
kMDQueryScopeNetwork	”kMDQueryScopeNetwork”	One of the option constants for the search sc A constant, which can be passed in the scop the search should include all user mounted r
kMDQueryScopeNetworkIndexed	”kMDQueryScopeNetworkIndexed”	One of the option constants for the search sc A constant, which can be passed in the scop the search should include indexed user mour
kMDQuerySynchronous	1	One of the constants for executing a query. Block during the gathering phase. If this pa not return until the query has finished gath loop will run in the default mode, which will mode with this run loop to execute as wel function returns immediately after starting t
kMDQueryWantsUpdates	4	One of the constants for executing a query. When set, after gathering the initial results t the system which should update the list of re cause new files to now match the query, or result list to continue to match, or no long begin to match the query are added to the re match the query expression are removed fro Currently, this parameter is ignored if the sy is subject to change, and you should always

185.4 Globals

185.4.1 SpotlightMBS(searchString as string) as Integer

MBS MacOSX Plugin, Plugin Version: 7.7, Platform: macOS, Targets: Desktop, Console & Web.

Function: Displays a Spotlight search window.
Example:

call SpotlightMBS("Hello")

Notes: searchString: An initial query string. Pass "" to open the search window with no initial query string.

Returns a Mac OS error code and -1 if the function is not available and 0 on success.
Requires Mac OS X 10.4.

Chapter 186

SQL

186.1 class Database

186.1.1 class Database

MBS SQL Plugin, Plugin Version: 1.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The Xojo Database class is the base class for the database subclasses that communicate with a variety of databases.
Notes: Use one of the subclasses to connect to your database.

186.1.2 Methods

186.1.3 AddRow(TableName as String, row as DatabaseRow)

MBS SQL Plugin, Plugin Version: 20.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Inserts Data (a populated DatabaseRow) as a new row in TableName.
See also:

- 186.1.4 AddRow(TableName as String, row as DatabaseRow, idColumnName as string = "") as Integer 21777

186.1.4 AddRow(TableName as String, row as DatabaseRow, idColumnName as string = "") as Integer

MBS SQL Plugin, Plugin Version: 24.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Inserts Data (a populated DatabaseRow) as a new row in TableName.

Notes: Returns insert ID if possible or -1 if not found.
Implemented directly in SQLDatabaseMBS for CubeSQL, SQLite, mariaDB and MySQL. Other databases need column name for ID to run a select to get the value.
For PostgreSQL we use RETURNING, so you need to pass name of the ID column.
See also:

- 186.1.3 AddRow(TableName as String, row as DatabaseRow) 21777

186.1.5 BeginTransaction

MBS SQL Plugin, Plugin Version: 20.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new transaction.
Notes: Changes to the database made after this call can be saved with CommitTransaction or undone with RollbackTransaction.

186.1.6 Close

MBS SQL Plugin, Plugin Version: 1.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Closes or disconnects the database.
Notes: Calling Close does not issue a Commit, but some databases will automatically Commit changes in a transaction when you Close the connection and some database will automatically Rollback changes in a transaction when the connection is closed. Refer to the documentation for your database to check what its behavior is.

For desktop applications, you will often Connect to the database when the app starts and Close it when the app quits.

For web applications, you usually Connect to the database when the Session starts and Close it when the Session quits.

186.1.7 Commit

MBS SQL Plugin, Plugin Version: 1.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Commits an open transaction. This permanently saves changes to the database.
Notes: You have to have an open transaction to be able to use Commit. On SQLite (and other databases), you can start a transaction with this command:

BEGIN TRANSACTION

It can be sent using SQLExecute:

DB.SQLExecute("BEGIN TRANSACTION")

186.1.8 CommitTransaction

MBS SQL Plugin, Plugin Version: 20.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Commits an open transaction. This permanently saves changes to the database.

186.1.9 Connect

MBS SQL Plugin, Plugin Version: 20.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Connects to the database so that you can begin using it.
See also:

- 186.1.10 Connect as boolean 21779

186.1.10 Connect as boolean

MBS SQL Plugin, Plugin Version: 1.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Connects to the database so that you can begin using it.
Notes: Before proceeding with database operations, test to be sure that Connect returns True.
If Connect returns False, you should also check the ErrorCode and ErrorMessage.

See Option() for various options you can set before connecting.
e.g. c.Option("SQLiteVFSFlags") = "1" for SQLite for read only access.
See also:

- 186.1.9 Connect 21779

186.1.11 ExecuteSQL(sql As String, ParamArray values As Variant)

MBS SQL Plugin, Plugin Version: 20.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Used to execute an SQL command.
Notes: Use this for commands that do not return any data, such as CREATE TABLE or INSERT.
See also:

- 186.1.12 ExecuteSQL(sql As String, values() As Variant) 21780

186.1.12 ExecuteSQL(sql As String, values() As Variant)

MBS SQL Plugin, Plugin Version: 20.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Used to execute an SQL command.
Notes: Use this for commands that do not return any data, such as CREATE TABLE or INSERT.
See also:

- 186.1.11 ExecuteSQL(sql As String, ParamArray values As Variant) 21779

186.1.13 InsertRecord(TableName as String, Data as DatabaseRecord)

MBS SQL Plugin, Plugin Version: 1.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Inserts Data (a populated DatabaseRecord) as a new row in TableName.
Notes: Always check the Error property to verity that the data was added.

186.1.14 Prepare(statement as String) as PreparedSQLStatement

MBS SQL Plugin, Plugin Version: 1.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a PreparedSQLStatement using the SQL statement for use with the various database prepared statement classes.
Notes: A prepared statement is an SQL statement with parameters that has been pre-processed by the database so that it can be executed more quickly if it is re-used with different parameters. Prepared statements also mitigate the risk of SQL injection in web apps.

186.1.15 Rollback

MBS SQL Plugin, Plugin Version: 1.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Cancels an open transaction restoring the database to the state it was in before the transaction began.
Notes: You will generally want to rollback database changes if a database error occurs within the transaction.
You have to have an open transaction to be able to use Rollback. On SQLite (and other databases), you can start a transaction with this command:

```
BEGIN TRANSACTION
```

It can be sent using SQLExecute:

DB.SQLExecute("BEGIN TRANSACTION")

186.1.16 RollbackTransaction

MBS SQL Plugin, Plugin Version: 20.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Cancels an open transaction restoring the database to the state it was in before the transaction began.

186.1.17 SelectSQL(sql As String, ParamArray values As Variant) as RowSet

MBS SQL Plugin, Plugin Version: 20.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Executes a SQL SELECT statement and returns the results in a RowSet.
See also:

- 186.1.18 SelectSQL(sql As String, values() As Variant) as RowSet 21781

186.1.18 SelectSQL(sql As String, values() As Variant) as RowSet

MBS SQL Plugin, Plugin Version: 20.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Executes a SQL SELECT statement and returns the results in a RowSet.
See also:

- 186.1.17 SelectSQL(sql As String, ParamArray values As Variant) as RowSet 21781

186.1.19 SQLExecute(ExecuteString as string)

MBS SQL Plugin, Plugin Version: 1.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Used to execute an SQL command. Use this for commands that do not return any data, such as CREATE TABLE or INSERT. ExecuteString contains the SQL statement.
Notes: To avoid SQL Injection, be sure to use Prepared SQL Statements.

186.1.20 SQLSelect(SelectString as string) as RecordSet

MBS SQL Plugin, Plugin Version: 1.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This is an SQL statement that returns a RecordSet.
Notes: SelectString contains the SQL statement.

Typically only SQL SELECT statements return a RecordSet, but some databases return a RecordSet for SQL commands such as INSERT, UPDATE or stored procedures.

If the SQL does not return data then Nil is returned. Nil is also usually returned if there is an error in the SQL statement, but you should instead check Database.Error to check if an error occurred.

To avoid SQL Injection, be sure to use Prepared SQL Statements.

186.1.21 Properties

186.1.22 DatabaseName as String

MBS SQL Plugin, Plugin Version: 1.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The name of the database to open.
Example:

```
Var db as new SQLDatabaseMBS
db.DatabaseName="PostgreSQL:127.0.0.1,5432@dbname=postgres connect_timeout=10 sslmode=require"
```

Notes: The DatabaseName is typically used with server databases (such as MySQL or PostgreSQL) to identify the specific database to use on the server.

Please set the DatabaseName, UserName and Password properties when using SQLDatabaseMBS class. The Host property is ignored.
The database name must contain the complete information and a prefix for the kind of database.
(Read and Write property)

186.1.23 Error as Boolean

MBS SQL Plugin, Plugin Version: 1.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: True if an error is returned from the database engine.
Notes: See the values of the ErrorCode and ErrorMessage properties to learn the specifics of the error.

You should check the Error property after each database operation to see if there was an error. If there is an error, you can display or log the ErrorCode and ErrorMessage.
(Read and Write property)

186.1.24 ErrorCode as Integer

MBS SQL Plugin, Plugin Version: 1.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The error code returned from the database.
Notes: Error codes and error messages are different for each database.
(Read and Write property)

186.1.25 ErrorMessage as String

MBS SQL Plugin, Plugin Version: 1.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Text of the error message returned from the database.
Notes: Error codes and error messages are different for each database.
You should check the Error property after each database operation to see if there was an error. If there is an error, you can display or log the ErrorCode and ErrorMessage.
(Read and Write property)

186.1.26 Host as String

MBS SQL Plugin, Plugin Version: 1.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The database host name or IP address of the database server.
Notes: (Read and Write property)

186.1.27 Password as String

MBS SQL Plugin, Plugin Version: 1.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The password that is required for access to the database.
Notes: Typically used in conjunction with UserName.
(Read and Write property)

186.1.28 UserName as String

MBS SQL Plugin, Plugin Version: 1.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The username that is required for access to the database.
Notes: (Read and Write property)

186.2 class DB2MBS

186.2.1 class DB2MBS

MBS SQL Plugin, Plugin Version: 13.2, Platforms: macOS, Linux, Windows, Targets: All.

Deprecated: This item is deprecated and should no longer be used. **Function:** The class for some DB2 related API commands.
Example:

```
Var cmd as new SQLCommandMBS // your command
Var con as new SQLConnectionMBS // your connection
Var api as DB2MBS = con.NativeAPI

// now use an API function
MsgBox str(api.SQLRowCount(cmd))
```

Notes: More commands are added as requested.

Deprecated in favor of direct methods on SQLCommandMBS. Please let us know if you need more DB2 specific functions.
Subclass of the SQLAPIMBS class.

186.2.2 Methods

186.2.3 SQLExecDirect(cmd as SQLCommandMBS, text as string)

MBS SQL Plugin, Plugin Version: 13.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Executes an SQL command directly without any preprocessing in the plugin.
Example:

```
Var cmd as new SQLCommandMBS // your command
Var con as new SQLConnectionMBS // your connection
Var api as DB2MBS = con.NativeAPI

// now use an API function
const sql = "some sql command"
```

api.SQLExecDirect cmd, sql

Notes: Lasterror is set.

186.2.4 SQLRowCount(cmd as SQLCommandMBS) as Int64

MBS SQL Plugin, Plugin Version: 13.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries the affected number of rows for the last operation.
Notes: Lasterror is set.

186.2.5 Properties

186.2.6 Lasterror as Integer

MBS SQL Plugin, Plugin Version: 13.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The last error code.
Notes: (Read and Write property)

186.3 class InformixMBS

186.3.1 class InformixMBS

MBS SQL Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Deprecated: This item is deprecated and should no longer be used. **Function:** The class for Informix specific functions.
Notes: Deprecated in favor of direct methods on SQLConnectionMBS. Please let us know if you need more Informix specific functions.
Subclass of the SQLAPIMBS class.

- MonkeyBread Software Releases the MBS Real Studio plug-ins in version 13.0
- MBS Real Studio Plugins, version 13.0fc1

186.3.2 Methods

186.3.3 Error(cmd as SQLCommandMBS, byref SQLState as string, byref NativeError as Integer, byref ErrorMsg as string) as Integer

MBS SQL Plugin, Plugin Version: 13.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries the error status.

186.3.4 GetCursorName(cmd as SQLCommandMBS) as string

MBS SQL Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries cursor name for given recordset.

186.3.5 HDBC as Integer

MBS SQL Plugin, Plugin Version: 13.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns Database Connection handle.

186.3.6 HENV as Integer

MBS SQL Plugin, Plugin Version: 13.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The environment handle.

186.3.7 HSTMT(cmd as SQLCommandMBS) as Integer

MBS SQL Plugin, Plugin Version: 13.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the statement handle for the command object.
Notes: Returns 0 on any error.

186.3.8 SetCursorName(cmd as SQLCommandMBS, name as string) as boolean

MBS SQL Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets cursor name for given recordset.
Notes: Returns true on success.

186.4 module InternalCubeSQLLibraryMBS

186.4.1 module InternalCubeSQLLibraryMBS

MBS SQL Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The module for our internal CubeSQL client connector.
Example:

```
if InternalCubeSQLLibraryMBS.Use then
MsgBox "Using internal CubeSQL library."
else
MsgBox "Failed, so please use library file."
end if

Var db As SQLDatabaseMBS // or SQLConnectionMBS

db.Option("ConnectionTimeout") = "30" // 30 seconds timeout
db.Option("ConnectionEncryption") = "SSL_AES256"
db.Option("SSLCertificatePath") = SSLCertificatePath

// connect...
```

Notes: This is a CubeSQL client library built into a plugin, so you can decide with use of MBS SQL Plugin to use this plugin instead of providing your own external copy of CubeSQL shared library.

Version 19.4 or newer have CubeSQL with SSL included.
You can use Option("ConnectionEncryption") with SSL, SSL+AES128, SSL+AES192 and SSL+AES256 as values.

If ConnectionEncryption is SSL, we can pass path from Option("SSLCertificatePath") with the certificate file.

Videos

- Presentation from Xojo Developer Conference 2019 in Miami.

186.4.2 Methods

186.4.3 SSLVersion as String

MBS SQL Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries SSL version of library.

186.4.4 Use as boolean

MBS SQL Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Registers the built in CubeSQL client library for use.
Example:

```
if InternalCubeSQLLibraryMBS.Use then
MsgBox "Using internal CubeSQL library."
else
MsgBox "Failed, so please use library file."
end if
```

Notes: So instead of having SQL Plugin load CubeSQL shared library from file, we use the one built into this plugin.

186.4.5 Version as String

MBS SQL Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries version of library.

186.5 module InternalSQLiteLibraryMBS

186.5.1 module InternalSQLiteLibraryMBS

MBS SQL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The module for our internal SQLite3 engine.
Example:

```
// enable our built-in SQLite library, which supports encryption
Call InternalSQLiteLibraryMBS.Use

// where to store?
Var f As FolderItem = SpecialFolder.Desktop.Child("test.db")
Var storage_database As New SQLDatabaseMBS ' SQLiteDatabase
storage_database.SQLiteEncryptionKey = "aes256:password" ' <- password with AES256 as prefix to pick algorithm
storage_database.DatabaseName = "sqlite:"+ f.NativePath

If storage_database.Connect Then

// create table if this is not yet here
storage_database.SQLExecute "Create table if not exists pics(pic_id integer PRIMARY KEY AUTOINCREMENT, name varchar(20), pic blob)"

// done
MsgBox "Ready"
Else
MsgBox storage_database.ErrorMessage
End If
```

Notes: This is a SQLite3 library built into a plugin, so you can decide with use of MBS SQL Plugin to use this plugin instead of providing your own external copy of SQLite shared library.

Our internal SQLite library includes the following extensions:

- JSON1, the extension to provide JSON functions
- FTS5, the full text search extension in version 5
- R*Tree index extension
- SOUNDEX function
- SQL math functions
- Geopoly extension

- ICU extension for unicode handling
- The RBU Extension
- SQLite Encryption Extension

You can turn on these SQLite extensions at runtime with MBS Plugin:

- UUID extension
- Base64 extension
- CSV extension

More extensions could be added on request.

186.5.2 Methods

186.5.3 CompileOption(index as Integer) as String

MBS SQL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries name of a compile option.
Example:

```
Var list() as string

for i as Integer = 0 to 100
Var s as string = InternalSQLiteLibraryMBS.CompileOption(i)
if s = "" then exit
Var b as Boolean = InternalSQLiteLibraryMBS.CompileOptionUsed(s)
Var t as string
if b then
t = ": yes"
else
t = ": no"
end if
list.Append s + t
next

MsgBox Join(list, EndOfLine)
```

Notes: Index index starting with zero until you get back an empty name.

186.5.4 CompileOptionUsed(optionName as String) as Boolean

MBS SQL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries if a given compile option was set on or off.
Example:

```
Var list() as string

for i as Integer = 0 to 100
Var s as string = InternalSQLiteLibraryMBS.CompileOption(i)
if s = "" then exit
Var b as Boolean = InternalSQLiteLibraryMBS.CompileOptionUsed(s)
Var t as string
if b then
t = ": yes"
else
t = ": no"
```

```
end if
list.Append s + t
next

MsgBox Join(list, EndOfLine)
```

Notes: If you need a specific option set, please contact MBS support.

186.5.5 DumpToFile(SqliteDBConectionHandle as Ptr, File as FolderItem, TableName as string = """, PreserveRowid as Boolean = false, Newlines as Boolean = false, DumpDataOnly as Boolean = false, DumpNoSys as Boolean = false)

MBS SQL Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Dumps SQLite database to text file just like dump command in SQLite command line tool.
Example:

```
Call InternalSQLiteLibraryMBS.Use

Var con As New SQLConnectionMBS

// connect....

Var handle As ptr = con.SQLiteConnectionHandle
Var file As FolderItem = SpecialFolder.Desktop.Child("dump.txt")
InternalSQLiteLibraryMBS.DumpToFile(handle, file)
```

Notes: Must use the internal SQLite database, otherwise it will crash.
Raises exception if handle or file is nil.
SQL errors are output by SQLite to the output file.

186.5.6 DumpToString(SqliteDBConectionHandle as Ptr, byref Data as String, MaximumSize as Integer = 10000000, TableName as string = """, PreserveRowid as Boolean = false, Newlines as Boolean = false, DumpDataOnly as Boolean = false, DumpNoSys as Boolean = false)

MBS SQL Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Dumps SQLite database to text file just like dump command in SQLite command line tool.
Example:

```
Call InternalSQLiteLibraryMBS.Use
```

```
Var con As New SQLConnectionMBS

// connect....

Var handle As ptr = con.SQLiteConnectionHandle
Var data as string
InternalSQLiteLibraryMBS.DumpToFile(handle, data, 1000000)
```

Notes: Must use the internal SQLite database, otherwise it will crash.
Raises exception if handle is nil or we run out of memory.
SQL errors are output by SQLite to the output file.

Please pass size of memory we should allocate. Then we can run the dump.
if the final COMMIT is missing or the size is close to the limit you gave, you may run again with higher limit.

186.5.7 DumpToStrings(SqliteDBConectionHandle as Ptr, SchemaName as String = ””, TableName as string = ””) as String()

MBS SQL Plugin, Plugin Version: 25.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Convert an SQLite database into SQL statements that will recreate that database.
Notes: Schema: Which schema to dump. Usually ”main”.
Table: Which table to dump. Pass ”” for all tables.

This subroutine converts the content of an SQLite database into UTF-8 text SQL statements that can be used to exactly recreate the original database. ROWID values are preserved.

The connection handle parameter is the SQLite database connection using our internal SQLite library. Schema is the schema within that database which is to be dumped. Usually the zSchema is ”main” but can also be ”temp” or any ATTACH-ed database. If Table is not empty, then only the content of that one table is dumped. If zTable is empty, then all tables are dumped.

The generate text is collected and returned as a string array.

186.5.8 isKeyword(name as string) as boolean

MBS SQL Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Checks if an identifier is a keyword.
Example:

```
if InternalSQLiteLibraryMBS.isKeyword("TABLE") then
MsgBox "Table is a keyword"
else
MsgBox "Table is not a keyword!"
end if
```

186.5.9 Keywords as String()

MBS SQL Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries list of keywords.
Example:

```
MsgBox Join(InternalSQLiteLibraryMBS.Keywords,EndOfLine)
```

186.5.10 LoadICU as Boolean

MBS SQL Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Loads ICU libraries now.
Example:

```
If InternalSQLiteLibraryMBS.ICULoaded Then
MessageBox "already loaded"
ElseIf InternalSQLiteLibraryMBS LoadICU Then
MessageBox "loaded successfully"
Else
MessageBox "failed to load the unicode libraries."
End If
```

Notes: Returns true on success.
Normally we load them when SQLite initializes and we then add the ICU extension if we find the library.
Call this function toe explicit load them now.

If MBS Plugin can find International Components for Unicode library files, we can load them and use them for proper unicode handling in SQLite.

186.5.11 SourceID as String

MBS SQL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The source code ID.
Example:

MsgBox InternalSQLiteLibraryMBS.SourceID

186.5.12 Use as boolean

MBS SQL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Registers the built in SQLite library for use.
Example:

```
if InternalSQLiteLibraryMBS.Use then
MsgBox "Using internal SQLite"
else
MsgBox "Failed, so please use library file."
end if
```

Notes: So instead of having SQL Plugin load sqlite3 shared library from file, we use the one built into this plugin.

186.5.13 Version as String

MBS SQL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries the version number.
Example:

```
MsgBox InternalSQLiteLibraryMBS.Version
```

186.5.14 VersionNumber as Integer

MBS SQL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries the sqlite version number.
Example:

```
MsgBox str(InternalSQLiteLibraryMBS.VersionNumber)
```

186.5.15 Properties

186.5.16 Base64ExtensionEnabled as Boolean

MBS SQL Plugin, Plugin Version: 25.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether to enable the Base64 extensions.
Notes: This is a SQLite extension for converting in either direction between a (binary) blob and base64 text. Base64 can transit a sane USASCII channel unmolested. It also plays nicely in CSV or written as TCL brace-enclosed literals or SQL string literals, and can be used unmodified in XML-like documents.

This is an independent implementation of conversions specified in RFC 4648, done on the above date by the author (Larry Brasfield) who thereby has the right to put this into the public domain.

The conversions meet RFC 4648 requirements, provided that this C source specifies that line-feeds are included in the encoded data to limit visible line lengths to 72 characters and to terminate any encoded blob having non-zero length.

Length limitations are not imposed except that the runtime SQLite string or blob length limits are respected. Otherwise, any length binary sequence can be represented and recovered. Generated base64 sequences, with their line-feeds included, can be concatenated; the result converted back to binary will be the concatenation of the represented binary sequences.

This SQLite3 extension creates a function, base64(x), which either: converts text x containing base64 to a returned blob; or converts a blob x to returned text containing base64. An error will be thrown for other input argument types.
(Read and Write property)

186.5.17 CSVExtensionEnabled as Boolean

MBS SQL Plugin, Plugin Version: 25.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether to enable the CSV extensions.
Notes: This file contains the implementation of an SQLite virtual table for reading CSV files.

Usage:

.load ./csv
CREATE VIRTUAL TABLE temp.csv USING csv(filename=FILENAME);
SELECT * FROM csv;

The columns are named "c1", "c2", "c3", ... by default. Or the application can define its own CREATE TABLE statement using the schema= parameter, like this:

CREATE VIRTUAL TABLE temp.csv2 USING csv(
filename = "../http.log",
schema = "CREATE TABLE x(date,ipaddr,url,referrer,userAgent)"

);

Instead of specifying a file, the text of the CSV can be loaded using the data= parameter.

If the columns=N parameter is supplied, then the CSV file is assumed to have N columns. If both the columns= and schema= parameters are omitted, then the number and names of the columns is determined by the first line of the CSV input.
(Read and Write property)

186.5.18 ICUEnabled as Boolean

MBS SQL Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether ICU libraries are enabled.
Notes: If MBS Plugin can find International Components for Unicode library files, we can load them and use them for proper unicode handling in SQLite.
Default is true to enable them, if possible.
(Read and Write property)

186.5.19 ICULoaded as Boolean

MBS SQL Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether ICU libraries are loaded.
Notes: If MBS Plugin can find International Components for Unicode library files, we can load them and use them for proper unicode handling in SQLite.
(Read only property)

186.5.20 ICUUsed as Boolean

MBS SQL Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether ICU libraries have been used.
Notes: Once SQLite is initialized, we set this to 1 if we passed the functionality to SQLite.
Starts with false and should later turn true if ICU libraries are loaded and enabled for usage.
(Read only property)

186.5.21 MemoryHighwater as Int64

MBS SQL Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries high water memory usage mark.
Example:

```
MsgBox "SQLite uses "+_
str(InternalSQLiteLibraryMBS.MemoryUsed)+_
" bytes and has a high mark of "+_
str(InternalSQLiteLibraryMBS.MemoryHighwater)+" bytes."
```

Notes: (Read only property)

186.5.22 MemoryUsed as Int64

MBS SQL Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries current memory usage.
Example:

```
MsgBox "SQLite uses "+_
str(InternalSQLiteLibraryMBS.MemoryUsed)+_
" bytes and has a high mark of "+_
str(InternalSQLiteLibraryMBS.MemoryHighwater)+" bytes."
```

Notes: (Read only property)

186.5.23 Path as String

MBS SQL Plugin, Plugin Version: 24.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries file path to the plugin library.
Notes: Allows you to query path for plugin library, so you can pass it to SQLite to load as extension.
(Read only property)

186.5.24 UUIDExtensionEnabled as Boolean

MBS SQL Plugin, Plugin Version: 25.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether to enable the uuid extensions.
Notes: This SQLite extension implements functions that handling RFC-4122 UUIDs

Three SQL functions are implemented:

uuid()	generate a version 4 UUID as a string
uuid_str(X)	convert a UUID X into a well-formed UUID string
uuid_blob(X)	convert a UUID X into a 16-byte blob

The output from uuid() and uuid_str(X) are always well-formed RFC-4122 UUID strings in this format:

xxxxxxxx-xxxx-Mxxx-Nxxx-xxxxxxxxxxxx

All of the 'x', 'M', and 'N' values are lower-case hexadecimal digits. The M digit indicates the "version". For uuid()-generated UUIDs, the version is always "4" (a random UUID). The upper three bits of N digit are the "variant". This library only supports variant 1 (indicated by values of N between '8' and 'b') as those are overwhelming the most common. Other variants are for legacy compatibility only.

The output of uuid_blob(X) is always a 16-byte blob. The UUID input string is converted in network byte order (big-endian) in accordance with RFC-4122 specifications for variant-1 UUIDs. Note that network byte order is *always* used, even if the input self-identifies as a variant-2 UUID.

The input X to the uuid_str() and uuid_blob() functions can be either a string or a BLOB. If it is a BLOB it must be exactly 16 bytes in length or else a NULL is returned. If the input is a string it must consist of 32 hexadecimal digits, upper or lower case, optionally surrounded by { ... } and with optional "-" characters interposed in the middle. The flexibility of input is inspired by the PostgreSQL implementation of UUID functions that accept in all of the following formats:

- A0EEBC99-9C0B-4EF8-BB6D-6BB9BD380A11
- { a0eebc99-9c0b-4ef8-bb6d-6bb9bd380a11 }
- a0eebc999c0b4ef8bb6d6bb9bd380a11
- a0ee-bc99-9c0b-4ef8-bb6d-6bb9-bd38-0a11
- { a0eebc99-9c0b4ef8-bb6d6bb9-bd380a11 }

If any of the above inputs are passed into uuid_str(), the output will always be in the canonical RFC-4122 format:

- a0eebc99-9c0b-4ef8-bb6d-6bb9bd380a11

If the X input string has too few or too many digits or contains stray characters other than { , } , or -, then NULL is returned.
(Read and Write property)

186.6 class MySQLMBS

186.6.1 class MySQLMBS

MBS SQL Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Deprecated: This item is deprecated and should no longer be used. **Function:** The class for MySQL specific functionality.
Notes: Deprecated in favor of direct methods on SQLConnectionMBS. Please let us know if you need more MySQL or MariaDB specific functions.
Subclass of the SQLAPIMBS class.

186.6.2 Methods

186.6.3 AffectedRows as UInt64

MBS SQL Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries the number of affected rows in the last statement.
Notes: see also
http://dev.mysql.com/doc/refman/5.1/en/mysql-affected-rows.html

186.6.4 Error as string

MBS SQL Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries the last error text.
Notes: see also
http://dev.mysql.com/doc/refman/5.1/en/mysql-error.html

186.6.5 ErrorNumber as UInt32

MBS SQL Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries the last error code.
Notes: see also
http://dev.mysql.com/doc/refman/5.1/en/mysql-errno.html

186.6.6 FieldCount as UInt32

MBS SQL Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the number of columns for the most recent query on the connection.
Notes: see also
http://dev.mysql.com/doc/refman/5.1/en/mysql-field-count.html

186.6.7 Info as string

MBS SQL Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Retrieves an info string providing information about the most recently executed statement.
Notes: see also
http://dev.mysql.com/doc/refman/5.1/en/mysql-info.html

186.6.8 InsertID as Int64

MBS SQL Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the last auto increment value from last insert command.
Notes: Please query value right after doing Insert. This value is reset when you call commit.
For mySQL and MariaDB connections.

see also
http://dev.mysql.com/doc/refman/5.1/en/mysql-insert-id.html

186.6.9 NumberOfRows(cmd as SQLCommandMBS) as UInt64

MBS SQL Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries number of records in a command.

186.6.10 SetSSL(keyPath as string, CertificatePath as string, AuthorityPath as string, authorityFolderPath as string, Cipher as string)

MBS SQL Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets SSL connection parameters.
Notes: Calls mysql_ssl_set internally.
Used for establishing secure connections using SSL. It must be called before Connect(). It does nothing unless SSL support is enabled in the client library.

keyPath is the path name to the key file.
CertificatePath is the path name to the certificate file.
AuthorityPath is the path name to the certificate authority file.
authorityFolderPath is the path name to a directory that contains trusted SSL CA certificates in PEM format.
Cipher is a list of permissible ciphers to use for SSL encryption.

Any unused SSL parameters may be given as empty string.
For paths, please use folderitem.NativePath and not folderitem.ShellPath.

Please switch to using the following options on the connection:

MYSQL_SSL_KEY
MYSQL_SSL_CERT
MYSQL_SSL_CA
MYSQL_SSL_CAPATH
MYSQL_SSL_CIPHER

They should be specified before the connection is made.
e.g.

db.Option("MYSQL_SSL_CIPHER") = "DHE-RSA-AES256-SHA"

Allows to specify MySQL SSL parameters that will be used with mysql_ssl_set. MySQL API method called only when at least one parameter specified. See MySQL documentation for more information about these options.

186.7 class PostgreSQLAPIMBS

186.7.1 class PostgreSQLAPIMBS

MBS SQL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Deprecated: This item is deprecated and should no longer be used. **Function:** The class for Postgre SQL specific functions.
Notes: The Listen method and Notification event are in the SQLDatabaseMBS/SQLConnectionMBS classes directly.

Deprecated in favor of direct methods on SQLCommandMBS. Please let us know if you need more postgreSQL specific functions.
Subclass of the SQLAPIMBS class.

186.7.2 Methods

186.7.3 DB as string

MBS SQL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: The database name used to create the connection.

186.7.4 ErrorMessage as string

MBS SQL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: The last error message.

186.7.5 Field(cmd as SQLCommandMBS, RecordIndex as Integer, FieldIndex as Integer) as string

MBS SQL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries a field by index for the row with the RecordIndex.
See also:

- 186.7.6 Field(cmd as SQLCommandMBS, RecordIndex as Integer, FieldName as string) as string 21805

186.7.6 Field(cmd as SQLCommandMBS, RecordIndex as Integer, FieldName as string) as string

MBS SQL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries a field by name for the row with the RecordIndex.
See also:

- 186.7.5 Field(cmd as SQLCommandMBS, RecordIndex as Integer, FieldIndex as Integer) as string 21804

186.7.7 FieldCount(cmd as SQLCommandMBS) as Integer

MBS SQL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of fields in the result.

186.7.8 Host as string

MBS SQL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: The host used to create the connection.

186.7.9 Options as string

MBS SQL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: The options used to create the connection.

186.7.10 Password as string

MBS SQL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: The password used to create the connection.

186.7.11 Port as string

MBS SQL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: The port used to create the connection.

186.7.12 RecordCount(cmd as SQLCommandMBS) as Integer

MBS SQL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of records in the result.

186.7.13 TTY as string

MBS SQL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tty used to create the connection.

186.7.14 User as string

MBS SQL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: The user name used to create the connection.

186.8 Globals

186.8.1 BuildRecordSetMBS(fieldNames() as string, values() as string) as RecordSet

MBS SQL Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Builds a recordset from strings.
Example:

```
Var names() as string = array("Firstname", "Lastname")
Var values() as string

values.append "Stefan"
values.append "Miller"
values.append "Patrick"
values.append "Maier"

Var r as RecordSet = BuildRecordSetMBS(names, values)
```

Notes: First array has field names. Second array has all values.
As plugin can't access multi dimensional arrays, we have to flatten it into one dimension and concat all rows.
Returns nil on low memory.
Array sizes should be like: Ubound(values)+1 = (ubound(fieldNames)+1) * RecordCount

See also BuildRowSetMBS for newer Xojo versions.

186.8.2 BuildRowSetMBS(fieldNames() as string, values() as string) as RowSet

MBS SQL Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Builds a recordset from strings.
Example:

```
Var names() as string = array("Firstname", "Lastname")
Var values() as string

values.append "Stefan"
values.append "Miller"
values.append "Patrick"
values.append "Maier"

Var r as RowSet = BuildRowSetMBS(names, values)
```

Notes: First array has field names. Second array has all values.
As plugin can't access multi dimensional arrays, we have to flatten it into one dimension and concat all rows.
Returns nil on low memory.
Array sizes should be like: Ubound(values)+1 = (ubound(fieldNames)+1) * RecordCount

RowSet requires Xojo 2019r2 or newer.

- 186.11.7 Constructor(dataProvider as SQLDataProviderMBS, BlockSize as UInt32) 21812

186.11.5 Constructor(data as SQLStringMBS)

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new blob object from a string object.
See also:

- 186.11.3 Constructor 21811
- 186.11.4 Constructor(Data as MemoryBlock) 21811
- 186.11.6 Constructor(Data as string, isText as Boolean = True) 21812
- 186.11.7 Constructor(dataProvider as SQLDataProviderMBS, BlockSize as UInt32) 21812

186.11.6 Constructor(Data as string, isText as Boolean = True)

MBS SQL Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new string object with data or text copied from the data string.
Notes: If isText is true, the data is interpreted as text and string encoding conversion may modify it. If isText is false the bytes are copied raw.
See also:

- 186.11.3 Constructor 21811
- 186.11.4 Constructor(Data as MemoryBlock) 21811
- 186.11.5 Constructor(data as SQLStringMBS) 21812
- 186.11.7 Constructor(dataProvider as SQLDataProviderMBS, BlockSize as UInt32) 21812

186.11.7 Constructor(dataProvider as SQLDataProviderMBS, BlockSize as UInt32)

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new blob object from a data provider.
Notes: The blocksize specifies in which sizes data is requested from the provider.
You must make sure that the data provider and this new blob object life long enough. Because the actual data is requested later when you do the update on the database.

If BlockSize is 0, the default block size is used.

186.14 class SQLCommandMBS

186.14.1 class SQLCommandMBS

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: This is the central class for the using the SQL database access.
Example:

```
Var con as SQLConnectionMBS
Var cmd as SQLCommandMBS

try

con = new SQLConnectionMBS // connection object
cmd = new SQLCommandMBS // create command object

// where is the library?
con.SetFileOption con.kOptionLibraryMySQL, SpecialFolder.UserHome.Child("libmysqlclient.dylib")

// connect to database (mySQL in our example)
// server: 192.168.1.80
// port: 3306
// database: test
// name: root
// no password
con.Connect("192.168.1.80,3306@test","root","",SQLConnectionMBS.kMySQLClient)
// associate a command with connection
// connection can also be specified in SACommand constructor
cmd.Connection=con

// create table
cmd.setCommandText("Create table test_tbl(fid integer, fvarchar20 varchar(20), fblob blob)")
cmd.Execute

// insert value
cmd.setCommandText("Insert into test_tbl(fid, fvarchar20) values (1, 'Some string (1)')")
cmd.Execute

// commit changes on success
con.Commit

MsgBox("Table created, row inserted!")

catch r as SQLErrorExceptionMBS
// SAConnection::Rollback()
// can also throw an exception
// (if a network error for example),
```

```
// we will be ready
try

// on error rollback changes
if con<>nil then
con.rollback
end if
catch x as SQLErrorExceptionMBS
// ignore
end try

// show error message
MsgBox r.message
end try
```

Notes: The plugin can cache the recordset locally. To enable you can call SQLCommandMBS.Cache or use the Option("AutoCache") = "true" on either command or connection or database objects. The plugin will than fetch all records and store them in memory. After this you can walk over the recordset and use FetchPos, FetchFirst, FetchLast, FetchPrev and FetchNext to locate the rows you need. When you call Field() you always get last row, but to read from cached result set, please use Value() function. When using RecordSet, the values are read via Value() functions automatically.

186.14.2 Methods

186.14.3 AsRecordSet as RecordSet

MBS SQL Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a recordset using the command to query fields.
Notes: You can use normal RecordSet functions to walk through fields and they simply control the command object.
This is for convenience like passing RecordSet to report functions in Xojo.

For this method to work, you need to have somewhere a property with SQLDatabaseMBS so Xojo includes our SQLDatabase plugin which provides the RecordSet functionality.

The record set may not have a valid RecordCount or have working movefirst/movelast/moveprev methods unless the underlaying database supports those and Scrollable result sets is enabled/supported.

186.14.4 AsRowSet as RowSet

MBS SQL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a RowSet using the command to query fields.
Notes: You can use normal RowSet functions to walk through fields and they simply control the command object.
This is for convenience like passing RowSet to other functions in Xojo.

For this method to work, you need to have somewhere a property with SQLDatabaseMBS so Xojo includes our SQLDatabase plugin which provides the RowSet functionality.

The RowSet may not have a valid RecordCount or have working movefirst/movelast/moveprev methods unless the underlaying database supports those and Scrollable result sets is enabled/supported.

Requires Xojo 2019r2 or newer.

186.14.5 Cache

MBS SQL Plugin, Plugin Version: 16.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Caches values.
Notes: The plugin will load the whole recordset and store it in memory.
Now you can move forward/backward as needed to read data.

If you set Option("AutoCache") = "true", the plugin will call Cache automatically for all result sets.
We can only cache first result set.

186.14.6 Cancel

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Attempts to cancel the pending result set, or current statement execution.
Notes: Only if isExecuting is true, doing cancel makes sense.

Cancel can cancel the following types of processing on a statement:

A function running asynchronously on the statement.
A function running on the statement on another thread.
After an application calls a function asynchronously, it checks repeatedly to determine whether it has finished processing. While the function is processing, an application can call Cancel to cancel the function.

In a multithread application, the application can cancel a function that is running synchronously on a statement.

see also
https://www.sqlapi.com/ApiDoc/class_s_a_command.html

186.14.7 Close

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Closes the specified command object.
Notes: Use the Close method to close the command explicitly.

A command will be implicitly closed in destructor, so you don't have to call Close method explicitly.

186.14.8 Constructor

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new command object with no connection and no command text.
See also:

- 186.14.9 Constructor(connection as SQLConnectionMBS, SQLCommand as String, CommandType as Integer = 0) 21821

186.14.9 Constructor(connection as SQLConnectionMBS, SQLCommand as String, CommandType as Integer = 0)

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: This constructor initializes a new SQLCommandMBS object.
Example:

```
// your connection
Var con as SQLConnectionMBS
Var SQL as string = "Insert into test_tbl(fid, fvarchar20) values(:id, :name)"

// create command object
Var cmd as new SQLCommandMBS(con, sql)

// assign values by name of parameter:
cmd.Param("id").setAsLong(2)
cmd.Param("name").setAsString(new SQLStringMBS("Some string (2)"))

// Insert first row
cmd.Execute
```

Notes: Connection: the connection to associated with the command.
SQLCommand: A string which represents command text string (an SQL statement or a stored procedure name). If it is an empty string, no command text is associated with the command, and you have to call setCommandText method later.
CommandType: The type of command like kCommandTypeUnknown, kCommandTypeSQLStatement, kCommandTypeSQLStatementRaw or kCommandTypeStoredProcedure.

All text strings sent to the plugin must have a defined encoding. Else the internal text encoding conversions will fail.
See also:

- 186.14.8 Constructor 21821

186.14.10 CreateParam(name as string, ParamType as Integer, DirType as Integer=0) as SQLParamMBS

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates parameter associated with the specified command.
Notes: Parameters

name:	A string representing the name of parameter.
ParamType:	Type of the parameter's value. Use the kDataType constants.
ParamSize:	An integer value represents parameter's value size.
ParamPrecision:	An integer value represents parameter's value precision.
ParamScale:	An integer value represents parameter's value scale.
DirType:	Type of the parameter. Use the kParamDirType* constants.

Returns a new SQLParamMBS object on success or nil on any error.

Normally you should not create parameters by yourself. The Library automatically detects whether the command has parameters in terms of the command text and implicitly creates a set of SAParam objects.

Nevertheless, if you call CreateParam explicitly you have to delete all SAParam objects created automatically by the Library before. Use DestroyParams method before the first call of CreateParam method.
See also:

- 186.14.11 CreateParam(name as string, ParamType as Integer, NativeType as Integer, ParamSize as Integer, ParamPrecision as Integer, ParamScale as Integer, DirType as Integer=0) as SQLParamMBS 21822

186.14.11 CreateParam(name as string, ParamType as Integer, NativeType as Integer, ParamSize as Integer, ParamPrecision as Integer, ParamScale as Integer, DirType as Integer=0) as SQLParamMBS

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates parameter associated with the specified command.
Notes: Parameters

Returns a new SQLParamMBS object on success or nil on any error.

Normally you should not create parameters by yourself. The Library automatically detects whether the command has parameters in terms of the command text and implicitly creates a set of SAParam objects.

name:	A string representing the name of parameter.
ParamType:	Type of the parameter's value. Use the kDataType constants.
ParamSize:	An integer value represents parameter's value size.
ParamPrecision:	An integer value represents parameter's value precision.
ParamScale:	An integer value represents parameter's value scale.
DirType:	Type of the parameter. Use the kParamDirType* constants.

Nevertheless, if you call CreateParam explicitly you have to delete all SAParam objects created automatically by the Library before. Use DestroyParams method before the first call of CreateParam method.
See also:

- 186.14.10 CreateParam(name as string, ParamType as Integer, DirType as Integer=0) as SQLParamMBS 21822

186.14.12 DB2SQLExecDirect(sql as string)

MBS SQL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Executes an SQL command directly without any preprocessing in the plugin.
Example:

```
Var cmd as new SQLCommandMBS // your command
Var con as new SQLConnectionMBS // your connection

// now use an API function
const sql = "some sql command"
cmd.DB2SQLExecDirect sql
```

Notes: Lasterror is set.

186.14.13 DB2SQLRowCount as Int64

MBS SQL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries the affected number of rows for the last operation.
Notes: Lasterror is set.

186.14.14 DestroyParams

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Destroys all parameters associated with the specified command.
Notes: DestroyParams method destroys all parameters either created automatically by the Library or by user.

Normally you should not create and delete parameters by yourself. The Library automatically detects whether the command has parameters, implicitly creates a set of SAParam objects and then deletes them in SACommanddestructor. But if you have some reason to create parameters explicitly use CreateParam method and then call DestroyParams method to delete all parameters after your work with parameters is over.

186.14.15 Execute

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Executes the current command.
Example:

```
// your connection
Var con as SQLConnectionMBS
Var SQL as string = "Insert into test_tbl(fid, fvarchar20) values(:id, :name)"

// create command object
Var cmd as new SQLCommandMBS(con, sql)

// assign values by name of parameter:
cmd.Param("id").setAsLong(2)
cmd.Param("name").setAsString(new SQLStringMBS("Some string (2)"))

// Insert first row
cmd.Execute
```

Notes: Use the Execute method to execute the query or stored procedure specified in the command text. Execute method calls Prepare method implicitly if needed. If the command has input parameters, they should be bound before calling Execute method. Input parameters represented by SAParam object. To bind input variables assign a value to SAParam object returning by Param or ParamByIndex methods.

A command (an SQL statement or procedure) can have a result set after executing. To check whether a result set exists use isResultSet method. If result set exists, a set of SAField objects is created after command execution. Rows from the result set can be fetched one by one using FetchNext method. To get field description or value use Field method.

Output parameters represented by SAParam objects. They are available after command execution. To get parameter description or value use Param or ParamByIndex methods.

186.14.16 ExecuteCommand(SQLCommand as string, CommandType as Integer=0)

MBS SQL Plugin, Plugin Version: 10.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Executes the given command.
Notes: This is a convenience function.
Internally it calls setCommandText with the given command and calls Execute.

All text strings sent to the plugin must have a defined encoding. Else the internal text encoding conversions will fail.

186.14.17 ExecuteCommandMT(SQLCommand as string, CommandType as Integer=0)

MBS SQL Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Executes the given command.
Notes: This is a convenience function.
Internally it calls setCommandText with the given command and calls Execute.

The work is performed on a preemptive thread, so this function does not block the application and can yield time to other Xojo threads. Must be called in a Xojo thread to enjoy benefits. If called in main thread will block, but keep other background threads running.

All text strings sent to the plugin must have a defined encoding. Else the internal text encoding conversions will fail.

186.14.18 ExecuteMT

MBS SQL Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Executes the current command.
Notes: Use the Execute method to execute the query or stored procedure specified in the command text. Execute method calls Prepare method implicitly if needed. If the command has input parameters, they should be bound before calling Execute method. Input parameters represented by SAParam object. To bind input variables assign a value to SAParam object returning by Param or ParamByIndex methods.

A command (an SQL statement or procedure) can have a result set after executing. To check whether a result set exists use isResultSet method. If result set exists, a set of SAField objects is created after command execution. Rows from the result set can be fetched one by one using FetchNext method. To get field description or value use Field method.

Output parameters represented by SAParam objects. They are available after command execution. To get parameter description or value use Param or ParamByIndex methods.

The work is performed on a preemptive thread, so this function does not block the application and can yield time to other Xojo threads. Must be called in a Xojo thread to enjoy benefits. If called in main thread will block, but keep other background threads running.

186.14.19 FetchFirst as boolean

MBS SQL Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Fetches first row from a result set.
Notes: Same as FetchNext, but jumps to the first row.
Returns true if the row was fetched; otherwise false.

Not supported for Interbase and SQLite.

When you cache the result set, you can always move within the result set.

186.14.20 FetchLast as boolean

MBS SQL Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Fetches last row from a result set.
Notes: Same as FetchNext, but jumps to the last row.
Returns true if the row was fetched; otherwise false.

Not supported for Interbase and SQLite.

When you cache the result set, you can always move within the result set.

186.14.21 FetchNext as boolean

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Fetches next row from a result set.
Notes: Returns true if the next row was fetched; otherwise false .

Use FetchNext method to fetch row by row from the result set.

Each column of fetched row is represented by SAField object. If a result set exists after the last command execution, a set of SAField objects is created implicitly. To check whether a result set exists use isResultSet method. FetchNext method updates value parts of SAField objects.

To get field description or value use Field method.

When you cache the result set, you can always move within the result set.

186.14.22 FetchPos(offset as Integer, relative as boolean = false) as boolean

MBS SQL Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Fetches a row by index.
Notes: Returns true if the row was fetched; otherwise false.
You may need to request recordset to be scrollable to have this work.
For that, please set Option("Scrollable") = "true" before doing the query.

When you cache the result set, you can always move within the result set.

186.14.23 FetchPrior as boolean

MBS SQL Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Fetches previous row from a result set.
Notes: Returns true if the row was fetched; otherwise false.
Same as FetchNext, just going back inside the result set.

Not supported for Interbase and SQLite.

When you cache the result set, you can always move within the result set.

186.14.24 Field(index as Integer) as SQLFieldMBS

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the column specified by its position in the result set.
Example:

```
Var c as SQLCommandMBS // your command object

// get field by name
Var f1 as SQLFieldMBS = c.Field("FirstName")

// get field by Index
Var f2 as SQLFieldMBS = c.Field(1)
```

Notes: index: A one-based field number in a result set.

Use Field method to access a field by its name or position in the result set.
For Cached result sets, please use Value() function to get values.

Using an index smaller than 1 and greater then the value returned by FieldCount method will result in a failed assertion.

A set of SAField objects creates implicitly after the command execution if the result set exists.SAField object contains full information about a column: name, type, size, value.

Raises OutOfBoundsException exception if index parameter is out of range.
See also:

- 186.14.25 Field(name as string) as SQLFieldMBS 21828

186.14.25 Field(name as string) as SQLFieldMBS

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the column specified by its name in the result set.
Example:

```
Var c as SQLCommandMBS // your command object

// get field by name
Var f1 as SQLFieldMBS = c.Field("FirstName")

// get field by Index
Var f2 as SQLFieldMBS = c.Field(1)
```

Notes: name: A string that represents a name of the requested field.

Returns a reference to a SAField object.

Use Field method to access a field by its name or position in the result set.
For Cached result sets, please use Value() function to get values.

Using a non-existent field name will throw an exception.

A set of SAField objects creates implicitly after the command execution if the result set exists.SAField object contains full information about a column: name, type, size, value.
See also:

- 186.14.24 Field(index as Integer) as SQLFieldMBS 21827

186.14.26 FieldExists(name as string) as Boolean

MBS SQL Plugin, Plugin Version: 21.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Checks whether a field exists.
Notes: Returns true if field is found or false if not.

186.14.27 FieldNames as String()

MBS SQL Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns an array with all the field names for quick inspection.
Example:

```
Var cmd as SQLCommandMBS // your command

Var FieldNames() as String = cmd.FieldNames
```

186.14.28 Open

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Opens the specified command object.
Notes: Use the Open method to open the command explicitly.

A command will be implicitly opened by any method that needs an open command, therefore you don't have to call it explicitly.

To test whether a command is opened use isOpened method.

186.14.29 Param(ID as Integer) as SQLParamMBS

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the command parameter specified by its position.
Notes: ID: A position of parameter specified in the command text. Normally position is a number stated in the command text after a colon (for example, 1 for :1, 5 for :5).

Returns a reference to a SAParam object which is only valid as long as the param object is not deleted by the library.

Use Param method to access a parameter by its name or position (in SQL statement). If, for example, you want to walk through all the parameters use ParamByIndex method.

If parameters were not created before calling Param method the Library creates them implicitly (can query native API if needed and therefore can throw exception on error) and then returns the specified parameter.

Passing a value of name or position which does not specified in the command text will throw an exception.

SAParam object contains full information about a parameter: name, type, size, etc. Values for the input parameters can be assigned to SAParam object.
See also:

- 186.14.30 Param(name as string) as SQLParamMBS 21830

186.14.30 Param(name as string) as SQLParamMBS

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the command parameter specified by its name.
Example:

```
// your connection
Var con as SQLConnectionMBS
Var SQL as string = "Insert into test_tbl(fid, fvarchar20) values(:id, :name)"

// create command object
Var cmd as new SQLCommandMBS(con, sql)

// assign values by name of parameter:
cmd.Param("id").setAsLong(2)
cmd.Param("name").setAsString(new SQLStringMBS("Some string (2)"))

// Insert first row
cmd.Execute
```

Notes: Name: A string that represents a name of the requested parameter. Normally name is a string stated in the command text after a colon (for example, 'city' for :city, 'my city' for :"my city") or a parameter name in a stored procedure or function.

Returns a reference to a SAParam object which is only valid as long as the param object is not deleted by the library.

Use Param method to access a parameter by its name or position (in SQL statement). If, for example, you want to walk through all the parameters use ParamByIndex method.

If parameters were not created before calling Param method the Library creates them implicitly (can query native API if needed and therefore can throw exception on error) and then returns the specified parameter.

Passing a value of name or position which does not specified in the command text will throw an exception.

SAParam object contains full information about a parameter: name, type, size, etc. Values for the input parameters can be assigned to SAParam object.
See also:

- 186.14.29 Param(ID as Integer) as SQLParamMBS 21830

186.14.31 ParamByIndex(index as Integer) as SQLParamMBS

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the command parameter specified by index.
Notes: Index: A zero-based index of the requested parameter in the array of SAParam objects. It must be greater than or equal to 0 and 1 less than the value returned by ParamCount method.

Returns a reference to a SAParam object.

Normally you should use Param method to access a parameter by its name or position (in SQL statement). ParamByIndex method can be used if, for example, you want to walk through all the parameters.

If parameters were not created before calling ParamByIndex method the Library creates them implicitly (can query native API if needed and therefore can throw exception on error) and then returns the specified parameter.

Passing a negative value of index or a value greater or equal than the value returned by ParamCount method will result in a failed assertion.

SAParam object contains full information about a parameter: name, type, size, etc. Values for the input parameters can be assigned to SAParam object.

Raises OutOfBoundsException exception if index parameter is out of range.

186.14.32 PostgreSQLField(RecordIndex as integer, FieldIndex as integer) as string

MBS SQL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries a field by index for the row with the RecordIndex.
See also:

- 186.14.33 PostgreSQLField(RecordIndex as integer, FieldName as string) as string 21832

186.14.33 PostgreSQLField(RecordIndex as integer, FieldName as string) as string

MBS SQL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries a field by name for the row with the RecordIndex.
See also:

- 186.14.32 PostgreSQLField(RecordIndex as integer, FieldIndex as integer) as string 21832

186.14.34 PostgreSQLFieldCount as Integer

MBS SQL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of fields in the result.

186.14.35 PostgreSQLRowCount as Integer

MBS SQL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of records in the result.

186.14.36 Prepare

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Prepares command before execution.
Notes: Prepare method compiles the command, but does not execute it. The method detects syntax errors in command text and verifies the existence of database objects.

Execute method calls Prepare method implicitly if needed, therefore you don't have to call it explicitly.

186.14.37 setCommandText(SQLCommand as string, CommandType as Integer = 0)

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the command text.
Example:

```
Var s as new SQLCommandMBS

s.setCommandText "select * from test"

MsgBox s.CommandText
```

Notes: SQLCommand: A string which represents command text string (an SQL statement or a stored procedure name).
CommandType: The type of command like kCommandTypeUnknown, kCommandTypeSQLStatement, kCommandTypeSQLStatementRaw or kCommandTypeStoredProcedure.

It's not necessary to set a command type explicitly, because it is defined automatically in terms of command text string. But if you still have any reason to do it, use one of the kCommandType* constants. To get command type use CommandType method.

186.14.38 SetParameters(Params as dictionary)

MBS SQL Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the parameters based on the keys and values in the dictionary.
Example:

```
Var con as SQLConnectionMBS // your connection
Var pic as picture // some picture

// get picture data
```

```
Var jpegData as MemoryBlock = pic.GetData(Picture.FormatJPEG, 80)

// parse a SQL command
Var sql as string = "Insert into BlobTest(name, image) values (:name, :image)"
Var cmd as new SQLCommandMBS(con, sql)

Var d as new Dictionary
// set by param index
d.Value(0) = "test.jpg"
// set by param name
d.Value("image") = jpegData

// set all parameters together
cmd.SetParameters d
cmd.Execute
```

Notes: Keys can be String, Text or numeric types. Text and String are used to pick parameters by name.
Numeric values are used to pick parameter by index (zero based).
MemoryBlock and Strings without text encoding are converted to byte values (BLOB).
Texts and Strings with encoding are converted to text values.
Raises exceptions if you pass anything which is not recognized.
Other types are translated as good as possible.

Raises OutOfBoundsException exception if index parameter is out of range.

186.14.39 Value(index as Integer) as SQLValueReadMBS

MBS SQL Plugin, Plugin Version: 16.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the value specified by its position in the result set.
Example:

```
Var c as SQLCommandMBS // your command object

// get field by name
Var f1 as SQLValueReadMBS = c.Value("FirstName")

// get field by Index
Var f2 as SQLValueReadMBS = c.Value(1)
```

Notes: You can use Value() to get values for normal or cached result sets.

index: A one-based field number in a result set.

Use Value method to access a field by its name or position in the result set.
For Cached result sets, please use Value() function to get values.

Using an index smaller than 1 and greater then the value returned by FieldCount method will result in a failed assertion.

A set of SAField objects creates implicitly after the command execution if the result set exists. SAField object contains full information about a column: name, type, size, value.

Raises OutOfBoundsException exception if index parameter is out of range.
See also:

- 186.14.40 Value(name as string) as SQLValueReadMBS 21835

186.14.40 Value(name as string) as SQLValueReadMBS

MBS SQL Plugin, Plugin Version: 16.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the value specified by its name in the result set.
Example:

```
Var c as SQLCommandMBS // your command object

// get value by name
Var f1 as SQLValueReadMBS = c.Value("FirstName")

// get value by Index
Var f2 as SQLValueReadMBS = c.Value(1)
```

Notes: You can use Value() to get values for normal or cached result sets.

name: A string that represents a name of the requested field.

Returns a reference to a SAValueRead object.

Use Value method to access a field by its name or position in the result set.
Using a non-existent field name will throw an exception.

A set of SAField objects creates implicitly after the command execution if the result set exists.SAField object contains full information about a column: name, type, size, value.
See also:

- 186.14.39 Value(index as Integer) as SQLValueReadMBS 21834

186.14.41 Properties

186.14.42 CommandCount as Integer

MBS SQL Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries number of current command objects.
Notes: This method should help you find leaked objects by keeping track of current count from the plugin perspective.
This includes SQLCommandMBS and RecordSet objects.
(Read only property)

186.14.43 CommandText as string

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Gets the command text associated with the SACommand object.
Example:

```
Var s as new SQLCommandMBS(nil, "select * from test")

MsgBox s.CommandText
```

Notes: Use the CommandText method to return the command text declared in SACommand constructor or setCommandText method.

All text strings sent to the plugin must have a defined encoding. Else the internal text encoding conversions will fail.
(Read and Write property)

186.14.44 CommandType as Integer

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Gets the command type currently associated with the SACommand object.
Notes: One of the following values from SACommandType_t enum:

- kCommandTypeUnknown Command type is not defined. Library will detect command type automatically when needed.
- kCommandTypeSQLStmt Command is an SQL statement.
- kCommandTypeSQLStmtRaw Command is an SQL statement that mustn't be interpreted by SQLAPI++.

- kCommandTypeStoredProc Command is a stored procedure or a function.

Remarks

The command type can be explicitly set in SACommand constructor and setCommandText method, but it's not necessary to do it.

The CommandTypemethod returns the command type value that was specified in SACommand constructor or setCommandText method. If you declared the command type value as kCommandTypeUnknown (the default value) then command type is detected by the Library and the CommandType method returns this detected value.
(Read only property)

186.14.45 Connection as SQLConnectionMBS

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The connection for the command.
Notes: When you set the connection on a command object that already has associated connection, the previous association will be correctly discarded (with closing opened command if needed) and new connection will be set.

If you attempt to call any method on a SACommand object that requires database access with no valid connection, an error occurs.
(Read and Write property)

186.14.46 FieldCount as Integer

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the number of fields (columns) in a result set.
Notes: FieldCount method returns the number of fields created implicitly after the command execution if a result set exists.

A field is represented by SAField object. You can get field value and description using Field method.
(Read only property)

186.14.47 Fields as Dictionary

MBS SQL Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Provides dictionary with all fields.
Notes: This dictionary should help for debugging to inspect all fields and their text value.
(Read only property)

186.14.48 hasCache as Boolean

MBS SQL Plugin, Plugin Version: 16.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether cache is active.
Notes: (Read only property)

186.14.49 isBOF as Boolean

MBS SQL Plugin, Plugin Version: 24.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether we are at the beginning of the result set.
Notes: Set to true when running the query and when FetchFirst succeeds.
Otherwise false.
(Read only property)

186.14.50 isEOF as Boolean

MBS SQL Plugin, Plugin Version: 24.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether we are at the end of the result set.
Notes: True if we are at the end of the recordset, e.g. FetchNext failed.
Set to false by Execute.

We set it to true, when something goes wrong, so Xojo's RecordSet and RowSet end looping.
We can only know, that we are not at the last one, if FetchNext internally failed to get the next record.
(Read only property)

186.14.51 isExecuted as boolean

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this command was already executed.
Notes: (Read only property)

186.14.52 isExecuting as Boolean

MBS SQL Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this command is executing.
Notes: You only see this true if you use threaded queries and look on the property from another thread.
(Read only property)

186.14.53 isOpened as boolean

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if the SACommand object is opened; otherwise false.
Notes: (Read only property)

186.14.54 isResultSet as boolean

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Tests whether a result set exists after the command execution.
Notes: Returns true if the result set exists; otherwise false.
(Read only property)

186.14.55 Options as Dictionary

MBS SQL Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a dictionary with all options.
Notes: For debugging, it may be useful to inspect options in debugger.
(Read only property)

186.14.56 ParamCount as Integer

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the number of parameters associated with the SACommand object.
Notes: ParamCount method returns the number of parameters created explicitly by using CreateParam method or (if parameters were not created before) creates them implicitly (can query native API if needed and therefore can throw exception on error) and returns the number of created parameters.

Command parameter is represented by SAParam object. You can look SAParam objects through and assign their values with Param and ParamByIndex methods.
(Read only property)

186.14.57 Parameters as Dictionary

MBS SQL Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Provides dictionary with all parameters.
Notes: This dictionary should help for debugging to inspect all parameters and their text value.
(Read only property)

186.14.58 RowsAffected as Integer

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the number of rows affected by the last insert/update/delete command execution.
Example:

```
Var con as SQLConnectionMBS // your connection

Var sql as string = "UPDATE Test SET MyField=1"
Var c as new SQLCommandMBS(con, sql)

c.Execute

MsgBox str(c.RowsAffected)
```

Notes: (Read only property)

186.14.59 Tag as Variant

MBS SQL Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tag property.
Example:

```
Var c as SQLCommandMBS // your command object

// store reference to window/control, so we have it available in events
c.Tag = self
```

Notes: You can store here whatever you like.
(Read and Write property)

186.14.60 Option(name as string) as string

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: A string value of a specific command option.
Example:

```
Var cmd as SQLCommandMBS // your command

// turn on auto cache
cmd.Option("AutoCache") = "true"
```

Notes: see also:
https://www.sqlapi.com/ApiDoc/class_s_a_command.html
(Read and Write computed property)

186.14.61 Events

186.14.62 Trace(traceInfo as Integer, SQL as string)

MBS SQL Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The event to trace SQL commands.

186.14.63 Working

MBS SQL Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The event called while the ExecuteMT and ExecuteCommandMT methods are running.

186.14.64 Constants

Constants

Constant	Value	Description
kOptionPreFetchRows	"PreFetchRows"	One of the option constants.
kParamDirTypeInput	0	One of the parameter direction type constants. Input parameter.
kParamDirTypeInputOutput	1	One of the parameter direction type constants. Input/output parameter.
kParamDirTypeOutput	2	One of the parameter direction type constants. Output parameter.
kParamDirTypeReturn	3	One of the parameter direction type constants. Returning parameter.

Command Types

Constant	Value	Description
kCommandTypeSQLStatement	1	Command is an SQL statement.
kCommandTypeSQLStatementRaw	2	Command is an SQL statement that mustn't be interpreted by SQLAPI.
kCommandTypeStoredProcedure	3	Command is a stored procedure or a function.
kCommandTypeUnknown	0	Used by default. Library detects command type automatically.

186.15 class SQLConnectionMBS

186.15.1 class SQLConnectionMBS

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for a SQL Plugin Database connection.
Example:

```
Var con as new SQLConnectionMBS

try

// where is the library?
con.SetFileOption con.kOptionLibraryMySQL, SpecialFolder.UserHome.Child("libmysqlclient.dylib")

// connect to database
// in this example it is Oracle,
// but can also be Sybase, Informix, DB2
// SQLServer, InterBase, SQLBase and ODBC

Var server as string = "192.168.1.80,3306@test"

con.Connect(server,"root","",SQLConnectionMBS.kMySQLClient)

MsgBox "We are connected!"

// Disconnect is optional
// autodisconnect will ocur in destructor if needed
con.Disconnect

msgbox "We are disconnected!"

catch r as RuntimeException
MsgBox r.message

// SAConnection::Rollback()
// can also throw an exception
// (if a network error for example),
// we will be ready
try

// on error rollback changes
con.Rollback

catch rr as runtimeexception
MsgBox rr.message
end try
```

end try

Notes: Supported databases: CubeSQL, Centura SQLBase, DB2, DuckDB, Firebird, Informix, InterBase, MariaDB, Microsoft Access, Microsoft SQL Server, MySQL, ODBC, Oracle Database Server, PostgreSQL, SQL Anywhere, SQLite, SQLCipher and Sybase.
Connect to Microsoft Access, FileMaker Server (or Pro), Microsoft Visual FoxPro and others via ODBC.

With Xojo 2013r1, you only need a database server license from Xojo, Inc. if you use the SQLDatabaseMBS class. The SQLConnectionMBS class does not require this license. But some features like getting a recordset do need the license as they refer to the SQLDatabaseMBS class.

Please free all RecordSets and SQLCommand objects before you close the SQLConnection or the SQL-Database. The plugin keeps references from RecordSets and SQLCommand to prevent automatic destruction of the database connection. If you close a database connection while you have RecordSets and SQLCommand in use, things may go wrong.

The plugin can cache the recordset locally. To enable you can call SQLCommandMBS.Cache or use the Option("AutoCache") = "true" on either command or connection or database objects. The plugin will than fetch all records and store them in memory. After this you can walk over the recordset and use FetchPos, FetchFirst, FetchLast, FetchPrev and FetchNext to locate the rows you need. When you call Field() you always get last row, but to read from cached result set, please use Value() function. When using RecordSet, the values are read via Value() functions automatically.

You can use InternalPostgreSQLLibraryMBS or InternalSQLiteLibraryMBS if you like to use our built in SQLite or PostgreSQL database libraries.

see also
https://www.sqlapi.com/ApiDoc/class_s_a_connection.html

The class pings the database every minute by checking whether it's alive and to avoid server dropping connection. This can be disabled by setting Option("Ping") = "false". Ping is not used for SQLite.

MBS Database connections are implemented via SQLConnectionMBS and SQLCommandMBS classes. We provide a thin layer on top with SQLDatabaseMBS class to make it compatible to the Xojo database class. And when you use SQLDatabaseMBS, you can always get the matching SQLConnectionMBS objet via Connection property. Instead of SQLCommandMBS class, you may just use SelectSQL/ExecuteSQL or older SQLSelect/SQLExecute functions.

We have a collection of library files here:
https://www.monkeybreadsoftware.de/xojo/download/plugin/Libs/

186.15.2 Methods

186.15.3 BeginTransaction

MBS SQL Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Begins a transaction.
Notes: This method does nothing. Why?
Well, if auto commit is on, you don't need to call this.
If auto commit is off, we call BeginTransaction for you, so if you call this method you would call it a second time and get an error.
We have this method for compatibility to other SQL database classes from Xojo.

186.15.4 CancelAllCommands

MBS SQL Plugin, Plugin Version: 18.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Cancel all commands for the connection.
Notes: This loops over the list of commands associated with this connection and calls Cancel on them.

186.15.5 Commands as SQLCommandMBS()

MBS SQL Plugin, Plugin Version: 18.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries list of all command objects related to the connection.

186.15.6 Commit

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Saves any changes and ends the current transaction.
Notes: Use Commit method to write transaction changes permanently to a database. It commits the work of all commands that associated with that connection.

All changes to the database since the last commit are made permanent and cannot be undone. Before a commit, all changes made since the start of the transaction can be rolled back using Rollback method.

186.15.7 Connect(DBString as string, UserID as string, Password as string, client as Integer = 0)

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Opens the connection to a data source.
Example:

```
Var con as SQLConnectionMBS// your connection

// some calls for MS SQL Server:
con.Connect("srv2@pubs","", "", SQLConnectionMBS.kSQLServerClient)
con.Connect("@pubs", "", "", SQLConnectionMBS.kSQLServerClient)
con.Connect("BEDLAM\SQL2005EX_EN@pubs", "", "", SQLConnectionMBS.kSQLServerClient)
con.Connect("BEDLAM\SQLEXPRESS@master", "", "", SQLConnectionMBS.kSQLServerClient)

// for MySQL:

con.Connect("192.168.1.80,3306@test","root","password", SQLConnectionMBS.kMySQLClient)
```

```
// for Postgre SQL:

con.Connect("somedb", "name", "password",SQLConnectionMBS.kPostgreSQLClient)
// with options
con.Connect("127.0.0.1,5432@dbname=postgres connect_timeout=10 sslmode=require", "name", "password",SQL-
ConnectionMBS.kPostgreSQLClient)

// for SQLite:

con.Connect("/test.db", "", "",SQLConnectionMBS.kSQLiteClient)
```

Notes:

DBString:	Name of database this connection will connect to (see Server specific notes).
UserID:	A string containing a user name to use when establishing the connection (see Server specific notes).
Password:	A string containing a password to use when establishing the connection.
client:	Optional. One of the following values from k*Client constants.

Using the Connect method on a SAConnection object establishes the physical connection to a data source. After this method successfully completes, the connection is live and you can issue commands against it and process the results.

If you use the default value of Client parameter, you should set Client before using Connect.

To check whether a connection established use isConnected method. To check whether a connection is broken or not use isAlive method.

see also for server specific notes:
https://www.sqlapi.com/ApiDoc/class_s_a_connection.html

For IPv6 we changed plugin to use , instead of : for the port separator. So please use , to separate port from IP or host.

For Firebird, if you connect to a database and you have 32/64bit mismatch, you get error number 3.

See Option() for various options you can set before connecting.
e.g. c.Option("SQLiteVFSFlags") = "1" for SQLite for read only access.

Raises OutOfBoundsException exception if client parameter is out of range.

186.15.8 ConnectMT(DBString as string, UserID as string, Password as string, client as Integer = 0)

MBS SQL Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Opens the connection to a data source.
Notes:

DBString:	Name of database this connection will connect to (see Server specific notes).
UserID:	A string containing a user name to use when establishing the connection (see Server specific notes).
Password:	A string containing a password to use when establishing the connection.
client:	Optional. One of the following values from k*Client constants.

Using the Connect method on a SAConnection object establishes the physical connection to a data source. After this method successfully completes, the connection is live and you can issue commands against it and process the results.

If you use the default value of Client parameter, you should set Client before using Connect.

To check whether a connection established use isConnected method. To check whether a connection is broken or not use isAlive method.

see also for server specific notes:
https://www.sqlapi.com/ApiDoc/class_s_a_connection.html

For IPv6 we changed plugin to use , instead of : for the port separator. So please use , to separate port from IP or host.

The work is performed on a preemptive thread, so this function does not block the application and can yield time to other Xojo threads. Must be called in a Xojo thread to enjoy benefits. If called in main thread will block, but keep other background threads running.

The MT method will not trigger WillConnect and DidConnect events.
Raises OutOfBoundsException exception if client parameter is out of range.

186.15.9 CubeSQLLastInsertID as Int64

MBS SQL Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the last auto increment value from last insert command.

Notes: Only for CubeSQL connections. May raise error if not available.

186.15.10 CubeSQLReceiveData(byref data as String, byref IsEndChunk as Boolean) as Boolean

MBS SQL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Receives a data chunk for file download.
Notes: Returns true on success.
Data is set with data and IsEndChunk is set to true for last chunk.

186.15.11 CubeSQLSendData(data as MemoryBlock)

MBS SQL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sends data chunk for file upload.
Notes: This is the sendchunk function in CubeSQL.
See also:

- 186.15.12 CubeSQLSendData(data as String) 21849

186.15.12 CubeSQLSendData(data as String)

MBS SQL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sends data chunk for file upload.
Notes: This is the sendchunk function in CubeSQL.
See also:

- 186.15.11 CubeSQLSendData(data as MemoryBlock) 21849

186.15.13 CubeSQLSendEndData

MBS SQL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sends end data packet.
Notes: This is the send_enddata function in CubeSQL.

186.15.14 Disconnect

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Disconnects the connection from the database.
Notes: Closes all commands objects and RecordSets.

186.15.15 InsertRecord(TableName as String, Record as Dictionary)

MBS SQL Plugin, Plugin Version: 17.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Convenience function to insert a record.
Example:

```
Var con as SQLConnectionMBS // your database connection

Var d as new Dictionary

d.Value("ID")=2
d.Value("text")="test insert"
d.Value("other")="Just a test"

con.InsertRecord("test_tbl", d)
```

Notes: The plugin builds for you SQL statement with prepared statement and runs the insert command with values.
Lasterror is set or exception raised as with SQLExecute.

Internally this uses a prepared statement. You can check the generated statement via LastStatement property.

186.15.16 kOptionLibrarySeparator as String

MBS SQL Plugin, Plugin Version: 10.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: One of the option constant to specify the platform specific path separator.
Notes: Use with Option() to specify multiple file paths for a library.
Has a different value on the different platforms.
Value is ";" on Windows and ":" on macOS/Linux.

186.15.17 Listen

MBS SQL Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Start listening for notifications.
Notes: Works only for PostgresSQL Client.

Please set client or connect before calling this method.

186.15.18 MySQLInsertID as Int64

MBS SQL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the last auto increment value from last insert command.
Notes: Please query value right after doing Insert. This value is reset when you call commit.
For mySQL and MariaDB connections.

see also
http://dev.mysql.com/doc/refman/5.1/en/mysql-insert-id.html

186.15.19 Rollback

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Cancels any changes made during the current transaction and ends the transaction.
Notes: Rollback method rolls back the database to the state it was in at the completion of the last commit operation. All uncommitted work is undone.

Rollback method rolls back the work of all commands that associated with that connection.

To commit all changes made since the start of the transaction use Commit method.

186.15.20 SetFileOption(name as string, file as folderitem)

MBS SQL Plugin, Plugin Version: 10.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets an option with passing a file path.
Example:

```
Var db as new SQLConnectionMBS

// where is the library?
db.SetFileOption SQLConnectionMBS.kOptionLibraryMySQL, SpecialFolder.UserHome.Child("libmysqlclient.dylib")
```

Notes: Allows you to specify a file path with a folderitem.

Makes sure the path is correct and you have a 32 or 64-bit library matching the architecture of your appli-

cation.

186.15.21 SQLExecute(command as string, CommandType as Integer = 0)

MBS SQL Plugin, Plugin Version: 10.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Executes a SQL command and ignores result.
Notes: This is a convenience function.
Internally it creates a SQLCommandMBS with the given command and calls Execute.

All text strings sent to the plugin must have a defined encoding. Else the internal text encoding conversions will fail.

186.15.22 SQLExecuteMT(command as string, CommandType as Integer = 0)

MBS SQL Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Executes a SQL command and ignores result.
Notes: This is a convenience function.
Internally it creates a SQLCommandMBS with the given command and calls Execute.

All text strings sent to the plugin must have a defined encoding. Else the internal text encoding conversions will fail.

The work is performed on a preemptive thread, so this function does not block the application and can yield time to other Xojo threads. Must be called in a Xojo thread to enjoy benefits. If called in main thread will block, but keep other background threads running.

186.15.23 SQLiteBackupFinish(Backup as SQLite3BackupMBS) as integer

MBS SQL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Finishes a backup run.
Notes: When BackupStep has returned kErrorDone, or when the application wishes to abandon the backup operation, the application should destroy the SQLite3BackupMBS by passing it to BackupFinish. The BackupFinish interfaces releases all resources associated with the SQLite3BackupMBS object. If BackupStep has not yet returned kErrorDone, then any active write-transaction on the destination database is rolled back. The SQLite3BackupMBS object is invalid and may not be used following a call to BackupFinish.
The value returned by BackupFinish is kErrorOK if no BackupStep errors occurred, regardless or whether or not BackupStep completed. If an out-of-memory condition or IO error occurred during any prior BackupStep call on the same SQLite3BackupMBS object, then BackupFinish returns the corresponding error code.

A return of kErrorBusy or kErrorLocked from BackupStep is not a permanent error and does not affect the return value of BackupFinish.

186.15.24 SQLiteBackupInit(Dest as Variant, DestName as String, Source as Variant, SourceName as String) as SQLite3BackupMBS

MBS SQL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Initializes a backup.
Notes: The backup API copies the content of one database into another. It is useful either for creating backups of databases or for copying in-memory databases to or from persistent files.

see also
http://www.sqlite.org/c3ref/backup_finish.html

Exclusive access is required to the destination database for the duration of the operation. However the source database is only read-locked while it is actually being read; it is not locked continuously for the entire backup operation. Thus, the backup may be performed on a live source database without preventing other users from reading or writing to the source database while the backup is underway.

To perform a backup operation:

- BackupInit is called once to initialize the backup,
- BackupStep is called one or more times to transfer the data between the two databases, and finally
- BackupFinish is called to release all resources associated with the backup operation.

There should be exactly one call to BackupFinish for each successful call to BackupInit.

The D and N arguments to BackupInit(D,N,S,M) are the database connection associated with the destination database and the database name, respectively. The database name is "main" for the main database, "temp" for the temporary database, or the name specified after the AS keyword in an ATTACH statement for an attached database. The S and M arguments passed to BackupInit(D,N,S,M) identify the database connection and database name of the source database, respectively. The source and destination database connections (parameters S and D) must be different or else BackupInit(D,N,S,M) will file with an error.
If an error occurs within BackupInit(D,N,S,M), then nil is returned and an error code and error message are store3d in the destination database connection D. The error code and message for the failed call to BackupInit can be retrieved using the ErrCode and ErrMessage functions. A successful call to BackupInit returns a SQLite3BackupMBS object. The SQLite3BackupMBS object may be used with the BackupStep and BackupFinish functions to perform the specified backup operation.

Concurrent Usage of Database Handles
The source database connection may be used by the application for other purposes while a backup operation is underway or being initialized. If SQLite is compiled and configured to support threadsafe database connections, then the source database connection may be used concurrently from within other threads.
However, the application must guarantee that the destination database connection is not passed to any other API (by any thread) after BackupInit is called and before the corresponding call to BackupFinish. SQLite does not currently check to see if the application incorrectly accesses the destination database connection and so no error code is reported, but the operations may malfunction nevertheless. Use of the destination database connection while a backup is in progress might also also cause a mutex deadlock.
If running in shared cache mode, the application must guarantee that the shared cache used by the destination database is not accessed while the backup is running. In practice this means that the application must guarantee that the disk file being backed up to is not accessed by any connection within the process, not just the specific connection that was passed to BackupInit.
The SQLite3BackupMBS object itself is partially threadsafe. Multiple threads may safely make multiple concurrent calls to BackupStep. However, the BackupRemaining and BackupPageCount APIs are not strictly speaking threadsafe. If they are invoked at the same time as another thread is invoking BackupStep it is possible that they return invalid values.

Source and Dest can be SQLConnectionMBS or SQLDatabaseMBS. You need to pass source and dest, even if one is self as we give you the option to decide where to pass the current database connection.

186.15.25 SQLiteBackupPageCount(Backup as SQLite3BackupMBS) as integer

MBS SQL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the number of pages in total.
Notes: Each call to BackupStep sets two values inside the SQLite3BackupMBS object: the number of pages still to be backed up and the total number of pages in the source databae file. The BackupRemaining and BackupPageCount interfaces retrieve these two values, respectively.
The values returned by these functions are only updated by BackupStep. If the source database is modified during a backup operation, then the values are not updated to account for any extra pages that need to be updated or the size of the source database file changing.

186.15.26 SQLiteBackupRemaining(Backup as SQLite3BackupMBS) as integer

MBS SQL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the number of pages remaining.
Notes: Each call to BackupStep sets two values inside the SQLite3BackupMBS object: the number of pages still to be backed up and the total number of pages in the source databae file. The BackupRemaining and BackupPageCount interfaces retrieve these two values, respectively.
The values returned by these functions are only updated by BackupStep. If the source database is modified during a backup operation, then the values are not updated to account for any extra pages that need to be updated or the size of the source database file changing.

186.15.27 SQLiteBackupStep(Backup as SQLite3BackupMBS, Pages as Integer) as integer

MBS SQL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Copies up to Pages pages between the source and destination databases specified by SQLite3BackupMBS object.
Notes: If N is negative, all remaining source pages are copied. If BackupStep(B,N) successfully copies N pages and there are still more pages to be copied, then the function resturns kErrorOK. If BackupStep(B,N) successfully finishes copying all pages from source to destination, then it returns kErrorDone. If an error occurs while running BackupStep(B,N), then an error code is returned. As well as kErrorOK and kErrorDone, a call to BackupStep may return kErrorReadOnly, kErrorNoMem, kErrorBusy, kErrorLocked, or an kErrorIOACCESS | kErrorIOXXX extended error code.
The BackupStep might return kErrorReadOnly if the destination database was opened read-only or if the destination is an in-memory database with a different page size from the source database.
If BackupStep cannot obtain a required file-system lock, then the sqlite3_busy_handler | busy-handler function is invoked (if one is specified). If the busy-handler returns non-zero before the lock is available, then kErrorBusy is returned to the caller. In this case the call to BackupStep can be retried later. If the source database connection is being used to write to the source database when BackupStep is called, then kErrorLocked is returned immediately. Again, in this case the call to BackupStep can be retried later on. (If kErrorIOACCESS | kErrorIOXXX, kErrorNoMem, or kErrorReadOnly is returned, then there is no point in retrying the call to BackupStep. These errors are considered fatal.) The application must accept that the backup operation has failed and pass the backup operation handle to the BackupFinish to release associated resources.
The first call to BackupStep obtains an exclusive lock on the destination file. The exclusive lock is not released until either BackupFinish is called or the backup operation is complete and BackupStep returns kErrorDone. Every call to BackupStep obtains a shared lock on the source database that lasts for the duration of the BackupStep call. Because the source database is not locked between calls to BackupStep, the source database may be modified mid-way through the backup process. If the source database is modified by an external process or via a database connection other than the one being used by the backup operation, then the backup will be automatically restarted by the next call to BackupStep. If the source database is modified by the using the same database connection as is used by the backup operation, then the backup database is automatically updated at the same time.

186.15.28 SQLiteConnectionHandle as Ptr

MBS SQL Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the current connection reference for the database.
Notes: sqlite3 pointer for using in declares.

186.15.29 SQLiteEnableLoadExtension(OnOff as boolean)

MBS SQL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Enables/disables extension loading for the given connection.

186.15.30 SQLiteLastInsertRowID as Int64

MBS SQL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns Last Insert Rowid.
Notes: Each entry in an SQLite table has a unique 64-bit signed integer key called the ROWID. The rowid is always available as an undeclared column named ROWID, OID, or _ROWID_ as long as those names are not also used by explicitly declared columns. If the table has a column of type INTEGER PRIMARY KEY then that column is another alias for the rowid.

This routine returns the rowid of the most recent successful INSERT into the database from the database connection in the first argument. If no successful INSERTs have ever occurred on that database connection, zero is returned.

(If an INSERT occurs within a trigger, then the rowid of the inserted row is returned by this routine as long as the trigger is running. But once the trigger terminates, the value returned by this routine reverts to the last value inserted before the trigger fired.)

An INSERT that fails due to a constraint violation is not a successful INSERT and does not change the value returned by this routine. ^Thus INSERT OR FAIL, INSERT OR IGNORE, INSERT OR ROLLBACK, and INSERT OR ABORT make no changes to the return value of this routine when their insertion fails. ^(When INSERT OR REPLACE encounters a constraint violation, it does not fail. The INSERT continues to completion after deleting rows that caused the constraint problem so INSERT OR REPLACE will always change the return value of this interface.)^

For the purposes of this routine, an INSERT is considered to be successful even if it is subsequently rolled back.

This function is accessible to SQL statements via the last_insert_rowid() SQL function.

If a separate thread performs a new INSERT on the same database connection while the LastInsertRowID function is running and thus changes the last insert rowid, then the value returned by LastInsertRowID is unpredictable and might not equal either the old or the new last insert rowid.

186.15.31 SQLiteLibVersion as String

MBS SQL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries the version string of the SQLite library.

186.15.32 SQLiteLoadExtension(file as FolderItem, ByRef ErrorMessage as String) as Integer

MBS SQL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Loads an SQLite extension library from the named file.
Notes: The LoadExtension interface attempts to load an SQLite extension library contained in the file.

Returns kErrorOk on success and kErrorError if something goes wrong.
Extension loading must be enabled using EnableLoadExtension prior to calling this API, otherwise an error will be returned.
See also:

- 186.15.33 SQLiteLoadExtension(path as String, ByRef ErrorMessage as String) as Integer 21857

186.15.33 SQLiteLoadExtension(path as String, ByRef ErrorMessage as String) as Integer

MBS SQL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Loads an SQLite extension library from the named file.
Notes: The LoadExtension interface attempts to load an SQLite extension library contained in the file.

Returns kErrorOk on success and kErrorError if something goes wrong.
Extension loading must be enabled using EnableLoadExtension prior to calling this API, otherwise an error will be returned.
See also:

- 186.15.32 SQLiteLoadExtension(file as FolderItem, ByRef ErrorMessage as String) as Integer 21857

186.15.34 SQLiteMemoryHighwater(reset as boolean = false) as Int64

MBS SQL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries maximum memory usage so far.
Notes: Can be reset with reset parameter being true.

186.15.35 SQLiteMemoryUsed as Int64

MBS SQL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries memory in use by SQLite.
Notes: This is memory allocated, but not yet freed.
Value is zero until SQLite3 initialized.

186.15.36 SQLiteReKey(Key as String) as Integer

MBS SQL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: You can change the key on a database using the Rekey Function.
Notes: An empty key decrypts the database.

Rekeying requires that every page of the database file be read, decrypted, reencrypted with the new key, then written out again. Consequently, rekeying can take a long time on a larger database.

Most SEE variants allow you to encrypt an existing database that was created using the public domain version of SQLite. This is not possible when using the authenticating version of the encryption extension in see-aes128-ccm. If you do encrypt a database that was created with the public domain version of SQLite, no nonce will be used and the file will be vulnerable to a chosen-plaintext attach. If you call SetKey() immediately after Open when you are first creating the database, space will be reserved in the database for a nonce and the encryption will be much stronger. If you do not want to encrypt right away, call SetKey() anyway, with an empty key, and the space for the nonce will be reserved in the database even though no encryption is done initially.

A public domain version of the SQLite library can read and write an encrypted database with an empty key. You only need the encryption extension if the key is non-empty.

Returns a SQLite error code.

186.15.37 SQLiteSetBusyHandler(MaxAttempts as Integer = 5)

MBS SQL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Installs busy handler for this connection.
Notes: This routine sets a callback function that might be invoked whenever an attempt is made to open a database table that another thread or process has locked.

The plugin has an busy handler which will wait up to MaxAttemps and yield to other Xojo threads while waiting.

Passing 5 should wait up to 100ms.

There can only be a single busy handler defined for each [database connection] . Setting a new busy handler clears any previously set handler.) Note that calling SetBusyTimeout will also set or clear the busy handler.

The busy callback should not take any actions which modify the database connection that invoked the busy handler. Any such actions result in undefined behavior.

186.15.38 SQLiteSetBusyTimeout(TimeOutMS as Integer = 20)

MBS SQL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: This routine sets a busy handler that sleeps for a specified amount of time when a table is locked.
Notes: The handler will sleep multiple times until at least "ms" milliseconds of sleeping have accumulated. ^After at least "ms" milliseconds of sleeping, the handler returns 0 which causes SQLite query to return SQLite Busy or IO Blocked error.

Calling this routine with an argument less than or equal to zero turns off all busy handlers.

(There can only be a single busy handler for a particular database connection any any given moment. If another busy handler was defined (using SetBusyHandler prior to calling this routine, that other busy handler is cleared.)

186.15.39 SQLiteSetKey(Key as String) as Integer

MBS SQL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Applies encryption to a database connection.
Notes: Returns a SQLite error code.

The amount of key material actually used by the encryption extension depends on which variant of SEE you are using. With RC4, the first 256 byte of key are used. With the AES128, the first 16 bytes of the key are used. With AES256, the first 32 bytes of key are used.

If you specify a key that is shorter than the maximum key length, then the key material is repeated as many times as necessary to complete the key. If you specify a key that is larger than the maximum key length, then the excess key material is silently ignored.

The key must begin with an ASCII prefix to specify which algorithm to use. The prefix must be one of "rc4:", "aes128:", or "aes256:". The prefix is not used as part of the key sent into the encryption algorithm.

So the real key should begin on the first byte after the prefix.

The string provided to the plugin is used with it's current encoding. So be sure you use right text encoding for what you want. e.g. using "M√ºller" as key in text encoding Windows ANSI will not open a database which used that key in UTF-8 encoding.

The Xojo database encryption in SQLiteDatabase class uses AES-128 OFB.

186.15.40 SQLiteTableColumnMetaData(DBName as string, TableName as string, ColumnName as string, byref DataType as string, byref CollationSequence as string, byref NotNull as boolean, byref PrimaryKey as boolean, byref AutoIncrement as Boolean) as integer

MBS SQL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Extract Metadata About A Column Of A Table
Notes: Not available in all sqlite libraries!

This routine returns metadata about a specific column of a specific database table accessible using the database connection handle passed as the first function argument.
The column is identified by the second, third and fourth parameters to this function. The second parameter is either the name of the database (i.e. "main", "temp", or an attached database) containing the specified table or NULL. If it is NULL, then all attached databases are searched for the table using the same algorithm used by the database engine to resolve unqualified table references.
The third and fourth parameters to this function are the table and column name of the desired column, respectively. Neither of these parameters may be NULL.
Metadata is returned by writing to the memory locations passed as the 5th and subsequent parameters to this function. Any of these arguments may be NULL, in which case the corresponding element of metadata is omitted.

CollationSequence is assigned the Name of default collation sequence. NotNull is set to true if column has a NOT NULL constraint. PrimaryKey is set to true if column is part of the PRIMARY KEY and AutoIncrement is set to true if column is AUTOINCREMENT.

If the specified table is actually a view, an error code is returned.

If the specified column is "rowid", "oid" or "_rowid_" and an INTEGER PRIMARY KEY column has been explicitly declared, then the output parameters are set for the explicitly declared column. (If there is no explicitly declared INTEGER PRIMARY KEY column, then the output parameters are set as follows:

data type: "INTEGER"
collation sequence: "BINARY"

not null: false
primary key: true
auto increment: false

(This function may load one or more schemas from database files. If an error occurs during this process, or if the requested table or column cannot be found, an error code is returned and an error message left in the database connection (to be retrieved using ErrMessage).)

This API is only available if the library was compiled with the SQLITE_ENABLE_COLUMN_METADATA C-preprocessor symbol defined.

186.15.41 SQLiteThreadsafe as integer

MBS SQL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Test To See If The Library Is Threadsafe.
Notes: The threadsafe() function returns zero if and only if SQLite was compiled mutexing code omitted due to the SQLITE_THREADSAFE compile-time option being set to 0.

SQLite can be compiled with or without mutexes. When the SQLITE_THREADSAFE C preprocessor macro is 1 or 2, mutexes are enabled and SQLite is threadsafe. When the SQLITE_THREADSAFE macro is 0, the mutexes are omitted. Without the mutexes, it is not safe to use SQLite concurrently from more than one thread.

Enabling mutexes incurs a measurable performance penalty. So if speed is of utmost importance, it makes sense to disable the mutexes. But for maximum safety, mutexes should be enabled. The default behavior is for mutexes to be enabled.

This interface can be used by an application to make sure that the version of SQLite that it is linking against was compiled with the desired setting of the SQLITE_THREADSAFE macro.

This interface only reports on the compile-time mutex setting of the SQLITE_THREADSAFE flag. If SQLite is compiled with SQLITE_THREADSAFE=1 or =2 then mutexes are enabled by default but can be fully or partially disabled using a call to sqlite3_config() with the verbs SQLITE_CONFIG_SINGLETHREAD, SQLITE_CONFIG_MULTITHREAD, or SQLITE_CONFIG_MUTEX. ^(The return value of the sqlite3_threadsafe() function shows only the compile-time setting of thread safety, not any run-time changes to that setting made by sqlite3_config(). In other words, the return value from sqlite3_threadsafe() is unchanged by calls to sqlite3_config().)^

See the threading mode documentation for additional information.

186.15.42 SQLSelect(command as string, CommandType as Integer = 0) as string

MBS SQL Plugin, Plugin Version: 10.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Executes a SQL command and returns the first field's string value.
Notes: This is a convenience function.
Internally it creates a SQLCommandMBS with the given command and calls Execute.
If the result is a record set, the first field from the first row is returned.
This is basicly useful for commands like "select sqlite_version()".

All text strings sent to the plugin must have a defined encoding. Else the internal text encoding conversions will fail.

186.15.43 SQLSelectAsRecordSet(command as string, CommandType as Integer = 0) as RecordSet

MBS SQL Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Executes a SQL command and returns the result as RecordSet object.
Notes: This is a convenience function.
Internally it creates a SQLCommandMBS with the given command and calls Execute.

For this method to work, you need to have somewhere a property with SQLDatabaseMBS so Xojo includes our SQLDatabase plugin which provides the RecordSet functionality.

If Scrollable property is true, the recordset will be requested to be scrollable.

The record set may not have a valid RecordCount or have working movefirst/movelast/moveprev methods unless the underlaying database supports those and Scrollable result sets is enabled/supported.

186.15.44 SQLSelectAsRecordSetMT(command as string, CommandType as Integer = 0) as RecordSet

MBS SQL Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Executes a SQL command and returns the result as RecordSet object.
Notes: This is a convenience function.
Internally it creates a SQLCommandMBS with the given command and calls Execute.

For this method to work, you need to have somewhere a property with SQLDatabaseMBS so Xojo includes

our SQLDatabase plugin which provides the RecordSet functionality.

If Scrollable property is true, the recordset will be requested to be scrollable.

The record set may not have a valid RecordCount or have working movefirst/movelast/moveprev methods unless the underlaying database supports those and Scrollable result sets is enabled/supported.

The work is performed on a preemptive thread, so this function does not block the application and can yield time to other Xojo threads. Must be called in a Xojo thread to enjoy benefits. If called in main thread will block, but keep other background threads running.

186.15.45 SQLSelectAsRowSet(command as string, CommandType as integer = 0) as RowSet

MBS SQL Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Executes a SQL command and returns the result as RowSet object.
Notes: This is a convenience function.
Internally it creates a SQLCommandMBS with the given command and calls Execute.

For this method to work, you need to have somewhere a property with SQLDatabaseMBS so Xojo includes our SQLDatabase plugin which provides the RowSet functionality.

If Scrollable property is true, the RowSet will be requested to be scrollable.

The RowSet may not have a valid RecordCount or have working movefirst/movelast/moveprev methods unless the underlaying database supports those and Scrollable result sets is enabled/supported.

For Xojo 2019r2 and newer. See SQLSelectAsRecordSet for older versions.

186.15.46 SQLSelectAsRowSetMT(command as string, CommandType as integer = 0) as RowSet

MBS SQL Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Executes a SQL command and returns the result as RowSet object.
Notes: This is a convenience function.
Internally it creates a SQLCommandMBS with the given command and calls Execute.

For this method to work, you need to have somewhere a property with SQLDatabaseMBS so Xojo includes our SQLDatabase plugin which provides the RowSet functionality.

If Scrollable property is true, the RowSet will be requested to be scrollable.

The RowSet may not have a valid RecordCount or have working movefirst/movelast/moveprev methods unless the underlaying database supports those and Scrollable result sets is enabled/supported.

The work is performed on a preemptive thread, so this function does not block the application and can yield time to other Xojo threads. Must be called in a Xojo thread to enjoy benefits. If called in main thread will block, but keep other background threads running.

For Xojo 2019r2 and newer. See SQLSelectAsRecordSetMT for older versions.

186.15.47 SQLSelectMT(command as string, CommandType as Integer = 0) as string

MBS SQL Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Executes a SQL command and returns the first field's string value.
Notes: This is a convenience function.
Internally it creates a SQLCommandMBS with the given command and calls Execute.
If the result is a record set, the first field from the first row is returned.
This is basicly useful for commands like "select sqlite_version()".

All text strings sent to the plugin must have a defined encoding. Else the internal text encoding conversions will fail.

The work is performed on a preemptive thread, so this function does not block the application and can yield time to other Xojo threads. Must be called in a Xojo thread to enjoy benefits. If called in main thread will block, but keep other background threads running.

186.15.48 UpdateRecord(TableName as String, Record as Dictionary, Keys as Dictionary)

MBS SQL Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Convenience function to update a record.
Example:

```
Var con as SQLConnectionMBS // your database connection
```

```
Var d as new Dictionary

d.Value("text")="new text"
d.Value("other")="second value"

con.UpdateRecord("test_tbl", d, new dictionary("ID":2))
```

Notes: The plugin builds for you SQL statement with prepared statement and runs the update command with given values for records with given key values.

You can put multiple field names in the keys dictionary.

Lasterror is set or exception raised as with SQLExecute.
Internally this uses a prepared statement. You can check the generated statement via LastStatement property.

186.15.49 Properties

186.15.50 AutoCommit as Integer

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether autocommit is enabled or disabled for the current connection.
Example:

```
Var con as SQLConnectionMBS // your database connection
con.AutoCommit = SQLConnectionMBS.kAutoCommitOn
```

Notes: If autocommit is on, the database is committed automatically after each SQL command. Otherwise, transaction is committed only after Commit calling.
(Read and Write property)

186.15.51 Client as Integer

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The current DBMS client assigned for the connection.
Example:

```
Var con as new SQLConnectionMBS
con.client = SQLConnectionMBS.kSQLiteClient
```

Notes: Raises OutOfBoundsException exception if value parameter is out of range on setting.
(Read and Write property)

186.15.52 ClientVersion as Integer

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Gets the DBMS client API version number.
Example:

```
Call InternalSQLiteLibraryMBS.Use

Var con As New SQLConnectionMBS
con.Client = con.kSQLiteClient

Var version As Integer = con.ClientVersion
Var HighVersion As Integer = Bitwise.ShiftRight(version, 16)
Var LowVersion As Integer = Bitwise.BitAnd(version, 65535)

var v as string = InternalSQLiteLibraryMBS.Version

MessageBox HighVersion.ToString+"."+LowVersion.ToString+EndOfLine+v
```

Notes: The higher word contains the major client version (the XX value in the XX.YY version number); the lower word contains the minor client version (the YY value in the XX.YY version number).

If an DBMS client was not set calling ClientVersion method will throw an exception.
(Read only property)

186.15.53 ConnectionCount as Integer

MBS SQL Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries number of current connection objects.
Notes: This method should help you find leaked objects by keeping track of current count from the plugin perspective.
This includes SQLConnectionMBS and SQLDatabaseMBS objects.
(Read only property)

186.15.54 Error as Boolean

MBS SQL Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether an error occurred.
Notes: This is set always when an error occurs and cleared if no error happened.
Be aware that the next call to a plugin function may reset error status.
If you look on this property in debugger, it's probably already cleared by the debugger querying a property.
(Read only property)

186.15.55 ErrorCode as Integer

MBS SQL Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The last error code.
Notes: This is set always when an error occurs and cleared if no error happened.
(Read only property)

186.15.56 ErrorMessage as string

MBS SQL Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The last error message.
Notes: This is set always when an error occurs and cleared if no error happened.
(Read only property)

186.15.57 isAlive as boolean

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the database server connection status for a particular connection object.
Notes: Returns true if the database server is active and accessible; otherwise false.
This method uses the safe query execution for most supported DBMS-es. The query uses the well known database table or procedure (mysql_ping is used for MySQL or MariaDB). If the query fails the method returns false.
(Read only property)

186.15.58 isConnected as boolean

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the connection state for a particular connection object.
Notes: Returns true if connected; otherwise false.
If you connect over a network, please check with isAlive whether the connection is still alive.

(Read only property)

186.15.59 IsolationLevel as Integer

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The transaction isolation level.
Example:

```
Var con as SQLConnectionMBS // your connection
con.IsolationLevel = SQLConnectionMBS.kReadUncommitted
```

Notes: Use the kReadCommitted, kReadUncommitted, kRepeatableRead, kSerializable and kLevelUnknown constants.
(Read and Write property)

186.15.60 LastStatement as String

MBS SQL Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The last executed SQL Statement.
Notes: (Read only property)

186.15.61 NativeAPI as Variant

MBS SQL Plugin, Plugin Version: 9.5, Platforms: macOS, Linux, Windows, Targets: All.

Deprecated: This item is deprecated and should no longer be used. **Function:** Returns a set of functions of native DBMS client API.
Notes: Returns a SQLAPIMBS object.
Deprecated in version 19.5 in favor of direct methods in SQLDatabaseMBS and SQLConnectionMBS classes.
(Read only property)

186.15.62 Options as Dictionary

MBS SQL Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a dictionary with all options.
Notes: For debugging, it may be useful to inspect options in debugger.
(Read only property)

186.15.63 RaiseExceptions as Boolean

MBS SQL Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether to raise exceptions.
Notes: Default is true which means we set error, ErrorCode and ErrorMessage properties and than raise SQLErrorExceptionMBS exception.
If you set to false, we don't raise the exception and you have similar behavior as with database class.
We recommend to use exceptions as they are not so easily ignored like an error property being true.
(Read and Write property)

186.15.64 RowsAffected as Integer

MBS SQL Plugin, Plugin Version: 23.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns number of rows affected by last DML operation.
Notes: Returns the number of rows affected by the last insert/update/delete command execution.

Can also return the result set rows count, usually when the result set is cached at the client side.
(Read only property)

186.15.65 Scrollable as Boolean

MBS SQL Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether to make internally created SQLCommand objects scrollable.
Notes: Since plugin version 15.0, Scrollable is false by default.
(Read and Write property)

186.15.66 ServerVersion as Integer

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Gets the currently connected DBMS server version number.
Notes: The higher word contains the major server version (the XX value in the XX.YY version number); the lower word contains the minor server version (the YY value in the XX.YY version number).
(Read only property)

186.15.67 ServerVersionString as string

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Gets the currently connected DBMS server version string.
Notes: A server version string may contain some useful information about server brand, configuration and so on. It is a good idea to display this information in all your applications.
(Read only property)

186.15.68 SQLiteEncryptionKey as String

MBS SQL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The encryption key to use.
Example:

```
Var db as new SQLConnectionMBS
db.SQLiteEncryptionKey = "Hello"
```

Notes: This key is applied to the database after connecting. In case of an error, the plugin raises an exception. An empty key can be used for having no encryption.
Alternatively you can use SQLite3MBS.SetKey yourself.

The amount of key material actually used by the encryption extension depends on which variant of SEE you are using. With RC4, the first 256 byte of key are used. With the AES128, the first 16 bytes of the key are used. With AES256, the first 32 bytes of key are used.

If you specify a key that is shorter than the maximum key length, then the key material is repeated as many times as necessary to complete the key. If you specify a key that is larger than the maximum key length, then the excess key material is silently ignored.

The key must begin with an ASCII prefix to specify which algorithm to use. The prefix must be one of "rc4:", "aes128:", or "aes256:". The prefix is not used as part of the key sent into the encryption algorithm. So the real key should begin on the first byte after the prefix. If no prefix is given, we default to AES 128. To be compatible to Xojo, you can use AES128.

The string provided to the plugin is used with it's current encoding. So be sure you use right text encoding for what you want. e.g. using "M√ºller" as key in text encoding Windows ANSI will not open a database which used that key in UTF-8 encoding.

The Xojo database encryption in SQLiteDatabase class uses AES-128 OFB.
(Read and Write property)

186.15.69 Tag as Variant

MBS SQL Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tag property.
Notes: You can store here whatever you like.
(Read and Write property)

186.15.70 VariantsKeepSQLObjects as Boolean

MBS SQL Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether variants should use SQL types.
Notes: If set to true, we return datetime and numeric as SQLDateTimeMBS and SQLNumericMBS objects. If false, we return them as date and double.
(Read and Write property)

186.15.71 Option(name as string) as string

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: A string value of a specific connection or command option.
Example:

```
Var c as SQLConnectionMBS // your connection

// for Microsoft SQL use OLEDB, so you don't need native SQL drivers installed...
c.Option("UseAPI") = "OLEDB"
c.Option("SQLNCLI.LIBS") = "sqlsrv32.dll" // Library included in Windows Vista and newer

// for SQLite, set flag to open database file read only:
c.Option("SQLiteVFSFlags") = "1"

// set 10 seconds timeout for MySQL
c.Option("MYSQL_OPT_CONNECT_TIMEOUT") = "10"

// turn on auto cache
c.Option("AutoCache") = "true"

// set connection timeout for ODBC:
c.Option("SQL_ATTR_CONNECTION_TIMEOUT") = "10"
```

Notes: see also:
https://www.sqlapi.com/ApiDoc/class_s_a_connection.html

We have a collection of library files here:
https://www.monkeybreadsoftware.de/xojo/download/plugin/Libs/
(Read and Write computed property)

186.15.72 Events

186.15.73 DidConnect

MBS SQL Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Event called after connection was made.
Notes: After we got connected, you can apply various options on the new connection here.

186.15.74 PostgresNotification(NotificationName as string, PID as Integer, Extras as String)

MBS SQL Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: A postgresSQL notification was received.
Notes: Provides notification name, process ID of app and optional extra information.

186.15.75 Trace(traceInfo as Integer, SQL as string, Command as SQLCommandMBS)

MBS SQL Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The event to trace SQL commands.

186.15.76 WillConnect

MBS SQL Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Event called before connection is established.
Notes: Last chance to set connection options.

186.15.77 Working

MBS SQL Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The event called while the SQLExecuteMT and SQLSelectMT methods are running.

186.15.78 Constants

Constants

Constant	Value	Description
kOptionAPPNAME	"APPNAME"	A constant for the options.
kOptionLibraryCubeSQL	"CUBESQL.LIBS"	One of the option constant to specify the library with the SetFileO method. Tells the plugin where to find the library for CubeSQL. Only needed don't use InternalCubeSQLLibraryMBS module! The value can contain multiple names and paths separated with ";" on Wi and ":" on macOS/Linux. The library extension on Mac is ".dylib", on Linux ".so" and on Windows You get this library with the CubeSQL download on their homepage. If no value is given, we default to Windows: cubeSQL_64bit.dll;cubesql.dll macOS: libcubesql_r.dylib Linux: libcubesql_r.so The default is set to work in most cases and try various possible library r
kOptionWSID	"WSID"	A constant for the options.
SQLiteInMemory	":memory:"	Connection string for SQLite for a new in-memory database.

Isolation Levels

Constant	Value	Description
kANSILevel0	0	ANSI Level 0
kANSILevel1	1	ANSI Level 1
kANSILevel2	2	ANSI Level 2
kANSILevel3	3	ANSI Level 3
kLevelUnknown	-1	Unknown
kReadCommitted	1	Read committed.
kReadUncommitted	0	Read uncommitted.
kRepeatableRead	2	Repeatable read.
kSerializable	3	Serializable.
kSnapshot	4	Changes made in other transactions can not be seen. For Microsoft SQL Server.

Values for autocommit property

Constant	Value	Description
kAutoCommitOff	0	Autocommit is off.
kAutoCommitOn	1	Autocommit is on.
kAutoCommitUnknown	-1	Autocommit unknown

The database client constants

Constant	Value	Description
kClientNotSpecified	0	Client is not specified.
kCubeSQLClient	13	CubeSQL client. (coming soon)
kDB2Client	6	DB2 client.
kDuckDBClient	14	DuckDB client
kFirebirdClient	4	InterBase/Firebird client.
kInformixClient	7	Informix client.
kInterBaseClient	4	InterBase/Firebird client.
kMariaDBClient	15	MariaDB client.
kMySQLClient	9	MySQL or MariaDB client.
kODBCClient	1	ODBC client.
kOLEDBClient	16	The OLEDB client.
kOracleClient	2	Oracle client. For Windows the file is "oci.dll", for Linux libclntsh.so and for Mac OS X libclntsh.dylib.
kPostgreSQLClient	10	PostgreSQL client.
kSQLAnywhereClient	12	SQL Anywhere client.
kSQLBaseClient	5	SQLbase client.
kSQLiteClient	11	SQLite client. Or spatialite.
kSQLServerClient	3	Mircosoft SQL Server client. You may need to download the client packages for accessing SQL Server. Files like the SQLNCLI dll may be missing. You can download for example the Feature Pack for Microsoft SQL Server 2005 from the microsoft download page.
kSybaseClient	8	Sybase client.

Error Codes

Constant	Value	Description
kErrorBindVarNotFound	7	Bind variable not found.
kErrorClientInitFails	6	Initialization failed for client.
kErrorClientNotSet	1	Client not set.
kErrorClientNotSupported	2	Unsupported client type for this platform.
kErrorClientVersionOld	5	Library file is too old.
kErrorFieldNotFound	8	Field not found.
kErrorGetLibraryVersionFails	4	Failed to query library version.
kErrorLoadLibraryFails	3	Failed to load a library. For example path could be wrong or 32/64bit mismatch.
kErrorNoMemory	0	Out of memory.
kErrorUnknownColumnType	11	Unknown column type.
kErrorUnknownDataType	9	Unknown data type.
kErrorUnknownParameterType	10	Unknown parameter type.
kErrorWrongConversion	12	Failed to convert a value, e.g. string to number.
kErrorWrongDatetime	13	Can't convert text to date.

Options to specify the library with SetFileOption

Constant	Value	Description
kOptionLibraryDB2	”DB2CLI.LIBS”	Tells the plugin where to find the library for DB2. The value can contain multiple names and paths separated with ”;” o and ”:” on macOS/Linux. The library extension on Mac is ”.dylib”, on Linux ”.so” and on Win You get this library with the DB2 download on their homepage. If no value is given, we default to Windows: db2clio.dll macOS: libdb2.dylib Linux: libdb2.so
kOptionLibraryDuckDB	”DUCKDB.LIBS”	Tells the plugin where to find the library for DuckDB. The value can contain multiple names and paths separated with ”;” o and ”:” on macOS/Linux. The library extension on Mac is ”.dylib”, on Linux ”.so” and on Win You get this library with the DuckDB download on their homepage If no value is given, we default to Windows: duckdb.dll macOS: libduckdb.dylib Linux: libduckdb.so
kOptionLibraryFirebird	”IBASE.LIBS”	Tells the plugin where to find the library for FireBird (or Interbase The value can contain multiple names and paths separated with ”;” o and ”:” on macOS/Linux. The library extension on Mac is ”.dylib”, on Linux ”.so” and on Win You get this library with the FireBird download on their homepage If no value is given, we default to Windows: ibclient64.dll;fbclient.dll;gds32.dll macOS: libgds.dylib:libfbclient.dylib Linux: libgds.so:libfbclient.so The default is set to work in most cases and try various possible libr
kOptionLibraryInformix	”INFCLI.LIBS”	Tells the plugin where to find the library for Informix. The value can contain multiple names and paths separated with ”;” o and ”:” on macOS/Linux. The library extension on Mac is ”.dylib”, on Linux ”.so” and on Win You get this library with the Informix download on their homepage If no value is given, we default to Windows: ICLIT09B.DLL;ICLIT09A.DLL macOS: iclit09b.dylib:iclit09a.dylib:libifcli.dylib Linux: iclit09b.so:iclit09a.so:libifcli.so The default is set to work in most cases and try various possible libr
kOptionLibraryInterbase	”IBASE.LIBS”	Tells the plugin where to find the library for FireBird (or Interbase The value can contain multiple names and paths separated with ”;” o and ”:” on macOS/Linux. The library extension on Mac is ”.dylib”, on Linux ”.so” and on Win You get this library with the FireBird download on their homepage If no value is given, we default to Windows: ibclient64.dll;fbclient.dll;gds32.dll macOS: libgds.dylib:libfbclient.dylib Linux: libgds.so:libfbclient.so The default is set to work in most cases and try various possible libr
kOptionLibraryMySQL	”MYSQL.LIBS”	Tells the plugin where to find the library for MySQL (or MariaDB The value can contain multiple names and paths separated with ”;” o and ”:” on macOS/Linux. The library extension on Mac is ”.dylib”, on Linux ”.so” and on Win You get this library with the MySQL download on their homepage Libs folder on our website. If no value is given, we default to Windows: libmySQL.dll;libmariadb.dll macOS: libmysqlclient.dylib.21:libmysqlclient_r.dyli client_r.18.dylib:libmysqlclient_r.16.dylib:libmysqlclient_r.15.dylib

186.16 class SQLDatabaseMBS

186.16.1 class SQLDatabaseMBS

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The database class for the SQL plugin
Example:

```
Var db as new SQLDatabaseMBS

// where is the library?
db.SetFileOption SQLConnectionMBS.kOptionLibrarySQLite, getfolderitem("/usr/lib/libsqlite3.0.dylib", folderitem.PathTy
Shell)

// connect to database
// in this example it is SQLite,
// but can also be Sybase, Oracle, Informix, DB2, SQLServer, InterBase, MySQL, SQLBase and ODBC

Var path as string

if TargetMacOS then
path = "/tmp/test.db" // put the database in the temporary folder
else
path = "test.db" // for Windows and Linux in the current folder the application is inside.
end if

db.DatabaseName = "sqlite:"+path

if db.Connect then

MsgBox "We are connected!"

// Disconnect is optional
// autodisconnect will ocur in destructor if needed
db.close

msgbox "We are disconnected!"
end if
```

Notes: You can use the SQL plugin without using Xojo built in database classes if you use the SQLConnectionMBS and SQLCommandMBS classes.

Or you use the SQLDatabaseMBS class which is a subclass of the database class and can be used with Xojo's RecordSet class. The current implementation is not complete. You can connect with passing the database URL in the DatabaseName property of the SQLDatabaseMBS class. You prefix this URL with the database type you are using.

You can use Execute and Select to run SQL statements. Errors can be queries with the lasterror properties. For the RecordSet, you can get the column count, the column names and values and move to the next row. All the other methods like deleting a record or updating a value are not implemented and you need to use SQL commands to do this.

Supported databases: CubeSQL, Centura SQLBase, DB2, DuckDB, Firebird, Informix, InterBase, MariaDB, Microsoft Access, Microsoft SQL Server, MySQL, ODBC, Oracle Database Server, PostgreSQL, SQL Anywhere, SQLite, SQLCipher and Sybase.
Connect to Microsoft Access, FileMaker Server (or Pro), Microsoft Visual FoxPro and others via ODBC.

As field and table schema functions are not implemented, you can't use this database with the database browser features in the Xojo IDE.
The plugin does not provide RecordCount on RecordSet class. For that you need to make a extra SELECT count(*) query.

With Xojo 2013r1, you only need a database server license from Xojo, Inc. if you use the SQLDatabaseMBS class. The SQLConnectionMBS class does not require this license. But some features like getting a recordset do need the license as they refer to the SQLDatabaseMBS class.

Please free all RecordSets and SQLCommand objects before you close the SQLConnection or the SQLDatabase. The plugin keeps references from RecordSets and SQLCommand to prevent automatic destruction of the database connection. If you close a database connection while you have RecordSets and SQLCommand in use, things may go wrong.

The plugin can cache the recordset locally. To enable you can call SQLCommandMBS.Cache or use the Option("AutoCache") = "true" on either command or connection or database objects. The plugin will than fetch all records and store them in memory. After this you can walk over the recordset and use FetchPos, FetchFirst, FetchLast, FetchPrev and FetchNext to locate the rows you need. When you call Field() you always get last row, but to read from cached result set, please use Value() function. When using RecordSet, the values are read via Value() functions automatically.

You can use InternalPostgreSQLLibraryMBS or InternalSQLiteLibraryMBS if you like to use our built in SQLite or PostgreSQL database libraries.

The class pings the database every minute by checking whether it's alive and to avoid server dropping connection. This can be disabled by setting Option("Ping") = "false". Ping is not used for SQLite.

MBS Plugin 21.1 adds support for Edit/Update methods in RecordSet and RowSet classes.

MBS Database connections are implemented via SQLConnectionMBS and SQLCommandMBS classes. We provide a thin layer on top with SQLDatabaseMBS class to make it compatible to the Xojo database class.

And when you use SQLDatabaseMBS, you can always get the matching SQLConnectionMBS objet via Connection property. Instead of SQLCommandMBS class, you may just use SelectSQL/ExecuteSQL or older SQLSelect/SQLExecute functions.

We have a collection of library files here:
https://www.monkeybreadsoftware.de/xojo/download/plugin/Libs/
Subclass of the Database class.

186.16.2 Methods

186.16.3 BeginTransaction

MBS SQL Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Begins a transaction.
Notes: This method does nothing. Why?
Well, if auto commit is on, you don't need to call this.
If auto commit is off, we call BeginTransaction for you, so if you call this method you would call it a second time and get an error.
We have this method for compatibility to other SQL database classes from Xojo.

186.16.4 CancelAllCommands

MBS SQL Plugin, Plugin Version: 18.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Cancel all commands for the connection.
Notes: This loops over the list of commands associated with this connection and calls Cancel on them.

186.16.5 Commands as SQLCommandMBS()

MBS SQL Plugin, Plugin Version: 18.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries list of all command objects related to the connection.

186.16.6 Connect as boolean

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Connects to the database.
Example:

```
Var db as new SQLDatabaseMBS

// where is the library?
db.SetFileOption SQLConnectionMBS.kOptionLibraryMySQL, SpecialFolder.UserHome.Child("libmysqlclient.dylib")

// connect to database
// in this example it is MySQL,
// but can also be Sybase, Informix, Oracle, DB2
// SQLServer, InterBase, SQLBase and ODBC
```

```
db.DatabaseName="mysql:192.168.1.80,3306@test"

db.UserName="root"
db.Password=""

// or postgreSQL with timeout and ssl mode
db.DatabaseName="PostgreSQL:127.0.0.1,5432@dbname=postgres connect_timeout=10 sslmode=require"

if db.Connect then

MsgBox "We are connected!"

MsgBox "Server Version: "+db.Connection.ServerVersionString

// Disconnect is optional
// autodisconnect will ocur in destructor if needed

else
MsgBox db.ErrorMessage
end if
```

Notes: Returns true on success and false on failure.

Please set the DatabaseName, UserName and Password properties. The Host property is ignored.
The database name must contain the complete information and a prefix for the kind of database.

Use this prefixes: "CubeSQL:", "SQLAnywhere:", "ODBC:", "Oracle:", "SQLServer:", "Firebird:", "DuckDB:", "InterBase:", "SQLBase:", "DB2:", "Informix:", "Sybase:", "MySQL:", "MariaDB:", "PostgreSQL:" or "SQLite:".
Connect to Microsoft Access, FileMaker Server (or Pro), Microsoft Visual FoxPro and others via ODBC.

For IPv6 we changed plugin to use , instead of : for the port separator. So please use , to separate port from IP or host.

For Firebird, if you connect to a database and you have 32/64bit mismatch, you get error number 3.

186.16.7 ConnectMT as Boolean

MBS SQL Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Connects to the database.
Notes: Returns true on success and false on failure.

Please set the DatabaseName, UserName and Password properties. The Host property is ignored.

The database name must contain the complete information and a prefix for the kind of database.

Use this prefixes: "CubeSQL:", "SQLAnywhere:", "ODBC:", "Oracle:", "SQLServer:", "Firebird:", "DuckDB:", "InterBase:", "SQLBase:", "DB2:", "Informix:", "Sybase:", "MySQL:", "MariaDB:", "PostgreSQL:" or "SQLite:". Connect to Microsoft Access, FileMaker Server (or Pro), Microsoft Visual FoxPro and others via ODBC.

For IPv6 we changed plugin to use , instead of : for the port separator. So please use , to separate port from IP or host.

Same as Connect, but if you run this on a thread, the plugin gives time to other threads so the rest of your application runs just fine.

The MT method will not trigger WillConnect and DidConnect events.

The work is performed on a preemptive thread, so this function does not block the application and can yield time to other Xojo threads. Must be called in a Xojo thread to enjoy benefits. If called in main thread will block, but keep other background threads running.

186.16.8 Constructor(globals as SQLGlobalsMBS = nil)

MBS SQL Plugin, Plugin Version: 13.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The constructor.
Notes: Please don't call this directly as it's called automatically with using new command.

186.16.9 CubeSQLLastInsertID as Int64

MBS SQL Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the last auto increment value from last insert command.
Notes: Only for CubeSQL connections. May raise error if not available.

186.16.10 CubeSQLReceiveData(byref data as String, byref IsEndChunk as Boolean) as Boolean

MBS SQL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Receives a data chunk for file download.
Notes: Returns true on success.

Data is set with data and IsEndChunk is set to true for last chunk.

186.16.11 CubeSQLSendData(data as MemoryBlock)

MBS SQL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sends data chunk for file upload.
Notes: This is the sendchunk function in CubeSQL.
See also:

- 186.16.12 CubeSQLSendData(data as String) 21882

186.16.12 CubeSQLSendData(data as String)

MBS SQL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sends data chunk for file upload.
Notes: This is the sendchunk function in CubeSQL.
See also:

- 186.16.11 CubeSQLSendData(data as MemoryBlock) 21882

186.16.13 CubeSQLSendEndData

MBS SQL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sends end data packet.
Notes: This is the send_enddata function in CubeSQL.

186.16.14 InsertRecord(TableName as String, Record as Dictionary)

MBS SQL Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Convenience function to insert a record.
Example:

```
Var db as SQLDatabaseMBS // your database connection

Var d as new Dictionary

d.Value("ID")=2
d.Value("text")="test insert"
d.Value("other")="Just a test"
```

```
db.InsertRecord("test_tbl", d)

if db.Error then
MsgBox db.ErrorMessage
end if
```

Notes: The plugin builds for you SQL statement with prepared statement and runs the insert command with values.
Lasterror is set or exception raised as with SQLExecute.
Internally this uses a prepared statement. You can check the generated statement via LastStatement property.

186.16.15 Listen

MBS SQL Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Start listening for notifications.
Notes: Works only for PostgresSQL Client.
Please set client or connect before calling this method.

186.16.16 MySQLInsertID as Int64

MBS SQL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the last auto increment value from last insert command.
Notes: Please query value right after doing Insert. This value is reset when you call commit.
For mySQL and MariaDB connections.

see also
http://dev.mysql.com/doc/refman/5.1/en/mysql-insert-id.html

186.16.17 Prepare(statement as string) as SQLPreparedStatementMBS

MBS SQL Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Prepares a statement.
Notes: Returns prepared statement or nil in case of error.
Please check ErrorMessage property for errors.

186.16.18 SetFileOption(name as string, file as folderitem)

MBS SQL Plugin, Plugin Version: 10.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets an option with passing a file path.
Example:

```
Var db as new SQLDatabaseMBS

// where is the library?
db.SetFileOption SQLConnectionMBS.kOptionLibraryMySQL, SpecialFolder.UserHome.Child("libmysqlclient.dylib")
```

Notes: Allows you to specify a file path with a folderitem.

Makes sure the path is correct and you have a 32 or 64-bit library matching the architecture of your application.

186.16.19 SQLExecute(ExecuteString as string, CommandType as Integer)

MBS SQL Plugin, Plugin Version: 13.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Runs the SQLExecute threaded.
Notes: Same as SQLExecute, but with additional CommandType parameter.

186.16.20 SQLExecuteMT(ExecuteString as string, CommandType as Integer = 0)

MBS SQL Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Runs the SQLExecute threaded.
Notes: Same as SQLExecute, but if you run this on a thread, the plugin gives time to other threads so the rest of your application runs just fine.

The work is performed on a preemptive thread, so this function does not block the application and can yield time to other Xojo threads. Must be called in a Xojo thread to enjoy benefits. If called in main thread will block, but keep other background threads running.

186.16.21 SQLiteBackupFinish(Backup as SQLite3BackupMBS) as integer

MBS SQL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Finishes a backup run.

Notes: When BackupStep has returned kErrorDone, or when the application wishes to abandon the backup operation, the application should destroy the SQLite3BackupMBS by passing it to BackupFinish. The BackupFinish interfaces releases all resources associated with the SQLite3BackupMBS object. If BackupStep has not yet returned kErrorDone, then any active write-transaction on the destination database is rolled back. The SQLite3BackupMBS object is invalid and may not be used following a call to BackupFinish.
The value returned by BackupFinish is kErrorOK if no BackupStep errors occurred, regardless or whether or not BackupStep completed. If an out-of-memory condition or IO error occurred during any prior BackupStep call on the same SQLite3BackupMBS object, then BackupFinish returns the corresponding error code.
A return of kErrorBusy or kErrorLocked from BackupStep is not a permanent error and does not affect the return value of BackupFinish.

186.16.22 SQLiteBackupInit(Dest as Variant, DestName as String, Source as Variant, SourceName as String) as SQLite3BackupMBS

MBS SQL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Initializes a backup.
Notes: The backup API copies the content of one database into another. It is useful either for creating backups of databases or for copying in-memory databases to or from persistent files.

see also
http://www.sqlite.org/c3ref/backup_finish.html

Exclusive access is required to the destination database for the duration of the operation. However the source database is only read-locked while it is actually being read; it is not locked continuously for the entire backup operation. Thus, the backup may be performed on a live source database without preventing other users from reading or writing to the source database while the backup is underway.

To perform a backup operation:

- BackupInit is called once to initialize the backup,
- BackupStep is called one or more times to transfer the data between the two databases, and finally
- BackupFinish is called to release all resources associated with the backup operation.

There should be exactly one call to BackupFinish for each successful call to BackupInit.

The D and N arguments to BackupInit(D,N,S,M) are the database connection associated with the destination database and the database name, respectively. The database name is "main" for the main database, "temp" for the temporary database, or the name specified after the AS keyword in an ATTACH statement for an attached database. The S and M arguments passed to BackupInit(D,N,S,M) identify the database connection and database name of the source database, respectively. The source and destination database

connections (parameters S and D) must be different or else BackupInit(D,N,S,M) will file with an error.
If an error occurs within BackupInit(D,N,S,M), then nil is returned and an error code and error message are store3d in the destination database connection D. The error code and message for the failed call to BackupInit can be retrieved using the ErrCode and ErrMessage functions. A successful call to BackupInit returns a SQLite3BackupMBS object. The SQLite3BackupMBS object may be used with the BackupStep and BackupFinish functions to perform the specified backup operation.

Concurrent Usage of Database Handles
The source database connection may be used by the application for other purposes while a backup operation is underway or being initialized. If SQLite is compiled and configured to support threadsafe database connections, then the source database connection may be used concurrently from within other threads.
However, the application must guarantee that the destination database connection is not passed to any other API (by any thread) after BackupInit is called and before the corresponding call to BackupFinish. SQLite does not currently check to see if the application incorrectly accesses the destination database connection and so no error code is reported, but the operations may malfunction nevertheless. Use of the destination database connection while a backup is in progress might also also cause a mutex deadlock.
If running in shared cache mode, the application must guarantee that the shared cache used by the destination database is not accessed while the backup is running. In practice this means that the application must guarantee that the disk file being backed up to is not accessed by any connection within the process, not just the specific connection that was passed to BackupInit.
The SQLite3BackupMBS object itself is partially threadsafe. Multiple threads may safely make multiple concurrent calls to BackupStep. However, the BackupRemaining and BackupPageCount APIs are not strictly speaking threadsafe. If they are invoked at the same time as another thread is invoking BackupStep it is possible that they return invalid values.

Source and Dest can be SQLConnectionMBS or SQLDatabaseMBS. You need to pass source and dest, even if one is self as we give you the option to decide where to pass the current database connection.

186.16.23 SQLiteBackupPageCount(Backup as SQLite3BackupMBS) as integer

MBS SQL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the number of pages in total.
Notes: Each call to BackupStep sets two values inside the SQLite3BackupMBS object: the number of pages still to be backed up and the total number of pages in the source databae file. The BackupRemaining and BackupPageCount interfaces retrieve these two values, respectively.
The values returned by these functions are only updated by BackupStep. If the source database is modified during a backup operation, then the values are not updated to account for any extra pages that need to be updated or the size of the source database file changing.

186.16.24 SQLiteBackupRemaining(Backup as SQLite3BackupMBS) as integer

MBS SQL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the number of pages remaining.
Notes: Each call to BackupStep sets two values inside the SQLite3BackupMBS object: the number of pages still to be backed up and the total number of pages in the source databae file. The BackupRemaining and BackupPageCount interfaces retrieve these two values, respectively.
The values returned by these functions are only updated by BackupStep. If the source database is modified during a backup operation, then the values are not updated to account for any extra pages that need to be updated or the size of the source database file changing.

186.16.25 SQLiteBackupStep(Backup as SQLite3BackupMBS, Pages as Integer) as integer

MBS SQL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Copies up to Pages pages between the source and destination databases specified by SQLite3BackupMBS object.
Notes: If N is negative, all remaining source pages are copied. If BackupStep(B,N) successfully copies N pages and there are still more pages to be copied, then the function resturns kErrorOK. If BackupStep(B,N) successfully finishes copying all pages from source to destination, then it returns kErrorDone. If an error occurs while running BackupStep(B,N), then an error code is returned. As well as kErrorOK and kErrorDone, a call to BackupStep may return kErrorReadOnly, kErrorNoMem, kErrorBusy, kErrorLocked, or an kErrorIOACCESS | kErrorIOXXX extended error code.
The BackupStep might return kErrorReadOnly if the destination database was opened read-only or if the destination is an in-memory database with a different page size from the source database.
If BackupStep cannot obtain a required file-system lock, then the sqlite3_busy_handler | busy-handler function is invoked (if one is specified). If the busy-handler returns non-zero before the lock is available, then kErrorBusy is returned to the caller. In this case the call to BackupStep can be retried later. If the source database connection is being used to write to the source database when BackupStep is called, then kErrorLocked is returned immediately. Again, in this case the call to BackupStep can be retried later on. (If kErrorIOACCESS | kErrorIOXXX, kErrorNoMem, or kErrorReadOnly is returned, then there is no point in retrying the call to BackupStep. These errors are considered fatal.) The application must accept that the backup operation has failed and pass the backup operation handle to the BackupFinish to release associated resources.
The first call to BackupStep obtains an exclusive lock on the destination file. The exclusive lock is not released until either BackupFinish is called or the backup operation is complete and BackupStep returns kErrorDone. Every call to BackupStep obtains a shared lock on the source database that lasts for the duration of the BackupStep call. Because the source database is not locked between calls to BackupStep, the source database may be modified mid-way through the backup process. If the source database is modified by an external process or via a database connection other than the one being used by the backup operation, then the backup will be automatically restarted by the next call to BackupStep. If the source database is modified by the using the same database connection as is used by the backup operation, then the backup database is automatically updated at the same time.

186.16.26 SQLiteConnectionHandle as Ptr

MBS SQL Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the current connection reference for the database.
Notes: sqlite3 pointer for using in declares.

186.16.27 SQLiteEnableLoadExtension(OnOff as boolean)

MBS SQL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Enables/disables extension loading for the given connection.

186.16.28 SQLiteLastInsertRowID as Int64

MBS SQL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns Last Insert Rowid.
Notes: Each entry in an SQLite table has a unique 64-bit signed integer key called the ROWID. The rowid is always available as an undeclared column named ROWID, OID, or _ROWID_ as long as those names are not also used by explicitly declared columns. If the table has a column of type INTEGER PRIMARY KEY then that column is another alias for the rowid.

This routine returns the rowid of the most recent successful INSERT into the database from the database connection in the first argument. If no successful INSERTs have ever occurred on that database connection, zero is returned.

(If an INSERT occurs within a trigger, then the rowid of the inserted row is returned by this routine as long as the trigger is running. But once the trigger terminates, the value returned by this routine reverts to the last value inserted before the trigger fired.)

An INSERT that fails due to a constraint violation is not a successful INSERT and does not change the value returned by this routine. ^Thus INSERT OR FAIL, INSERT OR IGNORE, INSERT OR ROLLBACK, and INSERT OR ABORT make no changes to the return value of this routine when their insertion fails. ^(When INSERT OR REPLACE encounters a constraint violation, it does not fail. The INSERT continues to completion after deleting rows that caused the constraint problem so INSERT OR REPLACE will always change the return value of this interface.)^

For the purposes of this routine, an INSERT is considered to be successful even if it is subsequently rolled back.

This function is accessible to SQL statements via the last_insert_rowid() SQL function.

If a separate thread performs a new INSERT on the same database connection while the LastInsertRowID function is running and thus changes the last insert rowid, then the value returned by LastInsertRowID is unpredictable and might not equal either the old or the new last insert rowid.

186.16.29 SQLiteLibVersion as String

MBS SQL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries the version string of the SQLite library.

186.16.30 SQLiteLoadExtension(file as FolderItem, ByRef ErrorMessage as String) as Integer

MBS SQL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Loads an SQLite extension library from the named file.
Notes: The LoadExtension interface attempts to load an SQLite extension library contained in the file.

Returns kErrorOk on success and kErrorError if something goes wrong.
Extension loading must be enabled using EnableLoadExtension prior to calling this API, otherwise an error will be returned.
See also:

- 186.16.31 SQLiteLoadExtension(path as String, ByRef ErrorMessage as String) as Integer 21889

186.16.31 SQLiteLoadExtension(path as String, ByRef ErrorMessage as String) as Integer

MBS SQL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Loads an SQLite extension library from the named file.
Notes: The LoadExtension interface attempts to load an SQLite extension library contained in the file.

Returns kErrorOk on success and kErrorError if something goes wrong.
Extension loading must be enabled using EnableLoadExtension prior to calling this API, otherwise an error will be returned.
See also:

- 186.16.30 SQLiteLoadExtension(file as FolderItem, ByRef ErrorMessage as String) as Integer 21889

186.16.32 SQLiteMemoryHighwater(reset as boolean = false) as Int64

MBS SQL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries maximum memory usage so far.
Notes: Can be reset with reset parameter being true.

186.16.33 SQLiteMemoryUsed as Int64

MBS SQL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries memory in use by SQLite.
Notes: This is memory allocated, but not yet freed.
Value is zero until SQLite3 initialized.

186.16.34 SQLiteReKey(Key as String) as Integer

MBS SQL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: You can change the key on a database using the Rekey Function.
Notes: An empty key decrypts the database.

Rekeying requires that every page of the database file be read, decrypted, reencrypted with the new key, then written out again. Consequently, rekeying can take a long time on a larger database.

Most SEE variants allow you to encrypt an existing database that was created using the public domain version of SQLite. This is not possible when using the authenticating version of the encryption extension in see-aes128-ccm. If you do encrypt a database that was created with the public domain version of SQLite, no nonce will be used and the file will be vulnerable to a chosen-plaintext attach. If you call SetKey() immediately after Open when you are first creating the database, space will be reserved in the database for a nonce and the encryption will be much stronger. If you do not want to encrypt right away, call SetKey() anyway, with an empty key, and the space for the nonce will be reserved in the database even though no encryption is done initially.

A public domain version of the SQLite library can read and write an encrypted database with an empty key. You only need the encryption extension if the key is non-empty.

Returns a SQLite error code.

186.16.35 SQLiteSetBusyHandler(MaxAttempts as Integer = 5)

MBS SQL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Installs busy handler for this connection.
Notes: This routine sets a callback function that might be invoked whenever an attempt is made to open a database table that another thread or process has locked.

The plugin has an busy handler which will wait up to MaxAttemps and yield to other Xojo threads while waiting.
Passing 5 should wait up to 100ms.

There can only be a single busy handler defined for each [database connection] . Setting a new busy handler clears any previously set handler.) Note that calling SetBusyTimeout will also set or clear the busy handler.

The busy callback should not take any actions which modify the database connection that invoked the busy handler. Any such actions result in undefined behavior.

186.16.36 SQLiteSetBusyTimeout(TimeOutMS as Integer = 20)

MBS SQL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: This routine sets a busy handler that sleeps for a specified amount of time when a table is locked.
Notes: The handler will sleep multiple times until at least "ms" milliseconds of sleeping have accumulated. ^After at least "ms" milliseconds of sleeping, the handler returns 0 which causes SQLite query to return SQLite Busy or IO Blocked error.

Calling this routine with an argument less than or equal to zero turns off all busy handlers.

(There can only be a single busy handler for a particular database connection any any given moment. If another busy handler was defined (using SetBusyHandler prior to calling this routine, that other busy handler is cleared.)

186.16.37 SQLiteSetKey(Key as String) as Integer

MBS SQL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Applies encryption to a database connection.
Notes: Returns a SQLite error code.

The amount of key material actually used by the encryption extension depends on which variant of SEE you

are using. With RC4, the first 256 byte of key are used. With the AES128, the first 16 bytes of the key are used. With AES256, the first 32 bytes of key are used.

If you specify a key that is shorter than the maximum key length, then the key material is repeated as many times as necessary to complete the key. If you specify a key that is larger than the maximum key length, then the excess key material is silently ignored.

The key must begin with an ASCII prefix to specify which algorithm to use. The prefix must be one of "rc4:", "aes128:", or "aes256:". The prefix is not used as part of the key sent into the encryption algorithm. So the real key should begin on the first byte after the prefix.

The string provided to the plugin is used with it's current encoding. So be sure you use right text encoding for what you want. e.g. using "M√ºller" as key in text encoding Windows ANSI will not open a database which used that key in UTF-8 encoding.

The Xojo database encryption in SQLiteDatabase class uses AES-128 OFB.

186.16.38 SQLiteTableColumnMetaData(DBName as string, TableName as string, ColumnName as string, byref DataType as string, byref CollationSequence as string, byref NotNull as boolean, byref PrimaryKey as boolean, byref AutoIncrement as Boolean) as integer

MBS SQL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Extract Metadata About A Column Of A Table
Notes: Not available in all sqlite libraries!

This routine returns metadata about a specific column of a specific database table accessible using the database connection handle passed as the first function argument.
The column is identified by the second, third and fourth parameters to this function. The second parameter is either the name of the database (i.e. "main", "temp", or an attached database) containing the specified table or NULL. If it is NULL, then all attached databases are searched for the table using the same algorithm used by the database engine to resolve unqualified table references.
The third and fourth parameters to this function are the table and column name of the desired column, respectively. Neither of these parameters may be NULL.
Metadata is returned by writing to the memory locations passed as the 5th and subsequent parameters to this function. Any of these arguments may be NULL, in which case the corresponding element of metadata is omitted.

CollationSequence is assigned the Name of default collation sequence. NotNull is set to true if column has a NOT NULL constraint. PrimaryKey is set to true if column is part of the PRIMARY KEY and AutoIncrement is set to true if column is AUTOINCREMENT.

If the specified table is actually a view, an error code is returned.

If the specified column is "rowid", "oid" or "_rowid_" and an INTEGER PRIMARY KEY column has been explicitly declared, then the output parameters are set for the explicitly declared column. (If there is no explicitly declared INTEGER PRIMARY KEY column, then the output parameters are set as follows:

data type: "INTEGER"
collation sequence: "BINARY"
not null: false
primary key: true
auto increment: false

(This function may load one or more schemas from database files. If an error occurs during this process, or if the requested table or column cannot be found, an error code is returned and an error message left in the database connection (to be retrieved using ErrMessage).)

This API is only available if the library was compiled with the SQLITE_ENABLE_COLUMN_METADATA C-preprocessor symbol defined.

186.16.39 SQLiteThreadsafe as integer

MBS SQL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Test To See If The Library Is Threadsafe.
Notes: The threadsafe() function returns zero if and only if SQLite was compiled mutexing code omitted due to the SQLITE_THREADSAFE compile-time option being set to 0.

SQLite can be compiled with or without mutexes. When the SQLITE_THREADSAFE C preprocessor macro is 1 or 2, mutexes are enabled and SQLite is threadsafe. When the SQLITE_THREADSAFE macro is 0, the mutexes are omitted. Without the mutexes, it is not safe to use SQLite concurrently from more than one thread.

Enabling mutexes incurs a measurable performance penalty. So if speed is of utmost importance, it makes sense to disable the mutexes. But for maximum safety, mutexes should be enabled. The default behavior is for mutexes to be enabled.

This interface can be used by an application to make sure that the version of SQLite that it is linking against was compiled with the desired setting of the SQLITE_THREADSAFE macro.

This interface only reports on the compile-time mutex setting of the SQLITE_THREADSAFE flag. If SQLite

is compiled with SQLITE_THREADSAFE=1 or =2 then mutexes are enabled by default but can be fully or partially disabled using a call to sqlite3_config() with the verbs SQLITE_CONFIG_SINGLETHREAD, SQLITE_CONFIG_MULTITHREAD, or SQLITE_CONFIG_MUTEX. ^(The return value of the sqlite3_threadsafe() function shows only the compile-time setting of thread safety, not any run-time changes to that setting made by sqlite3_config(). In other words, the return value from sqlite3_threadsafe() is unchanged by calls to sqlite3_config().)^

See the threading mode documentation for additional information.

186.16.40 SQLSelect(SelectString as string, CommandType as Integer) as RecordSet

MBS SQL Plugin, Plugin Version: 13.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Runs the SQLSelect threaded.
Notes: Same as SQLSelect, but with additional CommandType parameter.

For this method to work, you need to have somewhere a property with SQLDatabaseMBS so Xojo includes our SQLDatabase plugin which provides the RecordSet functionality.

If Scrollable property is true, the recordset will be requested to be scrollable.

The record set may not have a valid RecordCount or have working movefirst/movelast/moveprev methods unless the underlaying database supports those and Scrollable result sets is enabled/supported.

186.16.41 SQLSelectMT(SelectString as string, CommandType as Integer = 0) as RecordSet

MBS SQL Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Runs the SQLSelect threaded.
Notes: Same as SQLSelect, but if you run this on a thread, the plugin gives time to other threads so the rest of your application runs just fine.

The work is performed on a preemptive thread, so this function does not block the application and can yield time to other Xojo threads. Must be called in a Xojo thread to enjoy benefits. If called in main thread will block, but keep other background threads running.

If Scrollable property is true, the recordset will be requested to be scrollable.

The record set may not have a valid RecordCount or have working movefirst/movelast/moveprev methods unless the underlaying database supports those and Scrollable result sets is enabled/supported.

186.16.42 UpdateRecord(TableName as String, Record as Dictionary, Keys as Dictionary)

MBS SQL Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Convenience function to update a record.
Example:

```
Var db as SQLDatabaseMBS // your database connection

Var d as new Dictionary

d.Value("text")="new text"
d.Value("other")="second value"

db.UpdateRecord("test_tbl", d, new dictionary("ID":2))

if db.Error then
MsgBox db.ErrorMessage
end if
```

Notes: The plugin builds for you SQL statement with prepared statement and runs the update command with given values for records with given key values.

You can put multiple field names in the keys dictionary.

Lasterror is set or exception raised as with SQLExecute.
Internally this uses a prepared statement. You can check the generated statement via LastStatement property.

186.16.43 Properties

186.16.44 AutoCommit as Integer

MBS SQL Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether autocommit is enabled or disabled for the current connection.
Example:

```
Var db as SQLDatabaseMBS // your database connection
```

```
db.AutoCommit = SQLDatabaseMBS.kAutoCommitOn
```

Notes: If autocommit is on, the database is committed automatically after each SQL command. Otherwise, transaction is committed only after Commit calling.
(Read and Write property)

186.16.45 Client as Integer

MBS SQL Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The current DBMS client assigned for the connection.
Example:

```
Var con as new SQLDatabaseMBS
db.client = SQLConnectionMBS.kSQLiteClient
```

Notes: Raises OutOfBoundsException exception if value parameter is out of range on setting.
With SQLDatabaseMBS, the client is usually taken from the DatabaseName property with a prefix, e.g. "ODBC:test".
(Read and Write property)

186.16.46 ClientVersion as Integer

MBS SQL Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Gets the DBMS client API version number.
Example:

```
Call InternalSQLiteLibraryMBS.Use

Var db As New SQLDatabaseMBS
db.Client = SQLConnectionMBS.kSQLiteClient

Var version As Integer = db.ClientVersion
Var HighVersion As Integer = Bitwise.ShiftRight(version, 16)
Var LowVersion As Integer = Bitwise.BitAnd(version, 65535)

var v as string = InternalSQLiteLibraryMBS.Version

MessageBox HighVersion.ToString+"."+LowVersion.ToString+EndOfLine+v
```

Notes: The higher word contains the major client version (the XX value in the XX.YY version number); the lower word contains the minor client version (the YY value in the XX.YY version number).

If an DBMS client was not set calling ClientVersion method will throw an exception.
(Read only property)

186.16.47 Connection as SQLConnectionMBS

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The connection for this database used in the background.
Notes: Note that methods on this connection object can raise exceptions while methods on the SQLDatabaseMBS class sets the error properties.
(Read only property)

186.16.48 isAlive as boolean

MBS SQL Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the database server connection status for a particular connection object.
Notes: Returns true if the database server is active and accessible; otherwise false.
This method uses the safe query execution for most supported DBMS-es. The query uses the well known database table or procedure (mysql_ping is used for MySQL or MariaDB). If the query fails the method returns false.

For Sybase, SQLBase, MS SQL Server, Oracle, ODBC, MySQL, MariaDB, DB2, CubeSQL, Informix, Interbase, FireBase and PostgreSQL we check the status of the connection. This may send a query over the network and sees if server responds properly. If network connection breaks, this function returns false.

For SQLite, DuckDB and SQL Anywhere we return true if we are connected, just like isConnected property.
(Read only property)

186.16.49 isConnected as boolean

MBS SQL Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the connection state for a particular connection object.
Notes: Returns true if connected; otherwise false.
If you connect over a network, please check with isAlive whether the connection is still alive.
(Read only property)

186.16.50 IsolationLevel as Integer

MBS SQL Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The transaction isolation level.
Notes: Use the kReadCommitted, kReadUncommitted, kRepeatableRead, kSerializable and kLevelUnknown constants.
(Read and Write property)

186.16.51 LastStatement as String

MBS SQL Plugin, Plugin Version: 13.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The last executed SQL Statement.
Notes: (Read only property)

186.16.52 NativeAPI as Variant

MBS SQL Plugin, Plugin Version: 16.1, Platforms: macOS, Linux, Windows, Targets: All.

Deprecated: This item is deprecated and should no longer be used. **Function:** Returns a set of functions of native DBMS client API.
Notes: Returns a SQLAPIMBS object.
Deprecated in version 19.5 in favor of direct methods in SQLDatabaseMBS and SQLConnectionMBS classes.
(Read only property)

186.16.53 Options as Dictionary

MBS SQL Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a dictionary with all options.
Notes: For debugging, it may be useful to inspect options in debugger.
(Read only property)

186.16.54 RaiseExceptions as Boolean

MBS SQL Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether to raise exceptions.
Notes: Default is false which means we set error, ErrorCode and ErrorMessage properties and not raise SQLErrorExceptionMBS exception.
If you set to true, we do raise the exception and you have similar behavior as with SQLConnection class.

We recommend to use exceptions as they are not so easily ignored like an error property being true.
(Read and Write property)

186.16.55 RowsAffected as Integer

MBS SQL Plugin, Plugin Version: 23.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns number of rows affected by last DML operation.
Notes: Returns the number of rows affected by the last insert/update/delete command execution.

Can also return the result set rows count, usually when the result set is cached at the client side.
(Read only property)

186.16.56 Scrollable as Boolean

MBS SQL Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether to make internally created SQLCommand objects scrollable.
Notes: Since plugin version 15.0, Scrollable is false by default.
(Read and Write property)

186.16.57 ServerVersion as Integer

MBS SQL Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Gets the currently connected DBMS server version number.
Notes: The higher word contains the major server version (the XX value in the XX.YY version number); the lower word contains the minor server version (the YY value in the XX.YY version number).
(Read only property)

186.16.58 ServerVersionString as string

MBS SQL Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Gets the currently connected DBMS server version string.
Notes: A server version string may contain some useful information about server brand, configuration and so on. It is a good idea to display this information in all your applications.
(Read only property)

186.16.59 SQLiteEncryptionKey as String

MBS SQL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The encryption key to use.
Example:

```
// enable our built-in SQLite library, which supports encryption
Call InternalSQLiteLibraryMBS.Use

// where to store?
Var f As FolderItem = SpecialFolder.Desktop.Child("test.db")
Var storage_database As New SQLDatabaseMBS ' SQLiteDatabase
storage_database.SQLiteEncryptionKey = "aes256:password" ' <- password with AES256 as prefix to pick algorithm
storage_database.DatabaseName = "sqlite:"+ f.NativePath

If storage_database.Connect Then

// create table if this is not yet here
storage_database.SQLExecute "Create table if not exists pics(pic_id integer PRIMARY KEY AUTOINCREMENT, name varchar(20), pic blob)"

// done
MsgBox "Ready"
Else
MsgBox storage_database.ErrorMessage
End If
```

Notes: This key is applied to the database after connecting. In case of an error, the plugin raises an exception. An empty key can be used for having no encryption.
Alternatively you can use SQLite3MBS.SetKey yourself.

The amount of key material actually used by the encryption extension depends on which variant of SEE you are using. With RC4, the first 256 byte of key are used. With the AES128, the first 16 bytes of the key are used. With AES256, the first 32 bytes of key are used.

If you specify a key that is shorter than the maximum key length, then the key material is repeated as many times as necessary to complete the key. If you specify a key that is larger than the maximum key length, then the excess key material is silently ignored.

The key must begin with an ASCII prefix to specify which algorithm to use. The prefix must be one of "rc4:", "aes128:", or "aes256:". The prefix is not used as part of the key sent into the encryption algorithm. So the real key should begin on the first byte after the prefix. If no prefix is given, we default to AES 128. To be compatible to Xojo, you can use AES128.

The string provided to the plugin is used with it's current encoding. So be sure you use right text encoding for what you want. e.g. using "M√ºller" as key in text encoding Windows ANSI will not open a database which used that key in UTF-8 encoding.

The Xojo database encryption in SQLiteDatabase class uses AES-128 OFB.
(Read and Write property)

186.16.60 Tag as Variant

MBS SQL Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tag property.
Notes: You can store here whatever you like.
(Read and Write property)

186.16.61 Option(name as string) as string

MBS SQL Plugin, Plugin Version: 10.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets an option for the connection.
Example:

```
Var c as SQLDatabaseMBS // your database connection

// for Microsoft SQL use OLEDB, so you don't need native SQL drivers installed...
c.Option("UseAPI") = "OLEDB"
c.Option("SQLNCLI.LIBS") = "sqlsrv32.dll" // Library included in Windows Vista and newer

// for SQLite, set flag to open database file read only:
c.Option("SQLiteVFSFlags") = "1"

// turn on auto cache
c.Option("AutoCache") = "true"

// set connection timeout for ODBC:
c.Option("SQL_ATTR_CONNECTION_TIMEOUT") = "10"

// cache insert statements for AddRow/InsertRecord
c.Option("CacheInsertStatement") = "true"
```

Notes: We have a collection of library files here:
https://www.monkeybreadsoftware.de/xojo/download/plugin/Libs/
(Read and Write computed property)

186.16.62 Events

186.16.63 DidConnect

MBS SQL Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Event called after connection was made.
Notes: After we got connected, you can apply various options on the new connection here.

186.16.64 PostgresNotification(NotificationName as string, PID as Integer, Extras as String)

MBS SQL Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: A postgresSQL notification was received.
Notes: Provides notification name, process ID of app and optional extra information.

186.16.65 Trace(traceInfo as Integer, SQL as string, Command as SQLCommandMBS)

MBS SQL Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The event to trace SQL commands.

186.16.66 WillConnect

MBS SQL Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Event called before connection is established.
Notes: Last chance to set connection options.

186.16.67 Constants

Constants

Constant	Value	Description
kOptionLibraryCubeSQL	"CUBESQL.LIBS"	One of the option constant to specify the library with the SetFileO method. Tells the plugin where to find the library for CubeSQL. Only needed don't use InternalCubeSQLLibraryMBS module! The value can contain multiple names and paths separated with ";" on Wi and ":" on macOS/Linux. The library extension on Mac is ".dylib", on Linux ".so" and on Windows You get this library with the CubeSQL download on their homepage. If no value is given, we default to Windows: cubeSQL_64bit.dll;cubesql.dll macOS: libcubesql_r.dylib Linux: libcubesql_r.so The default is set to work in most cases and try various possible library n
SQLiteInMemory	"Sqlite::memory:"	Connection string for SQLite for a new in-memory database. Prefixed with SQLite to use directly.

Isolation Levels

Constant	Value	Description
kANSILevel0	0	ANSI Level 0
kANSILevel1	1	ANSI Level 1
kANSILevel2	2	ANSI Level 2
kANSILevel3	3	ANSI Level 3
kLevelUnknown	-1	Unknown
kReadCommitted	1	Read committed.
kReadUncommitted	0	Read uncommitted.
kRepeatableRead	2	Repeatable read.
kSerializable	3	Serializable.
kSnapshot	4	Changes made in other transactions can not be seen. For Microsoft SQL Server.

Values for autocommit property

Constant	Value	Description
kAutoCommitOff	0	Autocommit is off.
kAutoCommitOn	1	Autocommit is on.
kAutoCommitUnknown	-1	Autocommit unknown

Command Types

Constant	Value	Description
kCommandTypeSQLStatement	1	Command is an SQL statement.
kCommandTypeSQLStatementRaw	2	Command is an SQL statement that mustn't be interpreted by SQLAPI.
kCommandTypeStoredProcedure	3	Command is a stored procedure or a function.
kCommandTypeUnknown	0	Used by default. Library detects command type automatically.

Error Codes

Constant	Value	Description
kErrorBindVarNotFound	7	Bind variable not found.
kErrorClientInitFails	6	Initialization failed for client.
kErrorClientNotSet	1	Client not set.
kErrorClientNotSupported	2	Unsupported client type for this platform.
kErrorClientVersionOld	5	Library file is too old.
kErrorFieldNotFound	8	Field not found.
kErrorGetLibraryVersionFails	4	Failed to query library version.
kErrorLoadLibraryFails	3	Failed to load a library. For example path could be wrong or 32/64bit mismatch.
kErrorNoMemory	0	Out of memory.
kErrorUnknownColumnType	11	Unknown column type.
kErrorUnknownDataType	9	Unknown data type.
kErrorUnknownParameterType	10	Unknown parameter type.
kErrorWrongConversion	12	Failed to convert a value, e.g. string to number.
kErrorWrongDatetime	13	Can't convert text to date.

Options to specify the library with SetFileOption

Constant	Value	Description
kOptionLibraryDB2	"DB2CLI.LIBS"	Tells the plugin where to find the library for DB2. The value can contain multiple names and paths separated with ";" o and ":" on macOS/Linux. The library extension on Mac is ".dylib", on Linux ".so" and on Win You get this library with the DB2 download on their homepage. If no value is given, we default to Windows: db2clio.dll macOS: libdb2.dylib Linux: libdb2.so
kOptionLibraryDuckDB	"DUCKDB.LIBS"	Tells the plugin where to find the library for DuckDB. The value can contain multiple names and paths separated with ";" o and ":" on macOS/Linux. The library extension on Mac is ".dylib", on Linux ".so" and on Win You get this library with the DuckDB download on their homepage If no value is given, we default to Windows: duckdb.dll macOS: libduckdb.dylib Linux: libduckdb.so
kOptionLibraryFirebird	"IBASE.LIBS"	Tells the plugin where to find the library for FireBird (or Interbase The value can contain multiple names and paths separated with ";" o and ":" on macOS/Linux. The library extension on Mac is ".dylib", on Linux ".so" and on Win You get this library with the Firebird download on their homepage If no value is given, we default to Windows: ibclient64.dll;fbclient.dll;gds32.dll macOS: libgds.dylib:libfbclient.dylib Linux: libgds.so:libfbclient.so The default is set to work in most cases and try various possible libr
kOptionLibraryInformix	"INFCLI.LIBS"	Tells the plugin where to find the library for Informix. The value can contain multiple names and paths separated with ";" o and ":" on macOS/Linux. The library extension on Mac is ".dylib", on Linux ".so" and on Win You get this library with the Informix download on their homepage If no value is given, we default to Windows: ICLIT09B.DLL;ICLIT09A.DLL macOS: iclit09b.dylib:iclit09a.dylib:libifcli.dylib Linux: iclit09b.so:iclit09a.so:libifcli.so The default is set to work in most cases and try various possible libr
kOptionLibraryInterbase	"IBASE.LIBS"	Tells the plugin where to find the library for FireBird (or Interbase The value can contain multiple names and paths separated with ";" o and ":" on macOS/Linux. The library extension on Mac is ".dylib", on Linux ".so" and on Win You get this library with the FireBird download on their homepage If no value is given, we default to Windows: ibclient64.dll;fbclient.dll;gds32.dll macOS: libgds.dylib:libfbclient.dylib Linux: libgds.so:libfbclient.so The default is set to work in most cases and try various possible libr
kOptionLibraryMySQL	"MYSQL.LIBS"	Tells the plugin where to find the library for MySQL (or MariaDB The value can contain multiple names and paths separated with ";" o and ":" on macOS/Linux. The library extension on Mac is ".dylib", on Linux ".so" and on Win You get this library with the MySQL download on their homepage Libs folder on our website. If no value is given, we default to Windows: libmySQL.dll;libmariadb.dll macOS: libmysqlclient.dylib.21:libmysqlclient_r.dyli client_r.18.dylib:libmysqlclient_r.16.dylib:libmysqlclient_r.15.dylib

186.17 class SQLDataConsumerMBS

186.17.1 class SQLDataConsumerMBS

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for a data consumer.
Notes: If you query a clob/blob value, that value may not fit into memory, so you may prefer to get a callback for data and write it to a file in small chunks.
Blog Entries

- MBS Xojo / Real Studio Plugins, version 16.1pr4

186.17.2 Events

186.17.3 Write(PieceType as Integer, data as string, Length as UInt32, BlobSize as UInt32)

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The event called to process data.
Notes: PieceType is kOnePiece, kFirstPiece, kLastPiece or kNextPiece.
Data is the raw data in a binary string.
Length is the number of bytes and BlobSize the size of data blocks used.

186.17.4 Constants

Constants

Constant	Value	Description
kFirstPiece	1	One of the piece type constants. The first piece is processed. You may setup everything you need to handle the data.
kLastPiece	3	One of the piece type constants. The last piece is processed. You can close files/network connections.
kNextPiece	2	One of the piece type constants. The next piece is processed. Not the first one or the last one, but one between.
kOnePiece	4	One of the piece type constants. The whole data stream is delivered in one call of the event.

186.18 class SQLDataProviderMBS

186.18.1 class SQLDataProviderMBS

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for a data provider.
Notes: Use this to set a blob/clob object with streaming data. For example if you want to add a 1 GB big file to the database without loading it into RAM in one piece, you can use this class to read it in small chunks.

- 14.1, page 30: The MBS SQL Plugin, An alternative way to connect to databases by Christian Schmitz

186.18.2 Events

186.18.3 Read(byref PieceType as Integer, Length as UInt32) as string

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The event called whenever new data is needed.
Notes: PieceType is kOnePiece, kFirstPiece, kLastPiece or kNextPiece.
If your stream is on the end, you set this to kLastPiece.
Return the raw data in a string.
Length is the number of bytes.

186.18.4 Constants

Constants

Constant	Value	Description
kFirstPiece	1	One of the piece type constants. The first piece is processed. You may setup everything you need to handle the data.
kLastPiece	3	One of the piece type constants. The last piece is processed. You can close files/network connections.
kNextPiece	2	One of the piece type constants. The next piece is processed. Not the first one or the last one, but one between.
kOnePiece	4	One of the piece type constants. The whole data stream is delivered in one call of the event.

186.19 class SQLDateTimeMBS

186.19.1 class SQLDateTimeMBS

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The SQL date/time value class.
Example:

```
Var d as new SQLDateTimeMBS(2008, 3, 4, 23, 10, 20)

MsgBox d.StringValue // shows "2008-03-04T23:10:20"
```

186.19.2 Methods

186.19.3 Constructor(DateTimeValue as DateTime)

MBS SQL Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Initializes the datetime value with the given DateTime object.
See also:

- 186.19.4 Constructor(DateValue as Date) 21909
- 186.19.5 Constructor(Hour as Integer, Minute as Integer, Second as Integer = 0, Fraction as Integer = 0) 21909
- 186.19.6 Constructor(other as SQLDateTimeMBS) 21910
- 186.19.7 Constructor(StringValue as String) 21910

- 186.19.8 Constructor(value as Double) 21911
- 186.19.9 Constructor(Year as Integer, Month as Integer, Day as Integer, Hour as Integer, Minute as Integer, Second as Integer = 0, Fraction as Integer = 0, TimeZone as String = "") 21912
- 186.19.10 Constructor(Year as Integer, Month as Integer, Day as Integer, Hour as Integer, Minute as Integer, Second as Integer, TimeZone as String) 21912

186.19.4 Constructor(DateValue as Date)

MBS SQL Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Initializes the datetime value with the given date.
See also:

- 186.19.3 Constructor(DateTimeValue as DateTime) 21908
- 186.19.5 Constructor(Hour as Integer, Minute as Integer, Second as Integer = 0, Fraction as Integer = 0) 21909
- 186.19.6 Constructor(other as SQLDateTimeMBS) 21910
- 186.19.7 Constructor(StringValue as String) 21910
- 186.19.8 Constructor(value as Double) 21911
- 186.19.9 Constructor(Year as Integer, Month as Integer, Day as Integer, Hour as Integer, Minute as Integer, Second as Integer = 0, Fraction as Integer = 0, TimeZone as String = "") 21912
- 186.19.10 Constructor(Year as Integer, Month as Integer, Day as Integer, Hour as Integer, Minute as Integer, Second as Integer, TimeZone as String) 21912

186.19.5 Constructor(Hour as Integer, Minute as Integer, Second as Integer = 0, Fraction as Integer = 0)

MBS SQL Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new SQL Datetime with the given values.
See also:

- 186.19.3 Constructor(DateTimeValue as DateTime) 21908
- 186.19.4 Constructor(DateValue as Date) 21909
- 186.19.6 Constructor(other as SQLDateTimeMBS) 21910
- 186.19.7 Constructor(StringValue as String) 21910
- 186.19.8 Constructor(value as Double) 21911

- 186.19.9 Constructor(Year as Integer, Month as Integer, Day as Integer, Hour as Integer, Minute as Integer, Second as Integer = 0, Fraction as Integer = 0, TimeZone as String = "") 21912
- 186.19.10 Constructor(Year as Integer, Month as Integer, Day as Integer, Hour as Integer, Minute as Integer, Second as Integer, TimeZone as String) 21912

186.19.6 Constructor(other as SQLDateTimeMBS)

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a copy of the SQL Date Time.
Example:

```
Var d as new SQLDateTimeMBS(2008, 3, 4, 23, 10, 20)
Var e as new SQLDateTimeMBS(d)

MsgBox e.StringValue // shows "2008-03-04T23:10:20"
```

See also:

- 186.19.3 Constructor(DateTimeValue as DateTime) 21908
- 186.19.4 Constructor(DateValue as Date) 21909
- 186.19.5 Constructor(Hour as Integer, Minute as Integer, Second as Integer = 0, Fraction as Integer = 0) 21909
- 186.19.7 Constructor(StringValue as String) 21910
- 186.19.8 Constructor(value as Double) 21911
- 186.19.9 Constructor(Year as Integer, Month as Integer, Day as Integer, Hour as Integer, Minute as Integer, Second as Integer = 0, Fraction as Integer = 0, TimeZone as String = "") 21912
- 186.19.10 Constructor(Year as Integer, Month as Integer, Day as Integer, Hour as Integer, Minute as Integer, Second as Integer, TimeZone as String) 21912

186.19.7 Constructor(StringValue as String)

MBS SQL Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Initialized a date time value from a string.
Example:

```
Var d As New SQLDateTimeMBS("2021-04-12T18:46:16.242")
msgbox d.StringValue

Var d2 As New SQLDateTimeMBS("now")
```

MsgBox d2.StringValue

Notes: You can pass "now" for current time, a string containing a double value for seconds since epoche or a string formatted with SQL datetime. Either with T or space as separator. If fraction is given, it should be 3 digits for milliseconds.

- 186.19.10 Constructor(Year as Integer, Month as Integer, Day as Integer, Hour as Integer, Minute as Integer, Second as Integer, TimeZone as String) 21912

186.19.8 Constructor(value as Double)

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new SQL date time value based on the double value.
Example:

```
Var d as new SQLDateTimeMBS(2008, 3, 4, 23, 10, 20)
Var e as new SQLDateTimeMBS(d.DoubleValue+1) // clone with one day more

MsgBox e.StringValue // shows "2008-03-05T23:10:20"
```

- 186.19.8 Constructor(value as Double) 21911
- 186.19.9 Constructor(Year as Integer, Month as Integer, Day as Integer, Hour as Integer, Minute as Integer, Second as Integer = 0, Fraction as Integer = 0, TimeZone as String = "") 21912

186.19.11 Set(DateTimeValue as DateTime)

MBS SQL Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Assigns the datetime value with the given dateTime object.
See also:

- 186.19.12 Set(value as Date) 21913

186.19.12 Set(value as Date)

MBS SQL Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Assigns the datetime value with the given date.
See also:

- 186.19.11 Set(DateTimeValue as DateTime) 21913

186.19.13 Properties

186.19.14 DateTimeValue as DateTime

MBS SQL Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries the value of this datetime object as a date object.
Notes: (Read only property)

186.19.15 DateValue as Date

MBS SQL Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Queries the value of this datetime object as a date object.
Notes: (Read only property)

186.19.16 Day as Integer

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the day this SADateTime object represents (1 –31).
Notes: (Read only property)

186.19.17 DayOfWeek as Integer

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the day of the week this SADateTime object represents (Sunday = 1).
Notes: (Read only property)

186.19.18 DayOfYear as Integer

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the day of the year this SADateTime object represents (Jan 1 = 1).
Notes: (Read only property)

186.19.19 DoubleValue as Double

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The double value of this date/time.
Notes: Use these operators to get current date/time value using standard double representation. Days are represented by whole number increments starting with 30 December 1899, midnight as time zero. Hour values are expressed as the absolute value of the fractional part of the number.

Date and time	Representation
30 December 1899, midnight	0.00
1 January 1900, midnight	2.00
4 January 1900, midnight	5.00
4 January 1900, 6 A.M.	5.25
4 January 1900, noon	5.50
4 January 1900, 9 P.M.	5.875

(Read only property)

186.19.20 Fraction as Integer

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the value of the fraction of second (0 to 999,999,999) this SQLDateTime object represents.
Notes:

The value of the fraction field is the number of billionths of a second and ranges from 0 through 999,999,999 (1 less than 1 billion). For example, the value of the fraction field for a half-second is 500,000,000, for a thousandth of a second (one millisecond) is 1,000,000, for a millionth of a second (one microsecond) is 1,000, and for a billionth of a second (one nanosecond) is 1.
(Read only property)

186.19.21 hasDate as Boolean

MBS SQL Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this date & time object contains a date.
Notes: (Read only property)

186.19.22 hasTime as Boolean

MBS SQL Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this date & time object contains a time.
Notes: (Read only property)

186.19.23 Hour as Integer

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the hour this SADateTime object represents (0 –23).
Notes: (Read only property)

186.19.24 Minute as Integer

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the minute this SADateTime object represents (0 –59).
Notes: (Read only property)

186.19.25 Month as Integer

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the month this SADateTime object represents (1 –12).
Notes: (Read only property)

186.19.26 Second as Integer

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the second this SADateTime object represents (0 –59).
Notes: (Read only property)

186.19.27 StringValue as string

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The string value for this date/time.
Notes: (Read only property)

186.19.28 TimeZone as String

MBS SQL Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The time zone.
Notes: Should be in format "00:00" and should be supported for Oracle and Postgres.
(Read and Write property)

186.19.29 Year as Integer

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the year this SADateTime object represents.
Notes: (Read only property)

186.20 class SQLErrorExceptionMBS

186.20.1 class SQLErrorExceptionMBS

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The error exception class to report SQL errors.
Notes: The SQLDatabaseMBS class sets its error properties on an error. All other SQL classes raise exceptions where you can check the message property.
Subclass of the RuntimeException class.

Xojo Developer Magazine

- 14.1, page 27: The MBS SQL Plugin, An alternative way to connect to databases by Christian Schmitz

186.20.2 Properties

186.20.3 ErrorClass as Integer

MBS SQL Plugin, Plugin Version: 13.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a class of error.
Notes: Returns one of the following values:

SA_No_Error	0	No error occurred.
SA_UserGenerated_Error	1	User-generated error.
SA_Library_Error	2	The Library error occurred.
SA_DBMS_API_Error	3	DBMS API error occurred.

A SQLErrorExceptionMBS object handles the next error classes:

- User-generated errors
- Library errors

- DBMS API errors

The Library errors are generated by the Library itself. It can be like detecting some mistake in passing arguments to the function or referencing the parameter with an inappropriate name. To get a Library-defined error text call ErrorMessage method.

The DBMS API errors come to the Library from the DBMS Client or Server. In this case the Library returns an error code and text Client- or Server-defined. To get error code and error text returned by the server call NativeError and ErrorMessage methods.

The User-generated exception is "SQLAPI++ compatible" exception thrown by the user. To throw user exception use throwUserException method.
(Read only property)

186.20.4 ErrorMessage as String

MBS SQL Plugin, Plugin Version: 13.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Gets an error text.
Notes: A error text depends on a class of error.

If error class is Library error the ErrorMessage method returns Library-defined error text. If error class is DBMS API error the ErrorMessage method returns an error text gotten from DBMS Server or Client. If error class is User-defined error the ErrorMessage method returns an error text specified by user (see throwUserException method).

To get the error class call ErrorClass method.
(same as Message property)
(Read only property)

186.20.5 ErrorPosition as Integer

MBS SQL Plugin, Plugin Version: 13.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Gets an error position in SQL statement.
Notes: Returns an integer value representing error position.
Not all DBMS servers allow to get error position. See Server specific notes to get detailed information about returned value.

If a command object's associated SQL statement contains any syntax errors, an exception will be thrown when you try to compile. ErrorPosition method returns the error position within the command string.

Server specific notes

DBMS server	ErrorPosition method returned value
Oracle	ErrorPosition returns parse error offset.
SQL Server	ErrorPosition returns the number of line within SQL statement where error occurred.
Sybase	ErrorPosition returns the number of line within SQL statement where error occurred.
DB2	ErrorPosition returns -1. DB2 does not support this function.
Informix	ErrorPosition returns -1. Informix does not support this function.
InterBase	ErrorPosition returns -1. InterBase does not support this function.
SQLBase	ErrorPosition returns character position of the syntax error within an SQL statement. The first character is position 0.
MySQL	ErrorPosition returns -1. MySQL does not support this function.
PostgreSQL	ErrorPosition returns -1. PostgreSQL does not support this function.
ODBC	ErrorPosition returns -1. ODBC does not support this function.

(Read only property)

186.20.6 NativeError as Integer

MBS SQL Plugin, Plugin Version: 13.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Gets a native code associated with current error.
Notes: Returns an integer value represents a native code associated with current error.

If error class is DBMS API error the NativeError method returns error code received from DBMS Server or Client. If error class is User-defined error the NativeError method returns an error code specified by user (see throwUserException method). If error class is Library error the NativeError method returns -1.

To get the error class call ErrorClass method.

See server specific documentation to get more information about DBMS API error code.
(same as ErrorNumber property)
(Read only property)

186.20.7 SQL as String

MBS SQL Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The SQL string set when this error occurred.
Notes: (Read only property)

186.21 class SQLFieldMBS

186.21.1 class SQLFieldMBS

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: This is the class for a SQL field in a record.
Notes: Be aware that field objects exists only as long as their SQLCommand exists.

see also
https://www.sqlapi.com/ApiDoc/class_s_a_field.html
Subclass of the SQLValueReadMBS class.

186.21.2 Methods

186.21.3 ReadLongOrLob(toConsumer as SQLDataConsumerMBS, BlockSize as Integer)

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Starts reading of Long or BLob(CLob) value using the given data consumer.
Notes: BlockSize: Size of piece of data you want to get to the consumer event.

After a command execution all output parameters are updated by their values, including Long and BLob(CLob) parameters. If you want to control piecewise reading of Long or BLob(CLob) data you should do the following:

Before a command execution set kLongOrLobReaderManual reading mode (see LongOrLobReaderMode) for Long or BLob(CLob) parameters you want to process by a data consumer. After that SQLAPI++ will skip reading output Long and BLob(CLob) parameters that you set to be read manually.
After command execution use ReadLongOrLob method for each output parameter defined to be read manually.
Note, that if the command has result set(s) (it is possible in some servers, see Server specific notes) then output parameters are available only after all result sets are completely processed using FetchNext method.

- 186.21.4 ReadLongOrLob(toFile as FolderItem) 21922
- 186.21.5 ReadLongOrLob(toStream as Writeable) 21922

186.21.4 ReadLongOrLob(toFile as FolderItem)

MBS SQL Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Starts reading of Long or BLob(CLob) value to the given file.
Example:

```
Var cmd as SQLCommandMBS // your command
Var f as FolderItem = SpecialFolder.Desktop.Child("test.jpg")
Var field as SQLFieldMBS = cmd.Field("image")
// read blob content to binarystream
field.ReadLongOrLob(f)
```

Notes: May raise IOExceptions if things go wrong.
See also:

- 186.21.3 ReadLongOrLob(toConsumer as SQLDataConsumerMBS, BlockSize as Integer) 21921
- 186.21.5 ReadLongOrLob(toStream as Writeable) 21922

186.21.5 ReadLongOrLob(toStream as Writeable)

MBS SQL Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Starts reading of Long or BLob(CLob) value to the given writeable stream.
Example:

```
Var cmd as SQLCommandMBS // your command
Var f as FolderItem = SpecialFolder.Desktop.Child("test.jpg")
Var b as BinaryStream = BinaryStream.Create(f, true)
Var field as SQLFieldMBS = cmd.Field("image")
// read blob content to binarystream
field.ReadLongOrLob(b)
```

Notes: This allows you to read in chunks the data to a stream, e.g. binarystream, textoutputstream or socket.
See also:

- 186.21.3 ReadLongOrLob(toConsumer as SQLDataConsumerMBS, BlockSize as Integer) 21921
- 186.21.4 ReadLongOrLob(toFile as FolderItem) 21922

186.21.6 Properties

186.21.7 FieldNativeType as Integer

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Deprecated: This item is deprecated and should no longer be used. **Function:** Returns native type code of the field.
Notes: Deprecated. Please use NativeType property instead.
(Read only property)

186.21.8 FieldPrecision as Integer

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Deprecated: This item is deprecated and should no longer be used. **Function:** Returns precision of the field value (the total number of allowable digits).
Notes: Deprecated. Please use Precision property instead.
(Read only property)

186.21.9 FieldScale as Integer

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Deprecated: This item is deprecated and should no longer be used. **Function:** Returns scale of the field value (the number of digits to the right of the decimal point).
Notes: Deprecated. Please use Scale property instead.
(Read and Write property)

186.21.10 FieldSize as Integer

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Deprecated: This item is deprecated and should no longer be used. **Function:** Returns field data size.
Notes: Deprecated. Please use Size property instead.
(Read only property)

186.21.11 FieldType as Integer

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Deprecated: This item is deprecated and should no longer be used. **Function:** Returns field data type.
Notes: Value is one of the kDataType* constants.
Deprecated. Please use Type property instead.
(Read and Write property)

186.21.12 isFieldRequired as boolean

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Shows if it is possible for the field value to be null.
Notes: Returns true if the field value can be null; false otherwise.
(Read only property)

186.21.13 Name as string

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns name of the field.
Notes: (Read only property)

186.21.14 NativeType as Integer

MBS SQL Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns native type code of the field.
Notes: (Read only property)

186.21.15 Options as Dictionary

MBS SQL Plugin, Plugin Version: 18.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a dictionary with all options.
Notes: For debugging, it may be useful to inspect options in debugger.
(Read only property)

186.21.16 Pos as Integer

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a one-based position of the field in a result set.
Notes: (Read only property)

186.21.17 Precision as Integer

MBS SQL Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns precision of the field value (the total number of allowable digits).
Notes: (Read only property)

186.21.18 Scale as Integer

MBS SQL Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns scale of the field value (the number of digits to the right of the decimal point).
Notes: (Read and Write property)

186.21.19 Size as Integer

MBS SQL Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns field data size.
Notes: (Read only property)

186.21.20 Type as Integer

MBS SQL Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns field data type.
Example:

```
Var db as SQLConnectionMBS
Var cmd as new SQLCommandMBS(db, "select * from test")

cmd.Execute

Var f as SQLFieldMBS = cmd.Field("test")

if f.Type = f.kDataTypeLong then
MsgBox "type is long"
end if
```

Notes: Value is one of the kDataType* constants.
(Read and Write property)

186.21.21 Option(name as string) as string

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The string value of a specific field option.
Notes: See for more details:
https://www.sqlapi.com/ApiDoc/class_s_a_field.html
(Read and Write computed property)

186.22 class SQLGlobalsMBS

186.22.1 class SQLGlobalsMBS

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for the global methods of the SQL plugin.
Blog Entries

186.22.2 Methods

186.22.3 FindTableName(SQL as String) as String

MBS SQL Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries table name used in a SQL SELECT statement.
Example:

```
Var sql As String = "SELECT First, Last FROM MyTable WHERE ID = 1"
Var TableName As String = SQLGlobalsMBS.FindTableName(sql)

MessageBox TableName // shows MyTable
```

Notes: This is a helper function used by our Edit/Update methods in RecordSet.
Returns either the found table name or empty text if something got wrong. e.g. multiple tables affected due to JOIN operation.

If you find a case where the parser crashes or reports wrong result, please contact us.

186.22.4 GetEnv(name as string) as string

MBS SQL Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries environment variable.
Notes: Returns empty string if variable is undefined.

186.22.5 GetVersion as String

MBS SQL Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The version string of the SQLAPI library.

186.22.6 GetVersionBuild as Integer

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The build number of the SQLAPI library.

186.22.7 GetVersionMajor as Integer

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The major version number of the SQLAPI library.

186.22.8 GetVersionMinor as Integer

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The minor version number of the SQLAPI library.

186.22.9 PutEnv(line as string) as boolean

MBS SQL Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets environment variable.
Notes: Line format should be ”key=value” and returns true on success and false on failure.

186.22.10 RaiseException(message as string)

MBS SQL Plugin, Plugin Version: 13.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Raises an exception to test exception handling in SQL Plugin.
Notes: Raises directly a SQLErrorExceptionMBS with the given message.

186.22.11 RaiseSQLErrorException(UserCode as Integer, message as string)

MBS SQL Plugin, Plugin Version: 13.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Raises an exception to test exception handling in SQL Plugin.
Notes: Raises a SAUserException which the plugin catches and translates to a SQLErrorExceptionMBS in Xojo.

186.22.12 SetCurrentWorkingDirectory(path as folderitem) as boolean

MBS SQL Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the current working directory.
Notes: This is often useful to make sure the DLLs in that folder are found.
See also:

- 186.22.13 SetCurrentWorkingDirectory(path as String) as boolean 21929

186.22.13 SetCurrentWorkingDirectory(path as String) as boolean

MBS SQL Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the current working directory.
Notes: This is often useful to make sure the DLLs in that folder are found.
See also:

- 186.22.12 SetCurrentWorkingDirectory(path as folderitem) as boolean 21929

186.22.14 SetDllDirectory(path as folderitem) as boolean

MBS SQL Plugin, Plugin Version: 25.1, Platform: Windows, Targets: All.

Function: Adds a directory to the search path used to locate DLLs for the application.
Notes: The directory to be added to the search path. If this parameter is an empty string (""), the call removes the current directory from the default DLL search order. If this parameter is nil, the function

restores the default search order.

If the function succeeds, the return value is true, otherwise false.

The SetDllDirectory function affects all subsequent calls to the LoadLibrary and LoadLibraryEx functions. It also effectively disables safe DLL search mode while the specified directory is in the search path.

After calling SetDllDirectory, the standard DLL search path is:

- The directory from which the application loaded.
- The directory specified by the SetDllDirectory function.
- The system directory. Use the GetSystemDirectory function to get the path of this directory. The name of this directory is System32.
- The Windows directory. Use the GetWindowsDirectory function to get the path of this directory.
- The directories that are listed in the PATH environment variable.

Each time the SetDllDirectory function is called, it replaces the directory specified in the previous SetDllDirectory call.

To revert to the standard search path used by LoadLibrary and LoadLibraryEx, call SetDllDirectory with nil. This also restores safe DLL search mode based on the SafeDllSearchMode registry value.
See also:

- 186.22.15 SetDllDirectory(path as String) as boolean 21930

186.22.15 SetDllDirectory(path as String) as boolean

MBS SQL Plugin, Plugin Version: 25.1, Platform: Windows, Targets: All.

Function: Adds a directory to the search path used to locate DLLs for the application.
Notes: The directory to be added to the search path. If this parameter is an empty string (""), the call removes the current directory from the default DLL search order. If this parameter is nil, the function restores the default search order.

If the function succeeds, the return value is true, otherwise false.

The SetDllDirectory function affects all subsequent calls to the LoadLibrary and LoadLibraryEx functions. It also effectively disables safe DLL search mode while the specified directory is in the search path.

After calling SetDllDirectory, the standard DLL search path is:

- The directory from which the application loaded.
- The directory specified by the SetDllDirectory function.
- The system directory. Use the GetSystemDirectory function to get the path of this directory. The name of this directory is System32.
- The Windows directory. Use the GetWindowsDirectory function to get the path of this directory.
- The directories that are listed in the PATH environment variable.

Each time the SetDllDirectory function is called, it replaces the directory specified in the previous SetDllDirectory call.

To revert to the standard search path used by LoadLibrary and LoadLibraryEx, call SetDllDirectory with nil. This also restores safe DLL search mode based on the SafeDllSearchMode registry value.
See also:

- 186.22.14 SetDllDirectory(path as folderitem) as boolean 21929

186.22.16 SetEnv(name as string, value as string) as boolean

MBS SQL Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets an environment variable.
Notes: Existing variable with same name will be overwritten.
Returns true on success and false on failure.

186.22.17 SetLicenseCode(n as string, enddate as Integer, v1 as Integer, v2 as Integer)

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Registeres the SQL plugin and library.
Notes: Once you ordered a license, you receive details on how to call this method.

186.22.18 Setlocale(category as Integer, locale as string)

MBS SQL Plugin, Plugin Version: 10.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the locale to use.
Example:

```
// ask for English for USA with 1252 codepage
SQLGlobalsMBS.Setlocale SQLGlobalsMBS.LocaleAll, "English_United States.1252"
```

Notes: The Setlocale function sets the C library's notion of natural language formatting style for particular sets of routines. Each such style is called a 'locale' and is invoked using an appropriate name passed as a C string.

The setlocale() function recognizes several categories of routines. These are the categories and the sets of routines they select:

LocaleAll	Set the entire locale generically.
LocaleCollate	Set a locale for string collation routines. This controls alphabetic ordering in strcoll() and strxfrm().
LocaleCType	Set a locale for the ctype and multibyte functions. This controls recognition of upper and lower case, alphabetic or non-alphabetic characters, and so on.
LocaleMessages	Set a locale for message catalogs, see catopen function.
LocaleMonetary	Set a locale for formatting monetary values; this affects the localeconv() function.
LocaleNumeric	Set a locale for formatting numbers. This controls the formatting of decimal points in input and output of floating point numbers in functions such as printf() and scanf(), as well as values returned by localeconv().
LocaleTime	Set a locale for formatting dates and times using the strftime() function.

Only three locales are defined by default: the empty string "" (which denotes the native environment) and the "C" and "POSIX" locales (which denote the C-language environment). By default, C programs start in the "C" locale.

186.22.19 UnInitialize

MBS SQL Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Explicitly shutdown SQL engine.
Notes: You can call this in App Close or Destructor, but only after you destroyed all Connections, e.g. all SQLDatabaseMBS and SQLConnectionMBS objects.

186.22.20 UnSetEnv(name as string) as boolean

MBS SQL Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Removes environment variable.
Notes: Returns true on success and false on failure.

186.22.21 Events

186.22.22 Trace(traceInfo as Integer, SQL as string, Connection as SQLConnectionMBS, Command as SQLCommandMBS)

MBS SQL Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The event to trace SQL commands.

186.22.23 Constants

Constants

Constant	Value	Description
LocaleAll	0	One of the locale category constants for SetLocale. Set the entire locale generically.
LocaleCollate	1	One of the locale category constants for SetLocale. Set a locale for string collation routines. This controls alphabetic ordering in strcoll() and strxfrm().
LocaleCType	2	One of the locale category constants for SetLocale. et a locale for the ctype(3) and multibyte(3) functions. This controls recognition of upper and lower case, alphabetic or non-alphabetic characters, and so on.
LocaleMessages	6	One of the locale category constants for SetLocale. Set a locale for message catalogs, see catopen(3) function.
LocaleMonetary	3	One of the locale category constants for SetLocale. Set a locale for formatting monetary values; this affects the localeconv() function.
LocaleNumeric	4	One of the locale category constants for SetLocale. Set a locale for formatting numbers. This controls the formatting of decimal points in input and output of floating point numbers in functions such as printf() and scanf(), as well as values returned by localeconv().
LocaleTime	5	One of the locale category constants for SetLocale. Set a locale for formatting dates and times using the strftime() function.

186.23 class SQLIntervalMBS

186.23.1 class SQLIntervalMBS

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class in the SQL Plugin for an interval.

186.23.2 Methods

186.23.3 Constructor

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new zero interval.
See also:

- 186.23.4 Constructor(days as Integer, hours as Integer, minutes as Integer, seconds as Integer = 0, NanoSeconds as Integer = 0) 21934
- 186.23.5 Constructor(value as Double) 21934

186.23.4 Constructor(days as Integer, hours as Integer, minutes as Integer, seconds as Integer = 0, NanoSeconds as Integer = 0)

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new interval with the given values.
See also:

- 186.23.3 Constructor 21934
- 186.23.5 Constructor(value as Double) 21934

186.23.5 Constructor(value as Double)

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new interval with the given time delta.
Example:

```
Var n as new SQLIntervalMBS(5)

MsgBox n.StringValue // shows "120:00:00" for 120 hours
```

See also:

- 186.23.3 Constructor 21934
- 186.23.4 Constructor(days as Integer, hours as Integer, minutes as Integer, seconds as Integer = 0, NanoSeconds as Integer = 0) 21934

186.23.6 Dec(interval as SQLIntervalMBS)

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Decrements the interval.

186.23.7 Inc(interval as SQLIntervalMBS)

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Increments the interval.

186.23.8 SetInterval(days as Integer, hours as Integer, minutes as Integer, seconds as Integer = 0, NanoSeconds as Integer = 0)

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the interval values.

186.23.9 Properties

186.23.10 Days as Integer

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The days in this interval.
Notes: (Read only property)

186.23.11 DoubleValue as Double

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The value of this interval.
Example:

```
Var n as new SQLIntervalMBS(1,2,3,4)

MsgBox str(n.DoubleValue) // shows "1.085463" for 1 day, 2 hours, 3 minutes and 4 seconds
```

Notes: (Read only property)

186.23.12 Fraction as Integer

MBS SQL Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The fraction of a second in nano seconds.
Notes: Range 0..999999999.
(Read only property)

186.23.13 Hours as Integer

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The hours value.
Notes: (Read only property)

186.23.14 Minutes as Integer

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The minutes value.
Notes: (Read only property)

186.23.15 Seconds as Integer

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The seconds value.
Notes: (Read only property)

186.23.16 StringValue as string

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The interval as a string.
Example:

```
Var n as new SQLIntervalMBS(5)

MsgBox n.StringValue // shows "120:00:00" for 120 hours
```

Notes: (Read only property)

186.23.17 TotalDays as Double

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The total days value.
Example:

```
Var n as new SQLIntervalMBS(1,2,3,4)

MsgBox str(n.TotalDays) // shows "1"
```

Notes: (Read only property)

186.23.18 TotalHours as Double

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The total hours value.
Example:

```
Var n as new SQLIntervalMBS(1,2,3,4)

MsgBox str(n.TotalHours) // shows "26"
```

Notes: (Read only property)

186.23.19 TotalMinutes as Double

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The total minutes value.
Example:

```
Var n as new SQLIntervalMBS(1,2,3,4)
```

MsgBox str(n.TotalMinutes) // shows "1563"

Notes: (Read only property)

186.23.20 TotalSeconds as Double

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The total seconds value.
Notes: Var n as new SQLIntervalMBS(1,2,3,4)

MsgBox str(n.GetTotalSeconds) // shows "93784"
(Read only property)

186.24 class SQLite3BackupMBS

186.24.1 class SQLite3BackupMBS

MBS SQL Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The object for a running backup.
Notes: The backup object records state information about an ongoing online backup operation. The sqlite3_backup object is created by a call to BackupInit() and is destroyed by a call to BackupFinish().
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

186.24.2 Methods

186.24.3 Constructor

MBS SQL Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.

186.24.4 Properties

186.24.5 Handle as Integer

MBS SQL Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The internal object reference.
Notes: (Read only property)

186.25 class SQLite3MBS

186.25.1 class SQLite3MBS

MBS SQL Plugin, Plugin Version: 9.5, Platforms: macOS, Linux, Windows, Targets: All.

Deprecated: This item is deprecated and should no longer be used. **Function:** The class for the native SQLite API.
Example:

```
Var con as new SQLConnectionMBS
Var path as string = "/tmp/test.db" // change path for Windows!

con.Connect(path,"","",SQLConnectionMBS.kSQLiteClient)

Var api as SQLAPIMBS = con.NativeAPI
if api isa SQLite3MBS then
Var s as SQLite3MBS = SQLite3MBS(api)
MsgBox s.Version
end if
```

Notes: Deprecated in favor of direct methods on SQLConnectionMBS. Please let us know if you need more SQLite specific functions.
Subclass of the SQLAPIMBS class.

186.25.2 Methods

186.25.3 BackupFinish(Backup as SQLite3BackupMBS) as Integer

MBS SQL Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Finishes a backup run.
Notes: When BackupStep has returned kErrorDone, or when the application wishes to abandon the backup operation, the application should destroy the SQLite3BackupMBS by passing it to BackupFinish. The BackupFinish interfaces releases all resources associated with the SQLite3BackupMBS object. If BackupStep has not yet returned kErrorDone, then any active write-transaction on the destination database is rolled back. The SQLite3BackupMBS object is invalid and may not be used following a call to BackupFinish.
The value returned by BackupFinish is kErrorOK if no BackupStep errors occurred, regardless or whether or not BackupStep completed. If an out-of-memory condition or IO error occurred during any prior BackupStep call on the same SQLite3BackupMBS object, then BackupFinish returns the corresponding error code.
A return of kErrorBusy or kErrorLocked from BackupStep is not a permanent error and does not affect the return value of BackupFinish.

186.25.4 BackupInit(Dest as Variant, DestName as String, Source as Variant, SourceName as String) as SQLite3BackupMBS

MBS SQL Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Initializes a backup.
Notes: The backup API copies the content of one database into another. It is useful either for creating backups of databases or for copying in-memory databases to or from persistent files.

see also
http://www.sqlite.org/c3ref/backup_finish.html

Exclusive access is required to the destination database for the duration of the operation. However the source database is only read-locked while it is actually being read; it is not locked continuously for the entire backup operation. Thus, the backup may be performed on a live source database without preventing other users from reading or writing to the source database while the backup is underway.

To perform a backup operation:

- BackupInit is called once to initialize the backup,
- BackupStep is called one or more times to transfer the data between the two databases, and finally
- BackupFinish is called to release all resources associated with the backup operation.

There should be exactly one call to BackupFinish for each successful call to BackupInit.

The D and N arguments to BackupInit(D,N,S,M) are the database connection associated with the destination database and the database name, respectively. The database name is "main" for the main database, "temp" for the temporary database, or the name specified after the AS keyword in an ATTACH statement for an attached database. The S and M arguments passed to BackupInit(D,N,S,M) identify the database connection and database name of the source database, respectively. The source and destination database connections (parameters S and D) must be different or else BackupInit(D,N,S,M) will file with an error.
If an error occurs within BackupInit(D,N,S,M), then nil is returned and an error code and error message are store3d in the destination database connection D. The error code and message for the failed call to BackupInit can be retrieved using the ErrCode and ErrMessage functions. A successful call to BackupInit returns a SQLite3BackupMBS object. The SQLite3BackupMBS object may be used with the BackupStep and BackupFinish functions to perform the specified backup operation.

Concurrent Usage of Database Handles
The source database connection may be used by the application for other purposes while a backup operation is underway or being initialized. If SQLite is compiled and configured to support threadsafe database connections, then the source database connection may be used concurrently from within other threads.
However, the application must guarantee that the destination database connection is not passed to any other API (by any thread) after BackupInit is called and before the corresponding call to BackupFinish. SQLite does not currently check to see if the application incorrectly accesses the destination database connection and so no error code is reported, but the operations may malfunction nevertheless. Use of the destination database connection while a backup is in progress might also also cause a mutex deadlock.
If running in shared cache mode, the application must guarantee that the shared cache used by the destination database is not accessed while the backup is running. In practice this means that the application must guarantee that the disk file being backed up to is not accessed by any connection within the process, not just the specific connection that was passed to BackupInit.
The SQLite3BackupMBS object itself is partially threadsafe. Multiple threads may safely make multiple concurrent calls to BackupStep. However, the BackupRemaining and BackupPageCount APIs are not strictly speaking threadsafe. If they are invoked at the same time as another thread is invoking BackupStep it is possible that they return invalid values.

Source and Dest can be SQLConnectionMBS or SQLDatabaseMBS. You need to pass source and dest, even if one is self as we give you the option to decide where to pass the current database connection.

186.25.5 BackupPageCount(Backup as SQLite3BackupMBS) as Integer

MBS SQL Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the number of pages in total.
Notes: Each call to BackupStep sets two values inside the SQLite3BackupMBS object: the number of pages still to be backed up and the total number of pages in the source databae file. The BackupRemaining and BackupPageCount interfaces retrieve these two values, respectively.
The values returned by these functions are only updated by BackupStep. If the source database is modified

during a backup operation, then the values are not updated to account for any extra pages that need to be updated or the size of the source database file changing.

186.25.6 BackupRemaining(Backup as SQLite3BackupMBS) as Integer

MBS SQL Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the number of pages remaining.
Notes: Each call to BackupStep sets two values inside the SQLite3BackupMBS object: the number of pages still to be backed up and the total number of pages in the source databae file. The BackupRemaining and BackupPageCount interfaces retrieve these two values, respectively.
The values returned by these functions are only updated by BackupStep. If the source database is modified during a backup operation, then the values are not updated to account for any extra pages that need to be updated or the size of the source database file changing.

186.25.7 BackupStep(Backup as SQLite3BackupMBS, Pages as Integer) as Integer

MBS SQL Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Copies up to Pages pages between the source and destination databases specified by SQLite3BackupMBS object.
Notes: If N is negative, all remaining source pages are copied. If BackupStep(B,N) successfully copies N pages and there are still more pages to be copied, then the function resturns kErrorOK. If BackupStep(B,N) successfully finishes copying all pages from source to destination, then it returns kErrorDone. If an error occurs while running BackupStep(B,N), then an error code is returned. As well as kErrorOK and kErrorDone, a call to BackupStep may return kErrorReadOnly, kErrorNoMem, kErrorBusy, kErrorLocked, or an kErrorIOACCESS | kErrorIOXXX extended error code.
The BackupStep might return kErrorReadOnly if the destination database was opened read-only or if the destination is an in-memory database with a different page size from the source database.
If BackupStep cannot obtain a required file-system lock, then the sqlite3_busy_handler | busy-handler function is invoked (if one is specified). If the busy-handler returns non-zero before the lock is available, then kErrorBusy is returned to the caller. In this case the call to BackupStep can be retried later. If the source database connection is being used to write to the source database when BackupStep is called, then kErrorLocked is returned immediately. Again, in this case the call to BackupStep can be retried later on. (If kErrorIOACCESS | kErrorIOXXX, kErrorNoMem, or kErrorReadOnly is returned, then there is no point in retrying the call to BackupStep. These errors are considered fatal.) The application must accept that the backup operation has failed and pass the backup operation handle to the BackupFinish to release associated resources.
The first call to BackupStep obtains an exclusive lock on the destination file. The exclusive lock is not released until either BackupFinish is called or the backup operation is complete and BackupStep returns kErrorDone. Every call to BackupStep obtains a shared lock on the source database that lasts for the duration of the BackupStep call. Because the source database is not locked between calls to BackupStep, the source database may be modified mid-way through the backup process. If the source database is modified

by an external process or via a database connection other than the one being used by the backup operation, then the backup will be automatically restarted by the next call to BackupStep. If the source database is modified by the using the same database connection as is used by the backup operation, then the backup database is automatically updated at the same time.

186.25.8 EnableLoadExtension(OnOff as boolean)

MBS SQL Plugin, Plugin Version: 14.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Enables/disables extension loading for the given connection.

186.25.9 ErrCode as Integer

MBS SQL Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The ErrCode function returns the numeric result code or extended result code for the most recent failed sqlite3 API call associated with a database connection.
Notes: If a prior API call failed but the most recent API call succeeded, the return value from ErrCode is undefined.

186.25.10 ErrMessage as string

MBS SQL Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the most recent error message in english for the given connection.

186.25.11 LastInsertRowID as Int64

MBS SQL Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns Last Insert Rowid.
Notes: Each entry in an SQLite table has a unique 64-bit signed integer key called the ROWID. The rowid is always available as an undeclared column named ROWID, OID, or _ROWID_ as long as those names are not also used by explicitly declared columns. If the table has a column of type INTEGER PRIMARY KEY then that column is another alias for the rowid.

This routine returns the rowid of the most recent successful INSERT into the database from the database connection in the first argument. If no successful INSERTs have ever occurred on that database connection, zero is returned.

(If an INSERT occurs within a trigger, then the rowid of the inserted row is returned by this routine as long as the trigger is running. But once the trigger terminates, the value returned by this routine reverts to the last value inserted before the trigger fired.)

An INSERT that fails due to a constraint violation is not a successful INSERT and does not change the value returned by this routine. ^Thus INSERT OR FAIL, INSERT OR IGNORE, INSERT OR ROLLBACK, and INSERT OR ABORT make no changes to the return value of this routine when their insertion fails. ^(When INSERT OR REPLACE encounters a constraint violation, it does not fail. The INSERT continues to completion after deleting rows that caused the constraint problem so INSERT OR REPLACE will always change the return value of this interface.)^

For the purposes of this routine, an INSERT is considered to be successful even if it is subsequently rolled back.

This function is accessible to SQL statements via the last_insert_rowid() SQL function.

If a separate thread performs a new INSERT on the same database connection while the LastInsertRowID function is running and thus changes the last insert rowid, then the value returned by LastInsertRowID is unpredictable and might not equal either the old or the new last insert rowid.

186.25.12 LoadExtension(file as FolderItem, ByRef ErrorMessage as String) as Integer

MBS SQL Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Loads an SQLite extension library from the named file.
Notes: The LoadExtension interface attempts to load an SQLite extension library contained in the file.

Returns kErrorOk on success and kErrorError if something goes wrong.
Extension loading must be enabled using EnableLoadExtension prior to calling this API, otherwise an error will be returned.
See also:

- 186.25.13 LoadExtension(path as String, ByRef ErrorMessage as String) as Integer 21945

186.25.13 LoadExtension(path as String, ByRef ErrorMessage as String) as Integer

MBS SQL Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Loads an SQLite extension library from the named file.
Notes: The LoadExtension interface attempts to load an SQLite extension library contained in the file.

Returns kErrorOk on success and kErrorError if something goes wrong.
Extension loading must be enabled using EnableLoadExtension prior to calling this API, otherwise an error will be returned.
See also:

- 186.25.12 LoadExtension(file as FolderItem, ByRef ErrorMessage as String) as Integer 21945

186.25.14 MemoryHighwater(reset as boolean) as Int64

MBS SQL Plugin, Plugin Version: 17.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries maximum memory usage so far.
Notes: Can be reset with reset parameter being true.
See also:

- 186.25.23 MemoryHighwater as Int64 21950

186.25.15 ReKey(Key as String) as Integer

MBS SQL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: You can change the key on a database using the Rekey Function.
Notes: An empty key decrypts the database.

Rekeying requires that every page of the database file be read, decrypted, reencrypted with the new key, then written out again. Consequently, rekeying can take a long time on a larger database.

Most SEE variants allow you to encrypt an existing database that was created using the public domain version of SQLite. This is not possible when using the authenticating version of the encryption extension in see-aes128-ccm. If you do encrypt a database that was created with the public domain version of SQLite, no nonce will be used and the file will be vulnerable to a chosen-plaintext attach. If you call SetKey() immediately after Open when you are first creating the database, space will be reserved in the database for a nonce and the encryption will be much stronger. If you do not want to encrypt right away, call SetKey() anyway, with an empty key, and the space for the nonce will be reserved in the database even though no encryption is done initially.

A public domain version of the SQLite library can read and write an encrypted database with an empty key. You only need the encryption extension if the key is non-empty.

Returns a SQLite error code.

186.25.16 SetBusyHandler(MaxAttempts as Integer = 5)

MBS SQL Plugin, Plugin Version: 16.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Installs busy handler for this connection.
Notes: This routine sets a callback function that might be invoked whenever an attempt is made to open a database table that another thread or process has locked.

The plugin has an busy handler which will wait up to MaxAttemps and yield to other Xojo threads while waiting.
Passing 5 should wait up to 100ms.

There can only be a single busy handler defined for each [database connection] . Setting a new busy handler clears any previously set handler.) Note that calling SetBusyTimeout will also set or clear the busy handler.

The busy callback should not take any actions which modify the database connection that invoked the busy handler. Any such actions result in undefined behavior.

186.25.17 SetBusyTimeout(TimeOutMS as Integer = 20)

MBS SQL Plugin, Plugin Version: 16.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: This routine sets a busy handler that sleeps for a specified amount of time when a table is locked.
Notes: The handler will sleep multiple times until at least "ms" milliseconds of sleeping have accumulated. ^After at least "ms" milliseconds of sleeping, the handler returns 0 which causes SQLite query to return SQLite Busy or IO Blocked error.

Calling this routine with an argument less than or equal to zero turns off all busy handlers.

(There can only be a single busy handler for a particular database connection any any given moment. If another busy handler was defined (using SetBusyHandler prior to calling this routine, that other busy handler is cleared.)

186.25.18 SetKey(Key as String) as Integer

MBS SQL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Applies encryption to a database connection.
Notes: Returns a SQLite error code.

The amount of key material actually used by the encryption extension depends on which variant of SEE you

are using. With RC4, the first 256 byte of key are used. With the AES128, the first 16 bytes of the key are used. With AES256, the first 32 bytes of key are used.

If you specify a key that is shorter than the maximum key length, then the key material is repeated as many times as necessary to complete the key. If you specify a key that is larger than the maximum key length, then the excess key material is silently ignored.

The key must begin with an ASCII prefix to specify which algorithm to use. The prefix must be one of "rc4:", "aes128:", or "aes256:". The prefix is not used as part of the key sent into the encryption algorithm. So the real key should begin on the first byte after the prefix.

The string provided to the plugin is used with it's current encoding. So be sure you use right text encoding for what you want. e.g. using "M√ºller" as key in text encoding Windows ANSI will not open a database which used that key in UTF-8 encoding.

The Xojo database encryption in SQLiteDatabase class uses AES-128 OFB.

186.25.19 TableColumnMetaData(DBName as string, TableName as string, ColumnName as string, byref DataType as string, byref CollationSequence as string, byref NotNull as boolean, byref PrimaryKey as boolean, byref AutoIncrement as Boolean) as Integer

MBS SQL Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Extract Metadata About A Column Of A Table
Notes: Not available in all sqlite libraries!

This routine returns metadata about a specific column of a specific database table accessible using the database connection handle passed as the first function argument.
The column is identified by the second, third and fourth parameters to this function. The second parameter is either the name of the database (i.e. "main", "temp", or an attached database) containing the specified table or NULL. If it is NULL, then all attached databases are searched for the table using the same algorithm used by the database engine to resolve unqualified table references.
The third and fourth parameters to this function are the table and column name of the desired column, respectively. Neither of these parameters may be NULL.
Metadata is returned by writing to the memory locations passed as the 5th and subsequent parameters to this function. Any of these arguments may be NULL, in which case the corresponding element of metadata is omitted.

CollationSequence is assigned the Name of default collation sequence. NotNull is set to true if column has a NOT NULL constraint. PrimaryKey is set to true if column is part of the PRIMARY KEY and AutoIncrement is set to true if column is AUTOINCREMENT.

If the specified table is actually a view, an error code is returned.

If the specified column is "rowid", "oid" or "_rowid_" and an INTEGER PRIMARY KEY column has been explicitly declared, then the output parameters are set for the explicitly declared column. (If there is no explicitly declared INTEGER PRIMARY KEY column, then the output parameters are set as follows:

data type: "INTEGER"
collation sequence: "BINARY"
not null: false
primary key: true
auto increment: false

(This function may load one or more schemas from database files. If an error occurs during this process, or if the requested table or column cannot be found, an error code is returned and an error message left in the database connection (to be retrieved using ErrMessage).)

This API is only available if the library was compiled with the SQLITE_ENABLE_COLUMN_METADATA C-preprocessor symbol defined.

186.25.20 Threadsafe as Integer

MBS SQL Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Test To See If The Library Is Threadsafe.
Notes: The threadsafe() function returns zero if and only if SQLite was compiled mutexing code omitted due to the SQLITE_THREADSAFE compile-time option being set to 0.

SQLite can be compiled with or without mutexes. When the SQLITE_THREADSAFE C preprocessor macro is 1 or 2, mutexes are enabled and SQLite is threadsafe. When the SQLITE_THREADSAFE macro is 0, the mutexes are omitted. Without the mutexes, it is not safe to use SQLite concurrently from more than one thread.

Enabling mutexes incurs a measurable performance penalty. So if speed is of utmost importance, it makes sense to disable the mutexes. But for maximum safety, mutexes should be enabled. The default behavior is for mutexes to be enabled.

This interface can be used by an application to make sure that the version of SQLite that it is linking against was compiled with the desired setting of the SQLITE_THREADSAFE macro.

This interface only reports on the compile-time mutex setting of the SQLITE_THREADSAFE flag. If SQLite

is compiled with SQLITE_THREADSAFE=1 or =2 then mutexes are enabled by default but can be fully or partially disabled using a call to sqlite3_config() with the verbs SQLITE_CONFIG_SINGLETHREAD, SQLITE_CONFIG_MULTITHREAD, or SQLITE_CONFIG_MUTEX. ^(The return value of the sqlite3_threadsafe() function shows only the compile-time setting of thread safety, not any run-time changes to that setting made by sqlite3_config(). In other words, the return value from sqlite3_threadsafe() is unchanged by calls to sqlite3_config().)^

See the threading mode documentation for additional information.

186.25.21 Properties

186.25.22 ConnectionHandle as Ptr

MBS SQL Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the current connection reference for the database.
Notes: sqlite3 pointer for using in declares.
(Read only property)

186.25.23 MemoryHighwater as Int64

MBS SQL Plugin, Plugin Version: 17.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries maximum memory usage so far.
Notes: Can be reset with reset parameter.
(Read only property)
See also:

- 186.25.14 MemoryHighwater(reset as boolean) as Int64 21946

186.25.24 MemoryUsed as Int64

MBS SQL Plugin, Plugin Version: 17.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries memory in use by SQLite.
Notes: This is memory allocated, but not yet freed.
Value is zero until SQLite3 initialized.
(Read only property)

186.25.25 Version as string

MBS SQL Plugin, Plugin Version: 9.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The version string of the SQLite library.
Notes: (Read only property)

186.25.26 VersionNumber as Integer

MBS SQL Plugin, Plugin Version: 9.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The version number of the SQLite library.
Notes: (Read only property)

186.25.27 Constants

Error Codes

Constant	Value	Description
kErrorAbort	4	Callback routine requested an abort.
kErrorAuth	23	Authorization denied
kErrorBusy	5	The database file is locked.
kErrorCantopen	14	Unable to open the database file.
kErrorConstraint	19	Abort due to constraint violation.
kErrorCorrupt	11	The database disk image is malformed.
kErrorDone	101	sqlite3_step() has finished executing.
kErrorEmpty	16	Database is empty
kErrorError	1	SQL error or missing database.
kErrorFormat	24	Auxiliary database format error.
kErrorFull	13	Insertion failed because database is full.
kErrorInternal	2	Internal logic error in SQLite
kErrorInterrupt	9	Operation terminated by sqlite3_interrupt().
kErrorIoerr	10	Some kind of disk I/O error occurred.
kErrorLocked	6	A table in the database is locked.
kErrorMismatch	20	Data type mismatch.
kErrorMisuse	21	Library used incorrectly.
kErrorNolfs	22	Uses OS features not supported on host.
kErrorNoMem	7	Out of memory.
kErrorNotaDB	26	File opened that is not a database file.
kErrorNotFound	12	NOT USED. Table or record not found.
kErrorOk	0	Successful result
kErrorPerm	3	Access permission denied.
kErrorProtocol	15	NOT USED. Database lock protocol error.
kErrorRange	25	2nd parameter to sqlite3_bind out of range.
kErrorReadonly	8	Attempt to write a readonly database.
kErrorRow	100	sqlite3_step() has another row ready.
kErrorSchema	17	The database schema changed.
kErrorToobig	18	String or BLOB exceeds size limit.

186.26 class SQLiteFunctionMBS

186.26.1 class SQLiteFunctionMBS

MBS SQL Plugin, Plugin Version: 24.1, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The class for a custom SQLite function implemented in Xojo.
Example:

```
// Create a custom function with a handler function:
Var f As New SQLiteFunctionMBS
f.name = "SHA256"
f.ArgumentCount = 1
f.Flags = f.kFlagDeterministic OR f.kFlagUTF8 OR f.kFlagInnocuous
// Text encoding UTF8, function is deterministic and can be cached, function is innocuous as it depends only on parameters
AddHandler f.Perform, AddressOf PerformSHA256
functions.Append f // keep reference
```

Notes: You can use this with our InternalSQLiteLibraryMBS module and the SQL classes within MBS Plugin to work on SQLite databases and as extension for SQLiteDatabase in Xojo.

186.26.2 Methods

186.26.3 Constructor

MBS SQL Plugin, Plugin Version: 24.1, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The constructor.
Example:

```
Var f As New SQLiteFunctionMBS
f.name = "SHA256"
```

Notes: Please keep a reference to the function in a global array to avoid it being destroyed.

186.26.4 Destructor

MBS SQL Plugin, Plugin Version: 24.1, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The destructor.

186.26.5 ResultBlob(data as MemoryBlock)

MBS SQL Plugin, Plugin Version: 24.1, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Returns a BLOB value to SQLite.
Notes: We have three variants, so you can pass string, MemoryBlock or ptr.
See also:

- 186.26.6 ResultBlob(data as ptr, size as Integer) 21954
- 186.26.7 ResultBlob(text as string) 21954

186.26.6 ResultBlob(data as ptr, size as Integer)

MBS SQL Plugin, Plugin Version: 24.1, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Returns a BLOB value to SQLite.
Notes: We have three variants, so you can pass string, MemoryBlock or ptr.
See also:

- 186.26.5 ResultBlob(data as MemoryBlock) 21954
- 186.26.7 ResultBlob(text as string) 21954

186.26.7 ResultBlob(text as string)

MBS SQL Plugin, Plugin Version: 24.1, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Returns a BLOB value to SQLite.
Example:

me.ResultBlob "Hello World"

Notes: We have three variants, so you can pass string, MemoryBlock or ptr.
See also:

- 186.26.5 ResultBlob(data as MemoryBlock) 21954
- 186.26.6 ResultBlob(data as ptr, size as Integer) 21954

186.26.8 ResultDouble(value as Double)

MBS SQL Plugin, Plugin Version: 24.1, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Returns a double value back to SQLite.
Example:

```
Sub Perform(ArgumentCount as Integer, Arguments() as Variant) Handles Perform
#Pragma BackgroundTasks False
#Pragma BoundsChecking False
#Pragma StackOverflowChecking False

// square function
Var a as double = arguments(0).DoubleValue
ResultDouble a * a

End Sub
```

186.26.9 ResultError(ErrorMessage as string)

MBS SQL Plugin, Plugin Version: 24.1, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Returns an error message for the function call.
Example:

```
Sub Perform(ArgumentCount as Integer, Arguments() as Variant) Handles Perform
#Pragma BackgroundTasks False
#Pragma BoundsChecking False
#Pragma StackOverflowChecking False

Var v as string = arguments(0)
if v.length = 0 then
ResultError "Please pass text"
ResultErrorCode 12345 // custom error code
else
ResultText v + v
end if
End Sub
```

Notes: Sets error code to 1. Use ResultErrorCode to change this.

186.26.10 ResultErrorCode(ErrorCode as Integer)

MBS SQL Plugin, Plugin Version: 24.1, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Sets error code for the function call.

186.26.11 ResultInteger(value as Integer)

MBS SQL Plugin, Plugin Version: 24.1, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Returns an integer value back to SQLite.
Example:

```
Sub Perform(ArgumentCount as Integer, Arguments() as Variant) Handles Perform
#Pragma BackgroundTasks False
#Pragma BoundsChecking False
#Pragma StackOverflowChecking False

// square function
Var a as Integer = arguments(0).IntegerValue
ResultInteger a * a

End Sub
```

186.26.12 ResultNull

MBS SQL Plugin, Plugin Version: 24.1, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Returns a null value back to SQLite.
Example:

```
Sub Perform(ArgumentCount as Integer, Arguments() as Variant) Handles Perform
#Pragma BackgroundTasks False
#Pragma BoundsChecking False
#Pragma StackOverflowChecking False

// return NULL value
ResultNull

End Sub
```

186.26.13 ResultText(text as string)

MBS SQL Plugin, Plugin Version: 24.1, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Returns a string value back to SQLite.
Example:

```
Sub Perform(ArgumentCount as Integer, Arguments() as Variant) Handles Perform
#Pragma BackgroundTasks False
#Pragma BoundsChecking False
#Pragma StackOverflowChecking False

ResultText "Hello World"

End Sub
```

186.26.14 ResultZeroBlob(Length as Integer)

MBS SQL Plugin, Plugin Version: 24.1, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Returns a zero filled BLOB value back to SQLite.

186.26.15 Properties

186.26.16 ArgumentCount as Integer

MBS SQL Plugin, Plugin Version: 24.1, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The number of arguments expected for this function.
Notes: Pass 0 to 127 for number of arguments or -1 for variable number of arguments.
(Read and Write property)

186.26.17 CallCounter as Integer

MBS SQL Plugin, Plugin Version: 24.1, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The number of times the function was called.
Notes: (Read only property)

186.26.18 DatabaseCount as Integer

MBS SQL Plugin, Plugin Version: 24.1, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The number of times the function was registered to a database connection.
Notes: (Read only property)

186.26.19 Enabled as Boolean

MBS SQL Plugin, Plugin Version: 24.1, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Whether this function is enabled.
Notes: The value is checked when connecting to a new SQLite database.
Defaults to true.
(Read and Write property)

186.26.20 Flags as Integer

MBS SQL Plugin, Plugin Version: 24.1, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The flags for the function.
Example:

```
Var f As New SQLiteFunctionMBS

f.Flags = f.kFlagDeterministic OR f.kFlagUTF8 OR f.kFlagInnocuous
// Text encoding UTF8, function is deterministic and can be cached, function is innocuous as it depends only on parameters
```

Notes: See kFlag* constants.
(Read and Write property)

186.26.21 Name as String

MBS SQL Plugin, Plugin Version: 24.1, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The name of the function.
Notes: (Read and Write property)

186.26.22 Events

186.26.23 Perform(ArgumentCount as Integer, Arguments() as Variant)

MBS SQL Plugin, Plugin Version: 24.1, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The event called to perform the function.
Example:

```
Sub Perform(ArgumentCount as Integer, Arguments() as Variant) Handles Perform
#Pragma BackgroundTasks False
```

```
#Pragma BoundsChecking False
#Pragma StackOverflowChecking False

ResultText "Hello World"

End Sub
```

Notes: ArgumentCount is the number of arguments passed in the array.
Arguments contains values, which may be nil, double, integer, string, Memoryblock for BLOB.

Please use #pragmas like in the sample project to disable stack checking and background tasks for best performance. Also catch all exceptions that may happen to prevent trouble.

Call one of the result functions to return the result.

186.26.24 Constants

Flags

Constant	Value	Description
kFlagDeterministic	&h800	The function always gives the same output when the input parameters are the same.
kFlagDirectOnly	&h80000	The function may only be invoked from top-level SQL, and cannot be used in VIEWs or TRIGGERs nor in schema structures.
kFlagInnocuous	&h200000	The function is unlikely to cause problems even if misused. An innocuous function should have no side effects and should not depend on any values other than its input parameters.
kFlagUTF8	1	Specifies text encoding to be UTF-8.

186.27 class SQLLongBinaryMBS

186.27.1 class SQLLongBinaryMBS

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: A class for a long binary object.
Notes: Basicly this is a SQLStringMBS which is always marked to contain binary data. You only need this class to use the constructor with dataprovider to stream data to the database.
Subclass of the SQLLongOrLobMBS class.

186.27.2 Methods

186.27.3 Constructor

MBS SQL Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.
See also:

- 186.27.4 Constructor(Data as MemoryBlock) 21960
- 186.27.5 Constructor(data as SQLStringMBS) 21961
- 186.27.6 Constructor(Data as string, isText as Boolean = True) 21961
- 186.27.7 Constructor(dataProvider as SQLDataProviderMBS, BlockSize as UInt32) 21961

186.27.4 Constructor(Data as MemoryBlock)

MBS SQL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new string object with data, e.g. for blob.
See also:

- 186.27.3 Constructor 21960
- 186.27.5 Constructor(data as SQLStringMBS) 21961
- 186.27.6 Constructor(Data as string, isText as Boolean = True) 21961
- 186.27.7 Constructor(dataProvider as SQLDataProviderMBS, BlockSize as UInt32) 21961

186.27.5 Constructor(data as SQLStringMBS)

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new long binary object from a string object.
See also:

- 186.27.3 Constructor 21960
- 186.27.4 Constructor(Data as MemoryBlock) 21960
- 186.27.6 Constructor(Data as string, isText as Boolean = True) 21961
- 186.27.7 Constructor(dataProvider as SQLDataProviderMBS, BlockSize as UInt32) 21961

186.27.6 Constructor(Data as string, isText as Boolean = True)

MBS SQL Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new string object with data or text copied from the data string.
Notes: If isText is true, the data is interpreted as text and string encoding conversion may modify it. If isText is false the bytes are copied raw.
See also:

- 186.27.3 Constructor 21960
- 186.27.4 Constructor(Data as MemoryBlock) 21960
- 186.27.5 Constructor(data as SQLStringMBS) 21961
- 186.27.7 Constructor(dataProvider as SQLDataProviderMBS, BlockSize as UInt32) 21961

186.27.7 Constructor(dataProvider as SQLDataProviderMBS, BlockSize as UInt32)

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new long binary object from a data provider.
Notes: The blocksize specifies in which sizes data is requested from the provider.
You must make sure that the data provider and this new blob object life long enough. Because the actual data is requested later when you do the update on the database.

If BlockSize is 0, the default block size is used.

- 186.27.6 Constructor(Data as string, isText as Boolean = True) 21961

186.28 class SQLLongCharMBS

186.28.1 class SQLLongCharMBS

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: A class for the long character data type.
Notes: Basicly this is a SQLStringMBS which is always marked to contain text. You only need this class to use the constructor with dataprovider to stream data to the database.
Subclass of the SQLLongOrLobMBS class.

186.29 class SQLLongOrLobMBS

186.29.1 class SQLLongOrLobMBS

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The super class for Long Binary/Text and BLOB/CLOB classes.
Notes: Subclass of the SQLStringMBS class.

186.30 class SQLNotInitializedExceptionMBS

186.30.1 class SQLNotInitializedExceptionMBS

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The exception raised if you call a method on an object which was not properly initialized.
Notes: Subclass of the RuntimeException class.

186.32.2 Methods

186.32.3 Constructor

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates an empty numeric object.
See also:

- 186.32.4 Constructor(value as Double) 21967
- 186.32.5 Constructor(value as string) 21968

186.32.4 Constructor(value as Double)

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new numeric object based on the given double value.
See also:

- 186.32.3 Constructor 21967
- 186.32.5 Constructor(value as string) 21968

186.32.5 Constructor(value as string)

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new numeric object based on the given string.
See also:

- 186.32.3 Constructor 21967
- 186.32.4 Constructor(value as Double) 21967

186.32.6 NumericWithCurrency(value as Currency) as SQLNumericMBS

MBS SQL Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new numeric value object with given currency value.
Example:

```
// test code for currency
Var c1 as Currency = 12345678.
Var c2 as Currency = 1234567.8
Var c3 as Currency = 123456.78
Var c4 as Currency = 12345.678
Var c5 as Currency = 1234.5678
Var c6 as Currency = 123.45678

Var n1 as SQLNumericMBS = SQLNumericMBS.NumericWithCurrency(c1)
Var n2 as SQLNumericMBS = SQLNumericMBS.NumericWithCurrency(c2)
Var n3 as SQLNumericMBS = SQLNumericMBS.NumericWithCurrency(c3)
Var n4 as SQLNumericMBS = SQLNumericMBS.NumericWithCurrency(c4)
Var n5 as SQLNumericMBS = SQLNumericMBS.NumericWithCurrency(c5)
Var n6 as SQLNumericMBS = SQLNumericMBS.NumericWithCurrency(c6)

Var s1 as string = n1.StringValue
Var s2 as string = n2.StringValue
Var s3 as string = n3.StringValue
Var s4 as string = n4.StringValue
Var s5 as string = n5.StringValue
Var s6 as string = n6.StringValue

Var d1 as Double = n1.DoubleValue
Var d2 as Double = n2.DoubleValue
Var d3 as Double = n3.DoubleValue
Var d4 as Double = n4.DoubleValue
Var d5 as Double = n5.DoubleValue
Var d6 as Double = n6.DoubleValue

Var x1 as Currency = n1.CurrencyValue
```

```
Var x2 as Currency = n2.CurrencyValue
Var x3 as Currency = n3.CurrencyValue
Var x4 as Currency = n4.CurrencyValue
Var x5 as Currency = n5.CurrencyValue
Var x6 as Currency = n6.CurrencyValue

// check for errors
if x1<>c1 then break
if x2<>c2 then break
if x3<>c3 then break
if x4<>c4 then break
if x5<>c5 then break
if x6<>c6 then break

if x1*10000 <>round(d1 * 10000) then Break
if x2*10000 <>round(d2 * 10000) then Break
if x3*10000 <>round(d3 * 10000) then Break
if x4*10000 <>round(d4 * 10000) then Break
if x5*10000 <>round(d5 * 10000) then Break
if x6*10000 <>round(d6 * 10000) then Break

Break // if no break before, it's okay.
```

186.32.7 NumericWithDouble(value as Double) as SQLNumericMBS

MBS SQL Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new number with the given double value.

186.32.8 NumericWithInt64(value as Int64) as SQLNumericMBS

MBS SQL Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new number with the given Int64 value.

186.32.9 NumericWithString(value as string) as SQLNumericMBS

MBS SQL Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new number with the given string value.
Notes: If string is empty, we return a number with zero as value.

186.32.10 NumericWithUInt64(value as UInt64) as SQLNumericMBS

MBS SQL Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new number with the given unsigned integer value.

186.32.11 Properties

186.32.12 CurrencyValue as Currency

MBS SQL Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The currency value.
Example:

```
// test code for currency
Var c1 as Currency = 12345678.
Var c2 as Currency = 1234567.8
Var c3 as Currency = 123456.78
Var c4 as Currency = 12345.678
Var c5 as Currency = 1234.5678
Var c6 as Currency = 123.45678

Var n1 as SQLNumericMBS = SQLNumericMBS.NumericWithCurrency(c1)
Var n2 as SQLNumericMBS = SQLNumericMBS.NumericWithCurrency(c2)
Var n3 as SQLNumericMBS = SQLNumericMBS.NumericWithCurrency(c3)
Var n4 as SQLNumericMBS = SQLNumericMBS.NumericWithCurrency(c4)
Var n5 as SQLNumericMBS = SQLNumericMBS.NumericWithCurrency(c5)
Var n6 as SQLNumericMBS = SQLNumericMBS.NumericWithCurrency(c6)

Var s1 as string = n1.StringValue
Var s2 as string = n2.StringValue
Var s3 as string = n3.StringValue
Var s4 as string = n4.StringValue
Var s5 as string = n5.StringValue
Var s6 as string = n6.StringValue

Var d1 as Double = n1.DoubleValue
Var d2 as Double = n2.DoubleValue
Var d3 as Double = n3.DoubleValue
Var d4 as Double = n4.DoubleValue
Var d5 as Double = n5.DoubleValue
Var d6 as Double = n6.DoubleValue

Var x1 as Currency = n1.CurrencyValue
Var x2 as Currency = n2.CurrencyValue
Var x3 as Currency = n3.CurrencyValue
```

```
Var x4 as Currency = n4.CurrencyValue
Var x5 as Currency = n5.CurrencyValue
Var x6 as Currency = n6.CurrencyValue

// check for errors
if x1<>c1 then break
if x2<>c2 then break
if x3<>c3 then break
if x4<>c4 then break
if x5<>c5 then break
if x6<>c6 then break

if x1*10000 <>round(d1 * 10000) then Break
if x2*10000 <>round(d2 * 10000) then Break
if x3*10000 <>round(d3 * 10000) then Break
if x4*10000 <>round(d4 * 10000) then Break
if x5*10000 <>round(d5 * 10000) then Break
if x6*10000 <>round(d6 * 10000) then Break

Break // if no break before, it's okay.
```

Notes: (Read and Write property)

186.32.13 DoubleValue as Double

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The double value for this number.
Notes: (Read and Write property)

186.32.14 Int64Value as Int64

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number value as an int64.
Notes: (Read and Write property)

186.32.15 precision as Integer

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The maximum number of digits in base 10.

Notes: (Read only property)

186.32.16 scale as Integer

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of digits to the right of the decimal point.
Notes: (Read only property)

186.32.17 sign as Integer

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The sign: 1 for positive numbers, 0 for negative numbers.
Notes: (Read only property)

186.32.18 StringValue as string

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The string value of this number.
Notes: (Read and Write property)

186.32.19 UInt64Value as UInt64

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number value as an uint64.
Notes: (Read and Write property)

186.33 class SQLParamMBS

186.33.1 class SQLParamMBS

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The SQL class for parameters.
Notes: see also
https://www.sqlapi.com/ApiDoc/class_s_a_param.html
Subclass of the SQLValueMBS class.

186.33.2 Methods

186.33.3 ReadLongOrLob(toConsumer as SQLDataConsumerMBS, BlockSize as Integer)

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The Long or Lob data reading mode.
Notes: SQLAPI++ Library provides two ways to read Long or BLob(CLob) object's value (usually SQLField or SQLParam objects):

1. reading of Long or Lob data at once into an internal buffer (like ordinary string or binary values);
2. piecewise reading of Long or Lob data using user defined callback.

kLongOrLobReaderDefault reading mode used by default.

If you want to control piecewise reading of Long or BLob(CLob) data you should set LongOrLobReaderMode and use kLongOrLobReaderManual reading mode for Long or BLob(CLob) parameters or fields you want to process with your data consumer. After that each fetch will skip reading Long and BLob(CLob) parameters that you set to be read manually. To read field or parameter defined to be read manually you should call ReadLongOrLob method for each of them after the fetch. ReadLongOrLob method will repeatedly call the data consumer Write event.
See also:

- 186.33.4 ReadLongOrLob(toFile as FolderItem) 21974
- 186.33.5 ReadLongOrLob(toStream as Writeable) 21974

186.33.4 ReadLongOrLob(toFile as FolderItem)

MBS SQL Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Starts reading of Long or BLob(CLob) value to the given file.
Example:

```
Var cmd as SQLCommandMBS // your command
Var f as FolderItem = SpecialFolder.Desktop.Child("test.jpg")
Var Param as SQLParamMBS = cmd.Param("image")
// read blob content to binarystream
Param.ReadLongOrLob(f)
```

Notes: May raise IOExceptions if things go wrong.
See also:

- 186.33.3 ReadLongOrLob(toConsumer as SQLDataConsumerMBS, BlockSize as Integer) 21973
- 186.33.5 ReadLongOrLob(toStream as Writeable) 21974

186.33.5 ReadLongOrLob(toStream as Writeable)

MBS SQL Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Starts reading of Long or BLob(CLob) value to the given writeable stream.
Example:

```
Var cmd as SQLCommandMBS // your command
Var f as FolderItem = SpecialFolder.Desktop.Child("test.jpg")
Var b as BinaryStream = BinaryStream.Create(f, true)
Var param as SQLParamMBS = cmd.param("image")
// read blob content to binarystream
param.ReadLongOrLob(b)
```

Notes: This allows you to read in chunks the data to a stream, e.g. binarystream, textoutputstream or socket.
See also:

- 186.33.3 ReadLongOrLob(toConsumer as SQLDataConsumerMBS, BlockSize as Integer) 21973
- 186.33.4 ReadLongOrLob(toFile as FolderItem) 21974

186.33.6 Properties

186.33.7 DirType as Integer

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The direction type of parameter (input, output, etc.).
Notes: Use the kParamDirType* constants.

Usually the Library automatically detects parameter's direction type and implicitly creates an appropriate SAParam object. But not all of DBMS clients/servers provide complete parameters information. In that situation programmer need to describe parameter's direction type explicitly. See Server specific notes for details.

https://www.sqlapi.com/ApiDoc/class_s_a_param.html
(Read and Write property)

186.33.8 IsInput as Boolean

MBS SQL Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is an input paramater.
Notes: Checks ParamType property internally.
(Read only property)

186.33.9 IsOutput as Boolean

MBS SQL Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is an output paramater.
Notes: Checks ParamType property internally.
(Read only property)

186.33.10 Name as string

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The name of the parameter.
Notes: (Read only property)

186.33.11 NativeType as Integer

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The native type code of the parameter.
Notes: (Read and Write property)

186.33.12 Options as Dictionary

MBS SQL Plugin, Plugin Version: 18.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a dictionary with all options.
Notes: For debugging, it may be useful to inspect options in debugger.
(Read only property)

186.33.13 Precision as Integer

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The precision of the parameter value (the total number of allowable digits).
Notes: (Read and Write property)

186.33.14 Scale as Integer

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The scale of the parameter value (the number of digits to the right of the decimal point).
Notes: (Read and Write property)

186.33.15 Size as Integer

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The parameter's data size.
Notes: (Read and Write property)

186.33.16 Type as Integer

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The parameter's data type.
Notes: See the kDataType constants.
(Read and Write property)

186.33.17 Option(name as string) as string

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The string value of a specific parameter option.
Notes: see also:
https://www.sqlapi.com/ApiDoc/class_s_a_param.html
(Read and Write computed property)

186.33.18 Constants

Constants

Constant	Value	Description
kParamDirTypeInput	0	One of the parameter direction type constants. Input parameter.
kParamDirTypeInputOutput	1	One of the parameter direction type constants. Input/output parameter.
kParamDirTypeOutput	2	One of the parameter direction type constants. Output parameter.
kParamDirTypeReturn	3	One of the parameter direction type constants. Returning parameter.

186.34 class SQLPositionMBS

186.34.1 class SQLPositionMBS

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for a position value.

186.34.2 Methods

186.34.3 Constructor(withID as Integer)

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new Position value with an ID.
See also:

- 186.34.4 Constructor(withName as string) 21978

186.34.4 Constructor(withName as string)

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new Position value with a name.
See also:

- 186.34.3 Constructor(withID as Integer) 21978

186.35 class SQLPreparedStatementMBS

186.35.1 class SQLPreparedStatementMBS

MBS SQL Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for prepared statements if you work with SQLDatabaseMBS class.
Notes: If you work with SQLCommandMBS class, you can set parameters there directly.

For the SQL string you number parameters with colon and number. Like this: :1, :2, :3.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

Interfaces: PreparedSQLStatement

186.35.2 Methods

186.35.3 Bind(name As String, value as Variant)

MBS SQL Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Defines the value for one parameter.
Example:

```
Var db as SQLDatabaseMBS // your db connection
Var sql as string = "Insert into test_tbl(fid, fvarchar20) values(:fid, :fvarchar20)"
Var v as Variant = db.Prepare(sql)
Var p as SQLPreparedStatementMBS = v

p.BindType("fid", SQLPreparedStatementMBS.kTypeLong)
p.BindType("fvarchar20", SQLPreparedStatementMBS.kTypeString)
p.Bind("fid", 2345)
p.Bind("fvarchar20", "Hello World by name")

p.SQLExecute
```

Notes: Version 16.4 and newer allow you to bind BLOB fields using a Memoryblock or a String value. Older versions only accepted string.

When passing variant for value, MemoryBlock and Strings without text encoding are converted to byte values (BLOB). Texts and Strings with encoding are converted to text values. Other types are translated as good as possible. Raises exceptions if you pass anything which is not recognized.

With version 19.0 or later, you can pass folderitem to stream blob from file. This may raise exception if file can't be opened.

- 186.35.8 Bind(zeroBasedIndex as Integer, value as Variant, type as Integer) 21984

186.35.4 Bind(name As String, value as Variant, type as Integer)

MBS SQL Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Defines one paramater with value and type.
Example:

```
Var db as SQLDatabaseMBS // your db connection
Var sql as string = "Insert into test_tbl(fid, fvarchar20) values(:fid, :fvarchar20)"
Var v as Variant = db.Prepare(sql)
Var p as SQLPreparedStatementMBS = v

p.Bind("fid", 2345, SQLPreparedStatementMBS.kTypeLong)
p.Bind("fvarchar20", "Hello World by name", SQLPreparedStatementMBS.kTypeString)

p.SQLExecute
```

Notes: Version 16.4 and newer allow you to bind BLOB fields using a Memoryblock or a String value. Older versions only accepted string.

When passing variant for value, MemoryBlock and Strings without text encoding are converted to byte values (BLOB). Texts and Strings with encoding are converted to text values. Other types are translated as good as possible. Raises exceptions if you pass anything which is not recognized.

With version 19.0 or later, you can pass folderitem to stream blob from file. This may raise exception if file can't be opened.

With plugin version 16.4 and newer binding type is optional. In that case the type is determinated from the value type.
See also:

- 186.35.5 Bind(Values as Dictionary) 21981
- 186.35.6 Bind(values() as Variant) 21982
- 186.35.7 Bind(zeroBasedIndex as Integer, value as Variant) 21983
- 186.35.8 Bind(zeroBasedIndex as Integer, value as Variant, type as Integer) 21984

186.35.5 Bind(Values as Dictionary)

MBS SQL Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the parameters based on the keys and values in the dictionary.
Example:

```
Var db as SQLDatabaseMBS // your database
Var pic as Picture // some picture
Var jpegData as MemoryBlock = pic.GetData(Picture.FormatJPEG, 80)

// get an insert command
Var sql as string = "Insert into BlobTest(name, image) values (:name, :image)"
```

```
Var p as SQLPreparedStatementMBS = db.Prepare(sql)

// put parameter values in a dictionary
Var d as new Dictionary

// by param index
d.Value(0) = "logo.jpg"
// by param name
d.Value("image") = jpegData

// bind values and run it
p.Bind(d)
p.SQLExecute
```

Notes: The dictionary is saved to fill parameters later.
Keys can be String, Text or numeric types. Text and String are used to pick parameters by name. Numeric values are used to pick parameter by index (zero based).
MemoryBlock and Strings without text encoding are converted to byte values (BLOB).
Texts and Strings with encoding are converted to text values.
Raises exceptions if you pass anything which is not recognized.
Other types are translated as good as possible.

- 186.35.4 Bind(name As String, value as Variant, type as Integer) 21980
- 186.35.6 Bind(values() as Variant) 21982
- 186.35.7 Bind(zeroBasedIndex as Integer, value as Variant) 21983
- 186.35.8 Bind(zeroBasedIndex as Integer, value as Variant, type as Integer) 21984

186.35.6 Bind(values() as Variant)

MBS SQL Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the value list with the given values.
Notes: You can either pass values to the SQLExecute/SQLSelect method or call Bind methods to set values. You have to define for each parameter both the type and the value.

Version 16.4 and newer allow you to bind BLOB fields using a Memoryblock or a String value.
Older versions only accepted string.

When passing variant for value, MemoryBlock and Strings without text encoding are converted to byte values (BLOB). Texts and Strings with encoding are converted to text values. Other types are translated as

good as possible. Raises exceptions if you pass anything which is not recognized.

With version 19.0 or later, you can pass folderitem to stream blob from file. This may raise exception if file can't be opened.

- 186.35.7 Bind(zeroBasedIndex as Integer, value as Variant) 21983
- 186.35.8 Bind(zeroBasedIndex as Integer, value as Variant, type as Integer) 21984

186.35.7 Bind(zeroBasedIndex as Integer, value as Variant)

MBS SQL Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Defines the value for one parameter.
Notes: You can either pass values to the SQLExecute/SQLSelect method or call Bind methods to set values. You have to define for each parameter both the type and the value.

Version 16.4 and newer allow you to bind BLOB fields using a Memoryblock or a String value.
Older versions only accepted string.

When passing variant for value, MemoryBlock and Strings without text encoding are converted to byte values (BLOB). Texts and Strings with encoding are converted to text values. Other types are translated as good as possible. Raises exceptions if you pass anything which is not recognized.

With version 19.0 or later, you can pass folderitem to stream blob from file. This may raise exception if file can't be opened.

Raises OutOfBoundsException exception if index parameter is out of range.

- 186.35.6 Bind(values() as Variant) 21982
- 186.35.8 Bind(zeroBasedIndex as Integer, value as Variant, type as Integer) 21984

186.35.8 Bind(zeroBasedIndex as Integer, value as Variant, type as Integer)

MBS SQL Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Defines one paramater with value and type.
Notes: You can either pass values to the SQLExecute/SQLSelect method or call Bind methods to set values. You have to define for each parameter both the type and the value.

Version 16.4 and newer allow you to bind BLOB fields using a Memoryblock or a String value.
Older versions only accepted string.

When passing variant for value, MemoryBlock and Strings without text encoding are converted to byte values (BLOB). Texts and Strings with encoding are converted to text values. Other types are translated as good as possible. Raises exceptions if you pass anything which is not recognized.

With plugin version 16.4 and newer binding type is optional. In that case the type is determinated from the value type.

With version 19.0 or later, you can pass folderitem to stream blob from file. This may raise exception if file can't be opened.

Raises OutOfBoundsException exception if index parameter is out of range.

- 186.35.7 Bind(zeroBasedIndex as Integer, value as Variant) 21983

186.35.9 BindType(name As String, type as Integer)

MBS SQL Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Defines the type of one value.
Example:

```
Var db as SQLDatabaseMBS // your db connection
Var sql as string = "Insert into test_tbl(fid, fvarchar20) values(:fid, :fvarchar20)"
Var v as Variant = db.Prepare(sql)
Var p as SQLPreparedStatementMBS = v
```

```
p.BindType("fid", SQLPreparedStatementMBS.kTypeLong)
p.BindType("fvarchar20", SQLPreparedStatementMBS.kTypeString)
p.Bind("fid", 2345)
p.Bind("fvarchar20", "Hello World by name")

p.SQLExecute
```

Notes: With plugin version 16.4 and newer binding type is optional. In that case the type is determinated from the value type.
See also:

- 186.35.10 BindType(types() as Integer) 21985
- 186.35.11 BindType(zeroBasedIndex as Integer, type as Integer) 21985

186.35.10 BindType(types() as Integer)

MBS SQL Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Defines the types for all values.
Notes: You can either pass values to the SQLExecute/SQLSelect method or call Bind methods to set values. You have to define for each parameter both the type and the value.

With plugin version 16.4 and newer binding type is optional. In that case the type is determinated from the value type.
See also:

- 186.35.9 BindType(name As String, type as Integer) 21984
- 186.35.11 BindType(zeroBasedIndex as Integer, type as Integer) 21985

186.35.11 BindType(zeroBasedIndex as Integer, type as Integer)

MBS SQL Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Defines the type of one value.
Notes: You can either pass values to the SQLExecute/SQLSelect method or call Bind methods to set values. You have to define for each parameter both the type and the value.

With plugin version 16.4 and newer binding type is optional. In that case the type is determinated from the value type.
See also:

- 186.35.9 BindType(name As String, type as Integer) 21984
- 186.35.10 BindType(types() as Integer) 21985

186.35.12 Clear

MBS SQL Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Clears all parameters for reusing the SQL Prepared statement.

186.35.13 Constructor

MBS SQL Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.
Notes: This constructor makes sure you don't create useless SQLPreparedStatementMBS objects by error. The only way to create an object is to use the prepare method in the database class.
This constructor is private to make sure you don't create an object from this class by error. Please use designated functions to create objects.

186.35.14 ExecuteSQL(ParamArray bindItems As Variant)

MBS SQL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Runs the SQL command with the given parameters.
Notes: You can decide whether you pass values here or call Bind methods.

When passing variant for value, MemoryBlock and Strings without text encoding are converted to byte values (BLOB). Texts and Strings with encoding are converted to text values. Other types are translated as good as possible. Raises exceptions if you pass anything which is not recognized.

With version 19.0 or later, you can pass folderitem to stream blob from file. This may raise exception if file can't be opened.

If bindItems is not nil, we bind parameters using it.
If you like to pass an array of variant for the values, please pass this to Bind() and no parameters here. Otherwise passing an array here would create a variant array with your array as content.

This version of the function raises always exceptions, while SQLExecute only if you set RaiseException property to true.

186.35.15 ExecuteSQLMT(ParamArray bindItems As Variant)

MBS SQL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Runs the SQL command with the given parameters.
Notes: You can decide whether you pass values here or call Bind methods.

When passing variant for value, MemoryBlock and Strings without text encoding are converted to byte values (BLOB). Texts and Strings with encoding are converted to text values. Other types are translated as good as possible. Raises exceptions if you pass anything which is not recognized.

If bindItems is not nil, we bind parameters using it.

With version 19.0 or later, you can pass folderitem to stream blob from file. This may raise exception if file can't be opened.

This version of the function raises always exceptions, while SQLExecuteMT only if you set RaiseException property to true.

If you like to pass an array of variant for the values, please pass this to Bind() and no parameters here. Otherwise passing an array here would create a variant array with your array as content.

The work is performed on a preemptive thread, so this function does not block the application and can yield time to other Xojo threads. Must be called in a Xojo thread to enjoy benefits. If called in main thread will block, but keep other background threads running.

186.35.16 SelectSQL(ParamArray bindItems As Variant) As RowSet

MBS SQL Plugin, Plugin Version: 19.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Runs the query with the given parameters.
Notes: Returns the RowSet object or nil on error.
You can decide whether you pass values here or call Bind methods.

For this method to work, you need to have somewhere a property with SQLDatabaseMBS so Xojo includes our SQLDatabase plugin which provides the RecordSet functionality.

The record set may not have a valid RecordCount or have working movefirst/movelast/moveprev methods unless the underlaying database supports those and Scrollable result sets is enabled/supported.

If bindItems is not nil, we bind parameters using it.
If you like to pass an array of variant for the values, please pass this to Bind() and no parameters here. Otherwise passing an array here would create a variant array with your array as content.

When passing variant for value, MemoryBlock and Strings without text encoding are converted to byte values (BLOB). Texts and Strings with encoding are converted to text values. Other types are translated as good as possible. Raises exceptions if you pass anything which is not recognized.

This version of the function raises always exceptions, while SQLSelect only if you set RaiseException property to true.

186.35.17 SelectSQLMT(ParamArray bindItems As Variant) As Rowset

MBS SQL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function:

Returns the RowSet object or nil on error.
You can decide whether you pass values here or call Bind methods.

For this method to work, you need to have somewhere a property with SQLDatabaseMBS so Xojo includes our SQLDatabase plugin which provides the RecordSet functionality.

The record set may not have a valid RecordCount or have working movefirst/movelast/moveprev methods unless the underlaying database supports those and Scrollable result sets is enabled/supported.

If bindItems is not nil, we bind parameters using it.
If you like to pass an array of variant for the values, please pass this to Bind() and no parameters here. Otherwise passing an array here would create a variant array with your array as content.

When passing variant for value, MemoryBlock and Strings without text encoding are converted to byte values (BLOB). Texts and Strings with encoding are converted to text values. Other types are translated as good as possible. Raises exceptions if you pass anything which is not recognized.

This version of the function raises always exceptions, while SQLSelectMT only if you set RaiseException property to true.

The work is performed on a preemptive thread, so this function does not block the application and can yield time to other Xojo threads. Must be called in a Xojo thread to enjoy benefits. If called in main thread will block, but keep other background threads running.

186.35.18 SQLExecute(ParamArray bindItems as Variant)

MBS SQL Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Runs the SQL command with the given parameters.
Notes: You can decide whether you pass values here or call Bind methods.

When passing variant for value, MemoryBlock and Strings without text encoding are converted to byte values (BLOB). Texts and Strings with encoding are converted to text values. Other types are translated as good as possible. Raises exceptions if you pass anything which is not recognized.

If you like to pass an array of variant for the values, please pass this to Bind() and no parameters here. Otherwise passing an array here would create a variant array with your array as content.

With version 19.0 or later, you can pass folderitem to stream blob from file. This may raise exception if file can't be opened.

186.35.19 SQLExecuteMT(ParamArray bindItems as Variant)

MBS SQL Plugin, Plugin Version: 16.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Runs the SQL command with the given parameters.
Notes: You can decide whether you pass values here or call Bind methods.

The work is performed on a preemptive thread, so this function does not block the application and can yield time to other Xojo threads. Must be called in a Xojo thread to enjoy benefits. If called in main thread will block, but keep other background threads running.

When passing variant for value, MemoryBlock and Strings without text encoding are converted to byte values (BLOB). Texts and Strings with encoding are converted to text values. Other types are translated as good as possible. Raises exceptions if you pass anything which is not recognized.

If you like to pass an array of variant for the values, please pass this to Bind() and no parameters here. Otherwise passing an array here would create a variant array with your array as content.

With version 19.0 or later, you can pass folderitem to stream blob from file. This may raise exception if file can't be opened.

186.35.20 SQLSelect(ParamArray bindItems as Variant) As RecordSet

MBS SQL Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Runs the query with the given parameters.
Notes: Returns the recordset object or nil on error.

You can decide whether you pass values here or call Bind methods.

For this method to work, you need to have somewhere a property with SQLDatabaseMBS so Xojo includes our SQLDatabase plugin which provides the RecordSet functionality.

The record set may not have a valid RecordCount or have working movefirst/movelast/moveprev methods unless the underlaying database supports those and Scrollable result sets is enabled/supported.

If you like to pass an array of variant for the values, please pass this to Bind() and no parameters here. Otherwise passing an array here would create a variant array with your array as content.

When passing variant for value, MemoryBlock and Strings without text encoding are converted to byte values (BLOB). Texts and Strings with encoding are converted to text values. Other types are translated as good as possible. Raises exceptions if you pass anything which is not recognized.

With version 19.0 or later, you can pass folderitem to stream blob from file. This may raise exception if file can't be opened.

186.35.21 SQLSelectMT(ParamArray bindItems as Variant) As RecordSet

MBS SQL Plugin, Plugin Version: 16.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Runs the query with the given parameters.
Notes: Returns the recordset object or nil on error.
You can decide whether you pass values here or call Bind methods.

For this method to work, you need to have somewhere a property with SQLDatabaseMBS so Xojo includes our SQLDatabase plugin which provides the RecordSet functionality.

The record set may not have a valid RecordCount or have working movefirst/movelast/moveprev methods unless the underlaying database supports those and Scrollable result sets is enabled/supported.

If you like to pass an array of variant for the values, please pass this to Bind() and no parameters here. Otherwise passing an array here would create a variant array with your array as content.

When passing variant for value, MemoryBlock and Strings without text encoding are converted to byte values (BLOB). Texts and Strings with encoding are converted to text values. Other types are translated as good as possible. Raises exceptions if you pass anything which is not recognized.

With version 19.0 or later, you can pass folderitem to stream blob from file. This may raise exception if file

can't be opened.

The work is performed on a preemptive thread, so this function does not block the application and can yield time to other Xojo threads. Must be called in a Xojo thread to enjoy benefits. If called in main thread will block, but keep other background threads running.

186.35.22 Properties

186.35.23 BoundTypes as Dictionary

MBS SQL Plugin, Plugin Version: 19.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The binded types to inspect in debugger.
Notes: When queried, the plugin creates a copy of the dictionary for you to inspect in debugger.
Changes to the dictionary do not bind types.

Renamed to BoundTypes in version 19.4. Was BindedTypes, but that was not proper english.
(Read only property)

186.35.24 BoundValues as Dictionary

MBS SQL Plugin, Plugin Version: 19.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The binded values to inspect in debugger.
Notes: When queried, the plugin creates a copy of the dictionary for you to inspect in debugger.
Changes to the dictionary do not bind values.

Renamed to BoundValues in version 19.4. Was BindedValues, but that was not proper english.
(Read only property)

186.35.25 Scrollable as Boolean

MBS SQL Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether the plugin will ask for a scrollable recordset when doing SQLSelect.
Notes: Since plugin version 15.0, Scrollable is false by default.
(Read and Write property)

186.35.26 SQL as String

MBS SQL Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The SQL command for this prepared statement.
Notes: (Read and Write property)

186.35.27 Constants

Data Type Constants

Constant	Value	Description
kTypeBlob	16	Binary large Object. Pass a string or memoryblock.
kTypeBool	1	Boolean
kTypeBytes	13	a binary string or MemoryBlock. (which is a string without text encoding) This is usually a varbinary field. kTypeLongBinary is used for bigger binary data and streamed. And kTypeBlob is used for huge streams of bytes and also transferred in chunks. In most data base systems the varchar field is stored within the record, while BLOB and CLOB are stored separately.
kTypeClob	17	Character Large Object.
kTypeDateTime	10	Date and/or Time.
kTypeDouble	8	double float value.
kTypeInt32	4	signed 32 bit integer
kTypeInt64	6	Signed 64-bit integer.
kTypeInterval	11	An interval. Please pass SQLIntervalMBS in the variant. If the variant contains anything else, the plugin will pass nil value. When passing variant for value, MemoryBlock and Strings without text encoding are converted to byte values (BLOB). Texts and Strings with encoding are converted to text values. Other types are translated as good as possible. Raises exceptions if you pass anything which is not recognized.
kTypeLong	4	signed 32 bit integer
kTypeLongBinary	14	Long binary.
kTypeLongChar	15	Long string.
kTypeNull	99	NULL value
kTypeNumeric	9	A number (Int64 or double). This can be used for Int64 or Double values. Depending of the type of number in the variant, the plugin will either make an Int64 or a double internally. When passing variant for value, MemoryBlock and Strings without text encoding are converted to byte values (BLOB). Texts and Strings with encoding are converted to text values. Other types are translated as good as possible. Raises exceptions if you pass anything which is not recognized.
kTypeShort	2	signed 16 bit integer
kTypeString	12	String. This is usually a varchar field. kTypeLongChar is used for bigger varchars and streamed. And kTypeClob is used for huge streams of characters (BLOB for text) and also transferred in chunks. In most data base systems the varchar field is stored within the record, while BLOB and CLOB are stored separately.
kTypeUInt32	5	unsigned 32 bit integer
kTypeUInt64	7	Unsigned 64-bit integer.
kTypeULong	5	unsigned 32 bit integer
kTypeUnknown	0	unknown type
kTypeUShort	3	unsigned 16 bit integer

186.36 class SQLStringMBS

186.36.1 class SQLStringMBS

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for strings in this plugin.
Example:

```
Var s as new SQLStringMBS("Hello √§√√º")

MsgBox "Characters: "+str(s.GetLength)+" Bytes: "+str(s.GetBinaryLength)

Var a as string= s.CopyBinaryData
Var b as string= s.CopyText

MsgBox a // RB shows garbage as it tries to display bytes as UTF8 which does not work
MsgBox b // displays correct
```

Notes: A string can be text (with text encoding) or bytes (raw binary data).

186.36.2 Methods

186.36.3 Compare(text as SQLStringMBS) as Integer

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Compares this string object with another string.
Notes: Function performs a case-sensitive comparison of the strings, and is not affected by locale.

Returns zero if the strings are identical, <0 if this string object is less than text, or >0 if this string object is greater than text.
See also:

- 186.36.4 Compare(text as string) as Integer

186.36.4 Compare(text as string) as Integer

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Compares this string object with another string.
Notes: Function performs a case-sensitive comparison of the strings, and is not affected by locale.

Returns zero if the strings are identical, <0 if this string object is less than text, or >0 if this string object is greater than text.
See also:

- 186.36.3 Compare(text as SQLStringMBS) as Integer 21994

186.36.5 CompareNoCase(text as SQLStringMBS) as Integer

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Compares this string object with another string.
Notes: Function performs a case-insensitive comparison of the strings, and is not affected by locale.

Returns zero if the strings are identical (ignoring case), <0 if this string object is less than text (ignoring case), or >0 if this string object is greater than text (ignoring case).
See also:

- 186.36.6 CompareNoCase(text as string) as Integer 21995

186.36.6 CompareNoCase(text as string) as Integer

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Compares this string object with another string.
Notes: Function performs a case-insensitive comparison of the strings, and is not affected by locale.

Returns zero if the strings are identical (ignoring case), <0 if this string object is less than text (ignoring case), or >0 if this string object is greater than text (ignoring case).
See also:

- 186.36.5 CompareNoCase(text as SQLStringMBS) as Integer 21995

186.36.7 Constructor

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new empty string object.
See also:

- 186.36.8 Constructor(Data as MemoryBlock) 21996
- 186.36.9 Constructor(Data as string, isText as Boolean = True) 21996
- 186.36.10 Constructor(other as SQLStringMBS) 21996

186.36.8 Constructor(Data as MemoryBlock)

MBS SQL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new string object with data, e.g. for blob.
See also:

- 186.36.7 Constructor 21995
- 186.36.9 Constructor(Data as string, isText as Boolean = True) 21996
- 186.36.10 Constructor(other as SQLStringMBS) 21996

186.36.9 Constructor(Data as string, isText as Boolean = True)

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new string object with data or text copied from the data string.
Notes: If isText is true, the data is interpreted as text and string encoding conversion may modify it. If isText is false the bytes are copied raw.
See also:

- 186.36.7 Constructor 21995
- 186.36.8 Constructor(Data as MemoryBlock) 21996
- 186.36.10 Constructor(other as SQLStringMBS) 21996

186.36.10 Constructor(other as SQLStringMBS)

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new string object with data copied from the other string object.
See also:

- 186.36.7 Constructor 21995
- 186.36.8 Constructor(Data as MemoryBlock) 21996
- 186.36.9 Constructor(Data as string, isText as Boolean = True) 21996

186.36.11 CopyBinaryData as string

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Copies the bytes from the internal buffer ignoring any text encoding.

186.36.12 CopyMemoryBlock as MemoryBlock

MBS SQL Plugin, Plugin Version: 24.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Copies the content of the string/BLOB as MemoryBlock.

186.36.13 CopyText as string

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Copies the characters of this string as text.
Notes: Text encoding conversion may happen.

186.36.14 Empty

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Forces a string to have 0 length.

186.36.15 GetBinaryLength as UInt32

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use BinaryLength instead.
Function: Returns a count of the bytes in the binary data buffer.
Notes: Deprecated. Please use BinaryLength property.

186.36.16 GetLength as UInt32

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use Length instead. **Function:** Returns the number of characters in a SAString object.
Notes: Deprecated. Please use Length property.

For multibyte character sets, GetLength counts each 8-bit character; that is, a lead and trail byte in one multibyte character are counted as two bytes.

186.36.17 Left(count as Integer) as SQLStringMBS

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Extracts the left part of a string.

186.36.18 MakeLower

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Changes all characters in the string to lower case.

186.36.19 MakeUpper

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Changes all characters in the string to upper case.

186.36.20 Mid(first as Integer) as SQLStringMBS

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Extracts the middle part of a string.
Notes: first: The zero-based index of the first character in this string object that is to be included in the extracted substring.
See also:

- 186.36.21 Mid(first as Integer, Count as Integer) as SQLStringMBS 21998

186.36.21 Mid(first as Integer, Count as Integer) as SQLStringMBS

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Extracts the middle part of a string.
Notes: first: The zero-based index of the first character in this string object that is to be included in the extracted substring.
count: The number of characters to extract from this string object. If this parameter is not supplied, then

the remainder of the string is extracted.
See also:

- 186.36.20 Mid(first as Integer) as SQLStringMBS 21998

186.36.22 Operator_Convert as string

MBS SQL Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Convert operation for assignment to string.
See also:

- 186.36.23 Operator_Convert(text as string) 21999

186.36.23 Operator_Convert(text as string)

MBS SQL Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Convert operation for assigning text string.
See also:

- 186.36.22 Operator_Convert as string 21999

186.36.24 Right(count as Integer) as SQLStringMBS

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Extracts the right part of a string.

186.36.25 TrimLeft

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Trim leading whitespace characters from the string.

186.36.26 TrimRight

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Trim trailing whitespace characters from the string.

186.36.27 Properties

186.36.28 BinaryLength as UInt32

MBS SQL Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a count of the bytes in the binary data buffer.
Notes: (Read only property)

186.36.29 DebugText as String

MBS SQL Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Text content for debugging.
Notes: We show up to 1000 characters here for debugger.
(Read only property)

186.36.30 IsEmpty as boolean

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Tests whether a String object contains no characters.
Notes: Returns true if length is zero.
(Read only property)

186.36.31 Length as UInt32

MBS SQL Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the number of characters in a SAString object.
Notes: For multibyte character sets, GetLength counts each 8-bit character; that is, a lead and trail byte in one multibyte character are counted as two bytes.
(Read only property)

186.37 class SQLUnsupportedExceptionMBS

186.37.1 class SQLUnsupportedExceptionMBS

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for an exception to report that the function is not supported on this platform.
Notes: This one raises only if the plugin is compiled for Mac OS Classic.
Subclass of the RuntimeException class.

186.38 class SQLValueMBS

186.38.1 class SQLValueMBS

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The SQL class for mutable values.
Notes: Subclass of the SQLValueReadMBS class.

186.38.2 Methods

186.38.3 Constructor(DataType as Integer)

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new empty value object with the given data type.

186.38.4 setAsBlob(data as MemoryBlock)

MBS SQL Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets parameter's value as BLob data using a memoryblock.
See also:

- 186.38.5 setAsBlob(data as SQLDataProviderMBS, BlockSize as UInt32) 22003
- 186.38.6 setAsBlob(data as SQLStringMBS) 22003
- 186.38.7 setAsBlob(data as string) 22004
- 186.38.8 setAsBlob(file as folderItem) 22004
- 186.38.9 setAsBlob(stream as Readable) 22005

186.38.5 setAsBlob(data as SQLDataProviderMBS, BlockSize as UInt32)

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets parameter's value as BLob data (SQLString)
Notes: When you call the SQLCommandMBS.Execute method all input parameters are bound with their values, including Long and BLob(CLob) parameters.
That is the time when the data provider Read event runs to get the values in the block size you specify.

The default value for the block size is 0. If you use the default value, SQLAPI++ Library will automatically use the most appropriate size for current DBMS.
See also:

- 186.38.4 setAsBlob(data as MemoryBlock) 22002
- 186.38.6 setAsBlob(data as SQLStringMBS) 22003
- 186.38.7 setAsBlob(data as string) 22004
- 186.38.8 setAsBlob(file as folderItem) 22004
- 186.38.9 setAsBlob(stream as Readable) 22005

186.38.6 setAsBlob(data as SQLStringMBS)

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets parameter's value as BLob data (SQLString)
See also:

- 186.38.4 setAsBlob(data as MemoryBlock) 22002
- 186.38.5 setAsBlob(data as SQLDataProviderMBS, BlockSize as UInt32) 22003
- 186.38.7 setAsBlob(data as string) 22004
- 186.38.8 setAsBlob(file as folderItem) 22004
- 186.38.9 setAsBlob(stream as Readable) 22005

186.38.7 setAsBlob(data as string)

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets parameter's value as BLob data (SQLString)
Example:

```
Var c as SQLCommandMBS // your command object
Var JPEGData as string // some data

c.Param("imageData").setAsBlob JPEGData
```

See also:

- 186.38.4 setAsBlob(data as MemoryBlock) 22002
- 186.38.5 setAsBlob(data as SQLDataProviderMBS, BlockSize as UInt32) 22003
- 186.38.6 setAsBlob(data as SQLStringMBS) 22003
- 186.38.8 setAsBlob(file as folderItem) 22004
- 186.38.9 setAsBlob(stream as Readable) 22005

186.38.8 setAsBlob(file as folderItem)

MBS SQL Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets field with content of file.
Example:

```
Var cmd as SQLCommandMBS // your command object

// pass folderitem to BLOB field
Var f as FolderItem = SpecialFolder.Desktop.Child("test.jpg")
cmd.Param("image").setAsBlob(f)
```

Notes: The file will be read later when statement is executed.
May not work when using preemptive threads.
See also:

- 186.38.4 setAsBlob(data as MemoryBlock) 22002
- 186.38.5 setAsBlob(data as SQLDataProviderMBS, BlockSize as UInt32) 22003
- 186.38.6 setAsBlob(data as SQLStringMBS) 22003
- 186.38.7 setAsBlob(data as string) 22004
- 186.38.9 setAsBlob(stream as Readable) 22005

186.38.9 setAsBlob(stream as Readable)

MBS SQL Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets field with content of stream.
Example:

```
Var cmd as SQLCommandMBS // your command object

// pass BinaryStream to BLOB field
Var f as FolderItem = SpecialFolder.Desktop.Child("test.jpg")
Var b as BinaryStream = BinaryStream.open(f)
cmd.Param("image").setAsBlob(b)
```

Notes: The stream will be read later when statement is executed.
May not work when using preemptive threads.
See also:

- 186.38.4 setAsBlob(data as MemoryBlock) 22002
- 186.38.5 setAsBlob(data as SQLDataProviderMBS, BlockSize as UInt32) 22003

- 186.38.7 setAsBlob(data as string) 22004
- 186.38.8 setAsBlob(file as folderItem) 22004

186.38.10 setAsBool(value as boolean)

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets parameter's value as bool data.

186.38.11 setAsBytes(data as MemoryBlock)

MBS SQL Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets parameter's value as binary data from memoryblock.
See also:

- 186.38.12 setAsBytes(data as string) 22006
- 186.38.13 setAsBytes(value as SQLBytesMBS) 22006
- 186.38.14 setAsBytes(value as SQLStringMBS) 22006

186.38.12 setAsBytes(data as string)

MBS SQL Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Set the value to be bytes with content of given string.
Notes: For BLOB fields or parameters.
Same as the other variant, but avoids creating extra SQLStringMBS object.
See also:

- 186.38.11 setAsBytes(data as MemoryBlock) 22005
- 186.38.13 setAsBytes(value as SQLBytesMBS) 22006
- 186.38.14 setAsBytes(value as SQLStringMBS) 22006

186.38.13 setAsBytes(value as SQLBytesMBS)

MBS SQL Plugin, Plugin Version: 16.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Set the value to be bytes with content of given Bytes object.
Notes: For BLOB fields or parameters.
Same as the other variant, but avoids creating extra SQLStringMBS object.
See also:

- 186.38.11 setAsBytes(data as MemoryBlock) 22005
- 186.38.12 setAsBytes(data as string) 22006
- 186.38.14 setAsBytes(value as SQLStringMBS) 22006

186.38.14 setAsBytes(value as SQLStringMBS)

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets parameter's value as binary string data (SQLString).
See also:

- 186.38.11 setAsBytes(data as MemoryBlock) 22005
- 186.38.12 setAsBytes(data as string) 22006
- 186.38.13 setAsBytes(value as SQLBytesMBS) 22006

186.38.15 setAsClob(data as MemoryBlock)

MBS SQL Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Private method.
Notes: This method should make sure you don't accidentally a memoryblock instead of a text.
See also:

- 186.38.16 setAsClob(data as SQLDataProviderMBS, BlockSize as UInt32) 22007
- 186.38.17 setAsClob(file as folderItem) 22007
- 186.38.18 setAsClob(stream as Readable) 22008
- 186.38.19 setAsClob(text as SQLStringMBS) 22008
- 186.38.20 setAsClob(text as string) 22008

186.38.16 setAsClob(data as SQLDataProviderMBS, BlockSize as UInt32)

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets parameter's value as CLob data (SQLString)
Notes: nWhen you call the SQLCommandMBS.Execute method all input parameters are bound with their values, including Long and BLob(CLob) parameters.
That is the time when the data provider Read event runs to get the values in the block size you specify.

The default value for the block size is 0. If you use the default value, SQLAPI++ Library will automatically use the most appropriate size for current DBMS.
See also:

- 186.38.15 setAsClob(data as MemoryBlock) 22006
- 186.38.17 setAsClob(file as folderItem) 22007
- 186.38.18 setAsClob(stream as Readable) 22008
- 186.38.19 setAsClob(text as SQLStringMBS) 22008
- 186.38.20 setAsClob(text as string) 22008

186.38.17 setAsClob(file as folderItem)

MBS SQL Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets field with content of file.
Notes: The file will be read later when statement is executed.
May not work when using preemptive threads.
See also:

- 186.38.15 setAsClob(data as MemoryBlock) 22006
- 186.38.16 setAsClob(data as SQLDataProviderMBS, BlockSize as UInt32) 22007

- 186.38.18 setAsClob(stream as Readable) 22008
- 186.38.19 setAsClob(text as SQLStringMBS) 22008
- 186.38.20 setAsClob(text as string) 22008

186.38.18 setAsClob(stream as Readable)

MBS SQL Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets field with content of stream.
Notes: The stream will be read later when statement is executed.
May not work when using preemptive threads.
See also:

- 186.38.15 setAsClob(data as MemoryBlock) 22006
- 186.38.16 setAsClob(data as SQLDataProviderMBS, BlockSize as UInt32) 22007
- 186.38.17 setAsClob(file as folderItem) 22007
- 186.38.19 setAsClob(text as SQLStringMBS) 22008
- 186.38.20 setAsClob(text as string) 22008

186.38.19 setAsClob(text as SQLStringMBS)

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets parameter's value as CLob data (SQLString)
See also:

- 186.38.15 setAsClob(data as MemoryBlock) 22006
- 186.38.16 setAsClob(data as SQLDataProviderMBS, BlockSize as UInt32) 22007
- 186.38.17 setAsClob(file as folderItem) 22007
- 186.38.18 setAsClob(stream as Readable) 22008
- 186.38.20 setAsClob(text as string) 22008

186.38.20 setAsClob(text as string)

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets parameter's value as CLob data (SQLString)
See also:

- 186.38.15 setAsClob(data as MemoryBlock) 22006
- 186.38.16 setAsClob(data as SQLDataProviderMBS, BlockSize as UInt32) 22007
- 186.38.17 setAsClob(file as folderItem) 22007
- 186.38.18 setAsClob(stream as Readable) 22008
- 186.38.19 setAsClob(text as SQLStringMBS) 22008

186.38.21 setAsDate(value as date)

MBS SQL Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets parameter's value with a date.
Example:

```
Var cmd as SQLCommandMBS // your command object
Var d as new date(2012,12,24,16,0,0) // some date
cmd.Param(3).setAsDate(d) // set third parameter
```

Notes: Same as setAsDateTime, but here we take a date object to make it more convenient.

186.38.22 setAsDateTime(value as dateTime)

MBS SQL Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets parameter's value with a dateTime.
Notes: Same as setAsDate, but here we take a dateTime object to make it more convenient.
See also:

- 186.38.23 setAsDateTime(value as SQLDateTimeMBS) 22009

186.38.23 setAsDateTime(value as SQLDateTimeMBS)

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets parameter's value as SQLDateTime data.
See also:

- 186.38.22 setAsDateTime(value as dateTime) 22009

186.38.24 setAsDefault

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Forces to use the default parameter's value.
Notes: Forces DBMS API to use the default parameter value as the input value for an input or input/output parameter in a procedure.

If DBMS API does not support the concept of "default parameter values" in stored procedures, this setting will be ignored.

If you set this flag for the parameter that doesn't have a default value, the effect is DBMS defined (e.g. an error can be returned or NULL can be bound).

To cancel using the default parameter value you should call any other SQLValue::setAs... method to bind a parameter value.

To check whether this flag is set or not use isDefault method.

186.38.25 setAsDouble(value as Double)

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets parameter's value as Double data.

186.38.26 setAsInt32(value as Int32)

MBS SQL Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets parameter's value as Int32 data.

186.38.27 setAsInt64(value as Int64)

MBS SQL Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets parameter's value as Int64 data.

186.38.28 setAsInteger(value as Integer)

MBS SQL Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets parameter's value as Integer data.
Notes: Int32 or Int64 depending whether app is 32 or 64 bit.

186.38.29 setAsInterval(value as SQLIntervalMBS)

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets an interval value.

186.38.30 setAsLong(value as Int32)

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets parameter's value as Int32 data.

186.38.31 setAsLongBinary(data as MemoryBlock)

MBS SQL Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets parameter's value as long binary data from memoryblock.
See also:

- 186.38.32 setAsLongBinary(data as SQLDataProviderMBS, BlockSize as UInt32) 22011
- 186.38.33 setAsLongBinary(data as SQLStringMBS) 22012
- 186.38.34 setAsLongBinary(data as string) 22012
- 186.38.35 setAsLongBinary(file as folderItem) 22013
- 186.38.36 setAsLongBinary(stream as Readable) 22013

186.38.32 setAsLongBinary(data as SQLDataProviderMBS, BlockSize as UInt32)

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets parameter's value as long binary data (SQLString)
Notes: When you call the SQLCommandMBS.Execute method all input parameters are bound with their values, including Long and BLob(CLob) parameters.

That is the time when the data provider Read event runs to get the values in the block size you specify.

The default value for the block size is 0. If you use the default value, SQLAPI++ Library will automatically use the most appropriate size for current DBMS.

- 186.38.36 setAsLongBinary(stream as Readable) 22013

186.38.33 setAsLongBinary(data as SQLStringMBS)

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets parameter's value as long binary data (SQLString)
See also:

- 186.38.31 setAsLongBinary(data as MemoryBlock) 22011
- 186.38.32 setAsLongBinary(data as SQLDataProviderMBS, BlockSize as UInt32) 22011

- 186.38.35 setAsLongBinary(file as folderItem) 22013
- 186.38.36 setAsLongBinary(stream as Readable) 22013

186.38.34 setAsLongBinary(data as string)

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets parameter's value as long binary data (SQLString)
See also:

- 186.38.31 setAsLongBinary(data as MemoryBlock) 22011
- 186.38.32 setAsLongBinary(data as SQLDataProviderMBS, BlockSize as UInt32) 22011
- 186.38.33 setAsLongBinary(data as SQLStringMBS) 22012
- 186.38.35 setAsLongBinary(file as folderItem) 22013
- 186.38.36 setAsLongBinary(stream as Readable) 22013

186.38.35 setAsLongBinary(file as folderItem)

MBS SQL Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets field with content of file.
Notes: The file will be read later when statement is executed.
May not work when using preemptive threads.
See also:

- 186.38.31 setAsLongBinary(data as MemoryBlock) 22011
- 186.38.32 setAsLongBinary(data as SQLDataProviderMBS, BlockSize as UInt32) 22011
- 186.38.33 setAsLongBinary(data as SQLStringMBS) 22012
- 186.38.34 setAsLongBinary(data as string) 22012
- 186.38.36 setAsLongBinary(stream as Readable) 22013

186.38.36 setAsLongBinary(stream as Readable)

MBS SQL Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets field with content of stream.
Notes: The stream will be read later when statement is executed.
May not work when using preemptive threads.

186.38.37 setAsLongChar(data as MemoryBlock)

MBS SQL Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Private method.
Notes: This method should make sure you don't accidentally a memoryblock instead of a text.
See also:

- 186.38.38 setAsLongChar(data as SQLDataProviderMBS, BlockSize as UInt32) 22014
- 186.38.39 setAsLongChar(file as folderItem) 22014

- 186.38.40 setAsLongChar(stream as Readable) 22015
- 186.38.41 setAsLongChar(text as SQLStringMBS) 22015
- 186.38.42 setAsLongChar(text as string) 22015

186.38.38 setAsLongChar(data as SQLDataProviderMBS, BlockSize as UInt32)

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets parameter's value as long character data (SQLString)
Notes: When you call the SQLCommandMBS.Execute method all input parameters are bound with their values, including Long and BLob(CLob) parameters.
That is the time when the data provider Read event runs to get the values in the block size you specify.

The default value for the block size is 0. If you use the default value, SQLAPI++ Library will automatically use the most appropriate size for current DBMS.

- 186.38.41 setAsLongChar(text as SQLStringMBS) 22015
- 186.38.42 setAsLongChar(text as string) 22015

186.38.39 setAsLongChar(file as folderItem)

MBS SQL Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets field with content of file.
Notes: The file will be read later when statement is executed.
May not work when using preemptive threads.
See also:

- 186.38.37 setAsLongChar(data as MemoryBlock) 22013
- 186.38.38 setAsLongChar(data as SQLDataProviderMBS, BlockSize as UInt32) 22014

- 186.38.42 setAsLongChar(text as string) 22015

186.38.40 setAsLongChar(stream as Readable)

MBS SQL Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets field with content of stream.
Notes: The stream will be read later when statement is executed.
May not work when using preemptive threads.
See also:

- 186.38.37 setAsLongChar(data as MemoryBlock) 22013
- 186.38.38 setAsLongChar(data as SQLDataProviderMBS, BlockSize as UInt32) 22014
- 186.38.39 setAsLongChar(file as folderItem) 22014
- 186.38.41 setAsLongChar(text as SQLStringMBS) 22015
- 186.38.42 setAsLongChar(text as string) 22015

186.38.41 setAsLongChar(text as SQLStringMBS)

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets parameter's value as long character data (SQLString)
See also:

- 186.38.37 setAsLongChar(data as MemoryBlock) 22013
- 186.38.38 setAsLongChar(data as SQLDataProviderMBS, BlockSize as UInt32) 22014
- 186.38.39 setAsLongChar(file as folderItem) 22014
- 186.38.40 setAsLongChar(stream as Readable) 22015
- 186.38.42 setAsLongChar(text as string) 22015

186.38.42 setAsLongChar(text as string)

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets parameter's value as long character data (SQLString)
See also:

- 186.38.37 setAsLongChar(data as MemoryBlock) 22013
- 186.38.38 setAsLongChar(data as SQLDataProviderMBS, BlockSize as UInt32) 22014
- 186.38.39 setAsLongChar(file as folderItem) 22014
- 186.38.40 setAsLongChar(stream as Readable) 22015
- 186.38.41 setAsLongChar(text as SQLStringMBS) 22015

186.38.43 setAsNull

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets value to null.

186.38.44 setAsNumeric(value as SQLNumericMBS)

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets parameter's value as SQLNumeric data.

186.38.45 setAsShort(value as Int16)

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets parameter's value as short data.

186.38.46 setAsString(data as MemoryBlock)

MBS SQL Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Private method.
Notes: This method should make sure you don't accidentally a memoryblock instead of a text.
See also:

- 186.38.47 setAsString(value as SQLStringMBS) 22016
- 186.38.48 setAsString(value as string) 22017

186.38.47 setAsString(value as SQLStringMBS)

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets parameter's value as character string data (SQLString)
See also:

- 186.38.46 setAsString(data as MemoryBlock) 22016
- 186.38.48 setAsString(value as string) 22017

186.38.48 setAsString(value as string)

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets parameter's value as character string data.
Notes: Same as setAsString, but for your convenience with a Xojo string instead of a SQLStringMBS object.
See also:

- 186.38.46 setAsString(data as MemoryBlock) 22016
- 186.38.47 setAsString(value as SQLStringMBS) 22016

186.38.49 setAsUInt32(value as UInt32)

MBS SQL Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets parameter's value as UInt32 data.

186.38.50 setAsULong(value as UInt32)

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets parameter's value as unsigned long data.

186.38.51 setAsUnknown

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets parameter's type as unknown.

186.38.52 setAsUShort(value as UInt16)

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets parameter's value as unsigned short data.
Notes: Sets value as unsigned short data.

186.38.53 setAsValueRead(value as SQLValueReadMBS)

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets parameter's value from SQLParam or SQLField objects.
Notes: This method allows using SQLField or SQLParam object received from one SQL statement as a parameter for another SQL statement.

186.38.54 setVariant(value as Variant)

MBS SQL Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the value based on a variant.
Example:

```
Var con as SQLConnectionMBS // your connection
Var pic as picture // some picture

// get picture data
Var jpegData as MemoryBlock = pic.GetData(Picture.FormatJPEG, 80)

// get a command for an Insert command
Var sql as string = "Insert into BlobTest(name, image) values (:name, :image)"
Var cmd as new SQLCommandMBS(con, sql)

// set values by variant
cmd.Param("name").setVariant "logo.jpg"
cmd.Param("image").setVariant jpegData

// do the insert
cmd.Execute
```

Notes: MemoryBlock and Strings without text encoding are converted to byte values (BLOB).
Texts and Strings with encoding are converted to text values.
Raises exceptions if you pass anything which is not recognized.
Other types are translated as good as possible.

With version 19.0 or later, you can pass folderitem to stream blob from file. This may raise exception if file can't be opened.

186.38.55 Properties

186.38.56 isDefault as boolean

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if the plugin has been forced to use parameter's default value by calling setAsDefault method; false otherwise.

Notes: (Read only property)

186.39 class SQLValueReadMBS

186.39.1 class SQLValueReadMBS

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class used in the SQL Plugin for value objects which can be read.

186.39.2 Methods

186.39.3 asBLob as SQLStringMBS

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the value as BLob (SQLString) data.
Notes: If the value of current object is NULL, asBLob method returns an empty string. Use isNull method to make sure if the value is NULL or not.

If the value's type of current object is string (kDataTypeString), bytes (kDataTypeBytes), long binary (kDataTypeLongBinary), long character (kDataTypeLongChar), BLob (kDataTypeBLob) or CLob (kDataTypeCLob), asBLob method returns the object's value as SQLString object.

If the value's type of current object is bool (kDataTypeBool), short (kDataTypeShort), long (kDataTypeLong), double (kDataTypeDouble), numeric (kDataTypeNumeric), date-time (kDataTypeDateTime) or cursor (kDataTypeCursor), the result is undefined and debug version asserts.

Use DataType method to get the value's type of SQLValueRead object.

186.39.4 asBLobMemory as MemoryBlock

MBS SQL Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the value as BLob data in a memoryblock.

186.39.5 asBLobString as String

MBS SQL Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the value as BLob data in a string.

186.39.6 asBytes as SQLStringMBS

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the value as binary string data (SQLString).
Notes: If the value of current object is NULL, asBytes method returns an empty string. Use isNull method to make sure if the value is NULL or not.

If the value's type of current object is string (kDataTypeString), bytes (kDataTypeBytes), long binary (kDataTypeLongBinary), long character (kDataTypeLongChar), BLob (kDataTypeBLob) or CLob (kDataTypeCLob), asBytes method returns the object's value as SQLString object.

If the value's type of current object is bool (kDataTypeBool), short (kDataTypeShort), long (kDataTypeLong), double (kDataTypeDouble), numeric (kDataTypeNumeric) or date-time (kDataTypeDateTime), asBytes method returns a block of data with size sizeof(value's type) as SQLString object.

If the value's type of current object is cursor (kDataTypeCursor), the result is undefined and debug version asserts.

Use DataType method to get the value's type of SQLValueRead object.

186.39.7 asCLob as SQLStringMBS

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the value as CLob (SQLString) data.
Notes: If the value of current object is NULL, asCLob method returns an empty string. Use isNull method to make sure if the value is NULL or not.

If the value's type of current object is string (kDataTypeString), bytes (kDataTypeBytes), long binary (kDataTypeLongBinary), long character (kDataTypeLongChar), BLob (kDataTypeBLob) or CLob (kDataTypeCLob), asCLob method returns the object's value as SQLString object.

If the value's type of current object is bool (kDataTypeBool), short (kDataTypeShort), long (kDataTypeLong), double (kDataTypeDouble), numeric(kDataTypeNumeric), date-time (kDataTypeDateTime) or cursor (kDataTypeCursor), the result is undefined and debug version asserts.

Use DataType method to get the value's type of SQLValueRead object.

186.39.8 asDate as Date

MBS SQL Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Returns the value as date.
Example:

```
Var cmd as SQLCommandMBS // your command object
Var d as date = cmd.Field("mydate").asDate // read date value
```

Notes: If the value of current object is NULL, asDate method returns an empty date object. Use isNull method to make sure if the value is NULL or not.

If the value's type of current object is kDataTypeDateTime, asDate method returns date object.

If the value's type of current object is any data type except kDataTypeDateTime, the result is undefined and debug version asserts.

Use DataType method to get the value's type of SQLValueRead object.

186.39.9 asDateTime as SQLDateTimeMBS

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the value as SQLDateTimeMBS object.
Notes: If the value of current object is NULL, asDateTime method returns an empty SQLDateTime object. Use isNull method to make sure if the value is NULL or not.

If the value's type of current object is kDataTypeDateTime, asDateTime method returns SQLDateTime object.

If the value's type of current object is any data type except kDataTypeDateTime, the result is undefined and debug version asserts.

Use DataType method to get the value's type of SQLValueRead object.

186.39.10 asDateTimeValue as DateTime

MBS SQL Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the value as date.
Notes: If the value of current object is NULL, asDate method returns an empty date object. Use isNull method to make sure if the value is NULL or not.

If the value's type of current object is kDataTypeDateTime, asDate method returns date object.

If the value's type of current object is any data type except kDataTypeDateTime, the result is undefined and debug version asserts.

Use DataType method to get the value's type of SQLValueRead object.

186.39.11 asInterval as SQLIntervalMBS

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the value as interval (SQLIntervalMBS).

186.39.12 asLongBinary as SQLStringMBS

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the value as long binary (SQLString) data.
Notes: If the value of current object is NULL, asLongBinary method returns an empty string. Use isNull method to make sure if the value is NULL or not.

If the value's type of current object is string (kDataTypeString), bytes (kDataTypeBytes), long binary (kDataTypeLongBinary), long character (kDataTypeLongChar), BLob (kDataTypeBLob) or CLob (kDataTypeCLob), asLongBinary method returns the object's value as SQLString object.

If the value's type of current object is bool (kDataTypeBool), short (kDataTypeShort), long (kDataTypeLong), double (kDataTypeDouble), numeric (kDataTypeNumeric), date-time (kDataTypeDateTime) or cursor (kDataTypeCursor), the result is undefined and debug version asserts.

Use DataType method to get the value's type of SQLValueRead object.

186.39.13 asLongChar as SQLStringMBS

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the value as long character (SQLString) data.
Notes: If the value of current object is NULL, asLongChar method returns an empty string. Use isNull method to make sure if the value is NULL or not.

If the value's type of current object is string (kDataTypeString), bytes (kDataTypeBytes), long binary (kDataTypeLongBinary), long character (kDataTypeLongChar), BLob (kDataTypeBLob) or CLob (kDataTypeCLob), asLongChar method returns the object's value as SQLString object.

If the value's type of current object is bool (kDataTypeBool), short (kDataTypeShort), long (kDataTypeLong), double (kDataTypeDouble), numeric (kDataTypeNumeric), date-time (kDataTypeDateTime) or cursor (kDataTypeCursor), the result is undefined and debug version asserts.

Use DataType method to get the value's type of SQLValueRead object.

186.39.14 asNumeric as SQLNumericMBS

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the value as SQLNumeric data.
Notes: If the value of current object is NULL, asNumeric method returns 0. Use isNull method to make sure if the value is NULL or not.

If the value's type of current object is exact numeric value (kDataTypeNumeric), asNumeric method returns the original value with no conversion.

If the value's type of current object is bool (kDataTypeBool), short (kDataTypeShort), double (kDataTypeDouble) or long (kDataTypeLong), asNumeric method converts it to SQLNumeric .

If the value's type of current object is string (kDataTypeString), asNumeric method tries to convert it from SQLChar* value. If the conversion is possible and correct, asNumeric converts to SQLNumeric from

SQLChar* value. If conversion is incorrect asNumeric method throws an exception.

If the value's type of current object is any data type except the described above, the result is undefined and debug version asserts.

Use DataType method to get the value's type of SQLValueRead object.

186.39.15 asString as SQLStringMBS

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: returns the value as string (SQLString) data.
Notes: If the value of current object is NULL, asString method returns an empty string. Use isNull method to make sure if the value is NULL or not.

If the value's type of current object is bool (kDataTypeBool), asString method returns "true" or "false" string (SQLString object).

If the value's type of current object is short (kDataTypeShort), asString method converts it to decimal string (SQLString object) like function printf("%hd", ...) does.

If the value's type of current object is long (kDataTypeLong), asString method converts it to decimal string (SQLString object) like function printf("%ld", ...) does.

If the value's type of current object is double (kDataTypeDouble), asString method converts it to decimal string (SQLString object) like function printf("%g", ...) does.

If the value's type of current object is numeric (kDataTypeNumeric), asString method converts it to decimal string (SQLString object) without precision loss.

If the value's type of current object is date-time (kDataTypeDateTime), asString method converts it to string (SQLString object) like function asctime(...) does.

If the value's type of current object is string (kDataTypeString, kDataTypeLongChar, kDataTypeCLob), asString method returns the original object's value as SQLString object.

If the value's type of current object is binary (kDataTypeBytes, kDataTypeLongBinary, kDataTypeBLob), asString method converts it to hexadecimal string (SQLString object).

If the value's type of current object is cursor (kDataTypeCursor), the result is undefined and debug version

asserts.

Use DataType method to get the value's type of SQLValueRead object.
For numbers, this may give english decimal separator. For getting localized one, please use AsDoubleValue and use cstr() function.

186.39.16 Constructor(DataType as Integer)

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new empty value object for the given data type.
See also:

- 186.39.17 Constructor(value as SQLValueReadMBS) 22026

186.39.17 Constructor(value as SQLValueReadMBS)

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new value object by copying the given one.
See also:

- 186.39.16 Constructor(DataType as Integer) 22026

186.39.18 Properties

186.39.19 asBool as boolean

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the value of current object as bool data.
Notes: f the value of current object is NULL, asBool method returns false. Use isNull method to make sure if the value is NULL or not.

If the value's type of current object is bool (kDataTypeBool), asBool method returns the original value with no conversion.

If the value's type of current object is short (kDataTypeShort), long (kDataTypeLong) or double (kDataTypeDouble), asBool method converts it to bool data type. Conversion returns false if the value is 0; true otherwise.

If the value's type of current object is any data type except the described above, the result is undefined and debug version asserts.

Use DataType method to get the value's type of SQLValueRead object.
(Read only property)

186.39.20 asDouble as Double

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: returns the value as Double data.
Notes: If the value of current object is NULL, asDouble method returns 0. Use isNull method to make sure if the value is NULL or not.

If the value's type of current object is double (kDataTypeDouble), asDouble method returns the original value with no conversion.

If the value's type of current object is bool (kDataTypeBool), short (kDataTypeShort), long (kDataTypeLong) or numeric (kDataTypeNumeric), asDouble method converts it to double (kDataTypeDouble) data type.

If the value's type of current object is string (kDataTypeString), asDouble method tries to convert it to double value. If the conversion is possible and correct, asDouble returns kDataTypeDouble value. If conversion is incorrect asDouble method throws an exception.

If the value's type of current object is kDataTypeDateTime, asDouble method converts it to standard double representation. Days are represented by whole number increments starting with 30 December 1899, midnight as time zero. Hour values are expressed as the absolute value of the fractional part of the number. See SQLDateTime::operator double() for more detailes.

If the value's type of current object is any data type except the described above, the result is undefined and debug version asserts.

Use DataType method to get the value's type of SQLValueRead object.
(Read only property)

186.39.21 asInt32 as Int32

MBS SQL Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the value as Int32 data.
Notes: (Read only property)

186.39.22 asInt64 as Int64

MBS SQL Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the value as Int64 data.
Notes: (Read only property)

186.39.23 asInteger as Integer

MBS SQL Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the value as Integer data.
Notes: Either Int32 or Int64 depending on whether the application is 32 or 64 bit.
(Read only property)

186.39.24 asLong as Int32

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the value as Int32 data.
Notes: If the value of current object is NULL, asLong method returns 0. Use isNull method to make sure if the value is NULL or not.

If the value's type of current object is long (kDataTypeLong), asLong method returns the original value with no conversion.

If the value's type of current object is bool (kDataTypeBool), short (kDataTypeShort), double (kDataTypeDouble) or numeric (kDataTypeNumeric), asLong method converts it to long data type. Note, that in this case the returned value can be truncated.

If the value's type of current object is string (kDataTypeString), asLong method tries to convert it to long (kDataTypeLong) value. If the conversion is possible and correct, asLong returns kDataTypeLong value. If conversion is incorrect asLong method throws an exception.

If the value's type of current object is any data type except the described above, the result is undefined and debug version asserts.

Use DataType method to get the value's type of SQLValueRead object.
(Read only property)

186.39.25 asShort as Int16

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the value as short.
Notes: If the value of current object is NULL, asShort method returns 0. Use isNull method to make sure if the value is NULL or not.

If the value's type of current object is short, asShort method returns the original value with no conversion.

If the value's type of current object is bool (kDataTypeBool), long (kDataTypeLong), unsigned long (SkDataTypeULong), double (kDataTypeDouble) or numeric (kDataTypeNumeric), asShort method converts it to short data type. Note, that in this case the returned value can be truncated.

If the value's type of current object is string (kDataTypeString), asShort method tries to convert it to short value. If the conversion is possible and correct, asShort returns the value. If conversion is incorrect asShort method throws an exception.

If the value's type of current object is any data type except the described above, the result is undefined and debug version asserts.

Use DataType method to get the value's type of SAValueRead object.
(Read only property)

186.39.26 asStringValue as String

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the value string.
Notes: Same as asString but returns a Xojo string.
Please use SQLStringMBS and CopyBinaryData if the string you want to read is a BLOB value, else text encoding will change your data!
For numbers, this may give english decimal separator. For getting localized one, please use AsDoubleValue and use cstr() function.
(Read only property)

186.39.27 asUInt32 as UInt32

MBS SQL Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the value as UInt32 data.
Notes: (Read only property)

186.39.28 asULong as UInt32

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the value as an unsigned 32 bit integer value.
Notes: If the value of current object is NULL, asULong method returns 0. Use isNull method to make sure if the value is NULL or not.

If the value's type of current object is long (kDataTypeLong), asULong method returns the original value with no conversion.

If the value's type of current object is bool (kDataTypeBool), short (kDataTypeShort), double (kDataTypeDouble) or numeric (kDataTypeNumeric), asULong method converts it to long data type. Note, that in this case the returned value can be truncated.

If the value's type of current object is string (kDataTypeString), asULong method tries to convert it to long (kDataTypeLong) value. If the conversion is possible and correct, asULong returns kDataTypeLong value. If conversion is incorrect asULong method throws an exception.

If the value's type of current object is any data type except the described above, the result is undefined and debug version asserts.

Use DataType method to get the value's type of SQLValueRead object.
(Read only property)

186.39.29 asUShort as UInt16

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the value as unsigned short.
Notes: If the value of current object is NULL, asUShort method returns 0. Use isNull method to make sure if the value is NULL or not.

If the value's type of current object is unsigned short, asUShort method returns the original value with no

conversion.

If the value's type of current object is bool (kDataTypeBool), long (kDataTypeLong), unsigned long (SkDataTypeULong), double (kDataTypeDouble) or numeric (kDataTypeNumeric), asUShort method converts it to unsigned short data type. Note, that in this case the returned value can be truncated.

If the value's type of current object is string (kDataTypeString), asUShort method tries to convert it to unsigned short value. If the conversion is possible and correct, asUShort returns the value. If conversion is incorrect asUShort method throws an exception.

If the value's type of current object is any data type except the described above, the result is undefined and debug version asserts.

Use DataType method to get the value's type of SAValueRead object.
(Read only property)

186.39.30 asVariant as Variant

MBS SQL Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the value as a variant.
Notes: This is a convenience function.
May return nil, date, number or string.
BLOB strings without encoding and text strings as UTF-8.
(Read only property)

186.39.31 DataType as Integer

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns SAValueRead object's data type.
Notes: One of the kDataType constants.
(Read only property)

186.39.32 isNull as boolean

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if the value of current object is NULL; otherwise false.
Notes: (Read only property)

186.39.33 LongOrLobReaderMode as Integer

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The Long or Lob data reading mode.
Notes: SQLAPI++ Library provides two ways to read Long or BLob(CLob) object's value (usually SQLField or SQLParam objects):

1. reading of Long or Lob data at once into an internal buffer (like ordinary string or binary values);
2. piecewise reading of Long or Lob data using user defined callback.

kLongOrLobReaderDefault reading mode used by default.

If you want to control piecewise reading of Long or BLob(CLob) data you should set LongOrLobReaderMode and use kLongOrLobReaderManual reading mode for Long or BLob(CLob) parameters or fields you want to process with your data consumer. After that each fetch will skip reading Long and BLob(CLob) parameters that you set to be read manually. To read field or parameter defined to be read manually you should call ReadLongOrLob method for each of them after the fetch. ReadLongOrLob method will repeatedly call the data consumer Write event.
(Read and Write property)

186.39.34 Constants

Constants

Constant	Value	Description
kDataTypeInt64	6	One of the field type constants Signed 64-bit integer.
kDataTypeUInt64	7	One of the field type constants Unsigned 64-bit integer.

Data Types

Constant	Value	Description
kDataTypeBlob	16	Data type is BLob data (SQLStringMBS).
kDataTypeBool	1	Data type is a boolean.
kDataTypeBytes	13	Data type is binary string (SQLStringMBS).
kDataTypeClob	17	Data type is CLob data (SQLStringMBS).
kDataTypeCursor	18	Data type is Oracle REF CURSOR (SQLCommand).
kDataTypeDateTime	10	Data type is SQLDateTime.
kDataTypeDouble	8	This is a normal double variable.
kDataTypeInterval	11	Data type is an interval (SQLIntervalMBS).
kDataTypeLong	4	A 32 bit integer.
kDataTypeLongBinary	14	Data type is long binary data (SQLStringMBS).
kDataTypeLongChar	15	Data type is long character data (SQLStringMBS).
kDataTypeNumeric	9	Data type is SQLNumeric (used internally).
kDataTypeShort	2	Data type is a 16 bit signed integer.
kDataTypeSpecificToDBMS	19	Data type is server-specific.
kDataTypeString	12	Data type is character string (SQLString).
kDataTypeULong	5	Data type is a 32 bit unsigned integer.
kDataTypeUnknown	0	Data type is unknown.
kDataTypeUShort	3	A 16 bit unsigned integer.

Read Modes

Constant	Value	Description
kLongOrLobReaderModeDefault	0	Long or Lob(CLob) data reading mode is default (automatic).
kLongOrLobReaderModeManual	1	Long or Lob(CLob) data reading mode is manual.

Chapter 187

Statusitem

187.1 class NSStatusBarButtonMBS

187.1.1 class NSStatusBarButtonMBS

MBS MacControls Plugin, Plugin Version: 15.0, Platform: macOS, Targets: Desktop only.

Function: StatusBarButtons are the visual representation of NSStatusItems, and are primarily displayed on the right side of the menu bar.
Notes: When a template image is set as the \c image property of the status bar button, it is rendered with the correct menu bar style. This guarantees that the button will look correct in various button states and appearances (such as dark menu bar).

Available on Mac OS X 10.10 and newer.
Subclass of the NSButtonMBS class.

187.1.2 Methods

187.1.3 Available as boolean

MBS MacControls Plugin, Plugin Version: 15.0, Platform: macOS, Targets: Desktop only.

Function: Whether this class is available.
Notes: Returns true on OS X 10.10.

187.1.4 Properties

187.1.5 appearsDisabled as Boolean

MBS MacControls Plugin, Plugin Version: 15.0, Platform: macOS, Targets: Desktop only.

Function: Whether icon appears disabled.
Notes: When true the status bar icon has a disabled/off appearance while still being functional, such as allowing selection and actions. Defaults to false.
(Read and Write property)

187.2 class NSStatusItemMBS

187.2.1 class NSStatusItemMBS

MBS MacCocoa Plugin, Plugin Version: 7.2, Platform: macOS, Targets: Desktop only.

Function: A class to handle a NSStatusitem which is a tiny little item in the menubar.
Notes: All methods in this class will catch exceptions from Cocoa and raise a NSExceptionMBS instead. Using the message, name and reason properties you can see what was the reason for this exception. Please report if you find a method which does not handle exceptions correct.

187.2.2 Methods

187.2.3 Available as boolean

MBS MacCocoa Plugin, Plugin Version: 7.2, Platform: macOS, Targets: Desktop only.

Function: Whether Statusitems are available.
Notes: True on MachO platforms.

187.2.4 Close

MBS MacCocoa Plugin, Plugin Version: 7.2, Platform: macOS, Targets: Desktop only.

Function: The destructor.
Notes: There is no need to call this method except you want to free all resources of this object now without waiting for Xojo to do it for you.

187.2.5 CreateMenu as boolean

MBS MacCocoa Plugin, Plugin Version: 7.2, Platform: macOS, Targets: Desktop only.

Function: Creates a new menu.
Notes: Handle is not 0 after this call was successfull.

If the NSGrayBackground option is set in the system defaults, Mac OS X 10.5 will raise an NSImageCacheException, so please install an exception handle to catch NSExceptionMBS so your application can handle that.
See also:

- 187.2.6 CreateMenu(length as single) as boolean 22038

187.2.6 CreateMenu(length as single) as boolean

MBS MacCocoa Plugin, Plugin Version: 7.2, Platform: macOS, Targets: Desktop only.

Function: Creates the StatusItem menu with the given width.
Example:

```
Var e as new NSStatusItemMBS
call e.CreateMenu(24) // best for a 16x16 picture
```

Notes: Constants:

NSVariableStatusItemLength	-1
NSSquareStatusItemLength	-2

Other values between 0 and 10000 are used for the length.
Bad values like 20000 will crash the application.

Handle is not 0 after this call was successfull.

If the NSGrayBackground option is set in the system defaults, Mac OS X 10.5 will raise an NSImageCacheException, so please install an exception handle to catch NSExceptionMBS so your application can handle that.
See also:

- 187.2.5 CreateMenu as boolean 22038

187.2.7 CreateMenuMiddle(length as single) as boolean

MBS MacCocoa Plugin, Plugin Version: 7.2, Platform: macOS, Targets: Desktop only.

Deprecated: This item is deprecated and should no longer be used. You can use CreateMenu instead.
Function: Same as CreateMenu but tries to place Statusitem on the right side.
Notes: Uses private Apple API which may break on future Mac OS X versions. Returns false if Apple changes something in the future and the function we use will not be available. So if this function returns false, you can call CreateMenu to continue. Works on Mac OS X 10.4 to 10.6 and make the new statusitem being the rightmost one (left to Apples MenuItems).

Constants:

NSVariableStatusItemLength	-1
NSSquareStatusItemLength	-2

Other values between 0 and 10000 are used for the length.
Bad values like 20000 will crash the application.

Handle is not 0 after this call was successfull.

If the NSGrayBackground option is set in the system defaults, Mac OS X 10.5 will raise an NSImageCacheException, so please install an exception handle to catch NSExceptionMBS so your application can handle that.

Deprecated.

187.2.8 CreateMenuRight(length as single) as boolean

MBS MacCocoa Plugin, Plugin Version: 7.2, Platform: macOS, Targets: Desktop only.

Deprecated: This item is deprecated and should no longer be used. You can use CreateMenu instead.
Function: Same as CreateMenu but tries to place Statusitem on the right side.
Notes: Uses private Apple API which may break on future Mac OS X versions. Returns false if Apple changes something in the future and the function we use will not be available. So if this function returns

false, you can call CreateMenu to continue. Works on Mac OS X 10.4 to 10.6 and make the new statusitem being the rightmost one.

If you run this code after you used CreateMenuRight, the new menu will be right of all other statusitems:

Var sh as new Shell
sh.Execute "killall","SystemUIServer"

Constants:

NSVariableStatusItemLength	-1
NSSquareStatusItemLength	-2

Other values between 0 and 10000 are used for the length.
Bad values like 20000 will crash the application.

Handle is not 0 after this call was successfull.

If the NSGrayBackground option is set in the system defaults, Mac OS X 10.5 will raise an NSImageCacheException, so please install an exception handle to catch NSExceptionMBS so your application can handle that.

Deprecated.

187.2.9 DrawStatusBarBackground(x as Double, y as Double, width as Double, height as Double, highlight as boolean)

MBS MacCocoa Plugin, Plugin Version: 7.7, Platform: macOS, Targets: Desktop only.

Function: Draws the menu background pattern for a custom status-bar item in regular or highlight pattern.
Notes: x, y, width and height: A rectangle defining the area of a custom status-bar item.
highlight: true to draw the background pattern in the standard highlight pattern, false to not highlight the pattern.

You can use this method to help a custom status-bar item emulate the behavior of a standard item.

Available in Mac OS X v10.3 and later.

187.2.10 MenuIsVertical as boolean

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

Function: Returns true if the statusitem has a vertical orientation.
Example:

MsgBox str(NSStatusItemMBS.MenuIsVertical)

187.2.11 MenuThickness as Double

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

Function: The thickness of the status bar.
Example:

MsgBox str(NSStatusItemMBS.MenuThickness)

Notes: The status bar returned by systemStatusBar has a thickness of 22 pixels, the thickness of the menu bar.

187.2.12 popUpStatusItemMenu(menu as NSMenuMBS)

MBS MacCocoa Plugin, Plugin Version: 7.2, Platform: macOS, Targets: Desktop only.

Function: Displays a menu under a custom status bar item.
Notes: You can use this method to cause a popup menu to appear under a custom status bar item when the user clicks the item. Note that view must exist (that is, it must not be nil).

187.2.13 SendActionOn(mode as Integer)

MBS MacCocoa Plugin, Plugin Version: 7.2, Platform: macOS, Targets: Desktop only.

Function: Sets the conditions on which action event is called.
Notes: mask is set with one or more of the following bit masks described in NSEvent Constants: NSLeftMouseUpMask, NSLeftMouseDownMask, NSLeftMouseDraggedMask, and NSPeriodicMask.

mode is set with one or more of the following bit masks:

```
const NSLeftMouseDownMask       = &h00002
const NSLeftMouseUpMask         = &H00004
const NSLeftMouseDraggedMask    = &h00040
const NSPeriodicMask            = &h10000
```

187.2.14 Properties

187.2.15 alternateImage as NSImageMBS

MBS MacCocoa Plugin, Plugin Version: 7.2, Platform: macOS, Targets: Desktop only.

Function: An alternate image to be displayed when a status bar item is highlighted.
Notes: (Read and Write property)

187.2.16 attributedTitle as NSAttributedStringMBS

MBS MacCocoa Plugin, Plugin Version: 7.2, Platform: macOS, Targets: Desktop only.

Function: The attributed string that is displayed at the status item's position in the status bar.
Notes: If an image is also set, the title appears to the right of the image.
(Read and Write property)

187.2.17 Button as Variant

MBS MacCocoa Plugin, Plugin Version: 15.0, Platform: macOS, Targets: Desktop only.

Function: The button that is displayed in the status bar.
Notes: Value is a NSStatusBarButtonMBS object. Returned as Variant to reduce plugin dependencies.

This is created automatically on the creation of the StatusItem. Behavior customization for the button, such as image, target/action, tooltip, can be set with this property.

Available on Mac OS X 10.10 and newer.
(Read only property)

187.2.18 Enabled as boolean

MBS MacCocoa Plugin, Plugin Version: 7.2, Platform: macOS, Targets: Desktop only.

Function: Whether this status item is enabled.

Notes: (Read and Write property)

187.2.19 frame as NSRectMBS

MBS MacCocoa Plugin, Plugin Version: 24.4, Platform: macOS, Targets: Desktop only.

Function: Queries the frame rectangle of the window used by the status item.
Notes: (Read only property)

187.2.20 Handle as Integer

MBS MacCocoa Plugin, Plugin Version: 7.2, Platform: macOS, Targets: Desktop only.

Function: The handle of the NSStatusItem object used internally.
Notes: (Read and Write property)

187.2.21 Height as single

MBS MacCocoa Plugin, Plugin Version: 7.2, Platform: macOS, Targets: Desktop only.

Function: The height of the status item.
Notes: Should be 22 pixels.
This is a function using undocumented features from the Apple NSStatusItem class, so there is not guarantee that it will work in future versions.
(Read only property)

187.2.22 HighlightMode as boolean

MBS MacCocoa Plugin, Plugin Version: 7.2, Platform: macOS, Targets: Desktop only.

Function: Whether the receiver is highlighted when clicked.
Notes: If you use HighlightMode and Menu, you need to first assign the menu and later set HighlightMode to true.
(Read and Write property)

187.2.23 image as NSImageMBS

MBS MacCocoa Plugin, Plugin Version: 7.2, Platform: macOS, Targets: Desktop only.

Function: The image that is displayed at the statusitem's position in the status bar.
Notes: nil if an image has not been set.
(Read and Write property)

187.2.24 Left as single

MBS MacCocoa Plugin, Plugin Version: 7.2, Platform: macOS, Targets: Desktop only.

Function: The left position of the status item.
Notes: Valid only after item was drawn the first time.
This is a function using undocumented features from the Apple NSStatusItem class, so there is not guarantee that it will work in future versions.
(Read only property)

187.2.25 Length as single

MBS MacCocoa Plugin, Plugin Version: 7.2, Platform: macOS, Targets: Desktop only.

Function: The length of the status item in pixels.
Notes: Constants for special values:

NSVariableStatusItemLength	-1
NSSquareStatusItemLength	-2

(Read and Write property)

187.2.26 Menu as NSMenuMBS

MBS MacCocoa Plugin, Plugin Version: 7.2, Platform: macOS, Targets: Desktop only.

Function: The menu attached to this statusitem.
Notes: Nil if no menu is attached.
(Read and Write property)

187.2.27 Title as String

MBS MacCocoa Plugin, Plugin Version: 7.2, Platform: macOS, Targets: Desktop only.

Function: The title of the status item.
Notes: (Read and Write property)

187.2.28 ToolTip as String

MBS MacCocoa Plugin, Plugin Version: 7.2, Platform: macOS, Targets: Desktop only.

Function: The help tag for a menu item.
Notes: (Read and Write property)

187.2.29 Top as single

MBS MacCocoa Plugin, Plugin Version: 7.2, Platform: macOS, Targets: Desktop only.

Function: The top position of the status item.
Notes: Always 0.
This is a function using undocumented features from the Apple NSStatusItem class, so there is not guarantee that it will work in future versions.
(Read only property)

187.2.30 View as NSViewMBS

MBS MacCocoa Plugin, Plugin Version: 8.2, Platform: macOS, Targets: Desktop only.

Function: Sets the view to be used for this status menuitem.
Notes: Using a custom view you can draw whatever you like in the menu item.
You can set it to nil to remove the view.
(Read and Write property)

187.2.31 Width as single

MBS MacCocoa Plugin, Plugin Version: 7.2, Platform: macOS, Targets: Desktop only.

Function: The width of the status item.
Notes: This is a function using undocumented features from the Apple NSStatusItem class, so there is not guarantee that it will work in future versions.
(Read only property)

187.2.32 Window as NSWindowMBS

MBS MacCocoa Plugin, Plugin Version: 8.2, Platform: macOS, Targets: Desktop only.

Function: The window used for this NSStatusItem.
Notes: This is a function using undocumented features from the Apple NSStatusItem class, so there is not guarantee that it will work in future versions.
Returns nil on 64 bit target.
(Read only property)

187.2.33 Events

187.2.34 Action

MBS MacCocoa Plugin, Plugin Version: 7.2, Platform: macOS, Targets: Desktop only.

Function: The event called when the user clicks on the statusitem.
Notes: Mouse position can be calculated based on System.MouseX/System.MouseY relative to Left/Top. Mouse status can be read using System.MouseDown.

This event is limited. You can't for example do everything like quit an application. For using quit, start a timer which will remove the menu 500ms later and than quit 500ms later.

This event is coming from the Cocoa event system. What you can do is a bit limited when using GUI functions from Xojo. To avoid some redraw errors, you may want to start a timer and let your Xojo code run a millisecond after the menu code has finished.
Depending on what you do, you can see the menu not redrawing properly (staying highlighted) and crashes if the Xojo code modifies some global Cocoa states.

187.2.35 DidChangeOcclusionState

MBS MacCocoa Plugin, Plugin Version: 24.4, Platform: macOS, Targets: Desktop only.

Function: The event raised when the statusitem is shown/hidden due to limited space in menubar.
Notes: Please check visible property.

187.2.36 DidMove

MBS MacCocoa Plugin, Plugin Version: 24.4, Platform: macOS, Targets: Desktop only.

Function: The event raised when the statusitem moves.
Notes: e.g. when user moves it.

187.2.37 DidResize

MBS MacCocoa Plugin, Plugin Version: 24.4, Platform: macOS, Targets: Desktop only.

Function: The event raised when the statusitem resizes.
Notes: e.g. when content changes.

187.2.38 DoubleAction

MBS MacCocoa Plugin, Plugin Version: 7.2, Platform: macOS, Targets: Desktop only.

Function: The event called when the user double clicks on the statusitem.
Notes: If two Action Events happen very fast, this one is called the second time so you can e.g. react on double clicks.
Mouse position can be calculated based on System.MouseX/System.MouseY relative to Left/Top. Mouse status can be read using System.MouseDown.

This event is coming from the Cocoa event system. What you can do is a bit limited when using GUI functions from Xojo. To avoid some redraw errors, you may want to start a timer and let your Xojo code run a millisecond after the menu code has finished.
Depending on what you do, you can see the menu not redrawing properly (staying highlighted) and crashes if the Xojo code modifies some global Cocoa states.

187.2.39 Screenshots

187.2.40 NSStatusItem.jpg

Function: The NSStatusItem running a menu on the top right of the menubar.

Chapter 188

StoreKit

188.1 class AppReceiptIAPMBS

188.1.1 class AppReceiptIAPMBS

MBS Encryption Plugin, Plugin Version: 14.3, Platform: macOS, Targets: All.

Function: The class to represent an in-app purchase in the app receipt.
Example:

```
// open a receipt
Var f as FolderItem = SpecialFolder.Desktop.Child("receipt")
Var r as AppReceiptMBS = AppReceiptMBS.receiptForFile(f)

// show purchases
Var inAppPurchases() as AppReceiptIAPMBS = r.inAppPurchases
for each p as AppReceiptIAPMBS in inAppPurchases
MsgBox str(p.quantity)+"x "+p.productIdentifier+" "+p.purchaseDate.AbbreviatedDate
next
```

Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

- Validating Receipts of Mac App Store Purchases including In-App Purchases

188.1.2 Methods

188.1.3 Constructor

MBS Encryption Plugin, Plugin Version: 14.3, Platform: macOS, Targets: All.

Function: The private constructor.

188.1.4 isActiveAutoRenewableSubscriptionForDate(d as Date) as boolean

MBS Encryption Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns whether the auto renewable subscription is active for the given date.
Notes: date: The date in which the auto-renewable subscription should be active. If you are using the current date, you might not want to take it from the device in case the user has changed it.
Returns true if the auto-renewable subscription is active for the given date, false otherwise.

Auto-renewable subscription lapses are possible. If you are checking against the current date, you might want to deduct some time as tolerance.
If this method fails Apple recommends to refresh the receipt and try again once.
See also:

- 188.1.5 isActiveAutoRenewableSubscriptionForDate(d as DateTime) as boolean 22050

188.1.5 isActiveAutoRenewableSubscriptionForDate(d as DateTime) as boolean

MBS Encryption Plugin, Plugin Version: 20.5, Platform: macOS, Targets: All.

Function: Returns whether the auto renewable subscription is active for the given date.
Notes: date: The date in which the auto-renewable subscription should be active. If you are using the current date, you might not want to take it from the device in case the user has changed it.
Returns true if the auto-renewable subscription is active for the given date, false otherwise.

Auto-renewable subscription lapses are possible. If you are checking against the current date, you might want to deduct some time as tolerance.
If this method fails Apple recommends to refresh the receipt and try again once.
See also:

- 188.1.4 isActiveAutoRenewableSubscriptionForDate(d as Date) as boolean 22050

188.1.6 Properties

188.1.7 cancellationDate as Date

MBS Encryption Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: For a transaction that was canceled by Apple customer support, the date of the cancellation.
Notes: (Read only property)

188.1.8 cancellationDateTime as DateTime

MBS Encryption Plugin, Plugin Version: 20.5, Platform: macOS, Targets: All.

Function: For a transaction that was canceled by Apple customer support, the date of the cancellation.
Notes: (Read only property)

188.1.9 originalPurchaseDate as Date

MBS Encryption Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: For a transaction that restores a previous transaction, the date of the original transaction.
Notes: This value corresponds to the original transaction's transactionDate property.
In an auto-renewable subscription receipt, this indicates the beginning of the subscription period, even if the subscription has been renewed.
(Read only property)

188.1.10 originalPurchaseDateTime as DateTime

MBS Encryption Plugin, Plugin Version: 20.5, Platform: macOS, Targets: All.

Function: For a transaction that restores a previous transaction, the date of the original transaction.
Notes: This value corresponds to the original transaction's transactionDate property.
In an auto-renewable subscription receipt, this indicates the beginning of the subscription period, even if the subscription has been renewed.
(Read only property)

188.1.11 originalTransactionIdentifier as String

MBS Encryption Plugin, Plugin Version: 14.3, Platform: macOS, Targets: All.

Function: For a transaction that restores a previous transaction, the transaction identifier of the original

transaction.
Notes: Otherwise, identical to the transaction identifier.
This value corresponds to the original transaction's transactionIdentifier property.
All receipts in a chain of renewals for an auto-renewable subscription have the same value for this field.
(Read only property)

188.1.12 productIdentifier as String

MBS Encryption Plugin, Plugin Version: 14.3, Platform: macOS, Targets: All.

Function: The product identifier of the item that was purchased.
Example:

```
// open a receipt
Var f as FolderItem = SpecialFolder.Desktop.Child("receipt")
Var r as AppReceiptMBS = AppReceiptMBS.receiptForFile(f)

// show purchases
Var inAppPurchases() as AppReceiptIAPMBS = r.inAppPurchases
for each p as AppReceiptIAPMBS in inAppPurchases
MsgBox str(p.quantity)+"x "+p.productIdentifier+" "+p.purchaseDate.AbbreviatedDate
next
```

Notes: This value corresponds to the productIdentifier property of the SKPayment object stored in the transaction,Äôs payment property.
(Read only property)

188.1.13 purchaseDate as Date

MBS Encryption Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: The date and time that the item was purchased.
Notes: This value corresponds to the transaction,Äôs transactionDate property.

For a transaction that restores a previous transaction, the purchase date is the date of the restoration. Use originalPurchaseDate to get the date of the original transaction.

In an auto-renewable subscription receipt, this is always the date when the subscription was purchased or renewed, regardles of whether the transaction has been restored.
(Read only property)

188.1.14 purchaseDateTime as DateTime

MBS Encryption Plugin, Plugin Version: 20.5, Platform: macOS, Targets: All.

Function: The date and time that the item was purchased.
Notes: (Read only property)

188.1.15 quantity as Integer

MBS Encryption Plugin, Plugin Version: 14.3, Platform: macOS, Targets: All.

Function: The number of items purchased.
Example:

```
// open a receipt
Var f as FolderItem = SpecialFolder.Desktop.Child("receipt")
Var r as AppReceiptMBS = AppReceiptMBS.receiptForFile(f)

// show purchases
Var inAppPurchases() as AppReceiptIAPMBS = r.inAppPurchases
for each p as AppReceiptIAPMBS in inAppPurchases
MsgBox str(p.quantity)+"x "+p.productIdentifier+" "+p.purchaseDate.AbbreviatedDate
next
```

Notes: This value corresponds to the quantity property of the SKPayment object stored in the transaction,Äôs payment property.
(Read only property)

188.1.16 subscriptionExpirationDate as Date

MBS Encryption Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: The expiration date for the subscription.
Notes: Only present for auto-renewable subscription receipts.
(Read only property)

188.1.17 subscriptionExpirationDateTime as DateTime

MBS Encryption Plugin, Plugin Version: 20.5, Platform: macOS, Targets: All.

Function: The expiration date for the subscription.
Notes: Only present for auto-renewable subscription receipts.

(Read only property)

188.1.18 transactionIdentifier as String

MBS Encryption Plugin, Plugin Version: 14.3, Platform: macOS, Targets: All.

Function: The transaction identifier of the item that was purchased.
Notes: This value corresponds to the transaction's transactionIdentifier property.
(Read only property)

188.1.19 webOrderLineItemID as Integer

MBS Encryption Plugin, Plugin Version: 14.3, Platform: macOS, Targets: All.

Function: The primary key for identifying subscription purchases.
Notes: (Read only property)

188.2 class AppReceiptMBS

188.2.1 class AppReceiptMBS

MBS Encryption Plugin, Plugin Version: 14.3, Platform: macOS, Targets: All.

Function: The class for an app receipt.
Example:

```
// open a receipt
Var f as FolderItem = SpecialFolder.Desktop.Child("receipt")
Var r as AppReceiptMBS = AppReceiptMBS.receiptForFile(f)

// show value
MsgBox r.bundleIdentifier
```

Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.
Blog Entries

- Validating Receipts of Mac App Store Purchases including In-App Purchases

188.2.2 Methods

188.2.3 bundleReceipt as AppReceiptMBS

MBS Encryption Plugin, Plugin Version: 14.3, Platform: macOS, Targets: All.

Function: Returns the app receipt contained in the bundle, if any and valid.
Notes: Extracts the receipt in ASN1 from the PKCS #7 container, and then parses the ASN1 data into a AppReceiptMBS instance. If an Apple Root certificate is available, it will also verify that the signature of the receipt is valid.
Returns the app receipt contained in the bundle, or nil if there is no receipt or if it is invalid.

188.2.4 Constructor

MBS Encryption Plugin, Plugin Version: 14.3, Platform: macOS, Targets: All.

Function: The private constructor.

188.2.5 containsActiveAutoRenewableSubscriptionOfProductIdentifier(productIdentifier as string, d as date) as boolean

MBS Encryption Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns whether the receipt contains an active auto-renewable subscription for the given product identifier and for the given date.
Notes: productIdentifier: The identifier of the auto-renewable subscription.
date: The date in which the latest auto-renewable subscription should be active. If you are using the current date, you might not want to take it from the device in case the user has changed it.
Returns true if the latest auto-renewable subscription is active for the given date, false otherwise.

Auto-renewable subscription lapses are possible. If you are checking against the current date, you might want to deduct some time as tolerance.
If this method fails Apple recommends to refresh the receipt and try again once.

- 188.2.6 containsActiveAutoRenewableSubscriptionOfProductIdentifier(productIdentifier as string, d as dateTime) as boolean 22056

188.2.6 containsActiveAutoRenewableSubscriptionOfProductIdentifier(productIdentifier as string, d as dateTime) as boolean

MBS Encryption Plugin, Plugin Version: 20.5, Platform: macOS, Targets: All.

Function: Returns whether the receipt contains an active auto-renewable subscription for the given product identifier and for the given date.
Notes: productIdentifier: The identifier of the auto-renewable subscription.
date: The date in which the latest auto-renewable subscription should be active. If you are using the current date, you might not want to take it from the device in case the user has changed it.
Returns true if the latest auto-renewable subscription is active for the given date, false otherwise.

Auto-renewable subscription lapses are possible. If you are checking against the current date, you might want to deduct some time as tolerance.
If this method fails Apple recommends to refresh the receipt and try again once.
See also:

- 188.2.5 containsActiveAutoRenewableSubscriptionOfProductIdentifier(productIdentifier as string, d as date) as boolean 22056

188.2.7 containsInAppPurchaseOfProductIdentifier(productIdentifier as string) as boolean

MBS Encryption Plugin, Plugin Version: 14.3, Platform: macOS, Targets: All.

Function: Returns whether there is an in-app purchase in the receipt for the given product.
Notes: productIdentifier: The identifier of the product.
True if there is an in-app purchase for the given product, false otherwise.

188.2.8 inAppPurchases as AppReceiptIAPMBS()

MBS Encryption Plugin, Plugin Version: 14.3, Platform: macOS, Targets: All.

Function: Array of in-app purchases contained in the receipt.

188.2.9 receiptForFile(file as folderitem) as AppReceiptMBS

MBS Encryption Plugin, Plugin Version: 14.3, Platform: macOS, Targets: All.

Function: Returns the app receipt contained in the given file, if any and valid.
Example:

```
Var a as new AppReceiptVerificatorMBS
Var f as FolderItem = SpecialFolder.Desktop.Child("receipt")
Var r as AppReceiptMBS = AppReceiptMBS.receiptForFile(f)

// testing with receipt from current Dash app
a.bundleIdentifier = "com.kapeli.dash"
a.bundleVersion = "2.1.2"

if a.verifyReceipt(r) then
MsgBox "My receipt is valid"
else
MsgBox "My receipt is invalid."
end if
```

Notes: Extracts the receipt in ASN1 from the PKCS #7 container, and then parses the ASN1 data into a AppReceiptMBS instance. If an Apple Root certificate is available, it will also verify that the signature of the receipt is valid.
Returns the receipt contained in the given file, or nil if there is no receipt or if it is invalid.

188.2.10 setAppleRootCertificate(Data as Memoryblock)

MBS Encryption Plugin, Plugin Version: 14.3, Platform: macOS, Targets: All.

Function: Sets the certificate data of the Apple Root certificate that will be used to verifiy the signature of the bundle receipt.
Notes: If none is provided, the resource AppleIncRootCertificate.cer will be used. If no certificate is

available, no signature verification will be performed.
data: The contents of the Apple Root certificate file to use.
See also:

- 188.2.11 setAppleRootCertificate(File as FolderItem) 22058

188.2.11 setAppleRootCertificate(File as FolderItem)

MBS Encryption Plugin, Plugin Version: 14.3, Platform: macOS, Targets: All.

Function: Sets the file of the Apple Root certificate that will be used to verifiy the signature of the bundle receipt.
Notes: If none is provided, the resource AppleIncRootCertificate.cer will be used. If no certificate is available, no signature verification will be performed.
file: The folderitem of the Apple Root certificate.
See also:

- 188.2.10 setAppleRootCertificate(Data as Memoryblock) 22057

188.2.12 verifyReceiptHash as boolean

MBS Encryption Plugin, Plugin Version: 14.3, Platform: macOS, Targets: All.

Function: Returns wheter the receipt hash corresponds to the device's GUID by calcuting the expected hash using the GUID, bundleIdentifierData and opaqueValue.
Notes: Returns true if the hash contained in the receipt corresponds to the device's GUID, false otherwise.

188.2.13 Properties

188.2.14 appVersion as String

MBS Encryption Plugin, Plugin Version: 14.3, Platform: macOS, Targets: All.

Function: The app,Äôs version number.
Example:

```
// open a receipt
Var f as FolderItem = SpecialFolder.Desktop.Child("receipt")
Var r as AppReceiptMBS = AppReceiptMBS.receiptForFile(f)

// show value
MsgBox r.appVersion
```

Notes: This corresponds to the value of CFBundleVersion (in iOS) or CFBundleShortVersionString (in OS X) in the Info.plist.

(Read only property)

188.2.15 bundleIdentifier as String

MBS Encryption Plugin, Plugin Version: 14.3, Platform: macOS, Targets: All.

Function: The bundle identifier.
Example:

```
// open a receipt
Var f as FolderItem = SpecialFolder.Desktop.Child("receipt")
Var r as AppReceiptMBS = AppReceiptMBS.receiptForFile(f)

// show value
MsgBox r.bundleIdentifier
```

Notes: This corresponds to the value of CFBundleIdentifier in the Info.plist file.
(Read only property)

188.2.16 bundleIdentifierData as Memoryblock

MBS Encryption Plugin, Plugin Version: 14.3, Platform: macOS, Targets: All.

Function: The bundle identifier as data.
Notes: The bundle identifier as data, as contained in the receipt. Used to verifiy the receipt's hash.
(Read only property)

188.2.17 creationDate as Date

MBS Encryption Plugin, Plugin Version: 15.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: The creation date of the receipt.
Notes: (Read only property)

188.2.18 creationDateTime as DateTime

MBS Encryption Plugin, Plugin Version: 20.5, Platform: macOS, Targets: All.

Function: The creation date of the receipt.
Notes: (Read only property)

188.2.19 expirationDate as Date

MBS Encryption Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: The date that the app receipt expires.
Notes: Only for apps purchased through the Volume Purchase Program. If nil, the receipt does not expire. When validating a receipt, compare this date to the current date to determine whether the receipt is expired. Do not try to use this date to calculate any other information, such as the time remaining before expiration. (Read only property)

188.2.20 expirationDateTime as DateTime

MBS Encryption Plugin, Plugin Version: 20.5, Platform: macOS, Targets: All.

Function: The date that the app receipt expires.
Notes: Only for apps purchased through the Volume Purchase Program. If nil, the receipt does not expire. When validating a receipt, compare this date to the current date to determine whether the receipt is expired. Do not try to use this date to calculate any other information, such as the time remaining before expiration. (Read only property)

188.2.21 opaqueValue as Memoryblock

MBS Encryption Plugin, Plugin Version: 14.3, Platform: macOS, Targets: All.

Function: An opaque value used as part of the SHA-1 hash.
Notes: (Read only property)

188.2.22 originalAppVersion as String

MBS Encryption Plugin, Plugin Version: 14.3, Platform: macOS, Targets: All.

Function: The version of the app that was originally purchased.
Example:

```
// open a receipt
Var f as FolderItem = SpecialFolder.Desktop.Child("receipt")
Var r as AppReceiptMBS = AppReceiptMBS.receiptForFile(f)

// show value
MsgBox r.originalAppVersion
```

Notes: This corresponds to the value of CFBundleVersion (in iOS) or CFBundleShortVersionString (in OS X) in the Info.plist file when the purchase was originally made. In the sandbox environment, the value of

this field is always "1.0".
(Read only property)

188.2.23 purchaseDate as Date

MBS Encryption Plugin, Plugin Version: 15.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: Another date.
Notes: Digging in a receipt we found this field and assume it is the original purchase date.
(Read only property)

188.2.24 purchaseDateTime as DateTime

MBS Encryption Plugin, Plugin Version: 20.5, Platform: macOS, Targets: All.

Function: Another date.
Notes: Digging in a receipt we found this field and assume it is the original purchase date.
(Read only property)

188.2.25 receiptHash as Memoryblock

MBS Encryption Plugin, Plugin Version: 14.3, Platform: macOS, Targets: All.

Function: A SHA-1 hash, used to validate the receipt.
Notes: (Read only property)

188.2.26 transactionDate as Date

MBS Encryption Plugin, Plugin Version: 15.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: Another date.
Notes: Digging in a receipt we found this field and assume it is the transaction date.
(Read only property)

188.2.27 transactionDateTime as DateTime

MBS Encryption Plugin, Plugin Version: 20.5, Platform: macOS, Targets: All.

Function: Another date.
Notes: Digging in a receipt we found this field and assume it is the transaction date.

(Read only property)

188.3 class AppReceiptVerificatorMBS

188.3.1 class AppReceiptVerificatorMBS

MBS Encryption Plugin, Plugin Version: 14.3, Platform: macOS, Targets: All.

Function: Reference implementation of an app receipt verificator.
Example:

```
Var a as new AppReceiptVerificatorMBS

if a.verifyAppReceipt then
MsgBox "My receipt is valid"
else
MsgBox "My receipt is invalid."
end if
```

Notes: If security is a concern you might want to avoid using a verificator whose code is open source.

- Validating Receipts of Mac App Store Purchases including In-App Purchases

188.3.2 Methods

188.3.3 Constructor

MBS Encryption Plugin, Plugin Version: 14.3, Platform: macOS, Targets: All.

Function: The constructor.

188.3.4 ExitApp(code as Integer = 173)

MBS Encryption Plugin, Plugin Version: 14.3, Platform: macOS, Targets: All.

Function: Quits the application directly.
Example:

```
AppReceiptVerificatorMBS.ExitApp 173
```

Notes: This does not call the destructors and CancelClose events. The app is quit right away.
If you use code 173 the Finder will show error message that app needs to be downloaded again from Mac App Store.

188.3.5 GUID as string

MBS Encryption Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: Reads the GUID of the Mac.
Example:

```
Var g as String = AppReceiptVerificatorMBS.GUID
MsgBox EncodeHex(g)
```

Notes: This is normally build from the MAC ID of the ethernet card.

188.3.6 verifyAppReceipt as boolean

MBS Encryption Plugin, Plugin Version: 14.3, Platform: macOS, Targets: All.

Function: Verifies the app's receipt file.
Example:

```
Var a as new AppReceiptVerificatorMBS

if a.verifyAppReceipt then
MsgBox "My receipt is valid"
else
MsgBox "My receipt is invalid."
end if
```

Notes: Verifies the receipt by checking the integrity of the receipt, comparing its bundle identifier and bundle version to the values returned by the corresponding properties and verifying the receipt hash.

Returns true if the receipt is verified, false otherwise.
If validation fails, Apple recommends to refresh the receipt and try again.

If you set bundleVersion and/or bundleIdentifier properties, we use those values.
Else we pick them from the info.plist of the app.

188.3.7 verifyReceipt(Receipt as AppReceiptMBS) as boolean

MBS Encryption Plugin, Plugin Version: 14.3, Platform: macOS, Targets: All.

Function: Verifies the given receipt file.
Example:

```
Var a as new AppReceiptVerificatorMBS
Var f as FolderItem = SpecialFolder.Desktop.Child("receipt")
Var r as AppReceiptMBS = AppReceiptMBS.receiptForFile(f)

// testing with receipt from current Dash app
a.bundleIdentifier = "com.kapeli.dash"
a.bundleVersion = "2.1.2"

if a.verifyReceipt(r) then
MsgBox "My receipt is valid"
else
MsgBox "My receipt is invalid."
end if
```

Notes: Verifies the receipt by checking the integrity of the receipt, comparing its bundle identifier and bundle version to the values returned by the corresponding properties and verifying the receipt hash.

Returns true if the receipt is verified, false otherwise.
If validation fails, Apple recommends to refresh the receipt and try again.

188.3.8 Properties

188.3.9 bundleIdentifier as String

MBS Encryption Plugin, Plugin Version: 14.3, Platform: macOS, Targets: All.

Function: The value that will be used to validate the bundle identifier included in the app receipt.
Notes: Given that it is possible to modify the app bundle in jailbroken devices, setting this value from a hardcoded string might provide better protection.
Returns the given value, or the app's bundle identifier by default.
(Read and Write property)

188.3.10 bundleVersion as String

MBS Encryption Plugin, Plugin Version: 14.3, Platform: macOS, Targets: All.

Function: The value that will be used to validate the bundle version included in the app receipt.

Notes: Given that it is possible to modify the app bundle in jailbroken devices, setting this value from a hardcoded string might provide better protection.
Returns the given value, or the app's bundle version by default.
(Read and Write property)

188.3.11 FailReason as String

MBS Encryption Plugin, Plugin Version: 16.0, Platform: macOS, Targets: All.

Function: The reason for a failure.
Notes: This is for debugging and to help you to find the reason for why a verification fails.
(Read only property)

188.3.12 MACAddress as MemoryBlock

MBS Encryption Plugin, Plugin Version: 18.0, Platform: macOS, Targets: All.

Function: The MAC Address to use.
Example:

```
// get the one of this Mac
Var m as MemoryBlock = AppReceiptVerificatorMBS.MACAddress

// now set a fake one
Var x as MemoryBlock = DecodeHex("12347890ABCD")
AppReceiptVerificatorMBS.MACAddress = x

// and display
MsgBox EncodeHex(m)+EndOfLine+EncodeHex(AppReceiptVerificatorMBS.MACAddress)
```

Notes: Can be queried to automatically get the one we detect.
Or set to use a custom one for testing.
(Read and Write property)

188.4 class SKDownloadMBS

188.4.1 class SKDownloadMBS

MBS MacCloud Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop & iOS.

Deprecated: This item is deprecated and should no longer be used. **Function:** This storeKit class gives you information about the download status of a content file.
Notes: Available in Mac OS X 10.8 and newer.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.
Blog Entries

- MBS Xojo Plugins, version 22.5pr1

188.4.2 Methods

188.4.3 Constructor

MBS MacCloud Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop & iOS.

Function: The private constructor.

188.4.4 contentURLForProductID(productID as string) as string

MBS MacCloud Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Queries content URL for a product.

188.4.5 deleteContentForProductID(productID as string)

MBS MacCloud Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Deletes the content for that identifier from disk.

188.4.6 Properties

188.4.7 contentIdentifier as string

MBS MacCloud Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop & iOS.

Function: Product identifier entered in iTunesConnect.
Notes: (Read only property)

188.4.8 contentLength as Int64

MBS MacCloud Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Filesize of the asset.
Notes: (Read only property)

188.4.9 contentURL as string

MBS MacCloud Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop & iOS.

Function: Content URL.
Notes: (Read only property)

188.4.10 contentVersion as string

MBS MacCloud Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop & iOS.

Function: Version string of the product.
Notes: (Read only property)

188.4.11 error as NSErrorMBS

MBS MacCloud Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop & iOS.

Function: Last error, can be nil.
Notes: (Read only property)

188.4.12 Handle as Integer

MBS MacCloud Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop & iOS.

Function: The internal object reference.
Notes: (Read and Write property)

188.4.13 progress as Double

MBS MacCloud Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop & iOS.

Function: Download progress.
Notes: (Read only property)

188.4.14 state as Integer

MBS MacCloud Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop & iOS.

Function: Download state.
Notes: (Read only property)

188.4.15 timeRemaining as Double

MBS MacCloud Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop & iOS.

Function: Estimated number of seconds remaining in the download.
Notes: (Read only property)

188.4.16 Transaction as SKPaymentTransactionMBS

MBS MacCloud Plugin, Plugin Version: 18.1, Platform: macOS, Targets: Desktop & iOS.

Function: The transaction associated with the downloadable file
Notes: Available in MacOS 10.11 or newer.
(Read only property)

188.4.17 Constants

Download State Constants

Constant	Value	Description
kStateActive	1	Active
kStateCancelled	5	Cancelled
kStateFailed	4	Failed
kStateFinished	3	Finished
kStatePaused	2	Paused
kStateWaiting	0	Waiting

188.5 class SKMutablePaymentMBS

188.5.1 class SKMutablePaymentMBS

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop & iOS.

Function: The mutable class for SKPaymentMBS.
Notes: The SKMutablePayment class defines a request to the Apple App Store to process payment for additional functionality offered by your application. A payment encapsulates a string that identifies a particular product and the quantity of that item the user would like to purchase.

When a mutable payment is added to the payment queue, the payment queue copies the contents into an immutable request before queueing the request. Your application can safely change the contents of the mutable payment object.

Please also check the documentation from Apple for the SKMutablePayment class.
Subclass of the SKPaymentMBS class.
Blog Entries

- MBS Real Studio Plugins, version 11.3pr1

188.5.2 Methods

188.5.3 Constructor(payment as SKPaymentMBS)

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a mutable copy of the given payment.
See also:

- 188.5.4 Constructor(product as SKProductMBS) 22070

188.5.4 Constructor(product as SKProductMBS)

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a new payment for the specified product.
Example:

```
Var product as SKProductMBS // your product
Var queue as SKPaymentQueueMBS // your queue

Var payment as new SKMutablePaymentMBS(product)
payment.quantity = 5
```

MsgBox str(payment.quantity)+" units of "+product.localizedTitle

queue.addPayment payment

See also:

- 188.5.3 Constructor(payment as SKPaymentMBS) 22070

188.5.5 paymentWithProduct(product as SKProductMBS) as SKMutablePaymentMBS

MBS MacCloud Plugin, Plugin Version: 11.3, Platform: macOS, Targets: Desktop & iOS.

Function: Returns a new payment for the specified product with the given quantity.
Example:

```
Var product as SKProductMBS // your product
Var payment as SKMutablePaymentMBS = SKMutablePaymentMBS.paymentWithProduct(product)

MsgBox str(payment.quantity)+" units of "+product.localizedTitle
```

Notes: product: The product the user wishes to purchase.
quantity: Optional quantity. If you don't pass it, we default to 1.

This factory Method in Cocoa Core Competencies uses the productIdentifier property obtained from the product parameter to create and return a new payment with that identifier.

Available in Mac OS X v10.7 and later.
See also:

- 188.5.6 paymentWithProduct(product as SKProductMBS, quantity as Integer) as SKMutablePaymentMBS 22071

188.5.6 paymentWithProduct(product as SKProductMBS, quantity as Integer) as SKMutablePaymentMBS

MBS MacCloud Plugin, Plugin Version: 11.3, Platform: macOS, Targets: Desktop & iOS.

Function: Returns a new payment for the specified product with the given quantity.
Example:

```
Var product as SKProductMBS // your product
Var payment as SKMutablePaymentMBS = SKMutablePaymentMBS.paymentWithProduct(product, 5)
```

MsgBox str(payment.quantity)+" units of "+product.localizedTitle

Notes: product: The product the user wishes to purchase.
quantity: Optional quantity. If you don't pass it, we default to 1.

This factory Method in Cocoa Core Competencies uses the productIdentifier property obtained from the product parameter to create and return a new payment with that identifier.

Available in Mac OS X v10.7 and later.
See also:

- 188.5.5 paymentWithProduct(product as SKProductMBS) as SKMutablePaymentMBS 22071

188.5.7 Properties

188.5.8 applicationUsername as String

MBS MacCloud Plugin, Plugin Version: 18.1, Platform: macOS, Targets: Desktop & iOS.

Function: Application-specific user identifier. Optional.
Notes: (Read and Write property)

188.5.9 productIdentifier as string

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop & iOS.

Function: A string that identifies a product that can be purchased from within your application.
Notes: The product identifier is a string previously agreed on between your application and the Apple App Store.

Available in Mac OS X v10.7 and later.
(Read and Write property)

188.5.10 quantity as Integer

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop & iOS.

Function: The number of items the user wants to purchase.
Notes: The quantity property must be greater than 0.
Available in Mac OS X v10.7 and later.

(Read and Write property)

188.5.11 requestData as Memoryblock

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop & iOS.

Function: Reserved for future use.
Notes: The default value is nil. If requestData is not nil, your payment will be rejected by the Apple App Store.

Available in Mac OS X v10.7 and later.
(Read and Write property)

188.5.12 simulatesAskToBuyInSandbox as Boolean

MBS MacCloud Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value that produces an ‚Äúask to buy‚Äù flow for this payment in the sandbox.
Notes: Available on MacOS 10.14 or newer.
(Read and Write property)

188.6 class SKPaymentMBS

188.6.1 class SKPaymentMBS

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop & iOS.

Function: The class for a payment in the App Store.
Notes: The SKPayment class defines a request to the Apple App Store to process payment for additional functionality offered by your application. A payment encapsulates a string that identifies a particular product and the quantity of those items the user would like to purchase.

Please also check the documentation from Apple for the SKPayment class.
Available in Mac OS X v10.7 and later.
Blog Entries

- MBS Xojo Plugins, version 19.1pr6
- MBS Real Studio Plugins, version 11.3pr1

188.6.2 Methods

188.6.3 Constructor(product as SKProductMBS)

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a new payment for the specified product.
Example:

```
Var product as SKProductMBS // your product
Var queue as SKPaymentQueueMBS // your queue

Var payment as new SKPaymentMBS(product)
MsgBox str(payment.quantity)+" units of "+product.localizedTitle

queue.addPayment payment
```

188.6.4 copy as SKPaymentMBS

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a copy of the object.

188.6.5 mutableCopy as SKMutablePaymentMBS

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a mutable copy of the object.

188.6.6 paymentWithProduct(product as SKProductMBS) as SKPaymentMBS

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop & iOS.

Function: Returns a new payment for the specified product.
Example:

```
Var product as SKProductMBS // your product
Var queue as SKPaymentQueueMBS // your queue

Var payment as SKPaymentMBS = SKPaymentMBS.paymentWithProduct(product)
MsgBox str(payment.quantity)+" units of "+product.localizedTitle

queue.addPayment payment
```

Notes: product: The product the user wishes to purchase.

This factory Method in Cocoa Core Competencies uses the productIdentifier property obtained from the product parameter to create and return a new payment with that identifier. The quantity property defaults to 1.

To create a SKPaymentMBS object with a quantity greater than 1, create a SKMutablePaymentMBS object, adjust its quantity property and then add it to the payment queue.

Available in Mac OS X v10.7 and later.

188.6.7 Properties

188.6.8 applicationUsername as String

MBS MacCloud Plugin, Plugin Version: 18.1, Platform: macOS, Targets: Desktop & iOS.

Function: Application-specific user identifier. Optional.
Notes: (Read only property)

188.6.9 Handle as Integer

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop & iOS.

Function: The internal reference to the SKPayment object.
Notes: (Read and Write property)

188.6.10 productIdentifier as string

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop & iOS.

Function: A string used to identify a product that can be purchased from within your application. (read-only)
Notes: The product identifier is a string previously agreed on between your application and the Apple App Store.

Available in Mac OS X v10.7 and later.
(Read only property)

188.6.11 quantity as Integer

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop & iOS.

Function: The number of items the user wants to purchase. (read-only)
Notes: Default value is 1.
Available in Mac OS X v10.7 and later.
(Read only property)

188.6.12 requestData as Memoryblock

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop & iOS.

Function: Reserved for future use. (read-only)
Notes: The default value is nil. If requestData is not nil, your payment will be rejected by the Apple App Store.

Available in Mac OS X v10.7 and later.
(Read only property)

188.6.13 simulatesAskToBuyInSandbox as Boolean

MBS MacCloud Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value that produces an ‚Äúask to buy‚Äù flow for this payment in the sandbox.
Notes: Available on MacOS 10.14 or newer.
(Read only property)

188.7 class SKPaymentQueueMBS

188.7.1 class SKPaymentQueueMBS

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop & iOS.

Function: The SKPaymentQueue class defines a queue of payment transactions to send to the Apple App Store.
Notes: To use the payment queue, you add one or more payments. When payments are added to the queue, Store Kit connects to the Apple App Store and presents a user interface so that the user can authorize payment. As payments are fulfilled, the payment queue updates transactions and delivers them through events.

Available in Mac OS X v10.7 and later.
Please also check the documentation from Apple for the SKPaymentQueue class.
The plugin installs a transaction observer for you.

- MBS Xojo Plugins, version 19.1pr6
- MBS Xojo Plugins, version 18.1pr3

188.7.2 Methods

188.7.3 addPayment(payment as SKPaymentMBS)

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop & iOS.

Function: Adds a payment request to the queue.
Notes: payment: A payment request.

The payment request must have a product identifier registered with the Apple App Store and a quantity greater than 0. If either property is invalid, addPayment throws an exception.

When a payment request is added to the queue, the payment queue processes that request with the Apple App Store and arranges for payment from the user. When that transaction is complete or if a failure occurs, the payment queue sends the SKPaymentTransaction object that encapsulates the request to all transaction observers.

188.7.4 cancelDownload(download as SKDownloadMBS)

MBS MacCloud Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop & iOS.

Function: Cancel one download.
Notes: Available in Mac OS X 10.8 and newer.

188.7.5 cancelDownloads(downloads() as SKDownloadMBS)

MBS MacCloud Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop & iOS.

Function: Cancel a few downloads.
Notes: Available in Mac OS X 10.8 and newer.

188.7.6 canMakePayments as boolean

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop & iOS.

Function: Returns whether the user is allowed to make payments.
Example:

```
if SKPaymentQueueMBS.canMakePayments then
MsgBox "can make payments"
else
MsgBox "not available"
end if
```

Notes: A Mac can be restricted from accessing the Apple App Store. For example, parents can restrict their children's ability to purchase additional content. Your application should confirm that the user is allowed to authorize payments before adding a payment to the queue. Your application may also want to alter its behavior or appearance when the user is not allowed to authorize payments.

188.7.7 Constructor

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a new SKPaymentQueueMBS object.
Notes: Please make a subclass of this class to fill code into the events.
And please only have one instance of this class.

188.7.8 Destructor

MBS MacCloud Plugin, Plugin Version: 18.1, Platform: macOS, Targets: Desktop & iOS.

Function: The destructor.

188.7.9 finishTransaction(transaction as SKPaymentTransactionMBS)

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop & iOS.

Function: Completes a pending transaction.
Notes: transaction: The transaction to finish.

Your application should call this method from a transaction observer that received a notification from the payment queue. Calling finishTransaction on a transaction removes it from the queue. Your application should call finishTransaction only after it has successfully processed the transaction and unlocked the functionality purchased by the user.

Calling finishTransaction on a transaction that is in the SKPaymentTransactionMBS.StatePurchasing state throws an exception.

188.7.10 pauseDownload(download as SKDownloadMBS)

MBS MacCloud Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop & iOS.

Function: Pauses one download.
Notes: Available in Mac OS X 10.8 and newer.

188.7.11 pauseDownloads(downloads() as SKDownloadMBS)

MBS MacCloud Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop & iOS.

Function: Pauses a few downloads.
Notes: Available in Mac OS X 10.8 and newer.

188.7.12 restoreCompletedTransactions

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop & iOS.

Function: Asks the payment queue to restore previously completed purchases.
Notes: Your application calls this method to restore transactions that were previously finished so that you can process them again. For example, your application would use this to allow a user to unlock previously purchased content onto a new device.

When you create a new product to be sold in your store, you choose whether that product can be restored or not. See the In App Purchase Programming Guide for more information.

The payment queue will deliver a new transaction for each previously completed transaction that can be restored. Each transaction includes a copy of the original transaction.

After the transactions are delivered, the payment queue calls the observer's paymentQueueRestoreCompletedTransactionsFinished event. If an error occurred while restoring transactions, the observer will be notified through its paymentQueue:restoreCompletedTransactionsFailedWithError event.

188.7.13 restoreCompletedTransactionsWithApplicationUsername(username as String)

MBS MacCloud Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: Asks the payment queue to restore previously completed purchases, providing an opaque identifier for the user,Äôs account.
Notes: username: An opaque identifier for the user,Äôs account on your system.

188.7.14 resumeDownload(download as SKDownloadMBS)

MBS MacCloud Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop & iOS.

Function: Resumes one download.
Notes: Available in Mac OS X 10.8 and newer.

188.7.15 resumeDownloads(downloads() as SKDownloadMBS)

MBS MacCloud Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop & iOS.

Function: Resumes a few downloads.
Notes: Available in Mac OS X 10.8 and newer.

188.7.16 startDownload(download as SKDownloadMBS)

MBS MacCloud Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop & iOS.

Function: Start one download.
Notes: Available in Mac OS X 10.8 and newer.

188.7.17 startDownloads(downloads() as SKDownloadMBS)

MBS MacCloud Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop & iOS.

Function: Starts a few downloads.
Notes: Available in Mac OS X 10.8 and newer.

188.7.18 transactions as SKPaymentTransactionMBS()

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop & iOS.

Function: Returns an array of pending transactions.
Notes: The value of this property is undefined when there are no observers attached to the payment queue.

188.7.19 Properties

188.7.20 Handle as Integer

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop & iOS.

Function: The internal reference.
Notes: (Read and Write property)

188.7.21 Events

188.7.22 paymentQueueRestoreCompletedTransactionsFinished

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop & iOS.

Function: Tells the observer that the payment queue has finished sending restored transactions.
Notes: This method is called after all restorable transactions have been processed by the payment queue. Your application is not required to do anything in this method.

188.7.23 removedTransactions(transactions() as SKPaymentTransactionMBS)

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop & iOS.

Function: Tells an observer that one or more transactions have been removed from the queue.
Notes: transactions: An array of the transactions that were removed.

Your application does not typically need to implement this event but might implement it to update its own user interface to reflect that a transaction has been completed.

188.7.24 restoreCompletedTransactionsFailedWithError(Error as NSErrorMBS)

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop & iOS.

Function: Tells the observer that an error occurred while restoring transactions.

188.7.25 updatedDownloads(downloads() as SKDownloadMBS)

MBS MacCloud Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop & iOS.

Function: Sent when the download state has changed.
Notes: Available in Mac OS X 10.8 and newer.

188.7.26 updatedTransactions(transactions() as SKPaymentTransactionMBS)

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop & iOS.

Function: Tells an observer that one or more transactions have been updated.
Notes: transactions: An array of the transactions that were updated.

The application should process each transaction by examining the transaction's transactionState property. If transactionState is SKPaymentTransactionStatePurchased, payment was successfully received for the desired functionality. The application should make the functionality available to the user. If transactionState is SKPaymentTransactionStateFailed, the application can read the transaction's error property to return a meaningful error to the user.

Once a transaction is processed, it should be removed from the payment queue by calling the payment queue's finishTransaction: method, passing the transaction as a parameter.

Important: Once the transaction is finished, Store Kit can not tell you that this item is already purchased. It is important that applications process the transaction completely before calling finishTransaction:.

188.8 class SKPaymentTransactionMBS

188.8.1 class SKPaymentTransactionMBS

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop & iOS.

Function: The SKPaymentTransactionMBS class defines objects residing in the payment queue.
Notes: A payment transaction is created whenever a payment is added to the payment queue. Transactions are delivered to your application when the App Store has finished processing the payment. Completed transactions provide a receipt and transaction identifier that your application can use to save a permanent record of the processed payment.

Please also check the documentation from Apple for the SKPaymentTransaction class.
Available in Mac OS X v10.7 and later.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

188.8.2 Methods

188.8.3 Constructor

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop & iOS.

Function: The private constructor.

188.8.4 downloads as SKDownloadMBS()

MBS MacCloud Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop & iOS.

Function: Returns the downloads for this transaction.
Notes: Available in Mac OS X 10.8 and newer.

188.8.5 Properties

188.8.6 error as NSErrorMBS

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop & iOS.

Function: An object describing the error that occurred while processing the transaction.
Notes: The error property is undefined except when transactionState is set to StateFailed. Your application can read the error property to determine why the transaction failed.

(Read only property)

188.8.7 Handle as Integer

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop & iOS.

Function: The internal reference to the SKPaymentTransaction object.
Notes: (Read and Write property)

188.8.8 originalTransaction as SKPaymentTransactionMBS

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop & iOS.

Function: The transaction that was restored by the App Store.
Notes: The contents of this property are undefined except when transactionState is set to StateRestored. When a transaction is restored, the current transaction holds a new transaction identifier, receipt, and so on. Your application will read this property to retrieve the restored transaction.
(Read only property)

188.8.9 payment as SKPaymentMBS

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop & iOS.

Function: The payment for the transaction.
Notes: Each payment transaction is created in response to a payment that your application added to the payment queue.
(Read only property)

188.8.10 transactionDate as date

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

Function: The date the transaction was added to the App Store's payment queue.
Notes: The contents of this property are undefined except when transactionState is set to StatePurchased or StateRestored.
(Read only property)

188.8.11 transactionDateTime as DateTime

MBS MacCloud Plugin, Plugin Version: 20.5, Platform: macOS, Targets: Desktop & iOS.

Function: The date the transaction was added to the App Store's payment queue.
Notes: The contents of this property are undefined except when transactionState is set to StatePurchased or StateRestored.
(Read only property)

188.8.12 transactionIdentifier as string

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop & iOS.

Function: A string that uniquely identifies a successful payment transaction.
Notes: The contents of this property are undefined except when transactionState is set to StatePurchased or StateRestored. The transactionIdentifier is a string that uniquely identifies the processed payment. Your application may wish to record this string as part of an audit trail for App Store purchases. See In App Purchase Programming Guide for more information.
(Read only property)

188.8.13 transactionState as Integer

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop & iOS.

Function: The current state of the transaction.
Notes: see State* constants.
(Read only property)

188.8.14 Constants

Transaction State Constants

Constant	Value	Description
StateDeferred	4	Transaction is neither purchased nor failed, yet.
StateFailed	2	The transaction failed. Check the error property to determine what happened.
StatePurchased	1	The App Store successfully processed payment. Your application should provide the content the user purchased.
StatePurchasing	0	The transaction is being processed by the App Store.
StateRestored	3	This transaction restores content previously purchased by the user. Read the originalTransaction property to obtain information about the original purchase.

188.9 class SKProductDiscountMBS

188.9.1 class SKProductDiscountMBS

MBS MacCloud Plugin, Plugin Version: 18.1, Platform: macOS, Targets: Desktop & iOS.

Function: The class for product discounts.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

188.9.2 Methods

188.9.3 Constructor

MBS MacCloud Plugin, Plugin Version: 18.1, Platform: macOS, Targets: Desktop & iOS.

Function: The private constructor.

188.9.4 Properties

188.9.5 Handle as Integer

MBS MacCloud Plugin, Plugin Version: 18.1, Platform: macOS, Targets: Desktop & iOS.

Function: The internal object reference.
Notes: (Read and Write property)

188.9.6 NumberOfPeriods as Integer

MBS MacCloud Plugin, Plugin Version: 18.1, Platform: macOS, Targets: Desktop & iOS.

Function: The number of periods this price is valid.
Notes: (Read only property)

188.9.7 PaymentMode as Integer

MBS MacCloud Plugin, Plugin Version: 18.1, Platform: macOS, Targets: Desktop & iOS.

Function: The payment mode.
Notes: (Read only property)

188.9.8 Price as Double

MBS MacCloud Plugin, Plugin Version: 18.1, Platform: macOS, Targets: Desktop & iOS.

Function: The price of the product.
Notes: (Read only property)

188.9.9 priceLocale as NSLocaleMBS

MBS MacCloud Plugin, Plugin Version: 18.1, Platform: macOS, Targets: Desktop & iOS.

Function: The price locale.
Notes: (Read only property)

188.9.10 PriceString as String

MBS MacCloud Plugin, Plugin Version: 18.1, Platform: macOS, Targets: Desktop & iOS.

Function: The price as formatted string.
Notes: (Read only property)

188.9.11 subscriptionPeriod as SKProductSubscriptionPeriodMBS

MBS MacCloud Plugin, Plugin Version: 18.1, Platform: macOS, Targets: Desktop & iOS.

Function: The subscription period.
Notes: (Read only property)

188.9.12 Constants

Payment Modes

Constant	Value	Description
kPaymentModeFreeTrial	2	Free trial
kPaymentModePayAsYouGo	0	Pay ss you go
kPaymentModePayUpFront	1	Pay Upfront

188.10 class SKProductMBS

188.10.1 class SKProductMBS

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop & iOS.

Function: The App Store class for a product.
Notes: SKProductMBS objects are returned as part of an didReceiveResponse event in SKProductsRequestMBS class and are used to provide information about a product previously registered with the Apple App Store.

Please also check the documentation from Apple for the SKProduct class.
Available in Mac OS X v10.7 and later.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

188.10.2 Methods

188.10.3 Constructor

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop & iOS.

Function: The private constructor.

188.10.4 contentLengths as Int64()

MBS MacCloud Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Array with filesizes of the assets.
Notes: Available in Mac OS X 10.8 and newer.

188.10.5 downloadContentLengths as Int64()

MBS MacCloud Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop only.

Function: The lengths of the downloadable files available for this product.
Notes: The array holds Int64 values that is the size of one of the downloadable files (in bytes).

For MacOS 10.14 or newer.
Falls back to downloadLengths for older OS versions.

188.10.6 Properties

188.10.7 contentLength as Int64

MBS MacCloud Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Total filesize of the assets.
Notes: Available in Mac OS X 10.8 and newer.
(Read only property)

188.10.8 contentVersion as string

MBS MacCloud Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop & iOS.

Function: Version string of the product.
Notes: Available in Mac OS X 10.8 and newer.
(Read only property)

188.10.9 downloadable as boolean

MBS MacCloud Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Whether this is a download item.
Notes: Available in Mac OS X 10.8 and newer.
(Read only property)

188.10.10 downloadContentLength as Int64

MBS MacCloud Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop only.

Function: The length of the downloadable files available for this product.
Notes: For MacOS 10.14 or newer.
Falls back to downloadLength for older OS versions.
(Read only property)

188.10.11 downloadContentVersion as String

MBS MacCloud Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: A string that identifies which version of the content is available for download.
Notes: The version string is formatted as a series of integers separated by periods.

For MacOS 10.14 or newer.
Falls back to ContentVersion for older OS versions.
(Read only property)

188.10.12 Handle as Integer

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop & iOS.

Function: The internal reference to the SKProduct object.
Notes: (Read and Write property)

188.10.13 introductoryPrice as SKProductDiscountMBS

MBS MacCloud Plugin, Plugin Version: 18.1, Platform: macOS, Targets: Desktop & iOS.

Function: Introductory Price.
Notes: Available on MacOS 10.13.2 or later.
Value is nil on older systems.
(Read only property)

188.10.14 localizedDescription as string

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop & iOS.

Function: A description of the product.
Notes: The description is localized based on the currentLocale property.
(Read only property)

188.10.15 localizedTitle as string

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop & iOS.

Function: The name of the product.
Notes: The description is localized based on the currentLocale property.
(Read only property)

188.10.16 price as Double

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop & iOS.

Function: The cost of the product in the local currency.
Notes: Use PriceString to get a localized formatted price.
(Read only property)

188.10.17 priceLocale as NSLocaleMBS

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop & iOS.

Function: The locale used to format the price of the product.
Notes: (Read only property)

188.10.18 priceString as string

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop & iOS.

Function: The cost of the product in the local currency.
Notes: We format the price in the locale currency format.
(Read only property)

188.10.19 productIdentifier as string

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop & iOS.

Function: The string that identifies the product to the Apple App Store.
Notes: (Read only property)

188.10.20 subscriptionGroupIdentifier as String

MBS MacCloud Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: The identifier of the subscription group to which the subscription belongs.
Notes: All auto-renewable subscriptions must be a part of a group. You create the group identifiers in App Store Connect.
Available on MacOS 10.14 or newer.
(Read only property)

188.10.21 subscriptionPeriod as SKProductSubscriptionPeriodMBS

MBS MacCloud Plugin, Plugin Version: 18.1, Platform: macOS, Targets: Desktop & iOS.

Function: Subscription period.
Notes: Available on MacOS 10.13.2 or later.
Value is nil on older systems.
(Read only property)

188.11 class SKProductsRequestMBS

188.11.1 class SKProductsRequestMBS

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop & iOS.

Function: An SKProductsRequestMBS object is used to retrieve localized information about a list of products from the Apple App Store.
Notes: Your application uses this request to present localized prices and other information to the user without having to maintain that list itself.

To use an SKProductsRequest object, you initialize it with a list of product identifier strings, attach a delegate, and then call the request's start method. When the request completes, you receive the didReceiveResponse event.

Please also check the documentation from Apple for the SKProductsRequest class.
Available in Mac OS X v10.7 and later.

188.11.2 Methods

188.11.3 cancel

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop & iOS.

Function: Cancels a previously started request.
Notes: When you cancel a request, the events are not called with an error.

188.11.4 Constructor(productIdentifiers() as string)

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop & iOS.

Function: Initializes the request with the set of product identifiers.
Notes: productIdentifiers: The list of product identifiers for the products you wish to retrieve descriptions of.

188.11.5 Destructor

MBS MacCloud Plugin, Plugin Version: 17.4, Platform: macOS, Targets: Desktop & iOS.

Function: The destructor.

188.11.6 start

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop & iOS.

Function: Sends the request to the Apple App Store.
Notes: The results for a request are sent to the events.

188.11.7 Properties

188.11.8 Handle as Integer

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop & iOS.

Function: The internal reference to the SKProductsRequest object.
Notes: (Read and Write property)

188.11.9 Events

188.11.10 didFailWithError(error as NSErrorMBS)

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop & iOS.

Function: Called if the request failed to execute.
Notes: error: The error that caused the request to fail.

When the request fails, your application should release the request. The requestDidFinish event is not called after this method is called.

188.11.11 didFinish

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop & iOS.

Function: Called when the request has completed.
Notes: This method is called after all processing of the request has been completed.

188.11.12 didReceiveResponse(products() as SKProductMBS, invalidProductIdentifiers() as string)

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop & iOS.

Function: Called when the Apple App Store responds to the product request.
Notes: products: A list of products, one product for each valid product identifier provided in the original request.
invalidProductIdentifiers: An array of product identifier strings that were not recognized by the Apple App Store. This array should typically be empty.

188.12 class SKProductSubscriptionPeriodMBS

188.12.1 class SKProductSubscriptionPeriodMBS

MBS MacCloud Plugin, Plugin Version: 18.1, Platform: macOS, Targets: Desktop & iOS.

Function: The class for a subscription period.
Notes: Available on MacOS 10.13.2.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

188.12.2 Methods

188.12.3 Constructor

MBS MacCloud Plugin, Plugin Version: 18.1, Platform: macOS, Targets: Desktop & iOS.

Function: The private constructor.

188.12.4 Properties

188.12.5 Handle as Integer

MBS MacCloud Plugin, Plugin Version: 18.1, Platform: macOS, Targets: Desktop & iOS.

Function: The internal object reference.
Notes: (Read and Write property)

188.12.6 numberOfUnits as Integer

MBS MacCloud Plugin, Plugin Version: 18.1, Platform: macOS, Targets: Desktop & iOS.

Function: The number of units.
Notes: (Read only property)

188.12.7 unit as Integer

MBS MacCloud Plugin, Plugin Version: 18.1, Platform: macOS, Targets: Desktop & iOS.

Function: The unit of the period from day to year.
Notes: (Read only property)

188.12.8 Constants

Period units

Constant	Value	Description
PeriodUnitDay	0	Day
PeriodUnitMonth	2	Month
PeriodUnitWeek	1	Week
PeriodUnitYear	3	Year

188.13 class SKReceiptRefreshRequestMBS

188.13.1 class SKReceiptRefreshRequestMBS

MBS MacCloud Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop & iOS.

Function: The SKReceiptRefreshRequest class allows an app to refresh its receipt.
Notes: With this API, the app can request a new receipt if the receipt is invalid or missing. In the sandbox environment, you can request a receipt with any combination of properties to test the state transitions related to Volume Purchase Plan receipts.
Requires Mac OS X 10.9.

188.13.3 cancel

MBS MacCloud Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop & iOS.

Function: Cancels a previously started request.
Notes: When you cancel a request, the events are not called with an error.

188.13.4 Constructor(properties as dictionary = nil)

MBS MacCloud Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop & iOS.

Function: Initialized a receipt refresh request with optional properties.
Notes: In the test enviroment, the properties that the new receipt should have. For keys, see SKReceipt-Property* methods.
In the production environment, set this parameter to nil.

188.13.5 Destructor

MBS MacCloud Plugin, Plugin Version: 17.4, Platform: macOS, Targets: Desktop & iOS.

Function: The destructor.

188.13.6 SKReceiptPropertyIsExpired as string

MBS MacCloud Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop & iOS.

Function: One of the keys for properties in initialization.
Notes: A key whose value is a Boolean value, indicating whether the receipt is expired.

188.13.7 SKReceiptPropertyIsRevoked as string

MBS MacCloud Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop & iOS.

Function: One of the keys for properties in initialization.
Notes: A key whose value is a Boolean value, indicating whether the receipt has been revoked.

188.13.8 SKReceiptPropertyIsVolumePurchase as string

MBS MacCloud Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop & iOS.

Function: One of the keys for properties in initialization.
Notes: A key whose value is a Boolean value, indicating whether the receipt is is a Volume Purchase Plan receipt.

188.13.9 start

MBS MacCloud Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop & iOS.

Function: Sends the request to the Apple App Store.
Notes: The results for a request are sent to the events.

188.13.10 TerminateForInvalidReceipt

MBS MacCloud Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: Terminates an app if the license to use the app has expired.
Notes: Falls back to exit(173) for MacOS before 10.14.

188.13.11 Properties

188.13.12 Handle as Integer

MBS MacCloud Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop & iOS.

Function: The internal object reference.
Notes: (Read and Write property)

188.13.13 receiptProperties as Dictionary

MBS MacCloud Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop & iOS.

Function: The properties of the receipt. (read-only)
Notes: (Read only property)

188.13.14 Events

188.13.15 didFailWithError(error as NSErrorMBS)

MBS MacCloud Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop & iOS.

Function: Called if the request failed to execute.
Notes: error: The error that caused the request to fail.

When the request fails, your application should release the request. The requestDidFinish event is not called after this method is called.

188.13.16 didFinish

MBS MacCloud Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop & iOS.

Function: Called when the request has completed.
Notes: This method is called after all processing of the request has been completed.

188.14 module StoreKit2MBS

188.14.1 module StoreKit2MBS

MBS Swift Plugin, Plugin Version: 25.4, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: The module for the StoreKit 2 framework in Swift.
Example:

```
// on app start ask for products, updates and current entitlements
StoreKit2MBS.QueryProducts Array("test1"), AddressOf QueryProductsCompleted
StoreKit2MBS.SetUpdates AddressOf updatesReceived
StoreKit2MBS.CurrentEntitlements AddressOf CurrentEntitlementsCompleted
```

Notes: Due to bridging between C++ and Swift, we pass content of classes as Dictionaries, so we don't need to bridge each property and copy over data efficiently.

Support In-App Purchases and interactions with the App Store.

Use the StoreKit framework to provide the following features and services for your apps and In-App Purchases:

- In-App Purchase. Offer and promote In-App Purchases for content and services.
- App transaction. Verify a customer,Äôs app purchase with an App Store-signed transaction.
- Reviews. Request App Store reviews and ratings from your customers.

Most functions require macOS 12, iOS 15 or newer.
For a lot of things, we have additional properties in dictionaries for newer OS versions.

188.14.2 Methods

188.14.3 AllTransactions(completed as TransactionsCompletedMBS)

MBS Swift Plugin, Plugin Version: 25.4, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: A sequence that emits all the customer,Äôs transactions for your app.
Notes: Queries the transactions and calls delegate to pass them.
This sequence returns the customer,Äôs transaction history current to the moment you access it. The sequence emits a finite number of transactions. If the App Store processes additional transactions for the customer while you,Äôre accessing this sequence, they appear in the transaction listener updates.

The transaction history includes the following in-app purchases:

- Unfinished consumables
- Finished consumables that are refunded or revoked
- Non-consumables
- Auto-renewable subscriptions, including all renewals
- Auto-renewable subscriptions and non-consumables that the customer gets through Family Sharing

By default, when the SKIncludeConsumableInAppPurchaseHistory property list key is false, the transaction information excludes finished consumables (unless refunded or revoked).

To get all possible transactions, including all finished consumables, set the SKIncludeConsumableInAppPurchaseHistory property list key to true.

Requires iOS 15.0, macOS 12.0 or newer.
See also:

- 188.14.4 AllTransactions(ProductID as String, completed as TransactionsCompletedMBS) 22103

188.14.4 AllTransactions(ProductID as String, completed as TransactionsCompletedMBS)

MBS Swift Plugin, Plugin Version: 25.4, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: Gets all the transactions associated with this product ID.
Notes: productID: Identifies the product to filter the transaction cache against.

Returns: A sequence containing all transactions for the given product.
See also:

• 188.14.3 AllTransactions(completed as TransactionsCompletedMBS) 22103

188.14.5 beginRefundRequest(TransactionID as UInt64, completed as BeginRefundRequestCompletedMBS)

MBS Swift Plugin, Plugin Version: 26.0, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: Presents the refund request sheet for the transaction in a window.
Notes: transactionID: The identifier of the transaction the user is requesting a refund for.

Call this function from account settings or a help menu to enable customers to request a refund for an in-app purchase within your app. When you call this function, the system displays a refund sheet with the customer,Äôs purchase details and a list of reason codes for the customer to choose from.

When a customer requests a refund for consumable in-app purchases through your app, the App Stores sends a CONSUMPTION_REQUEST notificationType to your server. If the customer provided consent, respond by sending consumption data to the App Store using the Send Consumption Information endpoint. If not, don,Äôt respond to the CONSUMPTION_REQUEST notification.

The App Store takes up to 48 hours to either approve or deny a refund.

188.14.6 CanMakePayments as Boolean

MBS Swift Plugin, Plugin Version: 25.4, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: A Boolean value that indicates whether the person can make purchases.
Example:

BuyButton.Enabled = StoreKit2MBS.CanMakePayments

Notes: Use canMakePayments to determine at runtime whether a person can authorize payments. If the value is false, a person can,Äôt authorize payments, so don,Äôt offer In-App Purchases or external purchases.

Your app might need to alter its behavior or appearance when people can,Äôt make purchases. For example, don,Äôt enable your user interface for making In-App Purchases or external purchases when purchases are blocked.

The following conditions can cause the value of canMakePayments to be false:

- A person sets the Content & Privacy Restrictions in Screen Time to prevent purchases. For more information, see Use parental controls on your child,Äôs iPhone, iPad, and iPod touch.

- The device has a mobile device management (MDM) profile that prevents purchases. For more information, see Device Management.
- If canMakePayments is true and your app uses only StoreKit In-App Purchase APIs, the person can authorize purchases in the App Store and your app can offer In-App Purchases.

Requires macOS 12.0, iOS 15.0 or newer.

188.14.7 ClearUpdates

MBS Swift Plugin, Plugin Version: 25.4, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: Clears the update delegate.
Notes: Optional method to call when application quits.

188.14.8 currentEntitlement(ProductIdentifier as String, completed as TransactionsCompletedMBS)

MBS Swift Plugin, Plugin Version: 25.4, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: he transaction that entitles the user to the product.
Notes: Calls delegate when the transaction data is available. Value is nil if the user isn,Äôt currently entitled to this product. Current entitlement information applies only to non-consumables, non-renewing subscriptions, and auto-renewable subscriptions.

For iOS 15.0 to 18.4. For newer versions, you may better use currentEntitlements.

188.14.9 CurrentEntitlements(completed as TransactionsCompletedMBS)

MBS Swift Plugin, Plugin Version: 25.4, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: Queries a sequence of the latest transactions that entitle a customer to In-App Purchases and subscriptions.
Example:

StoreKit2MBS.CurrentEntitlements AddressOf CurrentEntitlementsCompleted

Notes: The current entitlements sequence emits the latest transaction for each product the customer has an entitlement to, specifically:

- A transaction for each non-consumable In-App Purchase

- The latest transaction for each auto-renewable subscription that has a Product.SubscriptionInfo.RenewalState state of subscribed or inGracePeriod
- The latest transaction for each non-renewing subscription, including finished ones

Products that the App Store has refunded or revoked don,Äôt appear in the current entitlements. Consumable In-App Purchases also don,Äôt appear in the current entitlements. To get transactions for unfinished consumables, use the unfinished or all sequences in Transaction.

Requires iOS 15.0 or macOS 12.0 or newer.
See also:

- 188.14.10 CurrentEntitlements(ProductID as String, completed as TransactionsCompletedMBS) 22106

188.14.10 CurrentEntitlements(ProductID as String, completed as TransactionsCompletedMBS)

MBS Swift Plugin, Plugin Version: 25.4, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: Gets the transactions that entitle the user to items purchased under a product ID.
Notes: If a generic SKU is provided, the returned sequence will yield all transactions that entitle the user to Advanced Commerce Items purchased using the generic product's ID.

If an ID for a regular IAP is provided, the returned sequence will contain no more than one transaction.

productID: Identifies the product to check entitlements for.

Returns: A sequence containing all transactions that entitle the user to the product.
See also:

- 188.14.9 CurrentEntitlements(completed as TransactionsCompletedMBS) 22105

188.14.11 FinishTransaction(completed as FinishCompletedMBS = nil)

MBS Swift Plugin, Plugin Version: 25.4, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: Indicates to the App Store that the app delivered the purchased content or enabled the service to finish the transaction.
Example:

StoreKit2MBS.FinishTransaction AddressOf FinishCompleted

Notes: Call finish() to complete a transaction after you deliver the purchased content or enable the purchased service. For on-demand resources, don,Äôt finish the transaction until the app completes downloading

the resource or you,Äôve otherwise delivered the resource.

Requires macOS 12.0, iOS 15.0 or newer.

188.14.12 latestTransaction(ProductIdentifier as String, completed as TransactionsCompletedMBS)

MBS Swift Plugin, Plugin Version: 25.4, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: The most recent transaction for the product.
Notes: Queries the latest transaction and calls the delegate.
This value is nil if the customer has never purchased this product.

By default, when the SKIncludeConsumableInAppPurchaseHistory property list key is false, this value excludes finished consumable in-app purchases unless they are refunded or revoked.
If you set the SKIncludeConsumableInAppPurchaseHistory property list key to true, this value returns all transactions, including consumable in-app purchases that your app marked as finished (finish()).

Requires macOS 12.0, iOS 15.0 or newer.

188.14.13 presentOfferCodeRedeemSheet

MBS Swift Plugin, Plugin Version: 25.4, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: Displays a sheet in the window scene that enables users to redeem a subscription offer code that you configure in App Store Connect.
Notes: This method displays a system sheet in the view, where customers can enter and redeem subscription offer codes. Use this method if you generate subscription offer codes in App Store Connect.

Set up subscription offer codes in App Store Connect before calling this API. Customers can only redeem these offers in your app through the redemption sheet; don,Äôt use a custom UI.

When customers redeem an offer code, StoreKit emits the resulting transaction in updates. Set up a transaction listener as soon as your app launches to receive new transactions while the app is running.

188.14.14 Product(Index as Integer) as Dictionary

MBS Swift Plugin, Plugin Version: 25.4, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: Queries a product by index.

Notes: We cache the products we got from QueryProducts, so you can query them anytime.

188.14.15 PurchaseProduct(ProductIdentifier as String, parentWindow as DesktopWindow, PurchaseOptions as Dictionary, completed as PurchaseProductCompletedMBS = nil)

MBS Swift Plugin, Plugin Version: 25.4, Platform: macOS, Targets: Desktop only.

Function: Initiates a purchase for the product with the App Store and displays the confirmation sheet.
Notes: The version taking a DesktopWindow as parent for dialogs.
See also:

- 188.14.16 PurchaseProduct(ProductIdentifier as String, parentWindow as Window, PurchaseOptions as Dictionary, completed as PurchaseProductCompletedMBS = nil) 22108
- 188.14.17 PurchaseProduct(ProductIdentifier as String, PurchaseOptions as Dictionary, completed as PurchaseProductCompletedMBS = nil) 22108

188.14.16 PurchaseProduct(ProductIdentifier as String, parentWindow as Window, PurchaseOptions as Dictionary, completed as PurchaseProductCompletedMBS = nil)

MBS Swift Plugin, Plugin Version: 25.4, Platform: macOS, Targets: Desktop only.

Function: Initiates a purchase for the product with the App Store and displays the confirmation sheet.
Notes: The version taking a window as parent for dialogs.
See also:

- 188.14.15 PurchaseProduct(ProductIdentifier as String, parentWindow as DesktopWindow, PurchaseOptions as Dictionary, completed as PurchaseProductCompletedMBS = nil) 22108
- 188.14.17 PurchaseProduct(ProductIdentifier as String, PurchaseOptions as Dictionary, completed as PurchaseProductCompletedMBS = nil) 22108

188.14.17 PurchaseProduct(ProductIdentifier as String, PurchaseOptions as Dictionary, completed as PurchaseProductCompletedMBS = nil)

MBS Swift Plugin, Plugin Version: 25.4, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: Initiates a purchase for the product with the App Store and displays the confirmation sheet.
Example:

```
Var purchaseOptions As New Dictionary
purchaseOptions.value("quantity") = 2
purchaseOptions.value("appAccountToken") = "xxx"
```

purchaseOptions.value("simulatesAskToBuyInSandbox") = False
purchaseOptions.value("customkey") = "customvalue"

StoreKit2MBS.PurchaseProduct("test", Self, purchaseOptions, AddressOf PurchaseCompleted)

Notes: Please query products before calling this. We find the product in the products array by the given identifier.

Call the purchase method when a customer initiates a purchase, either within your app or after selecting a promoted in-app purchase on the App Store. This method brings up the system-confirmation sheet. The user can confirm to complete the transaction or cancel it.
Include the purchase options to provide additional information about the purchase, such as:

- appAccountToken to associate the purchase with the resulting transaction
- quantity, if the customer is purchasing more than one of the product
- If you,Äôre testing your app in the sandbox environment, test an Ask to Buy scenario by setting the simulatesAskToBuyInSandbox purchase option to true.

PurchaseOptions dictionary may have the following keys:

appAccountToken	Sets a UUID to associate the purchase with an account in your system.
quantity	Indicates the quantity of items the customer is purchasing. Default is 1. Maximum is 10.
simulatesAskToBuyInSandbox	Simulates an Ask to Buy scenario when testing your app in the sandbox environment. Set to true to simulate a child,Äôs account asking permission to make a purchase.

See also:

- 188.14.15 PurchaseProduct(ProductIdentifier as String, parentWindow as DesktopWindow, PurchaseOptions as Dictionary, completed as PurchaseProductCompletedMBS = nil) 22108
- 188.14.16 PurchaseProduct(ProductIdentifier as String, parentWindow as Window, PurchaseOptions as Dictionary, completed as PurchaseProductCompletedMBS = nil) 22108

188.14.18 QueryProducts(identifiers() as String, completed as QueryProductsCompletedMBS = nil)

MBS Swift Plugin, Plugin Version: 25.4, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: Requests product data from the App Store.
Notes: identifiers: A collection of unique in-app purchase product identifiers that you previously configured

in App Store Connect. StoreKit ignores any duplicate identifiers in the collection.

Use this method to get an instance of Product. Your app must have its product identifiers available to provide them to this function.

You initially create product identifiers when you configure in-app purchases in App Store Connect.

Your app can store or retrieve product identifiers in several ways, such as embedding the identifiers in the app bundle, or fetching them from your server.
If any identifiers are invalid or the App Store can,Äôt find them, the App Store excludes them from the return value.

A product comes with these values in the dictionary:

Key	Description
id	The product identifier.
displayName	The localized display name of the product, if it exists.
description	The localized description of the product.
price	The decimal representation of the cost of the product, in local currency. (as double)
displayPrice	The localized string representation of the product price, suitable for display.
isFamilyShareable	A Boolean value that indicates whether the product is available for Family Sharing in App Store Connect.
jsonRepresentation	The JSON representation of the product information.
type	A dictionary with type value and if available the localized description.
debugDescription	The debug description.

Requires macOS 12.0, iOS 15.0 or newer.

188.14.19 refreshAppTransaction(completed as TransactionsCompletedMBS)

MBS Swift Plugin, Plugin Version: 25.4, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: Gets the App Store-signed app transaction information from the App Store server.
Notes: This method queries the App Store server to refresh the app transaction information. This method returns a VerificationResult that contains the App Store-signed app transaction information for your app.

Calling refresh() displays a system prompt that asks users to authenticate with their App Store credentials. Call this function only in response to an explicit user action, like tapping or clicking a button.

Use this method to get an AppTransaction in the following cases:

- The shared property throws an error.
- The shared property returns an unverified unverified result.

This method throws an error if the user cancels the authentication prompt, if there,Äôs no network connectivity, or if the call fails to update the app transaction.

188.14.20 requestAgeRange(Age1 as integer, Age2 as Integer, Age3 as Integer, completed as RequestAgeRangeCompletedMBS)

MBS Swift Plugin, Plugin Version: 26.0, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: Requests the age range of a person logged onto the current device.
Notes: Use 'AgeRangeService' to request a person's age range and manage their access to content on your app.

Age2 or Age3 can be zero if you only need 1 or 2 age limits.
Typically you would ask for something like 13, 15 and 18 to know whether you should display content >= 13, >= 15 and >= 18 for your app.

Your app needs to have the com.apple.developer.declared-age-range entitlement with value true to call the API.

188.14.21 RequestReview

MBS Swift Plugin, Plugin Version: 25.4, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: Tells StoreKit to request an App Store rating or review from the user, if appropriate, using the specified scene.
Example:

StoreKit2MBS.RequestReview

Notes: When you call this method in your shipping app and the system displays a rating and review request view, the system handles the entire process for you. Although you normally call this method when it makes sense in the user experience flow of your app, App Store policy governs the actual display of a rating and review request view. When your app calls this API, StoreKit uses the following criteria:

- If the person hasn,Äôt rated or reviewed your app on this device, StoreKit displays the ratings and review request a maximum of three times within a 365-day period.

- If the person has rated or reviewed your app on this device, StoreKit displays the ratings and review request if the app version is new, and if more than 365 days have passed since the person,Äôs previous review.

Requires macOS 13.0, iOS 16.0 or newer.
We use current window/screen as root for the dialog.

188.14.22 SetUpdates(update as TransactionsCompletedMBS)

MBS Swift Plugin, Plugin Version: 25.4, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: Sets the asynchronous delegate that emits a transaction when the system creates or updates transactions that occur outside the app or on other devices.
Notes: Use updates to receive new transactions while the app is running. This sequence receives transactions that occur outside of the app, such as Ask to Buy transactions, subscription offer code redemptions, and purchases that customers make in the App Store. It also emits transactions that customers complete in your app on another device.

Note that after a successful in-app purchase on the same device, StoreKit returns the transaction through purchase delegate.

Set this when the app launches. If your app has unfinished transactions, the updates listener receives them once, immediately after the app launches. Without the Task to listen for these transactions, your app may miss them.

The updates listener receives unfinished transactions just once at app launch, but you can use the unfinished listener to get your app,Äôs unfinished transactions at any time. For information on finishing transactions, see FinishTransaction.

188.14.23 sharedAppTransaction(completed as TransactionsCompletedMBS)

MBS Swift Plugin, Plugin Version: 25.4, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: Gets the App Store-signed app transaction information for the app.
Notes: Queries the app transaction and calls delegate.

Use this property to get a VerificationResult that contains the App Store-signed app transaction information for your app, including the first time the app launches. StoreKit automatically keeps the app transaction up-to-date.

This property throws an error if the AppTransaction isn,Äôt available or if the user isn,Äôt authenticated with the App Store. Getting an AppTransaction may require network connectivity.

If your app fails to get an AppTransaction by accessing the shared property, see refreshAppTransaction.

188.14.24 ShowManageSubscriptions

MBS Swift Plugin, Plugin Version: 25.5, Platforms: macOS, iOS, Targets: iOS only.

Function: Presents the App Store sheet for managing subscriptions.
Notes: Use this function to display the manage subscriptions sheet within your app. Consider adding a manage subscriptions option to your app. For design guidance on supporting this functionality, see Human Interface Guidelines >In-App Purchase >Helping People Manage Their Subscriptions.

The showManageSubscriptions function presents a manage subscription sheet that,Äôs the same as what customers can view in their account settings in the App Store app or by choosing Settings >Apple Account >Subscriptions on an iOS or iPadOS device. The sheet displays the customer,Äôs currently active subscription for your app and the options to view, upgrade, downgrade, or cancel their subscription.

Avoid showing the user interface for this feature in Mac apps built with Mac Catalyst and on iOS apps running on Mac computers with Apple silicon because this sheet isn,Äôt supported in macOS.

- In Mac apps built with Mac Catalyst, enclose the code in a compilation conditional block that uses the targetEnvironment(): platform condition. For more information on Mac Catalyst, see Creating a Mac version of your iPad app.
- For iOS apps running on Apple silicon, if isiOSAppOnMac is true, avoid showing the user interface for this feature.

See also:

- 188.14.25 ShowManageSubscriptions(GroupID as String) 22113

188.14.25 ShowManageSubscriptions(GroupID as String)

MBS Swift Plugin, Plugin Version: 25.5, Platforms: macOS, iOS, Targets: iOS only.

Function: Presents the App Store sheet for managing subscriptions.
Notes: subscriptionGroupID: The subscription group identifier that the subscription belongs to.
See also:

- 188.14.24 ShowManageSubscriptions 22113

188.14.26 Sync(completed as SyncCompletedMBS = nil)

MBS Swift Plugin, Plugin Version: 25.4, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: Synchronizes your app,Äôs transaction information and subscription status with information from the App Store.
Example:

StoreKit2MBS.Sync AddressOf syncCompleted

Notes: Include some mechanism in your app, such as a Restore Purchases button, to let users restore their in-app purchases. In rare cases when a user suspects the app isn,Äôt showing all the transactions, call sync(). By calling sync(), you force the app to obtain transaction information and subscription status from the App Store.

Calling sync()displays a system prompt that asks users to authenticate with their App Store credentials. Call this function only in response to an explicit user action, like tapping or clicking a button.

In regular operations, there,Äôs no need to call sync(). StoreKit automatically keeps up to date transaction information and subscription status available to your app. When users reinstall your app or download it on a new device, the app automatically has all transactions available to it upon initial launch. There,Äôs no need for users to ask your app to restore transactions —your app can immediately get the current entitlements using currentEntitlements and transaction history using all. For more information about transactions, see Transaction.

Requires macOS 12.0, iOS 15.0 or newer.

188.14.27 Transaction as Dictionary

MBS Swift Plugin, Plugin Version: 25.4, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: Queries the current transaction.

188.14.28 Properties

188.14.29 deviceVerificationID as String

MBS Swift Plugin, Plugin Version: 25.4, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: The device verification identifier to use to verify whether signed information is valid for the current device.
Example:

Var uuid As String = StoreKit2MBS.deviceVerificationID
MessageBox uuid

Notes: Use this property to verify whether an App Store-signed JSON Web Signature (JWS) is valid for the current device.
(Read only property)

188.14.30 ProductCount as Integer

MBS Swift Plugin, Plugin Version: 25.4, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: Queries list of products.
Notes: We cache the products we got from QueryProducts, so you can query them anytime.
This number is only filled after QueryProducts was successful.
(Read only property)

188.14.31 Constants

App Store Environments

Constant	Value	Description
AppStoreEnvironmentProduction	"Production"	A value that indicates the production server environment.
AppStoreEnvironmentSandbox	"Sandbox"	A value that indicates the sandbox server environment.
AppStoreEnvironmentXcode	"Xcode"	A value that indicates the StoreKit Testing in Xcode environment.

188.14.32 Delegates

188.14.33 BeginRefundRequestCompletedMBS(errorMessage as String, status as String)

MBS Swift Plugin, Plugin Version: 26.0, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: The event called when the refund request started.
Notes: Status may be "success", "userCancelled" or "unknown".
Error may show any error message we may have got. Then status is empty.

188.14.34 FinishCompletedMBS(errorMessage as String)

MBS Swift Plugin, Plugin Version: 25.4, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: The delegate for the method to call when transaction finish is completed.
Notes: We pass any error message if one happened.

188.14.35 PurchaseProductCompletedMBS(errorMessage as String, result as Dictionary)

MBS Swift Plugin, Plugin Version: 25.4, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: The delegate called when purchase is completed.
Notes: If an error occurred, we pass an error message.

The result dictionary contains:

Key	Description
Result	The status, which is either success, pending, userCancelled, unknown or failed.
verified	Boolean on whether the result was verified. If false, iPhone may be jailbroken.
verificationError	If verification fails, the error message.
transaction	The details on the transaction.

188.14.36 QueryProductsCompletedMBS(errorMessage as String, products() as Dictionary)

MBS Swift Plugin, Plugin Version: 25.4, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: The delegate to use with QueryProducts method.
Example:

```
Public Sub QueryProductsCompleted(errorMessage as String, products() as Dictionary)
Log CurrentMethodName

If errorMessage <>"" Then
Log "Failed to query products: "+errorMessage
End If

If products <>Nil Then
For Each product As Dictionary In products
Var id As String = product.Value("id")
Var displayName As String = product.Value("displayName")
Var description As String = product.Value("description")
Var price As double = product.Value("price")
Var displayPrice As String = product.Value("displayPrice")
Var isFamilyShareable As boolean = product.Value("isFamilyShareable")
```

```
Var type As Dictionary = product.Value("type")
Var typeValue As String = type.Value("value")

// iOS 15.4, macOS 12.3 or newer
var typeDescription as string = type.Lookup("localizedDescription", "")

log displayName+": "+displayPrice

Break // see in debugger
Next
End If
End Sub
```

Notes: We pass any error message if an error happens.
And all products are converted to dictionaries.

188.14.37 RequestAgeRangeCompletedMBS(errorMessage as String, result as Dictionary)

MBS Swift Plugin, Plugin Version: 26.0, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: The delegate to report back the answer for the requestAgeRange method.
Notes: errorMessage contains message from any exception that happens. Or an error reported by our plugin like an old OS.

The result parameter contains the following keys:

Key	Description
response	declined, sharing or unknown.
lowerBound	The lower bound of the age range.
upperBound	The upper bound of the age range.
ageRangeDeclaration	guardianDeclared, selfDeclared or unknown.
activeParentalControls	Bitmask for parental controls.

Some keys may be missing if not available.

188.14.38 SyncCompletedMBS(errorMessage as String)

MBS Swift Plugin, Plugin Version: 25.4, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: The delegate called when Sync method finishes.

188.14.39 TransactionsCompletedMBS(errorMessage as String, transactions() as Dictionary)

MBS Swift Plugin, Plugin Version: 25.4, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: The delegate called to return information about transactions.
Example:

```
Public Sub TransactionsComplete(errorMessage as String, transactions() as Dictionary)
Log CurrentMethodName

If errorMessage <>"" Then
Log "Failed to get updates: "+errorMessage
End If

If transactions <>Nil Then
For Each transaction As Dictionary In transactions

Break // see in debugger
Next
End If
End Sub
```

Notes: Please check for verified value in the dictionary to know if it was verified.
If the verification failed, you may ignore it.

188.15 module StoreKitMBS

188.15.1 module StoreKitMBS

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop & iOS.

Function: Globals for the StoreKit plugin.
Notes: Be aware that StoreKit requires your app to be signed.
Blog Entries

- MBS Xojo Plugins, version 19.1pr6

188.15.2 Methods

188.15.3 appStoreReceiptURL as string

MBS MacCloud Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: Queries URL for the app store receipt file.
Example:

```
Var url As String = StoreKitMBS.appStoreReceiptURL

If url.Len >0 Then
Var file As New FolderItem(url, FolderItem.PathModes.URL)

If file.Exists then
// check it
End If
End If
```

188.15.4 available as Boolean

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop & iOS.

Function: Whether the StoreKit framework is available.
Example:

```
msgbox "StoreKit available: "+str(StoreKitMBS.available)
```

Notes: Should always be true on Mac OS X 10.7 and newer.

188.15.5 requestReview

MBS MacCloud Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: Tells StoreKit to ask the user to rate or review your app, if appropriate.
Example:

```
If StoreKitMBS.StoreReviewAvailable Then
StoreKitMBS.requestReview
End If
```

Notes: Although you should call this method when it makes sense in the user experience flow of your app, the actual display of a rating/review request view is governed by App Store policy. Because this method may or may not present an alert, it's not appropriate to call it in response to a button tap or other user action.

When you call this method while your app is still in development mode, a rating/review request view is always displayed so that you can test the user interface and experience. However, this method has no effect when you call it in an app that you distribute using TestFlight.

When you call this method in your shipping app and a rating/review request view is displayed, the system handles the entire process for you. In addition, you can continue to include a persistent link in the settings or configuration screens of your app that deep-links to your App Store product page. To automatically open a page on which users can write a review in the App Store, append the query parameter action=write-review to your product URL.

Available on MacOS 10.14 or newer.
requestReview method will only work, if StoreReviewAvailable returns true.
Does nothing if called on older OS versions.

188.15.6 SKErrorDomain as string

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop & iOS.

Function: The domain for StoreKit errors.

188.15.7 StoreReviewAvailable as Boolean

MBS MacCloud Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: Checks whether SKStoreReviewController class is available.
Example:

```
If StoreKitMBS.StoreReviewAvailable Then
```

```
StoreKitMBS.requestReview
End If
```

Notes: requestReview method will only work, if StoreReviewAvailable returns true.

188.15.8 Constants

StoreKit error codes

Constant	Value	Description
SKErrorClientInvalid	1	client is not allowed to issue the request, etc.
SKErrorPaymentCancelled	2	user cancelled the request, etc.
SKErrorPaymentInvalid	3	purchase identifier was invalid, etc.
SKErrorPaymentNotAllowed	4	this machine is not allowed to make the payment
SKErrorUnknown	0	unknown error

Chapter 189

String

189.1 Globals

189.1.1 InStrByteRangeMBS(target as string, find as string, StartValue as Integer, EndValue as Integer) as Integer

MBS Util Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Finds bytes or byte ranges in a string.
Example:

```
// search for question mark or uppercase letters A to Z
MsgBox str(InStrByteRangeMBS("Hello?", "?", 65, 90)) // shows 1 as H is found.

MsgBox str(InStrByteRangeMBS("hello?", "?", 65, 90)) // shows 6 as ? is found.
```

Notes: You may want to make sure target and find are both in the same 8bit encoding (UTF-8, MacRoman, Windows ANSI, Latin 1, ASCII, etc. but not UTF16/UTF32).

The optional find string defines the bytes to search. This gives you a way to see whether one of those bytes is inside or to find the first byte matching a certain value.

The StartValue/EndValue parameters define ranges of values which you consider to match.

Returns 0 if nothing is found or the position of the found character.
See also:

- 189.1.2 InStrByteRangeMBS(target as string, find as string, StartValue as Integer, EndValue as Integer, StartValue2 as Integer, EndValue2 as Integer) as Integer 22124

- 189.1.3 InStrByteRangeMBS(target as string, find as string, StartValue as Integer, EndValue as Integer, StartValue2 as Integer, EndValue2 as Integer, StartValue3 as Integer, EndValue3 as Integer) as Integer 22125
- 189.1.4 InStrByteRangeMBS(target as string, StartValue as Integer, EndValue as Integer) as Integer 22126
- 189.1.5 InStrByteRangeMBS(target as string, StartValue as Integer, EndValue as Integer, StartValue2 as Integer, EndValue2 as Integer) as Integer 22127
- 189.1.6 InStrByteRangeMBS(target as string, StartValue as Integer, EndValue as Integer, StartValue2 as Integer, EndValue2 as Integer, StartValue3 as Integer, EndValue3 as Integer) as Integer 22127

189.1.2 InStrByteRangeMBS(target as string, find as string, StartValue as Integer, EndValue as Integer, StartValue2 as Integer, EndValue2 as Integer) as Integer

MBS Util Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Finds bytes or byte ranges in a string.
Example:

```
// search for question mark or uppercase letters A to Z or numbers from 0 to 9
MsgBox str(InStrByteRangeMBS("Hello?", "?", 65, 90, 48, 57)) // shows 1 as H is found.
MsgBox str(InStrByteRangeMBS("hello?", "?", 65, 90, 48, 57)) // shows 6 as ? is found
MsgBox str(InStrByteRangeMBS("Hello 123", "?", 65, 90, 48, 57)) // shows 1 as H is found.
MsgBox str(InStrByteRangeMBS("hello 123", "?", 65, 90, 48, 57)) // shows 7 as 1 is found.
```

Notes: You may want to make sure target and find are both in the same 8bit encoding (UTF-8, MacRoman, Windows ANSI, Latin 1, ASCII, etc. but not UTF16/UTF32).

The optional find string defines the bytes to search. This gives you a way to see whether one of those bytes is inside or to find the first byte matching a certain value.

The StartValue/EndValue parameters define ranges of values which you consider to match.

Returns 0 if nothing is found or the position of the found character.

- 189.1.1 InStrByteRangeMBS(target as string, find as string, StartValue as Integer, EndValue as Integer) as Integer 22123
- 189.1.3 InStrByteRangeMBS(target as string, find as string, StartValue as Integer, EndValue as Integer, StartValue2 as Integer, EndValue2 as Integer, StartValue3 as Integer, EndValue3 as Integer) as Integer 22125

- 189.1.4 InStrByteRangeMBS(target as string, StartValue as Integer, EndValue as Integer) as Integer 22126
- 189.1.5 InStrByteRangeMBS(target as string, StartValue as Integer, EndValue as Integer, StartValue2 as Integer, EndValue2 as Integer) as Integer 22127
- 189.1.6 InStrByteRangeMBS(target as string, StartValue as Integer, EndValue as Integer, StartValue2 as Integer, EndValue2 as Integer, StartValue3 as Integer, EndValue3 as Integer) as Integer 22127

189.1.3 InStrByteRangeMBS(target as string, find as string, StartValue as Integer, EndValue as Integer, StartValue2 as Integer, EndValue2 as Integer, StartValue3 as Integer, EndValue3 as Integer) as Integer

MBS Util Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Finds bytes or byte ranges in a string.
Example:

```
// search for question mark, low byte values, high byte values or numbers from 0 to 9
MsgBox str(InStrByteRangeMBS("Hello?", "?", 0, 31, 127, 255, 48, 57 )) // shows 6 as ? is found.
MsgBox str(InStrByteRangeMBS("123", "?", 0, 31, 127, 255, 48, 57 )) // shows 1 as 1 is found.
MsgBox str(InStrByteRangeMBS(EndOfLine.Windows, "?", 0, 31, 127, 255, 48, 57 )) // shows 1 as chr(13) is found.
MsgBox str(InStrByteRangeMBS("Hello", "?", 0, 31, 127, 255, 48, 57 )) // shows 0 as nothing is found.
```

Notes: You may want to make sure target and find are both in the same 8bit encoding (UTF-8, MacRoman, Windows ANSI, Latin 1, ASCII, etc. but not UTF16/UTF32).

The optional find string defines the bytes to search. This gives you a way to see whether one of those bytes is inside or to find the first byte matching a certain value.

The StartValue/EndValue parameters define ranges of values which you consider to match.

Returns 0 if nothing is found or the position of the found character.
See also:

- 189.1.1 InStrByteRangeMBS(target as string, find as string, StartValue as Integer, EndValue as Integer) as Integer 22123
- 189.1.2 InStrByteRangeMBS(target as string, find as string, StartValue as Integer, EndValue as Integer, StartValue2 as Integer, EndValue2 as Integer) as Integer 22124
- 189.1.4 InStrByteRangeMBS(target as string, StartValue as Integer, EndValue as Integer) as Integer 22126
- 189.1.5 InStrByteRangeMBS(target as string, StartValue as Integer, EndValue as Integer, StartValue2 as Integer, EndValue2 as Integer) as Integer 22127

- 189.1.6 InStrByteRangeMBS(target as string, StartValue as Integer, EndValue as Integer, StartValue2 as Integer, EndValue2 as Integer, StartValue3 as Integer, EndValue3 as Integer) as Integer 22127

189.1.4 InStrByteRangeMBS(target as string, StartValue as Integer, EndValue as Integer) as Integer

MBS Util Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Finds bytes or byte ranges in a string.
Example:

```
// search for uppercase letters A to Z
MsgBox str(InStrByteRangeMBS("Hello?", 65, 90)) // shows 1 as H is found.

MsgBox str(InStrByteRangeMBS("hello?", 65, 90)) // shows 0 as nothing is found.
```

Notes: You may want to make sure target and find are both in the same 8bit encoding (UTF-8, MacRoman, Windows ANSI, Latin 1, ASCII, etc. but not UTF16/UTF32).

The optional find string defines the bytes to search. This gives you a way to see whether one of those bytes is inside or to find the first byte matching a certain value.

The StartValue/EndValue parameters define ranges of values which you consider to match.

Returns 0 if nothing is found or the position of the found character.

- 189.1.5 InStrByteRangeMBS(target as string, StartValue as Integer, EndValue as Integer, StartValue2 as Integer, EndValue2 as Integer) as Integer 22127
- 189.1.6 InStrByteRangeMBS(target as string, StartValue as Integer, EndValue as Integer, StartValue2 as Integer, EndValue2 as Integer, StartValue3 as Integer, EndValue3 as Integer) as Integer 22127

189.1.5 InStrByteRangeMBS(target as string, StartValue as Integer, EndValue as Integer, StartValue2 as Integer, EndValue2 as Integer) as Integer

MBS Util Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Finds bytes or byte ranges in a string.
Example:

```
// search for uppercase letters A to Z or numbers from 0 to 9
MsgBox str(InStrByteRangeMBS("Hello?", 65, 90, 48, 57)) // shows 1 as H is found.
MsgBox str(InStrByteRangeMBS("hello?", 65, 90, 48, 57)) // shows 0 as nothing is found.
MsgBox str(InStrByteRangeMBS("Hello 123", 65, 90, 48, 57)) // shows 1 as H is found.
MsgBox str(InStrByteRangeMBS("hello 123", 65, 90, 48, 57)) // shows 7 as 1 is found.
```

Notes: You may want to make sure target and find are both in the same 8bit encoding (UTF-8, MacRoman, Windows ANSI, Latin 1, ASCII, etc. but not UTF16/UTF32).

The optional find string defines the bytes to search. This gives you a way to see whether one of those bytes is inside or to find the first byte matching a certain value.

The StartValue/EndValue parameters define ranges of values which you consider to match.

Returns 0 if nothing is found or the position of the found character.

189.1.7 InStrBytesMBS(target as string, find as string) as Integer

MBS Util Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the first position of one of the bytes given in the find string in the target string.
Example:

```
MsgBox str(InStrBytesMBS("Hello", "e")) // shows 2, as e is found
MsgBox str(InStrBytesMBS("Hello", "abcd")) // shows 0, as nothing is found
MsgBox str(InStrBytesMBS("Hello World", "abcd")) // shows 11, as d is found
```

Notes: You may want to make sure target and find are both in the same 8bit encoding (UTF-8, MacRoman, Windows ANSI, Latin 1, ASCII, etc. but not UTF16/UTF32).
The find string defines the bytes to search. This gives you a way to see whether one of those bytes is inside or to find the first byte matching a certain value.

Returns 0 if nothing is found or the position of the found character.

189.1.8 EncodingNameMBS(extends Text as string) as string

MBS Util Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries the text encoding name for this string.
Example:

```
Var t as string = "Hello World"

MsgBox "InternetName: "+t.Encoding.InternetName
MsgBox "InternetNameMBS: "+t.Encoding.InternetNameMBS
MsgBox "EncodingNameMBS: "+t.EncodingNameMBS
```

Blog Entries

189.1.9 RemoveAccentsMBS(text as string, IgnoreCase as boolean = false) as string

MBS Util Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Removes accents from text.
Example:

```
Var s as string = "L'√©l√®ve pr√©f√©r√©"
Var a as string = RemoveAccentsMBS(s)
```

```
Var b as string = RemoveAccentsMBS(s, true)
// check values in debugger
Var x As String = RemoveAccentsMBS("‘ ,Äò ,Äô ,Ä¢ \¶¬® √Ä √Å √Ç √É √Ñ √Ö √Ü √á √à √É √Ä √Å √Â √Ã √Ä √Å √Æ √Ø √Ì √Î √Ï √Ñ √Ò √Ô √Ö √Õ √Ú √Ù √Û √Ü † √° √¢ √£ √§ √• √¶ √¶ √ß √® √© √™ √´ √¨ √Ì √Î √Ï √Ñ √Ó √Ô √Ö √Õ √Ú √Ù √Û √Ü √ß √® √© √™ √´ √¬ √Ì √Î √Ï √Ñ √Ò √Ó √Ô √Ö √Ö √Ø √Ø √Ø
```

```
t.Encoding = encodings.MacRoman

while not t.EOF
Var line as string = t.ReadLine
Var items() as string = SplitCommaSeparatedValuesMBS(line)

// process items array
wend

// 2. compare with split:

Var test as string = "Hello,""World,test"",end"

Var a() as string = split(test, ",")
Var b() as string = SplitCommaSeparatedValuesMBS(test, ",")

MsgBox Join(a,EndOfLine)+EndOfLine+EndOfLine+Join(b,EndOfLine)
```

Notes: This function is better for CSV data than the Split function as it handles quoted text right.
For 17.5 we rewrote this function. Now auto detects the delimiter (comma or semicolon) if none passed. Default quote character is " if nothing is passed. Please only one character for delimiter.

Version 18.0 can detect tab character, too.

189.1.11 CheckUTF8MBS(data as ptr, size as Integer, Placeholder as string) as string

MBS Util Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns string as UTF-8 and replacing invalid UTF-8 sequences with placeholder.
Notes: This function is more save than simply DefineEncoding as it makes sure the returned text actually is valid UTF-8.
You can replace missing characters with empty text, question mark or any other symbol.

This function is overloaded, so you can directly pass in string, memoryblock or ptr+size.
Checks byte sequence with up to 4 byte long sequences. Does not verify whether code points are valid.
See also:

- 189.1.12 CheckUTF8MBS(data as string, Placeholder as string) as string 22132
- 189.1.13 CheckUTF8MBS(mem as MemoryBlock, Placeholder as string) as string 22133

189.1.12 CheckUTF8MBS(data as string, Placeholder as string) as string

MBS Util Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns string as UTF-8 and replacing invalid UTF-8 sequences with placeholder.
Example:

```
// some random bytes
Var t as string = RandomBytesStringMBS(20, false)

// and some text
t = t + " √§√√º üòÄ"

// checked
Var s as string = CheckUTF8MBS(t, "üòÇ")

MsgBox s
```

Notes: This function is more save than simply DefineEncoding as it makes sure the returned text actually is valid UTF-8.
You can replace missing characters with empty text, question mark or any other symbol.

This function is overloaded, so you can directly pass in string, memoryblock or ptr+size.
Checks byte sequence with up to 4 byte long sequences. Does not verify whether code points are valid.
See also:

- 189.1.11 CheckUTF8MBS(data as ptr, size as Integer, Placeholder as string) as string 22132
- 189.1.13 CheckUTF8MBS(mem as MemoryBlock, Placeholder as string) as string 22133

189.1.13 CheckUTF8MBS(mem as MemoryBlock, Placeholder as string) as string

MBS Util Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns string as UTF-8 and replacing invalid UTF-8 sequences with placeholder.
Example:

```
// some random bytes
Var t as string = RandomBytesStringMBS(20, false)

// and some text
t = t + " √§√√º üòÄ"

// checked in memoryblock
Var m as MemoryBlock = t
Var s as string = CheckUTF8MBS(m, "üòÇ")

MsgBox s
```

Notes: This function is more save than simply DefineEncoding as it makes sure the returned text actually is valid UTF-8.
You can replace missing characters with empty text, question mark or any other symbol.

This function is overloaded, so you can directly pass in string, memoryblock or ptr+size.
Checks byte sequence with up to 4 byte long sequences. Does not verify whether code points are valid.

189.1.14 ClearStringContentMBS(s as String) as Boolean

MBS Util Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Clears string content.
Example:

```
// this is a constant string
Var c As String = "Hello"

// this is an allocated string
Var a As String = c + "World"

// try to clear both
Call ClearStringContentMBS c
Call ClearStringContentMBS a

MsgBox "const: "+c+" "+Str(Len(c))+EndOfLine+"allocated: "+a+" "+Str(Len(a))
```

Notes: Overwrites content of string with zeros.
We check if this is a constant string and for those do nothing.
Returns true if we zeroed content, otherwise false.

This function can help to clear memory for passwords stored in strings.

189.1.15 ConcatBinaryStringsMBS(a as string, b as string) as string

MBS Util Plugin, Plugin Version: 6.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Concats the given strings with binary encoding.
Example:

```
Var a as string = "Hello"
Var b as string = "World"
Var c as string = ConcatBinaryStringsMBS(a,b)
Var d as string = ConvertEncoding(b, encodings.UTF16)
Var e as string = ConcatBinaryStringsMBS(a,d)
```

MsgBox "ConcatBinaryStringsMBS"+EndOfLine+EndOfLine+c+EndOfLine+EncodingToHexMBS(c)+EndOfLine+EndOfLine+e+EndOfLine+EncodingToHexMBS(e)

Notes: If RB concats strings the encoding is changed before concating to match the other strings.

189.1.18 ConcatBinaryStringsMBS(a as string, b as string, c as string, d as string, e as string) as string

MBS Util Plugin, Plugin Version: 6.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Concats the given strings with binary encoding.
Notes: If RB concats strings the encoding is changed before concating to match the other strings.
See also:

- 189.1.15 ConcatBinaryStringsMBS(a as string, b as string) as string 22134
- 189.1.16 ConcatBinaryStringsMBS(a as string, b as string, c as string) as string 22135
- 189.1.17 ConcatBinaryStringsMBS(a as string, b as string, c as string, d as string) as string 22135
- 189.1.19 ConcatBinaryStringsMBS(a as string, b as string, c as string, d as string, e as string, f as string) as string 22136

189.1.19 ConcatBinaryStringsMBS(a as string, b as string, c as string, d as string, e as string, f as string) as string

MBS Util Plugin, Plugin Version: 6.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Concats the given strings with binary encoding.
Notes: If RB concats strings the encoding is changed before concating to match the other strings.

189.1.20 ContainsWholeWordMBS(Text as String, Word as String) as boolean

MBS Util Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Checks whether text contains whole word.
Example:

```
// let's try a few test cases

If ContainsWholeWordMBS("Hello World", "Hello") Then
// okay
Else
Break
End If

If ContainsWholeWordMBS("Hello World", "World") Then
// okay
Else
Break
End If

If ContainsWholeWordMBS("Hello World", "ello") Then
Break
Else
// okay
End If

If ContainsWholeWordMBS("Hello World", "Worl") Then
Break
Else
// okay
End If

If ContainsWholeWordMBS("Hello World", "orld") Then
Break
Else
// okay
End If

If ContainsWholeWordMBS("Hello World!", "orld") Then
Break
Else
// okay
End If
```

Notes: This function is optimized for speed and should only be used with ASCII as it handles all unicode characters as word characters.
Returns true if whole word is found inside text.
Returns false if the word was either not found or is contained, but has other letters before/after.

This function should be faster than doing a RegEx with "\b" + word "\b", but the RegEx may handle

unicode word delimiters better.

189.1.21 CountOccurancesMBS(s as string, find as string) as Integer

MBS Util Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Counts the occurances of a string.
Example:

```
Var s as string

s="111110001110101010111"

MsgBox str(CountOccurancesMBS(s,"1")) // 14
MsgBox str(CountOccurancesMBS(s,"0")) // 7
MsgBox str(len(s)) // 21
```

Notes: Returns the number of occurances of a substring in a string.
Blog Entries

- MBS Xojo / Real Studio Plugins, version 14.2pr5
- MonkeyBread Software Releases the MBS Plugins 8.2

189.1.22 CreateStringMBS(Length as Integer, Content as String) as string

MBS Util Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a string based on a pattern.
Example:

```
Var c as string = CreateStringMBS(20, "Hello")
Var t as string = CreateStringMBS(10, chrb(255))
```

Break

Notes: The content string is repeated until size is matched and returned.
The string returned has the same encoding set as the content string.
Blog Entries

- MBS Xojo / Real Studio Plugins, version 16.4pr5

189.1.23 DecodingFromHTMLMBS(s as string) as string

MBS Util Plugin, Plugin Version: 2.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Decodes a string with HTML escaped characters.
Example:

```
Var html as string = "<p><B>Gr&uuml;&szlig;e</B></P>"
Var htmltext as string = RemoveHTMLTagsMBS(html)
Var text as string = DecodingFromHTMLMBS(htmltext)

MsgBox text // shows: Gr√º√üe
```

Notes: The source string is converted to a native string if it is not allready in ASCII. Than for every character the functions looks for the unescaped character code and returns a normal unicode string.

e.g. "München" ->"M√ºnchen"

This functions uses Xojo unicode strings, so you may need to convert back to a NativeString before saveing the string to a file. (using e.g. ConvertEncoding(string, encodings.UTF8))

May return "" on low memory conditions.
Strings and encoding work only perfectly for RB 4.5 or newer.

Speed optimized in version 2.8 to be a hundret times faster.
Added Linux support in v5.1.

The result of this function is unpredictable on bad input strings.
(e.g. no encoding, or encoding does not match the content of the string)
Blog Entries

- MBS Xojo / Real Studio Plugins, version 15.0pr7

189.1.24 DecodingFromMySQLMBS(s as string) as string

MBS Util Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Decodes a string from MySQL.
Example:

MsgBox DecodingFromMySQLMBS("test\\test\%2.doc")

Notes: Replaces all the escapes in a mysql string like (\0, \t or \\) to their binary replacement.

189.1.25 DecodingFromQuotedPrintableMBS(s as string) as string

MBS Util Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Decodes a string with quoted printable encoding.
Example:

msgbox DecodingFromQuotedPrintableMBS("Hi, =A1=92")

Notes: The decoded string is marked to have an ASCII encoding, but you may need to set the encoding to something like ISO. Than you need a text converter to make something printable from it.

May return "" on low memory conditions.
Blog Entries

- MBS Xojo / Real Studio Plugins, version 14.3pr9

189.1.26 DecodingFromURLMBS(s as string) as string

MBS Util Plugin, Plugin Version: 2.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Decodes a string with URL escaped characters.
Example:

```
Var s as string
Var t as string
Var u as string

t="Hello World √§√√º"

s= EncodingToURLMBS(t,0)

u=DecodingFromURLMBS(s,0)
```

SetEncodingOfStringMBS u,GetEncodingOfStringMBS(t) // restore encoding

// Hello World √§√√º
MsgBox t
// Hello%20World%20%C3%A4%C3%B6%C3%BC
MsgBox s
// Hello World √§√√º
MsgBox u

Notes: Decodes an URL encoded ASCII string. The string returned is marked as a binary string (without encoding). You need to set the encoding to whatever the original was (ISO-9660 or UTF8 for example).

e.g. "Wie%20geht's%3F" ->"Wie geht's?"

May return "" on low memory conditions.
Strings and encoding work only perfectly for RB 4.5 or newer.
Added Linux support in v5.1.
See also:

- 189.1.27 DecodingFromURLMBS(s as string, options as Integer) as string 22141

189.1.27 DecodingFromURLMBS(s as string, options as Integer) as string

MBS Util Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Decodes a string with URL escaped characters.
Example:

Var s as string
Var t as string
Var u as string

t="Hello World √§√√º"

s= EncodingToURLMBS(t,1)

u=DecodingFromURLMBS(s,1)

SetEncodingOfStringMBS u,GetEncodingOfStringMBS(t) // restore encoding

// Hello World √§√√º
MsgBox t
// Hello+World+%C3%A4%C3%B6%C3%BC
MsgBox s
// Hello World √§√√º
MsgBox u

Notes: Decodes an URL encoded ASCII string. The string returned is marked as a binary string (without encoding). You need to set the encoding to whatever the original was (ISO-9660 or UTF8 for example).

e.g. "Wie%20geht's%3F" ->"Wie geht's?"

May return "" on low memory conditions.
Strings and encoding work only perfectly for RB 4.5 or newer.

Pass 1 for the options parameter to get PHP/Perl compatible output (+ instead of spaces and %20 for spaces).
Added Linux support in v5.1.
See also:

- 189.1.26 DecodingFromURLMBS(s as string) as string 22140

189.1.28 DecodingFromXMLMBS(s as string) as string

MBS Util Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Decodes a string with XML escaped characters.
Notes: see DecodingFromHTMLMBS.

189.1.29 DetectUnicodeMarkersMBS(s as string) as Integer

MBS Util Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Tries to get the unicode marker from the string.
Example:

```
const EncodingUnknown=0
const EncodingUTF8=1
const EncodingUTF16be=3
const EncodingUTF16le=4
const EncodingUTF32be=6
const EncodingUTF32le=7

Var text as string = "Hello World" // this text does not have a marker..

msgbox str(DetectUnicodeMarkersMBS(text))
```

Notes: For some UTF16 LittleEndian strings this function may return UTF32.

189.1.30 EncodeEmailSubjectMBS(s as string) as string

MBS Util Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function:

Encodes an email subject.
Text is encoded with UTF-8 Quoted Printable encoding.
If text does not need to be encoded (pure ASCII), we return the input text.
Example:

```
MsgBox EncodeEmailSubjectMBS("Hello World")+EndOfLine+EncodeEmailSubjectMBS("Test √§√√º")
```

Blog Entries

- MBS Xojo / Real Studio Plugins, version 14.3pr3

189.1.31 EncodingToHTMLMBS(s as string, options as Integer = 0) as string

MBS Util Plugin, Plugin Version: 2.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a string with HTML escaped characters.
Example:

```
Var f as folderItem
Var b as binaryStream

f=getsaveFolderItem("text/html","new.html")
if f<>nil then
b=f.createBinaryFile("text/html")
if b<>nil then
b.write nativeStringMBS(EncodingToHTMLMBS(editfield1.text))
b.close
end if
end if
```

Notes: The source string is converted to unicode if it is not allready in unicode. Than for every character the functions looks for the escaped character code and returns a HTML encoded string.

e.g. "M√ºnchen" ->"München"

This functions uses Xojo unicode strings, so you may need to convert back to a NativeString before saveing the string to a file.

Return characters (chr(10) and chr(13)) are not converted to
codes.

May return "" on low memory conditions.

The result of this function is unpredictable on bad input strings.
(e.g. no encoding, or encoding does not match the content of the string)

Options can be 1 to not encode ASCII values <128, so quotes, <, >and & are not encoded.

189.1.32 EncodingToQuotedPrintableMBS(s as string, LineLen as Integer = 72) as string

MBS Util Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a string with quoted printable characters.
Example:

```
Var a as string = "Hello √§√√º!"
Var b as string = EncodingToQuotedPrintableMBS(a)
Var c as string = ConvertEncoding(a, encodings.ISOLatin1)
Var d as string = EncodingToQuotedPrintableMBS(c)
Var e as string = EncodeQuotedPrintable(a)
Var f as string = EncodeQuotedPrintable(c)

MsgBox b+EndOfLine+d+EndOfLine+e+EndOfLine+f
```

Notes: Line wrap is per default at 72 characters but you can pass some other positive value here.
Quoted printable encoded strings have some ISO encoding as base, you need to pass a valid ISO string to this function to get the correct result.
May return "" on low memory conditions.

- MBS Xojo / Real Studio Plugins, version 14.3pr9

189.1.33 EncodingToURLMBS(s as string) as string

MBS Util Plugin, Plugin Version: 2.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a string with URL escaped characters.
Example:

msgbox EncodingToURLMBS("Wie geht's?")

Notes: Encodings a string for an URL. Use with UTF8 or ISO-9660 encoded strings. This function does not work correctly with UTF16 strings.

e.g. "Wie geht's?" ->"Wie%20geht's%3F"

May return "" on low memory conditions.
Strings and encoding work only perfectly for RB 4.5 or newer.
Added Linux support in v5.1.
See also:

- 189.1.34 EncodingToURLMBS(s as string, options as Integer) as string 22145

189.1.34 EncodingToURLMBS(s as string, options as Integer) as string

MBS Util Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a string with URL escaped characters.
Example:

```
Var s as string = "20101210 1244 - Sky Cinema +24 - Wen die Geister lieben"

MsgBox EncodingToURLMBS(s)

// gives: 20101210%201244%20-%20Sky%20Cinema%20+24%20-%20Wen%20die%20Geister%20lieben

MsgBox EncodingToURLMBS(s,1)

// gives: 20101210+1244+-+Sky+Cinema+%2B24+-+Wen+die+Geister+lieben

MsgBox EncodingToURLMBS(s,2)

// gives: 20101210%201244%20-%20Sky%20Cinema%20%2b24%20-%20Wen%20die%20Geister%20lieben
```

Notes: Encodings a string for an URL. Use with UTF8 or ISO-9660 encoded strings. This function does not work correctly with UTF16 strings.

e.g. "Wie geht's?" ->"Wie%20geht's%3F"

May return "" on low memory conditions.
Strings and encoding work only perfectly for RB 4.5 or newer.

Pass 1 for the options parameter to get PHP/Perl compatible output (+ instead of spaces and %20 for spaces).
Pass 2 for the options parameter to get plus to %2B and space to %20. Added in plugin version 10.6.

- 189.1.33 EncodingToURLMBS(s as string) as string 22145

189.1.35 EncodingToXMLMBS(s as string, options as Integer = 0) as string

MBS Util Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a string with XML escaped characters.
Notes: see EncodingToHTMLMBS.

189.1.36 GetStringsFromDataMBS(data as MemoryBlock, MinLength as Integer = 0) as string()

MBS Util Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Looks for strings within a data block.
Notes: Looks over the bytes in the data block to see if there are useful byte sequences which could be text. Returns an array with all text fragments found.

This function is UTF8 aware and will work well for UTF-8 encoded text fragments.
See also:

- 189.1.37 GetStringsFromDataMBS(data as ptr, size as Integer, MinLength as Integer = 0) as string() 22147

189.1.38 GetStringsFromDataMBS(data as String, MinLength as Integer = 0) as string()

MBS Util Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Looks for strings within a data block.
Example:

```
Var f as FolderItem = SpecialFolder.Desktop.Child("test.txt")
Var b as BinaryStream = BinaryStream.Open(f)
Var s as string = b.Read(b.Length)
Var texts() as string = GetStringsFromDataMBS(s, 3)

Break
```

Notes: Looks over the bytes in the data block to see if there are useful byte sequences which could be text. Returns an array with all text fragments found.

This function is UTF8 aware and will work well for UTF-8 encoded text fragments.

189.1.39 GetUnicodeMarkersMBS(kind as Integer) as string

MBS Util Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the unicode marker with the given code.
Example:

```
const EncodingUnknown=0
const EncodingUTF8=1
const EncodingUTF16=2 // native
const EncodingUTF16be=3
const EncodingUTF16le=4
const EncodingUTF32=5 // native
const EncodingUTF32be=6
const EncodingUTF32le=7

msgbox EncodingToHexMBS(GetUnicodeMarkersMBS(EncodingUTF8))
```

Notes: If you concat strings, RB may convert the string to UTF8.

189.1.40 HasPostfixMBS(Text as String, Prefix as String) as boolean

MBS Util Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Checks whether text has given postfix.
Example:

```
Var t as string = "Hello World"
Var p as string = "Hello"
Var w as string = "World"

if HasPrefixMBS(t, p) then
// ok
else
break
MsgBox "failed?"
end if

if HasPostfixMBS(t, w) then
// ok
else
break
MsgBox "failed?"
end if

if HasPrefixMBS(t, w) then
break
```

```
MsgBox "failed?"
else
// ok
end if

if HasPostfixMBS(t, p) then
break
MsgBox "failed?"
else
// ok
end if

Break
```

Notes: Returns true if yes, or false if not.
We may convert text to UTF-8 to compare.
Blog Entries

- MBS Xojo Plugins, version 18.5pr6

189.1.41 HasPrefixMBS(Text as String, Prefix as String) as boolean

MBS Util Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Checks whether text has given prefix.
Example:

```
Var t as string = "Hello World"
Var p as string = "Hello"
Var w as string = "World"

if HasPrefixMBS(t, p) then
// ok
else
break
MsgBox "failed?"
end if

if HasPostfixMBS(t, w) then
// ok
else
break
MsgBox "failed?"
end if

if HasPrefixMBS(t, w) then
break
```

```
MsgBox "failed?"
else
// ok
end if

if HasPostfixMBS(t, p) then
break
MsgBox "failed?"
else
// ok
end if

Break
```

Notes: Returns true if yes, or false if not.
We may convert text to UTF-8 to compare.
Blog Entries

- MBS Xojo Plugins, version 18.5pr6

189.1.42 HexstringMBS(input as string, hexlen as Integer, linelen as Integer, linestart as string, lineend as string, spacer as string,filler as string) as string

MBS Util Plugin, Plugin Version: 2.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a hexadecimal string.
Example:

```
Var s as string
s=HexstringMBS("Hello World",2,10,"<",">"+endofline,"","0")
```

Notes: Fails if input="" or hexlen<1 or linelen<1 or on low memory conditions.
If filler is "", filler is set to "0".

Memory requirement is around 5 times the memory for input.
or exactly:
mem=20+linelen*hexlen*(1+len(filler))+2*((linelen*hexlen*len(filler)+len(lineend)+len(linestart))*(len(input)*2/hexlen))

All strings must be in the encoding you want to have.
Can raise OutOfMemoryException on low memory.

189.1.43 IsASCIIStringMBS(s as string) as boolean

MBS Util Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Checks if this string is an ASCII string.
Notes: False if one of the characters of the string has a numeric value of 128 or higher. (->string is not a 7 bit ASCII string)
True if all bytes are in the valid ASCII range.
See also:

- 189.1.44 IsASCIIStringMBS(s as string, mode as Integer) as boolean 22151

189.1.44 IsASCIIStringMBS(s as string, mode as Integer) as boolean

MBS Util Plugin, Plugin Version: 3.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Checks if this string is an ASCII string.
Notes: Does not work for 16bit unicode strings.
But it works fine with UTF8.

Mode values:

0	False if one of the characters of the string has a numeric value of 128 or higher. (->string is not a 7 bit ASCII string)
1	False if one of the characters of the string has a numeric value >128 or <32. (->string may not be printable in ASCII, which may require some kind of Base64 encoding to transfer it.)
2	False if one of the characters of the string has a numeric value below 32. (->string may contain line breaks or other control characters)

Added Linux support in v5.1.
See also:

- 189.1.43 IsASCIIStringMBS(s as string) as boolean 22151

189.1.45 JaroWinklerDistanceMBS(a as string, b as string) as Double

MBS Util Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates the string distance.
Example:

```
Var s1 as string = "Hello"
Var s2 as string = "Hallo"
Var s3 as string = "Helo"
Var s4 as string = "Helllo"

// 0 for equal, the more it goes to 1.0

Var d1 as Double = levenshteinDistanceMBS(s1,s1)
Var d2 as Double = levenshteinDistanceMBS(s1,s2)
Var d3 as Double = levenshteinDistanceMBS(s1,s3)
Var d4 as Double = levenshteinDistanceMBS(s1,s4)

Var d5 as Double = jaroWinklerDistanceMBS(s1,s1)
Var d6 as Double = jaroWinklerDistanceMBS(s1,s2)
Var d7 as Double = jaroWinklerDistanceMBS(s1,s3)
Var d8 as Double = jaroWinklerDistanceMBS(s1,s4)

break // check values in debugger
```

Notes: Value is normalized, so 0.0 is equal text and 1.0 is totally unequal.

189.1.46 LevenshteinDistanceMBS(a as string, b as string) as Double

MBS Util Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates the string distance.
Example:

```
Var s1 as string = "Hello"
Var s2 as string = "Hallo"
Var s3 as string = "Helo"
Var s4 as string = "Helllo"

// 0 for equal, the more it goes to 1.0
```

```
Var d1 as Double = levenshteinDistanceMBS(s1,s1)
Var d2 as Double = levenshteinDistanceMBS(s1,s2)
Var d3 as Double = levenshteinDistanceMBS(s1,s3)
Var d4 as Double = levenshteinDistanceMBS(s1,s4)

Var d5 as Double = jaroWinklerDistanceMBS(s1,s1)
Var d6 as Double = jaroWinklerDistanceMBS(s1,s2)
Var d7 as Double = jaroWinklerDistanceMBS(s1,s3)
Var d8 as Double = jaroWinklerDistanceMBS(s1,s4)

break // check values in debugger
```

Notes: Value is normalized, so 0.0 is equal text and 1.0 is totally unequal.

189.1.47 NativeStringMBS(s as string) as string

MBS Util Plugin, Plugin Version: 2.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a native string with the given string as content.
Notes: If the string in the parameter s is allready native it is returned unchanged and without allocating additional memory. Else the string is copied into a new string with native characters.
On Mac OS Classic native means MacRoman encoding, on Mac OS X it's UTF8 and on Windows the ANSI Codepage.
May return "" on low memory conditions.
Strings and encoding work only perfectly for RB 4.5 or newer.
Added Linux support in v5.1.

189.1.48 RandomBytesStringMBS(Length as Integer, ASCII as boolean=false) as string

MBS Util Plugin, Plugin Version: 9.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a string with random content.
Example:

```
Var s as string
```

```
s = RandomBytesStringMBS(10, true)

MsgBox s

s = RandomBytesStringMBS(10, false)

MsgBox s
```

Notes: Length is the number of bytes in the string.
If ASCII is true the string returned in an ASCII string.

189.1.49 RemoveHTMLTagsMBS(AsciiTextWithTags as string) as string

MBS Util Plugin, Plugin Version: 4.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Removes all html tags from the string.
Example:

```
Var s As String = "<div><P param=""value""">Hello</P></div>"
Var t As String = RemoveHTMLTagsMBS(s)

MsgBox t // returns "Hello"
```

Notes: Returns "" on low memory.
Written to be used with UTF8 strings.
Added Linux support in v5.1.
Blog Entries

- MBS Xojo Plugins, version 19.4pr8

189.1.50 RemoveHTMLTagsWithMBS(AsciiTextWithTags as string, Replacement as string) as string

MBS Util Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Removes all html tags from the string and replaces them with the replacement string.
Example:

msgbox RemoveHTMLTagsWithMBS("<P>Hello</P>"," ") // returns " Hello "

Notes: Returns "" on low memory.
Written to be used with UTF8 strings.

189.1.51 ReplaceLineEndingsMBS(Text as String, NewLine as String, yield as boolean = false) as String

MBS Util Plugin, Plugin Version: 19.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Replaces line endings.
Example:

```
Var s as string = "Some text"
Var t as string = ReplaceLineEndingsMBS(s, endofline.Unix)
```

Notes: Whether we got CR, LF, CRLF or even LFCR, we'll replace it with the given replacement text.
If yield is true, we yield to other Xojo threads every 16 MB of input text to keep other threads responsive.

Handles UTF16/UTF32 by converting first to UTF-8.
Other 8 bit encodings (or no encoding set) are passed through.

Returns new text. May raise OutOfMemoryException in case of no memory available.
Blog Entries

- MBS Xojo Plugins, version 19.0pr7
- New ReplaceLineEndingsMBS function

189.1.52 ReplaceNonPrintableCharactersMBS(s as string, replacevalue as Integer=46) as string

MBS Util Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Replaces bytes in the string which are not printable with the given byte value.
Example:

```
MsgBox ReplaceNonPrintableCharactersMBS("Hello World")
MsgBox ReplaceNonPrintableCharactersMBS("Hello √§√√º World")
MsgBox ReplaceNonPrintableCharactersMBS("Hello √§√√º World",32)
```

Notes: All bytes in range 32 to 127 are copied and all others replaces with the given byte value. Default is 46 which is a dot.

Returns always an ASCII string.
On low memory this function returns an empty string.
Blog Entries

- New ReplaceLineEndingsMBS function

189.1.53 ScientificStrMBS(d as Double, digits as Integer) as string

MBS Util Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the given value formatted as scientific number with the given number of digits.
Example:

```
Var d as Double = 3.1415926535897

MsgBox ScientificStrMBS(d,6)+EndOfLine+ScientificStrMBS(d,9)
```

Blog Entries

- MBS Plugins 11.1 Release notes

189.1.54 SplitMBS(value as String, delimiter as String = " ") as String()

MBS DataTypes Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Splits string.
Example:

```
Var a() as string = SplitMBS("Hello World Test", " ")
Var b() as string = SplitMBS("Gr√º√üe", "")
Var c() as string = SplitMBS("Just$ test$ a$ test$ test", "$ test$ ")

break
```

Notes: Similar to the Split() function, but without the problems we see with Split function. See feedback cases for Split.

If delimiter is "", we return an array with all characters in string.
Else we split given string with delimiter.

189.1.55 SQLReplaceBooleanMBS(SQL as string) as string

MBS Util Plugin, Plugin Version: 10.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Replaces all false/true strings with 0/1 and handles quotes correctly.
Example:

MsgBox SQLReplaceBooleanMBS("INSERT INTO criteria VALUES ('1','9999','0001','000001557',false);")

Notes: SQLite used in REALSQLDatabase does not like false and true literals for boolean values. You need to use 0 and 1. So this function helps you converting old queries using false/true.
false and true inside a quoted string are not changed.

- MBS Plugins 10.3 Release Notes

189.1.56 StrCompBytesMBS(a as string, b as string) as Integer

MBS Util Plugin, Plugin Version: 9.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Compares two strings.
Example:

msgbox str(StrCompBytesMBS("Hello","hello"))

Notes: Returns zero if the two strings are identical.
Returns 1 or -1 if the strings are different.
Empty strings are equal.

Compares the bytes of both strings independend of the text encoding.

So if a="A" in UTF-8 and b="A" in UTF-16 they will not be equal!

189.1.57 StrCompCharactersMBS(a as string, b as string) as Integer

MBS Util Plugin, Plugin Version: 9.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Compares two strings.
Example:

msgbox str(StrCompCharactersMBS("Hello","hello"))

Notes: Returns zero if the two strings are identical.
Returns 1 or -1 if the strings are different.
Empty strings are equal.

Compares the characters of both strings. If the text encodings are not equal, they are both converted to UTF-8 before comparing them.

So if a="A" in UTF-8 and b="A" in UTF-16 they will be equal!

189.1.58 StringANDMBS(a as string,b as string) as string

MBS Util Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Applies a binary AND on the bytes from the both strings.
Notes: If a is "" or memory is low, the result is "".
If b is shorter as a the b string is used several times.
The function is optimized for several cases, e.g. the case where b is only one, two or four bytes long.
Returns a string with binary encoding. Before using this function, make sure both strings have the same encoding.
Added Linux support in v5.1.

189.1.59 StringIsHTMLreadyMBS(s as string) as boolean

MBS Util Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Test whether a string is html safe.
Example:

```
Function html(t as string) As string
#pragma disablebackgroundtasks
#pragma disableautowaitcursor

if StringIsHTMLreadyMBS(t) then
Return t
else
```

```
t=EncodingToHTMLMBS(t)
Return ConvertEncoding(t,encodings.UTF8)
end if
End Function
```

Notes: String which are not html safe, need to go through EncodingToHTMLMBS.
Using this function saves a lot of time!

Returns true for strings which are html safe.

189.1.60 StringIsXMLreadyMBS(s as string) as boolean

MBS Util Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Test whether a string is xml safe.
Notes: String which are not html safe, need to go through EncodingToXMLMBS.
Using this function saves a lot of time!

Returns true for strings which are xml safe.

189.1.61 StringORMBS(a as string,b as string) as string

MBS Util Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Applies a binary OR on the bytes from the both strings.
Notes: If a is "" or memory is low, the result is "".
If b is shorter as a the b string is used several times.
The function is optimized for several cases, e.g. the case where b is only one, two or four bytes long.
Returns a string with binary encoding. Before using this function, make sure both strings have the same encoding.
Added Linux support in v5.1.

189.1.62 StringXOR2MBS(data as string, XorMask as string, MaskOffset as Integer = 0) as string

MBS Util Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Applies a binary XOR on the bytes from the both strings.
Example:

```
Var s as string = StringXORMBS("Hello", "World")
```

```
Var t as string = StringXOR2MBS("Hello", "World")

MsgBox EncodeHex(S)+" "+EncodeHex(t)

Var ss as string = StringXORMBS(s, "World")
Var tt as string = StringXOR2MBS(t, "World")

MsgBox ss+" "+tt
```

Notes: If data is "" or memory is low, the result is "".
If XorMask is shorter as data the XorMask string is used several times.
Returns a string with binary encoding. Before using this function, make sure both strings have the same encoding.

The difference between StringXORMBS and StringXOR2MBS is that the second version xors also with position of byte in string, so your text looks a little bit more random.
MaskOffset specifies where in the XorMask string to start. This is useful for partial blocks.
Blog Entries

- MBS Real Studio Plugins, version 12.3pr8

189.1.63 StringXORMBS(data as string, XorMask as string, MaskOffset as Integer = 0) as string

MBS Util Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Applies a binary XOR on the bytes from the both strings.
Notes: If data is "" or memory is low, the result is "".
If XorMask is shorter as data the XorMask string is used several times.
The function is optimized for several cases, e.g. the case where b is only one, two or four bytes long.
Returns a string with binary encoding. Before using this function, make sure both strings have the same encoding.
MaskOffset specifies where in the XorMask string to start. This is useful for partial blocks.

189.1.64 StrMBS(d as Double) as string

MBS Util Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Formats numbers more human readable
Example:

```
// shows: 0.000000012339 1.234560e-8
MsgBox StrMBS(0.00000001234)+" "+str(0.00000001234)

// shows 123456789.0 1.234568e+8
```

MsgBox StrMBS(123456789.0)+" "+str(123456789.0)

Notes: The idea is to have a dynamically changing number of digits. We have no scientific notation and up to 15 digits visible (not counting zeros).

- MBS REALbasic Plugins, version 11.1pr4

189.1.65 UnicodeStringMBS(s as string) as string

MBS Util Plugin, Plugin Version: 2.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a unicode string with the given string as content.
Notes: If the string in the parameter s is allready unicode it is returned unchanged and without allocating additional memory. Else the string is copied into a new string with unicode (16bit) characters.
May return "" on low memory conditions.
Strings and encoding work only perfectly for RB 4.5 or newer.
Added Linux support in v5.1.

The result of this function is unpredictable on bad input strings.
(e.g. no encoding, or encoding does not match the content of the string)

189.1.66 ConvertUnicodeToCharacterCompositionMBS(text as string) as string

MBS Util Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts unicode characters to composed normalization form.
Example:

```
Var s1 as string = ConvertUnicodeToCharacterDecompositionMBS("√§")

MsgBox s1+": "+EncodeHex(s1)
// shows √§: 61CC88

Var s2 as string = ConvertUnicodeToCharacterCompositionMBS("√§")

MsgBox s2+": "+EncodeHex(s2)
// shows √§: C3A4
```

Notes: This function replaces character represented by decomposed representation with the composed representation.

189.1.67 ConvertUnicodeToCharacterDecompositionMBS(text as string) as string

MBS Util Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts unicode characters to decomposed normalization form.
Example:

```
Var s1 as string = ConvertUnicodeToCharacterDecompositionMBS("√§")

MsgBox s1+": "+EncodeHex(s1)
// shows √§: 61CC88

Var s2 as string = ConvertUnicodeToCharacterCompositionMBS("√§")

MsgBox s2+": "+EncodeHex(s2)
// shows √§: C3A4
```

Notes: This function replaces character represented by one unicode character by the decomposed variant.

189.1.68 DecodingFromCP1252MBS(s as string) as string

MBS Util Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Decodes a string with ISO 8859 encoding.
Notes: The source string must be really an CP1252 string!
The string returned is Unicode and you may try NativeString to make a string you can display better.

May return "" on low memory conditions.
Strings and encoding work only perfectly for RB 4.5 or newer.
Added Linux support in v5.1.

189.1.69 DecodingFromHexMBS(s as string) as string

MBS Util Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Decodes a Hex string to a binary string.
Example:

```
Var s as String

s=EncodingToHexMBS("Hallo")

MsgBox DecodingFromHexMBS(s)
```

Notes: May return "" on low memory conditions.
Added Linux support in v5.1.
The string returned has no defined string encoding, so use DefineEncoding on the result if needed.

189.1.70 DecodingFromISO8859MBS(s as string) as string

MBS Util Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Decodes a string with ISO 8859 encoding.
Example:

```
Var s as String

s=EncodingToISO8859MBS("hallo √§√√º")

MsgBox s

s=DecodingFromISO8859MBS(s)

MsgBox s

s=NativeStringMBS(s)

MsgBox s
```

Notes: The source string must be really an ISO 8859-1 string!
The string returned is Unicode and you may try NativeString to make a string you can display better.

May return "" on low memory conditions.
Strings and encoding work only perfectly for RB 4.5 or newer.
Added Linux support in v5.1.

189.1.71 EncodingToCP1252MBS(s as string) as string

MBS Util Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a string encoded with Codepage 1252.
Notes: The string is converted to Unicode (if it's not allready Unicode) and than encoded to a CP 1252 string which is returned with encoding set to binary.
(other encodings are available, but currently not in the plugin)

May return "" on low memory conditions.
Strings and encoding work only perfectly for RB 4.5 or newer.
Added Linux support in v5.1.

189.1.72 EncodingToHexMBS(s as string) as string

MBS Util Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Encodes a binary string to a hex string.
Example:

```
Var s1 as string = "Hello World"
Var s2 as string = EncodingToHexMBS(s1)

Var t1 as string = "Umlauts √§√√º"
Var t2 as string = EncodingToHexMBS(t1)

Var u as new UUIDMBS
Var u1 as string = u.ValueString
Var u2 as string = EncodingToHexMBS(u1)

break // see variables in debugger
```

Notes: May return "" on low memory conditions.
Added Linux support in v5.1.

189.1.73 EncodingToISO8859MBS(s as string) as string

MBS Util Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a string encoded with ISO 8859-1.
Example:

```
Var s as String
```

```
s=EncodingToISO8859MBS("hallo √§√√º")

MsgBox s

s=DecodingFromISO8859MBS(s)

MsgBox s

s=NativeStringMBS(s)

MsgBox s
```

Notes: The string is converted to Unicode (if it's not allready Unicode) and than encoded to a ISO 8859-1 string which is returned with encoding set to binary.
(other encodings are available, but currently not in the plugin)

May return "" on low memory conditions.
Strings and encoding work only perfectly for RB 4.5 or newer.
Added Linux support in v5.1.

189.1.74 JoinDataMBS(blocks() as memoryblock) as string

MBS DataTypes Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Joins an array of memoryblocks in new string.
Example:

```
Var s() as MemoryBlock

// make memoryblock with a space character
Var m as MemoryBlock = "Hello"

s.Append m
s.Append m
s.Append m

// now join
Var r as string = JoinDataMBS(s)

// define to be ASCII:
r = DefineEncoding(r, encodings.ASCII)

// and show
MsgBox r
```

Notes: Returned string has no encoding defined.
Raises OutOfMemoryException in case of low memory.
See also:

- 189.1.75 JoinDataMBS(strings() as string) as string 22166
- 189.1.76 JoinDataMBS(values() as Variant) as string 22166

189.1.75 JoinDataMBS(strings() as string) as string

MBS DataTypes Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Joins an array of strings in new string.
Example:

```
Var s() as string

s.Append "Hello"
s.Append " "
s.Append "World"

// now join
Var r as string = JoinDataMBS(s)

// define to be ASCII:
r = DefineEncoding(r, encodings.ASCII)

// and show
MsgBox r
```

Notes: Returned string has no encoding defined.
Raises OutOfMemoryException in case of low memory.
See also:

- 189.1.74 JoinDataMBS(blocks() as memoryblock) as string 22165
- 189.1.76 JoinDataMBS(values() as Variant) as string 22166

189.1.76 JoinDataMBS(values() as Variant) as string

MBS DataTypes Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Joins an array of variants in new string.
Example:

```
Var s() as Variant
```

```
// make memoryblock with a space character
Var m as new MemoryBlock(1)
m.Int8Value(0) = 32

s.Append "Hello"
s.Append m
s.Append "World"

// now join
Var r as string = JoinDataMBS(s)

// define to be ASCII:
r = DefineEncoding(r, encodings.ASCII)

// and show
MsgBox r
```

Notes: Variants can be memoryblocks or strings or normal objects which can give stringValue.
Returned string has no encoding defined.
Raises OutOfMemoryException in case of low memory.

- 189.1.75 JoinDataMBS(strings() as string) as string 22166

189.1.77 JoinStringMBS(strings() as string) as string

MBS DataTypes Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Joins an array of strings in new string.
Example:

```
Var s() as string

s.Append "Hello"
s.Append " "
s.Append "World"

Var r as string = JoinStringMBS(s)
```

MsgBox r

Notes: Converts all strings if necessary into UTF-8. If you want to join them as they are, please use JoinDataMBS.
Raises OutOfMemoryException in case of low memory.
See also:

- 189.1.78 JoinStringMBS(values() as Variant) as string 22168

189.1.78 JoinStringMBS(values() as Variant) as string

MBS DataTypes Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Joins an array of strings in new string.
Example:

```
Var s() as Variant

s.Append "Hello"
s.Append " "
s.Append "World"

Var r as string = JoinStringMBS(s)

MsgBox r
```

Notes: Converts all strings if necessary into UTF-8.
Raises OutOfMemoryException in case of low memory.
Blog Entries

- MBS Xojo / Real Studio Plugins, version 14.2pr3

See also:

- 189.1.77 JoinStringMBS(strings() as string) as string 22167

189.1.79 StringCodePointsMBS(text as string) as UInt32()

MBS DataTypes Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Query unicode code points for a text.
Example:

```
// take Hello World in Japanese
Var Text As String = "„Åì„Çì„Å´„Å°„ÅØ‰ñÁïå"
```

```
// get code points
Var v() As UInt32 = StringCodePointsMBS(Text)

// check in debugger
Break
```

Notes: We get text as UTF32 and return you the characters as an array of numbers.

Can be faster than Xojo's character iterator as we don't construct temporary strings and an iterator object here.

189.2 class StringHandleMBS

189.2.1 class StringHandleMBS

MBS DataTypes Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: A class for attaching strings together very fast.
Example:

```
Var s as StringHandleMBS

s=new StringHandleMBS

// Add some text
s.Add "Hello"
s.Add " "
s.Add "World"

// Insert a string
s.Insert " great",6

// check it
MsgBox s.Copy

// Delete the great from above
s.Delete 6,7
```

```
// check
MsgBox s.Copy

// Insert again
s.Insert " great ",6

// check
MsgBox s.Copy

// Now we extract the middle, so it's deleted
MsgBox s.Extract(6,7)

// check again
MsgBox s.copy
```

Notes: The class initalized itself on the first use.

189.2.2 Methods

189.2.3 Add(data as MemoryBlock)

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds data from memoryblock to the string handle.
See also:

- 189.2.4 Add(data as Ptr, size as Integer) 22171
- 189.2.5 Add(data as string) 22171
- 189.2.6 Add(data as StringHandleMBS) 22171

189.2.4 Add(data as Ptr, size as Integer)

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds data from ptr to the string handle with given size.
Notes: Using invalid Ptr or size combination can cause a crash.
See also:

- 189.2.3 Add(data as MemoryBlock) 22170
- 189.2.5 Add(data as string) 22171
- 189.2.6 Add(data as StringHandleMBS) 22171

189.2.5 Add(data as string)

MBS DataTypes Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds the string at the end of the current data.
Notes: Note that all strings added must have the same encoding.
See also:

- 189.2.3 Add(data as MemoryBlock) 22170
- 189.2.4 Add(data as Ptr, size as Integer) 22171
- 189.2.6 Add(data as StringHandleMBS) 22171

189.2.6 Add(data as StringHandleMBS)

MBS DataTypes Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds content of other string handle to this one.
Example:

```
Var s1 As New StringHandleMBS

s1.add "Hello World"
```

```
Var s2 As New StringHandleMBS

s2.add "Got: "
s2.add s1

MessageBox s2.Copy
```

Notes: Just like asking first StringHandle for content as string or Memoryblock and then adding that to the target one. But without the intermediate copying.
See also:

- 189.2.3 Add(data as MemoryBlock) 22170
- 189.2.4 Add(data as Ptr, size as Integer) 22171
- 189.2.5 Add(data as string) 22171

189.2.7 AddByte(value as UInt8)

MBS DataTypes Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds a byte to the string handle.

189.2.8 AddInteger(value as Int64)

MBS DataTypes Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds a integer value to the string handle.
Notes: This is like AddString(str(value)).

189.2.9 Clear

MBS DataTypes Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Clears the string handle.
Notes: Resets size to zero, but does not release memory, so it can be reused.

189.2.10 clone as StringHandleMBS

MBS DataTypes Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new StringHandleMBS object with the same content.

189.2.11 Constructor

MBS DataTypes Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The constructor of this class.
See also:

- 189.2.12 Constructor(InitValue as MemoryBlock) 22173
- 189.2.13 Constructor(initvalue as string) 22173

189.2.12 Constructor(InitValue as MemoryBlock)

MBS DataTypes Plugin, Plugin Version: 23.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Initializes a StringHandle and inserts the content of the memoryblock.
See also:

- 189.2.11 Constructor 22173
- 189.2.13 Constructor(initvalue as string) 22173

189.2.13 Constructor(initvalue as string)

MBS DataTypes Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The second constructor of this class which sets the value directly to the given Xojo string.
Example:

```
// An utility function you can define in a module:

Function BinaryReplaceAll(s as string, a as string,b as string) As string
Var h as StringHandleMBS

h=new StringHandleMBS(s)
h.ReplaceAll(a,b)

Return h.Copy
End Function
```

See also:

- 189.2.11 Constructor 22173
- 189.2.12 Constructor(InitValue as MemoryBlock) 22173

189.2.14 Copy as string

MBS DataTypes Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the content as a Xojo string.
Notes: This string will have the encoding set in the encoding property.

189.2.15 CopyMemory as MemoryBlock

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Copies content of handle in new memoryblock.

189.2.16 Delete(start as Integer, lengthBytes as Integer)

MBS DataTypes Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Deletes the bytes within the range.
Notes: One based like RB's string functions.
The start and length parameters use bytes not charcters as unit. You can use the Copy method to get a RB string for characterwise editing.

189.2.17 Extract(start as Integer, lengthBytes as Integer) as string

MBS DataTypes Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a part of the string.
Notes: One based and the returned part is removed form the string data.
The start and length parameters use bytes not charcters as unit. You can use the Copy method to get a RB string for characterwise editing.

189.2.18 FindByte(value as UInt8, StartByteOffset as Integer = 1) as Integer

MBS DataTypes Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Finds position of a given value.
Example:

```
Var s As New StringHandleMBS("Hello")

// 64 = big letters
// +32 = small letters
```

```
// + 5 = for 5th letter in alphabet

Var c As Integer = 64+32+5
Var p As Integer = s.FindByte(c)

MsgBox "position "+Str(p)+" for letter e"
```

Notes: Returns one based byte offset.
Result is 0 if not found.

StartPosition added in v21.3.
See also:

- 189.2.19 FindByte(values() as UInt8, StartByteOffset as Integer = 1) as Integer 22175

189.2.19 FindByte(values() as UInt8, StartByteOffset as Integer = 1) as Integer

MBS DataTypes Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Finds position of a given value.
Example:

```
Var s As New StringHandleMBS("Hello Welt")

Var values() As UInt8
values.append Asc("e")
values.append Asc("o")
Var p As Integer = s.FindByte(values, 3)

MsgBox "position "+Str(p)+" for letter "+s.Mid(p, 1)
```

Notes: Values is an array of possible values to find.
For best performance avoid duplicates in that array.

Returns one based byte offset.
Result is 0 if not found.
See also:

- 189.2.18 FindByte(value as UInt8, StartByteOffset as Integer = 1) as Integer 22174

189.2.20 FirstNonWhiteSpace(StartByteOffset as Integer = 1) as Integer

MBS DataTypes Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Finds first non-whitespace byte in the data starting at given offset.
Example:

```
Var s As New StringHandleMBS("Hello World")
Var p As Integer = s.FirstWhiteSpace(1)
Var x As Integer = s.FirstNonWhiteSpace(p+1)

MsgBox "position "+Str(p)+" for white space and "+Str(x)+" for following text"
```

Notes: StartByteOffset is one based.
White space are space, tab and new line characters.
Returns 0 if not found.

189.2.21 FirstWhiteSpace(StartByteOffset as Integer = 1) as Integer

MBS DataTypes Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Finds first whitespace byte in the data starting at given offset.
Example:

```
Var s As New StringHandleMBS("Hello World")
Var p As Integer = s.FirstWhiteSpace(1)
Var x As Integer = s.FirstNonWhiteSpace(p+1)

MsgBox "position "+Str(p)+" for white space and "+Str(x)+" for following text"
```

Notes: StartByteOffset is one based.
White space are space, tab and new line characters.
Returns 0 if not found.

189.2.22 Insert(data as string, position as Integer)

MBS DataTypes Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Inserts the string data at the given byte position.
Notes: One based.
Note that on Unicode the character position and the byte position are not equal!
(On 16bit Unicode charpos=2*bytepos and on US ASCII charpos=bytepos)

The position parameter uses bytes not charcters as unit. You can use the Copy method to get a RB string for characterwise editing.

189.2.23 InStr(OffsetBytes as Integer = 1, target as String, EndOffsetBytes as Integer = -1) as Integer

MBS DataTypes Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Searches for a binary string inside the StringHandle.
Example:

```
// We test if RB returns the same values as the plugin

Var s as String
Var h as StringHandleMBS

s="Christian"
h=new StringHandleMBS

h.Add s

MsgBox "MBS: "+str(h.InStr("is"))+", RB: "+str(InStr(s,"is"))
MsgBox "MBS: "+str(h.InStr(5,"ia"))+", RB: "+str(InStr(5,s,"ia"))
MsgBox "MBS: "+str(h.InStr("xy"))+", RB: "+str(InStr(s,"xy"))
```

Notes: The same as InStr but with a second parameter to specify the start of the search inside the string handled.

The srcOfs parameter uses bytes not charcters as unit. You can use the Copy method to get a RB string for characterwise editing.

Returns positive value if something is found and zero in case nothing is found.
Returns negative value in case of error.
Casesensitive search!

189.2.24 InStrUTF8(OffsetCharacters as Integer = 1, target as String, EndOffsetCharacters as Integer = -1) as Integer

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Searches for a binary string inside the StringHandle.
Example:

```
Var sh As New StringHandleMBS
sh.Encoding = sh.encodingUTF8 // so copy gives right encoding

sh.Add "√Ñ test Hello Word √§√√º test string."
```

```
Var s As String = sh.Copy

MsgBox "position of text: "+Str(sh.InStr(5,"test"))+"/"+Str(s.InStrB(5,"test"))+"th byte "+_
"or "+Str(sh.InStrUTF8(5,"test"))+"/"+Str(s.InStr(5,"test"))+"th character"
```

Notes: This function uses UTF8 characters instead of bytes as unit.
Returns positive value if something is found and zero in case nothing is found.
Returns negative value in case of error.
The same as InStrUTF8 but with a second parameter to specify the start of the search inside the string handle.
Casesensitive search!

189.2.25 IsValidASCII(data as ptr, TotalByteLength as integer) as Boolean

MBS DataTypes Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Checks whether given data is valid ASCII text.

189.2.26 IsValidUTF8(data as ptr, TotalByteLength as integer) as Boolean

MBS DataTypes Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Checks whether given data is valid UTF-8 text.

189.2.27 Left(lengthBytes as Integer) as string

MBS DataTypes Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a copy of the first left bytes of the string.
Notes: May return less strings if the stored string is not long enough.

The length parameter uses bytes not charcters as unit. You can use the Copy method to get a RB string for characterwise editing.

189.2.28 LeftUTF8(lengthCharacter as integer) as string

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries given number of characters from string from the left side.
Example:

```
Var s As String = "Hello √√§√º!"
Var d As New StringHandleMBS(s)

d.Encoding = d.encodingUTF8

// √ is two bytes
MsgBox d.LeftUTF8(8)+" in UTF8 and "+d.Left(8)+" in bytes"
```

189.2.29 Mid(startByte as Integer, lengthBytes as Integer) as string

MBS DataTypes Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a part of the string.
Notes: One based.
The length parameter uses bytes not charcters as unit. You can use the Copy method to get a RB string for characterwise editing.

189.2.30 MidInteger(startByte As Integer, lengthBytes As Integer = -1) as Int64

MBS DataTypes Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts some bytes read as ASCII text to number.
Example:

```
Var s As New StringHandleMBS("123456789")

Var v As Integer = s.MidInteger(3,3)
MsgBox str(v)
```

Notes: startByte is one based.

189.2.31 MidUTF8(startCharacter as integer, lengthCharacter as integer) as string

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries characters from UTF-8 string with given characters.
Example:

```
Var s As String = "Hello √√§√º!"
Var d As New StringHandleMBS(s)
```

```
d.Encoding = d.encodingUTF8

// √ is two bytes
MsgBox d.MidUTF8(7,4)+" in UTF8 and "+d.Mid(7,4)+" in bytes"
```

Notes: startCharacter starts with 1 as in Xojo's mid function.

189.2.32 Replace(a as String, b as string)

MBS DataTypes Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Replaces the first string found with content of a with the content of b.
Example:

```
Var s as StringHandleMBS

s=new StringHandleMBS

s.Add "Hallo Leutle, Hellau"

s.Replace("H","h")
s.Replace("l","i")

MsgBox s.Copy+" "+str(s.Len)
```

Notes: Note that all strings are compared binary and must have the same encoding.
Basicly this is just a call to instr, one to delete and one to insert.
See also:

- 189.2.33 Replace(startpos as Integer, a as String, b as string) 22180

189.2.33 Replace(startpos as Integer, a as String, b as string)

MBS DataTypes Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Replaces the first string found with content of a with the content of b.
Notes: If you don't give a startpos parameter the call uses one and is equal to Replace(a,b).
Startpos is one based like all indexes in this class.
The startpos parameter uses bytes not charcters as unit. You can use the Copy method to get a RB string for characterwise editing.
See also:

- 189.2.32 Replace(a as String, b as string) 22180

189.2.34 ReplaceAll(a as String, b as string)

MBS DataTypes Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Replaces all strings with content of a with the content of b.
Example:

```
Var s as StringHandleMBS

s=new StringHandleMBS

s.Add "Hallo Leutle, Hellau"

s.Replaceall("H","h")
s.Replaceall("l","i")

MsgBox s.Copy+" "+str(s.Len)
```

Notes: Note that all strings are compared binary and must have the same encoding.
Basicly this is just a loop with calls to instr, to delete and to insert.
See also:

- 189.2.35 ReplaceAll(startpos as Integer, a as String, b as string) 22181

189.2.35 ReplaceAll(startpos as Integer, a as String, b as string)

MBS DataTypes Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Replaces all strings with content of a with the content of b.
Notes: If you don't give a startpos parameter the call uses one and is equal to ReplaceAll(a,b).
Startpos is one based like all indexes in this class.

The startpos parameter uses bytes not charcters as unit. You can use the Copy method to get a RB string for characterwise editing.
See also:

- 189.2.34 ReplaceAll(a as String, b as string) 22181

189.2.36 Reverse as StringHandleMBS

MBS DataTypes Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reverses bytes in string.
Example:

```
Var s As New StringHandleMBS("Hello")
Var r As StringHandleMBS = s.Reverse
```

MsgBox r.Copy

Notes: Returns copy of the string with reversed order.

189.2.37 Right(lengthBytes as Integer) as string

MBS DataTypes Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a copy of the first right bytes of the string.
Example:

```
// There was a small bug in the Right and the Mid function for the version 3.1 of this plugin.
// This test failed in 3.1, but works in 3.2:

Var Text as StringhandleMBS
Var Part as String

Text = New StringHandleMBS
Text.Add "." + chr(13) + chr(10)

Part = Text.Copy
' Now Part is ".<CR><LF" which is correct

if lenb(Part)<>3 then
MsgBox "Failed on Copy "+str(lenb(Part))
end if

Part = Text.Right(1)
' Now Part is "<LF>" which is correct

if lenb(Part)<>1 then
MsgBox "Failed on Right(1) "+str(lenb(Part))
end if

Part = Text.Right(2)
' Now Part is "<CR><LF>" which is correct

if lenb(Part)<>2 then
MsgBox "Failed on Right(2) "+str(lenb(Part))
end if

Part = Text.Right(3)
' Now Part is "" which is wrong!

if lenb(Part)<>3 then
```

```
MsgBox "Failed on Right(3) "+str(lenb(Part))
end if
```

Notes: May return less strings if the stored string is not long enough.
The length parameter uses bytes not charcters as unit. You can use the Copy method to get a RB string for characterwise editing.

189.2.38 RightUTF8(lengthCharacter as integer) as string

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries given number of characters from string from the right side.
Example:

```
Var s As String = "Hello √√§√º!"
Var d As New StringHandleMBS(s)

d.Encoding = d.encodingUTF8

// √ is two bytes
MsgBox d.RightUTF8(8)+" in UTF8 and "+d.Right(8)+" in bytes"
```

189.2.39 Truncate(lengthBytes as Integer)

MBS DataTypes Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Truncates the string handle content.
Notes: Sets the length of the string back to the given value if it's greater.

The length parameter uses bytes not charcters as unit. You can use the Copy method to get a RB string for characterwise editing.

189.2.40 TruncateUTF8(lengthCharacters as integer)

MBS DataTypes Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Truncates data to given number of UTF-8 characters.
Example:

```
Var s As New StringHandleMBS("√§√º")

// limit to 2 characters, here 4 bytes
s.TruncateUTF8 2
```

MsgBox s.Copy

189.2.41 UTF8Length(data as ptr, TotalByteLength as integer) as Integer

MBS DataTypes Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries how many UTF-8 characters are in one memory area.
Example:

```
Var s As String = "Hello √§√√º"
Var m As MemoryBlock = s

Var c As Integer = StringHandleMBS.UTF8Length(m, m.size)

MsgBox str(c)+" characters, "+str(m.size)+" bytes"
```

Notes: Please make sure ptr is a valid ptr.
This is the internal function we use ourselves for the UTF-8 related functions.

189.2.42 UTF8LengthToBytes(data as ptr, TotalByteLength as integer, Characters as Integer) as Integer

MBS DataTypes Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries how many bytes are needed for UTF-8 characters.
Example:

```
Var s As String = "Hello √§√√º"
Var m As MemoryBlock = s

Var c As Integer = StringHandleMBS.UTF8Length(m, m.size)
Var b As Integer = StringHandleMBS.UTF8LengthToBytes(m, m.size, c)

MsgBox Str(c)+" characters, "+Str(b)+" bytes"
```

Notes: Please make sure ptr is a valid ptr.
This is the internal function we use ourselves for the UTF-8 related functions.

189.2.43 Properties

189.2.44 BlockLen as Int64

MBS DataTypes Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The size of the memory currently used for this class.
Notes: This value increases by BlockSize if more memory is needed.
(Read only property)

189.2.45 BlockSize as Int64

MBS DataTypes Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The size of the blocks to allocate for storing the data.
Notes: (Read and Write property)

189.2.46 Encoding as Int64

MBS DataTypes Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The encoding to use for returned strings.
Notes: Only useful on Xojo 4.5 and newer.

Some example values for encoding:

MacRoman	0	Also for ASCII or binary data used.
WindowsLatin1	&h0500	ANSI codepage 1252
ISOLatin1	&h0201	ISO 8859-1
NextStepLatin	&h0B01	NextStep encoding
Unicode	&h0100	16 bit Unicode
UTF8	&h08000100	8 bit Unicode
Invalid	&hFFFFFFFF	(Binary)
Invalid	&hFFFF	(Binary)

(Read and Write property)

189.2.47 Len as Int64

MBS DataTypes Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the len in bytes of the stored string.
Notes: (Read only property)

189.2.48 LenUTF8 as Int64

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries length of text in UTF-8 encoded characters.
Example:

```
Var s As String = "Hello √√§√º!"
Var d As New StringHandleMBS(s)

MsgBox Str(d.Len)+" bytes, "+Str(d.LenUTF8)+" characters"
```

Notes: Returns incorrect values if string is not UTF-8!
(Read only property)

189.2.49 ReplaceCount as Int64

MBS DataTypes Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: After a call to one of the Replace functions the number of items replaced.
Notes: (Read and Write property)

189.2.50 ValidASCII as Boolean

MBS DataTypes Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this string handle contains valid ASCII text.
Notes: (Read only property)

189.2.51 ValidUTF8 as Boolean

MBS DataTypes Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this string handle contains valid UTF-8 text.
Example:

```
Var s As New StringHandleMBS
```

```
s.Add "Hello World"

Var validUTF8a As Boolean = s.ValidUTF8

// now make invalid
s.AddByte 222

Var validUTF8b As Boolean = s.ValidUTF8

Break
```

Notes: (Read only property)

189.2.52 UInt16Value(offset as Integer) as UInt16

MBS DataTypes Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get or set an UInt16 value.
Example:

```
Var t As String = ConvertEncoding("Hello Welt", encodings.UTF16)
Var s As New StringHandleMBS(t)

// offset 1 is first character, so second character is offset 3
Var n As Integer = s.UInt16Value(3)
s.UInt16Value(3) = Asc("a")

MsgBox s.Copy

// append

s.UInt16Value(s.Len+1) = Asc("!")
MsgBox s.Copy
```

Notes: Offset is range checked and may raise an OutOfBoundsException.

When you assign a value and the offset is exactly size of the string handle plus one, we append the new byte.
(Read and Write computed property)

189.2.53 UInt32Value(offset as Integer) as UInt32

MBS DataTypes Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get or set an UInt32 value.
Notes: Offset is range checked and may raise an OutOfBoundsException.

When you assign a value and the offset is exactly size of the string handle plus one, we append the new byte. (Read and Write computed property)

189.2.54 UInt8Value(offset as Integer) as UInt8

MBS DataTypes Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get or set a byte value.
Example:

```
Var s As New StringHandleMBS("Hello Welt")

Var n as integer = s.UInt8Value(2)
s.UInt8Value(2) = Asc("a")

MsgBox s.Copy

// append

s.UInt8Value(s.Len+1) = Asc("!")
MsgBox s.Copy
```

Notes: Offset is range checked and may raise an OutOfBoundsException.

When you assign a value and the offset is exactly size of the string handle plus one, we append the new byte. (Read and Write computed property)

189.2.55 Constants

Encodings

Constant	Value	Description
encodingASCII	&h0600	ASCII encoding.
encodingBinary	&hFFFF	No encoding.
encodingLatin1	&h0201	ISO Latin 1 encoding.
encodingMacRoman	0	Mac Roman encoding.
encodingUnicode	&h0100	Unicode UTF16 encoding.
encodingUTF8	&h08000100	UTF-8 encoding.
encodingWindows	&h0500	Windows encoding.

189.3 class StyledText

189.3.1 class StyledText

Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The built-in class for styled text.

189.3.2 Properties

189.3.3 RTFDataMBS(SkipParagraphs as Boolean = false) as string

MBS Util Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get or set RTF data for this StyledText.
Example:

```
Var s As New StyledText

s.Text = "Hello World"

s.Bold(0,5) = True
s.size(0,6) = 12
s.size(6,5) = 14

#if TargetDesktop
Var m As String = s.RTFData
#EndIf

Var r As String = s.RTFDataMBS

Break
```

Notes: This is a replacement for the built-in RTFData property.
We tried to make the results exactly like the original.
Speed should be a little bit faster than the official method.

Added SkipParagraphs parameter in version 21.2.
If SkipParagraphs is true, we skip to look on paragraphs, so left/center/right alignment won't be included in the output, but that is much faster.

See also RTFDataMBS and WinRTFDataMBS in TextArea and DesktopTextArea controls and RTFData in NSTextViewMBS class.

(Read and Write computed property)

189.4 class TextConverterMBS

189.4.1 class TextConverterMBS

MBS Util Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for converting text from one text encoding to other one.
Example:

```
Var s as string = "Hello √§√√º"
Var c as new TextConverterMBS

c.Input = s
c.InputEncoding = "UTF-8"
c.OutputEncoding = "WINDOWS-1252"

c.Convert

Var output as string = c.Output

Break // see in debugger
```

Notes: Wraps iconv library. Please use LoadIconvLibrary function to load it. Without the library, we use fallback code, which just passes through data.

Xojo Developer Magazine

- 17.5, page 37: What's New in the MBS Plugins, With the Plugins growing every year, here are new capabilities you may have missed by Stefanie Juchmes
- 17.3, page 11: News

189.4.2 Methods

189.4.3 Canonicalize(name as String) as String

MBS Util Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Canonicalize an encoding name.
Example:

```
MsgBox TextConverterMBS.Canonicalize("utf-8")
MsgBox TextConverterMBS.Canonicalize("Latin1")
```

Notes: The result is either a canonical encoding name, or name itself.

189.4.4 Constructor

MBS Util Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The constructor.
Notes: Currently enables translit and ignore by default.

189.4.5 Convert

MBS Util Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts text.
Example:

```
Var s as string = "Hello √§√√º"
Var c as new TextConverterMBS

c.Input = s
c.InputEncoding = "UTF-8"
c.OutputEncoding = "WINDOWS-1252"

c.Convert

Var output as string = c.Output

Break // see in debugger
```

Notes: Input is read from either Input or InputData properties.
ErrorCode and ErrorMessage are set.
Output is set with output data.

189.4.6 EncodingNames(Mode as Integer = 0) as String()

MBS Util Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries names of text encodings.
Example:

MsgBox Join(TextConverterMBS.EncodingNames(1),EndOfLine)

Notes: Mode 0 returns list of text encoding names.
Mode 1 returns list of text encoding names and alternative names separated by comma.
Mode 2 returns list of text encoding names and alternative names.

e.g. "CP1252,MS-ANSI,WINDOWS-1252" in the list for mode 1.

189.4.7 LoadIconvLibrary(path as String, byref Error as String) as boolean

MBS Util Plugin, Plugin Version: 20.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Loads the iconv library.
Notes: The TextConverterMBS class uses libiconv for text encoding conversion.
If you explicitly need, you can load the library on start of solution.

MBS Plugin may try to load iconv.dll/dylib/so automatically when first iconv function is called.

189.4.8 Properties

189.4.9 ErrorCode as Integer

MBS Util Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Last error code from Convert method.
Notes: (Read and Write property)

189.4.10 ErrorMessage as String

MBS Util Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Text message for error.
Notes: (Read and Write property)

189.4.11 Ignore as Boolean

MBS Util Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether to ignore errors.
Notes: Characters that cannot be represented in the target character set will be silently discarded.
(Read and Write property)

189.4.12 Input as String

MBS Util Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Input text string.
Notes: (Read and Write property)

189.4.13 InputData as MemoryBlock

MBS Util Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Input as memoryblock.
Notes: (Read and Write property)

189.4.14 InputEncoding as String

MBS Util Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Name of input encoding.
Notes: e.g. "UTF-8"
(Read and Write property)

189.4.15 InputPosition as Integer

MBS Util Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The input position on the end of convert.
Notes: If errors are not ignored, this shows error position.

(Read and Write property)

189.4.16 LibVersion as Integer

MBS Util Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The library version for iconv.
Notes: Returns major * 256 + minor, e.g. &h10B for 1.11.
(Read only property)

189.4.17 Output as String

MBS Util Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The output text.
Notes: String may not have an encoding set, if the plugin does not recognize the encoding.
But for e.g. UTF-8, we set the text encoding.
(Read and Write property)

189.4.18 OutputEncoding as String

MBS Util Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Name of output encoding.
Notes: e.g. "UTF-8"
(Read and Write property)

189.4.19 OutputLength as Integer

MBS Util Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The length of the output in bytes.
Notes: (Read and Write property)

189.4.20 Translit as Boolean

MBS Util Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether to activate transliteration.
Notes: This means that when a character cannot be represented in the target character set, it can be

approximated through one or several characters that look similar to the original character.
(Read and Write property)

189.5 class TextEncoding

189.5.1 class TextEncoding

Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Built in class from Xojo for text encodings.

189.5.2 Methods

189.5.3 InternetNameMBS as string

MBS Util Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries the name of this text encoding.
Notes: We have this method in MBS Plugin as InternetName function does not work on Linux/Windows. (See feedback case 30712)
Blog Entries

- MBS Xojo / Real Studio Plugins, version 13.5pr6

Chapter 190

SVG

190.1 class ReSVGMBS

190.1.1 class ReSVGMBS

MBS Images Plugin, Plugin Version: 23.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: A class to render SVG data to a picture.
Example:

```
// we load this file
Var file As FolderItem = SpecialFolder.Desktop.Child("test.svg")

Var p As New ReSVGMBS(file)

// and render them in their normal size:
Var pic As picture = p.RenderToPicture(p.Width, p.Height)

// show in the window
Window1.Backdrop = pic
```

Notes: This uses the ReSVG library written in Rust.
ReSVG is a fast, small, portable SVG library with the goal to support the whole SVG spec.

see
https://github.com/RazrFalcon/resvg

- 21.2, page 9: News

190.1.2 Methods

190.1.3 Constructor(data as MemoryBlock)

MBS Images Plugin, Plugin Version: 23.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Creates SVG from data.
Notes: data: SVG data. Can contain SVG string or gzip compressed data. Must not be nil.

Raises exceptions in case of errors.
See also:

- 190.1.4 Constructor(data as String) 22204
- 190.1.5 Constructor(file as FolderItem) 22205

190.1.4 Constructor(data as String)

MBS Images Plugin, Plugin Version: 23.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Creates SVG from data.
Notes: data: SVG data. Can contain SVG string or gzip compressed data. Must not be empty.

Raises exceptions in case of errors.
See also:

- 190.1.3 Constructor(data as MemoryBlock) 22204
- 190.1.5 Constructor(file as FolderItem) 22205

190.1.5 Constructor(file as FolderItem)

MBS Images Plugin, Plugin Version: 23.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Creates SVG from file.
Example:

```
// we load this file
Var file As FolderItem = SpecialFolder.Desktop.Child("test.svg")

Var p As New ReSVGMBS(file)

// and render them in their normal size:
Var pic As picture = p.RenderToPicture(p.Width, p.Height)

// show in the window
Window1.Backdrop = pic
```

Notes: For the files, .svg and .svgz files are supported.

Raises exceptions in case of errors.
See also:

- 190.1.3 Constructor(data as MemoryBlock) 22204
- 190.1.4 Constructor(data as String) 22204

190.1.6 ImageBox(byref x as double, byref y as double, byref width as double, byref height as double) as Boolean

MBS Images Plugin, Plugin Version: 23.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Queries the image bounding box.
Notes: Can be smaller or bigger than a view box.

Returns true on success and sets passed variables.
Return false if an image has no elements.

190.1.7 InitLog

MBS Images Plugin, Plugin Version: 23.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Initializes the library log.
Notes: Use it if you want to see any warnings.
Must be called only once.
All warnings will be printed to the ‘stderr‘.

190.1.8 LoadSystemFonts

MBS Images Plugin, Plugin Version: 23.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Loads system fonts into the internal fonts database.
Notes: This method is very IO intensive.

This method should be executed only once.

The system scanning is not perfect, so some fonts may be omitted. Please send a bug report in this case.
Prints warnings into the log.

Has no effect when the ‘text‘ feature is not enabled.

190.1.9 NodeBox(id as string, byref x as double, byref y as double, byref width as double, byref height as double) as Boolean

MBS Images Plugin, Plugin Version: 23.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Returns node’s bounding box by ID.
Notes: tree Render tree.

id: Node’s ID.

Returns false if a node with such an ID does not exist.
returns false if ID is an empty string.

Returns true on success and sets passed variables.

190.1.10 NodeExists(id as string) as Boolean

MBS Images Plugin, Plugin Version: 23.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Returns true if a renderable node with such an ID exists.
Notes: Return false if a node doesn't exist or ID isn't a UTF-8 string.
Return false if a node exists, but not renderable.

190.1.11 Render(width as Integer, Height as Integer, pixmap as Ptr, FitToType as Integer = 0, FitToValue as single = 0.0, transform as Ptr = nil)

MBS Images Plugin, Plugin Version: 23.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Renders the SVG onto the pixmap.
Notes: FitToType: Specifies into which region SVG should be fit.
transform: A root SVG transform. Can be used to position SVG inside the pixmap. If nil, we use identity transform.
width: Pixmap width.
height: Pixmap height.
pixmap: Pixmap data. Should have width * height * 4 bytes in size and contain premultiplied RGBA8888 pixels.

190.1.12 RenderNode(ID as string, width as Integer, Height as Integer, pixmap as Ptr, FitToType as Integer = 0, FitToValue as single = 0.0, transform as Ptr = nil)

MBS Images Plugin, Plugin Version: 23.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Renders the SVG onto the pixmap.
Notes: id: Node's ID. Must not be "".
FitToType: Specifies into which region SVG should be fit.
transform: A root SVG transform. Can be used to position SVG inside the pixmap. If nil, we use identity transform.
width: Pixmap width.
height: Pixmap height.
pixmap: Pixmap data. Should have width * height * 4 bytes in size and contain premultiplied RGBA8888 pixels.

190.1.13 RenderNodeToPicture(ID as string, width as Integer, Height as Integer, FitToType as Integer = 0, FitToValue as single = 0.0, transform as Ptr = nil) as Picture

MBS Images Plugin, Plugin Version: 23.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Renders the SVG as picture.
Notes: id: Node's ID. Must not be "".
FitToType: Specifies into which region SVG should be fit.
transform: A root SVG transform. Can be used to position SVG inside the picture. If nil, we use identity transform.
width: picture width.
height: picture height.

On success, we return the picture with the pixels.
Not supported for macOS 32-bit.

190.1.14 RenderToFile(file as FolderItem, FitToType as Integer = 0, FitToValue as single = 0.0)

MBS Images Plugin, Plugin Version: 23.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Renders SVG to file.
Notes: Only for macOS 32-bit.

190.1.15 RenderToPicture(width as Integer, Height as Integer, FitToType as Integer = 0, FitToValue as single = 0.0, transform as Ptr = nil) as Picture

MBS Images Plugin, Plugin Version: 23.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Renders the SVG as picture.
Notes: FitToType: Specifies into which region SVG should be fit.
transform: A root SVG transform. Can be used to position SVG inside the picture. If nil, we use identity transform.
width: picture width.
height: picture height.

On success, we return the picture with the pixels.
Not supported for macOS 32-bit.

190.1.16 ViewBox(byref x as double, byref y as double, byref width as double, byref height as double) as Boolean

MBS Images Plugin, Plugin Version: 23.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Queries the image viewbox.
Notes: Returns true on success and sets passed variables.

190.1.17 Properties

190.1.18 Available as Boolean

MBS Images Plugin, Plugin Version: 23.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether the class is available.
Example:

```
MessageBox "Available: "+ReSVGMBS.Available.ToString
```

Notes: Should return true for all targets except iOS.
(Read only property)

190.1.19 DPI as Double

MBS Images Plugin, Plugin Version: 23.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The target DPI.
Notes: Impact units conversion.
Default: 96
(Read and Write property)

190.1.20 FontFamily as String

MBS Images Plugin, Plugin Version: 23.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The default font family.
Notes: Will be used when no ‘font-family‘ attribute is set in the SVG.

Default: Times New Roman
(Read and Write property)

190.1.21 FontSize as Double

MBS Images Plugin, Plugin Version: 23.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The default font size.
Notes: Will be used when no ‘font-size‘ attribute is set in the SVG.
Default: 12
(Read and Write property)

190.1.22 Handle as Integer

MBS Images Plugin, Plugin Version: 23.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The internal object reference.
Notes: (Read only property)

190.1.23 Height as Double

MBS Images Plugin, Plugin Version: 23.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Returns an image height.
Example:

```
Var file As FolderItem = SpecialFolder.Desktop.Child("test.svg")
Var p As New ReSVGMBS(file)

MessageBox "width "+p.Width.ToString+" x height "+p.Height.ToString
```

Notes: The size of a canvas that required to render this SVG.
(Read only property)

190.1.24 ImageRendering as Integer

MBS Images Plugin, Plugin Version: 23.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The default image rendering method.
Example:

ReSVGMBS.ImageRendering = ReSVGMBS.kImageRenderingOptimizeQuality

Notes: Will be used when an SVG element's 'image-rendering' property is set to 'auto'.
Default: kImageRenderingOptimizeQuality
(Read and Write property)

190.1.25 IsEmpty as Boolean

MBS Images Plugin, Plugin Version: 23.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Checks that tree has any nodes.
Notes: Returns true if tree has no nodes.
(Read only property)

190.1.26 KeepNamedGroups as Boolean

MBS Images Plugin, Plugin Version: 23.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Keep named groups.
Notes: If set to 'true', all non-empty groups with 'id' attribute will not be removed.
Default: false
(Read and Write property)

190.1.27 Languages as String

MBS Images Plugin, Plugin Version: 23.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: A comma-separated list of languages.
Example:

ReSVGMBS.Languages = "en,en-US"
MessageBox ReSVGMBS.Languages

Notes: Will be used to resolve a ‘systemLanguage‘ conditional attribute.
Example: en,en-US.
Default: en
(Read and Write property)

190.1.28 ShapeRendering as Integer

MBS Images Plugin, Plugin Version: 23.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The default shape rendering method.
Example:

ReSVGMBS.ShapeRendering = ReSVGMBS.kShapeRenderingGeometricPrecision

Notes: Will be used when an SVG element’s ‘shape-rendering‘ property is set to ‘auto‘.

Default: kShapeRenderingGeometricPrecision
(Read and Write property)

190.1.29 TextRendering as Integer

MBS Images Plugin, Plugin Version: 23.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The default text rendering method.
Example:

ReSVGMBS.TextRendering = ReSVGMBS.kTextRenderingOptimizeLegibility

Notes: Will be used when an SVG element’s ‘text-rendering‘ property is set to ‘auto‘.
Default: kTextRenderingOptimizeLegibility
(Read and Write property)

190.1.30 Width as Double

MBS Images Plugin, Plugin Version: 23.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Returns an image width.

Example:

```
Var file As FolderItem = SpecialFolder.Desktop.Child("test.svg")
Var p As New ReSVGMBS(file)

MessageBox "width "+p.Width.ToString+" x height "+p.Height.ToString
```

Notes: The size of a canvas that required to render this SVG.
(Read only property)

190.1.31 Constants

Errors

Constant	Value	Description
kErrorElementsLimitReached	4	We do not allow SVG with more than 1_000_000 elements for security reasons.
kErrorFileOpenFailed	2	Failed to open the provided file.
kErrorInvalidSize	5	SVG doesn't have a valid size. Occurs when width and/or height are <= 0. Also occurs if width, height and viewBox are not set.
kErrorMalformedGZip	3	Compressed SVG must use the GZip algorithm.
kErrorNotAnUTF8String	1	Only UTF-8 content are supported.
kErrorOK	0	Everything is ok.
kErrorParsingFailed	6	Failed to parse an SVG data.

Fit Types

Constant	Value	Description
kFitToTypeHeight	2	Fit an image to a specified height.
kFitToTypeOriginal	0	Use an original image size.
kFitToTypeWidth	1	Fit an image to a specified width.
kFitToTypeZoom	3	Zoom an image using scaling factor.

Image Rendering

Constant	Value	Description
kImageRenderingOptimizeQuality	0	Optimize for quality
kImageRenderingOptimizeSpeed	1	Optimize for speed

Shape Renderings

Constant	Value	Description
kShapeRenderingCrispEdges	1	Crisp Edges
kShapeRenderingGeometricPrecision	2	Geometric precision
kShapeRenderingOptimizeSpeed	0	Optimize speed

Text Renderings

Constant	Value	Description
kTextRenderingGeometricPrecision	2	Geometric precision
kTextRenderingOptimizeLegibility	1	Optimize legibility
kTextRenderingOptimizeSpeed	0	Optimize for speed

Chapter 191

System

191.1 Globals

191.1.1 GetHelpTagDelayMBS as Integer

MBS MacOSX Plugin, Platform: macOS, Targets: Desktop only.

Deprecated: This item is deprecated and should no longer be used. **Function:** Returns the delay time for the help tags.
Example:

msgbox str(GetHelpTagDelayMBS)

Notes: A positive value is for milliseconds and a negative value for microseconds.
It looks like the setting of this property is not recognized always.
This setting is also per application and not saved between sessions.
Blog Entries

- MBS Xojo Plugins, version 20.6pr4

191.1.2 GetHelpTagDisplayedMBS as boolean

MBS MacOSX Plugin, Platform: macOS, Targets: Desktop only.

Deprecated: This item is deprecated and should no longer be used. **Function:** whether the help tags are displayed.
Notes: This setting is per application and not saved between sessions.
Blog Entries

- MBS Xojo Plugins, version 20.6pr4

191.1.3 SetHelpTagDelayMBS(value as Integer)

MBS MacOSX Plugin, Platform: macOS, Targets: Desktop only.

Deprecated: This item is deprecated and should no longer be used. **Function:** Sets the delay time for the help tags.
Example:

```
if GetHelpTagDelayMBS<>5000 then // change to 5 seconds
SetHelpTagDelayMBS 5000
end if
```

Notes: A positive value is for milliseconds and a negative value for microseconds.
It looks like the setting of this property is not recognized always.
This setting is also per application and not saved between sessions.

Xojo 2006r3 does set this value whenever a window comes to front, so if you want to set it really, use some code like in the example above in a timer to change it to your need.
Blog Entries

- MBS Xojo Plugins, version 20.6pr4

191.1.4 SetHelpTagDisplayedMBS(value as boolean)

MBS MacOSX Plugin, Platform: macOS, Targets: Desktop only.

Deprecated: This item is deprecated and should no longer be used. **Function:** Sets whether the help tags are displayed.
Notes: This setting is per application and not saved between sessions.
Blog Entries

- MBS Xojo Plugins, version 20.6pr4

191.1.5 GetWindowsColorProfileMBS as folderitem

MBS Win Plugin, Plugin Version: 8.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Returns the path to the color profile for the main screen on Windows.
Example:

```
Var f as folderitem

f=getwindowsColorProfileMBS

msgBox f.NativePath
```

Notes: Returns nil on any error.
Blog Entries

- MBS Xojo Plugins, version 21.6pr1

191.1.6 GetWindowsDisplayColorProfileMBS(DisplayIndex as Integer) as folderitem

MBS Win Plugin, Plugin Version: 8.6, Platform: Windows, Targets: Desktop, Console & Web.

Function: Returns the path to the color profile for the given screen on Windows.
Example:

```
Var f as folderitem

f=GetWindowsDisplayColorProfileMBS(1)

msgBox f.NativePath
```

Notes: Index is zero based.
Returns nil on any error.
See also:

- 191.1.7 GetWindowsDisplayColorProfileMBS(DisplayName as String) as folderitem 22217

191.1.7 GetWindowsDisplayColorProfileMBS(DisplayName as String) as folderitem

MBS Win Plugin, Plugin Version: 15.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Returns the path to the color profile for the given screen on Windows.
Notes: Same as GetWindowsDisplayColorProfileMBS, but without index and taking a name.
See also:

- 191.1.6 GetWindowsDisplayColorProfileMBS(DisplayIndex as Integer) as folderitem 22217

191.1.8 CrashNiceMBS

MBS Util Plugin, Plugin Version: 4.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Crashes the application.
Notes: Does a nil object dereference which leads to a crash.

191.1.9 CrashUglyMBS

MBS Util Plugin, Plugin Version: 4.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Crashes the application.
Notes: This function should hide the stack list so it should be impossible to know what function crashed.

It may take a second to finish it, but CrashReporter (on Mac OS X) and other tools will not be able to show you which function crashed.
Blog Entries

- MBS Xojo / Real Studio Plugins, version 14.2pr1

191.1.10 DelayMBS(time as Double)

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: Stopps the application for the given time.
Example:

```
DelayMBS 1.5 // wait one and a half seconds
```

Notes: The application should take nearly 0% CPU Power till time has gone.
If you need more options like blocking other RB threads, check the DelayMBS method with mode parameter.

Another example from Kirk Clendinning:

```
Property: lastupdate as Integer

Sub YieldProcessorTime(periodticks as Integer, widthmilliseconds as Integer)
// use the Monkeybread Software delay to yeild time for a screen update
// every period*ticks for a pulse width of width milliseconds

if ticks>lastupdate+periodTicks then
delayMBS widthmilliseconds/1000
lastupdate=ticks
end if

exception err
ExceptionReport(err, "Utils:Methods:YieldProcessorTime")
end sub
```

YieldProcessorTime(15, 20) gives me a delay of 20ms every 250ms. But,
since the delayMBS yields time more efficiently than using a RB thread, this turns out to be a much more effective way to update progress bars etc.
I don't need the delay per se, but since RB still hasn't written a good yield function (that I know of) your delayMSB works instead.

Please use optional mode flags with DelayDontWaitNextEvent when using on thread.

Using DelayMBS on Web Applications can cause problems as the server is paused than for all clients, a really bad thing.
See also:

- 191.1.11 DelayMBS(time as Double, mode as Integer) 22219

191.1.11 DelayMBS(time as Double, mode as Integer)

MBS Util Plugin, Plugin Version: 6.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Stopps the application for the given time.
Example:

```
DelayMBS 1.5, 0 // wait one and a half seconds
```

Notes: Like DelayMBS with one parameter but additional mode parameter:

combine the following constants:

```
const DelayDontMPYield = 1              // Don't give additional time for other OS threads
const DelayDontRBYield = 2              // Don't give Xojo time for other Xojo threads
const DelayDontThreadYield = 4          // Don't give addition time for other OS threads
const DelayDontQuickTimeYield = 8       // Don't give time for QuickTime Movieplayer
const DelayDontWait = 16                // Don't give CPU time for other OS threads
const DelayDontWaitNextEvent = 32       // Don't give CPU time to handle events on Mac OS X to avoid beachball
                                        cursor
const DelayDontSleep = 64               // Don't give CPU time for other OS threads (Windows)
```

Using DelayDontWaitNextEvent may show the beach ball cursor, but will have the OpenDocument event working as other AppleEvents. Please use DelayDontWaitNextEvent option for running on threads.

Using DelayMBS on Web Applications can cause problems as the server is paused than for all clients, a really bad thing.

See also:

- 191.1.10 DelayMBS(time as Double) 22218

191.1.12 SleepMBS(time as Double)

MBS Util Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sleeps the current thread for the given time in seconds.
Example:

```
Var sock as TCPSocket // some socket
Var done as Boolean // some global property

do

SleepMBS(0.1) // 100 ms
sock.poll

loop until done
```

Notes: Sleep does not yield CPU time to other functions, so you really sleep the whole process.
Useful for console projects which sleep for a few milliseconds in a loop polling a socket.

If you need to give CPU time to socket, other threads or for quicktime movie playback, please use DelayMBS.
Blog Entries

- MBS Real Studio Plugins, version 11.3pr9

191.1.13 InstallSystemExceptionHandlerMBS(Message as string = "")

MBS Util Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Targets: All.

Function: Installs an exception handler to show a message dialog with custom message before the app crashes.
Example:

```
InstallSystemExceptionHandlerMBS "My message"
```

Notes: If message is empty, the default message is "An unhandled C++ exception occurred. The application will now quit. A common reason for this is simply running out of memory.".

The plugin allocates some memory which we release later to make sure there is free memory for the message box.

On Windows this method does not work as currently we use static runtime on Windows which does not allow the plugin to access the runtime inside the RB framework.
Blog Entries

- About InstallSystemExceptionHandlerMBS

191.1.14 AbortMBS

MBS Util Plugin, Plugin Version: 8.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The abort function causes abnormal program termination to occur.
Notes: Any open streams are flushed and closed.
The abort function never returns.

191.1.15 ExitMBS(code as Integer)

MBS Util Plugin, Plugin Version: 8.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Perform normal program termination.
Notes: See "man 3 exit" on the terminal on Mac OS X or Linux for details.
You define your own error codes. Zero is no error by convention.
Blog Entries

- Console and GUI in one project
- Tipp of the day: Shell SSH Trouble and Workaround

191.1.16 GlobalIdleTimeMBS as Double

MBS MacOSX Plugin, Plugin Version: 13.2, Platforms: macOS, Windows, Targets: Desktop, Console & Web.

Function: Queries the current global idle time.
Example:

```
MsgBox Format(GlobalIdleTimeMBS,"0.0")+" seconds idle"
```

Notes: The return value is the number of seconds the user did not use mouse or keyboard.
Returns 0 on any error.
Blog Entries

- MBS Xojo / Real Studio Plugins, version 13.2pr5

191.1.17 MacGlobalIdleTimeMBS as UInt64

MBS MacOSX Plugin, Plugin Version: 10.0, Platform: macOS, Targets: Desktop only.

Function: Queries the current global idle time on a Mac.
Example:

```
MsgBox Format(MacGlobalIdleTimeMBS/1000000000.0,"0.0")+" seconds idle"
```

Notes: The return value is the number of nanoseconds the user did not use mouse or keyboard.
Returns 0 on any error.

Deprecated in 13.2 plugins in favor of GlobalIdleTimeMBS.
Blog Entries

191.1.18 MacMountServerVolumeMBS(URL as string, MountDir as String, User as String, Password as String, byref Disk as FolderItem, flags as Integer) as Integer

MBS MacOSX Plugin, Plugin Version: 16.1, Platform: macOS, Targets: All.

Function: This routine will mount the server specified by url at mountDir (or the default location if mountDir is empty).
Example:

```
Var flags as Integer = 0
Var disk as FolderItem
Var URL as string = "smb://Test.local"
Var user as string = "root"
Var pass as string = "xxx"

Var e as Integer = MacMountServerVolumeMBS(URL, "", user, pass, disk, flags)

if e = 0 then
MsgBox "OK"
else
```

```
MsgBox disk.NativePath
end if
```

Notes: An optional user and password can be passed in for authentication. If no user or password is provided then the underlying file system will handle authentication if required. This routine returns after the mount is complete.

url: The server to mount.
mountDir: The directory to mount the server to (default if empty).
user: String to pass as user for authentication.
password: String to pass as password for authenticated log in.
Disk: The folderItem of the newly mounted volume.
Flags: Options (such as kFSMountServerMarkDoNotDisplay and kFSMountServerMountOnMountDir).

Constant	Value	Description
kFSMountServerMarkDoNotDisplay	1	Specify this option if you do want the volume displayed as a stand along volume in the UI.
kFSMountServerMountOnMountDir	4	Specify this option if you want the volume mounted on the mountdir passed in instead of in it.
kFSMountServerSuppressConnectionUI	&h40	Specify this option if you want to suppress connection-time UI when mounting the server volume.

Returns Mac OS X error code. Zero for success.

- MBS Xojo / Real Studio Plugins, version 16.1pr5

191.1.19 MacUnmountVolumeMBS(volume as folderItem, Force as Boolean, byref dissenter as Integer) as Integer

MBS MacOSX Plugin, Plugin Version: 16.1, Platform: macOS, Targets: All.

Function: This routine unmounts the volume specified by FolderItem.
Example:

```
Var u as Integer = VolumeCount-1
for i as Integer = 0 to u
Var v as FolderItem = volume(i)

if v.Name = "TestServer" then
Var dissenter as Integer = 0
Var e as Integer = MacUnmountVolumeMBS(v, false, dissenter)

if e = 0 then
```

```
MsgBox "Unmounted"
else
MsgBox "Failed to unmount with error "+str(e)+". The app with PID "+str(dissenter)+" blocks it."
end if
end if
next
```

Notes: If the volume cannot be unmounted the pid of the process which denied the unmount will be returned in the dissenter parameter. This routine returns after the unmount is complete.

Force: Specify true if you want the volume forcibly unmounted. Force unmounting a volume will very likely result in data loss since the volume will be ejected even if there are open files on it. This option should be reserved for situations such as the backing store for a volume is gone (so the data is lost regardless).

dissenter: pid of the process which denied the unmount if the unmount is denied.

Returns Mac OS X error code. Zero for success.

- MBS Xojo / Real Studio Plugins, version 16.1pr5

191.1.20 StartDictationMBS

MBS MacOSX Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: Starts dictation.
Notes: This is for Carbon application. For Cocoa use methods on NSApplicationMBS.
Blog Entries

- MBS Real Studio Plugins, version 13.1pr1

191.1.21 BacktraceMBS(MaxFrames as Integer = 0, skip as Integer = 2) as string()

MBS Util Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Targets: All.

Function: Queries the stack trace of the current function.
Example:

```
MsgBox Join(BacktraceMBS, EndOfLine)
```

Notes: MaxFrames: How many steps to show at maximum. Default is 128 currently.
skip: How many entries to skip. Default is 2 to not show this function.
Requires Mac OS X 10.5 or Linux.

Skip is 2 to hide this plugin function in the list.
Blog Entries

- MBS Xojo Plugins, version 20.1pr1

191.1.22 MillisecondsMBS as Double

MBS Util Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries current milliseconds time.
Notes: Like Microseconds in Xojo, but queries system functions for milliseconds counter.

191.1.23 ExitWindowsMBS(mode as Integer) as boolean

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: Shutdown a Windows PC.
Example:

```
Var b as boolean
b=ExitWindowsMBS(0)
```

Notes: Mode constants:

LOGOFF	0	Shuts down all processes running in the security context of the process that called the ExitWindows function. Then it logs the user off.
SHUTDOWN	1	Shuts down the system to a point at which it is safe to turn off the power. All file buffers have been flushed to disk, and all running processes have stopped.
REBOOT	2	Shuts down the system and then restarts the system.
FORCE	4	Forces processes to terminate. When this flag is set, the system does not send the WM_QUERYENDSESSION and WM_ENDSESSION messages. This can cause the applications to lose data. Therefore, you should only use this flag in an emergency.
POWEROFF	8	Shuts down the system and turns off the power. The system must support the power-off feature.
FORCEIFHUNG	16	(Windows 2000) Forces processes to terminate if they do not respond to the WM_QUERYENDSESSION or WM_ENDSESSION message. This flag is ignored if FORCE is used.

Returns true if successfull.

The ExitWindows function returns as soon as it has initiated the shutdown. The shutdown or logoff then proceeds asynchronously.

During a shutdown or log-off operation, applications that are shut down are allowed a specific amount of time to respond to the shutdown request. If the time expires, the system displays a dialog box that allows the user to forcibly shut down the application, to retry the shutdown, or to cancel the shutdown request. If the FORCE value is specified, the system always forces applications to close and does not display the dialog box. If the FORCEIFHUNG value is specified, the system forces hung applications to close and does not display the dialog box.

Windows NT: To shut down or restart the system, the calling process must use the AdjustTokenPrivileges function to enable the SE_SHUTDOWN_NAME privilege.
Blog Entries

- MBS Real Studio Plugins, version 12.0pr7

191.1.24 GetDoubleClickIntervalMBS as Integer

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Returns the time in ticks which makes two clicks to one double click.
Example:

```
sub MouseUp(X as Integer, Y as Integer)
Var currentClickTicks as Integer
currentClickTicks = ticks

if (currentClickTicks - lastClickTicks) <= GetDoubleClickIntervalMBS then
if abs(x - lastClickX) <= 5 and abs (y - lastClickY) <= 5 then
DoubleClick //Fire new Doubleclick event
return
end
end

lastClickTicks = currentClickTicks
lastClickX = x
lastClickY = y
MouseUp
End sub
```

Notes: Time returned in ticks. One tick is 1/60 of a second.
Blog Entries

- MBS Xojo / Real Studio Plugins, version 14.0pr1

191.1.25 GetMaximumOpenFileCountMacOSXMBS as Integer

MBS MacCF Plugin, Platforms: macOS, Linux, Targets: All.

Function: The number of simultan open files
Example:

msgbox str(GetMaximumOpenFileCountMacOSXMBS)

Notes: On Mac OS X per default a process can have 256 files open at the same time.
This function allows you to increase the number of open files. It seems that you can't have more than 10240 files open on Mac OS X.
Returns -2 if the function is not available and -1 if the current number of open files is unknown.

191.1.26 GetSystemUIModeMBS as Integer

MBS MacOSX Plugin, Plugin Version: 2.8, Platform: macOS, Targets: Desktop only.

Function: Returns the current Mac OS X System UI Mode for your application.
Notes: Returns -1 on any error.
See SetSystemUIModeMBS for more details.
Please use presentationOptions in NSApplicationMBS for Cocoa applications.

191.1.27 GetSystemUIModeOptionsMBS as Integer

MBS MacOSX Plugin, Plugin Version: 2.8, Platform: macOS, Targets: Desktop only.

Function: Returns the current Mac OS X System UI Mode options for your application.
Notes: Returns -1 on any error.
See SetSystemUIModeMBS for more details.
Please use presentationOptions in NSApplicationMBS for Cocoa applications.

191.1.28 MacCountryCodeMBS as string

MBS MacClassic Plugin, Plugin Version: 3.1, Platform: macOS, Targets: Desktop only.

Function: Returns the country code for
Example:

msgbox MacCountryCodeMBS // Shows DE in Germany.

Notes: On any error returns "".
Requires Mac OS 8.6 or newer (or Mac OS X).

Fix in Plugin version 4.0 to no longer return random strings, but now you must accept that this function may fail on Mac if it has nothing to report. (unkown reason)

191.1.29 OpenMacOSXPreferencesPaneMBS(name as string) as Integer

MBS MacOSX Plugin, Plugin Version: 2.8, Platform: macOS, Targets: Desktop only.

Function: Opens a named preference pane on Mac OS X.
Example:

```
Var e as Integer
e=OpenMacOSXPreferencesPaneMBS("Network")
```

Notes: Returns a Mac OS X error code. For example -43 if file not found, -1 if function is not available or 0 if successfull.

Possible values for Mac OS X:
UniversalAccessPref
StartupDisk
Speech
Sound
Network
MyAccount
Mouse
LoginItems
Localization
Keyboard
Internet
Ink
General
EnergySaver
DigiHubDiscs
DesktopPictures
Dock
ColorSync
QuickTime
Classic
Bluetooth
ARDPref
DateAndTime
Accounts
Displays
SoftwareUpdate
SharingPref
ScreenSaver

See content of /System/Library/PreferencePanes/ folder.

In MacOS 10.10 or newer, better use URL schemes:
https://www.mbsplugins.de/archive/2020-04-05/MacOS_System_Preference_Links
Blog Entries

191.1.30 RunningOnCarbonXMBS as boolean

MBS MacOSX Plugin, Platform: macOS, Targets: Desktop only.

Function: Returns true if we are running Carbon on Mac OS X.
Example:

```
if RunningOnCarbonXMBS then
' do Stuff for Mac OS X only
end if
```

Notes: Does always return false on Windows and Mac OS Classic.

191.1.31 SetMaximumOpenFileCountMacOSXMBS(Value as Integer)

MBS MacCF Plugin, Platforms: macOS, Linux, Targets: All.

Function: The number of simultan open files
Example:

```
SetMaximumOpenFileCountMacOSXMBS 500
```

Notes: On Mac OS X per default a process can have 256 files open at the same time.
This function allows you to increase the number of open files. It seems that you can't have more than 10240 files open on Mac OS X.

191.1.32 SetSystemUIModeMBS(mode as Integer, Options as Integer)

MBS MacOSX Plugin, Plugin Version: 2.8, Platform: macOS, Targets: Desktop only.

Function: Sets the current System UI mode for your application.
Notes: Details from Apple's documentation:

Sets the presentation mode for system-provided user interface elements.

The presentation mode of an application determines which system-provided user interface elements are visible on thes screen. When the frontmost application changes its presentation mode, a kEventAppSystemUIModeChanged Carbon event is sent to all applications that have registered for the event. This event is also sent when an application is activated; it contains the newly active application's presentation mode.

Note that the system UI mode is a per-process state. Switching from a process that is suppressing system UI to another processthat is not will cause system UI elements to become visible automatically. Switching back to the first process will suppress system UI elements again.

The modes available:

kUIModeNormal	0	In this mode, all standard system UI elements are visible.
kUIModeContentSuppressed	1	In this mode, system UI elements which cover the "content area" of the screen (the area other than the menubar) are hidden. However, these elements may automatically show themselves in response to mouse movements or other user activity; specifically, the Dock will still show itself automatically when the mouse moves into the Dock's auto-show region.
kUIModeContentHidden	2	In this mode, system UI elements which cover the "content area" of the screen (the area other than the menubar) are hidden. Unlike kUIModeContentSuppressed, most UI elements will not automatically show themselves in this mode.
kUIModeAllHidden	3	In this mode, all system UI elements, including the menubar, are hidden. Most system UI elements will not automatically show themselves in this mode. The application may request that the menubar automatically show itself while in this mode by passing the kUIOptionAutoShowMenuBar flag to SetSystemUIMode.

The options which you can combine:

Please use presentationOptions in NSApplicationMBS for Cocoa applications.

191.1.33 ShowCharacterPaletteMBS

MBS MacOSX Plugin, Plugin Version: 4.1, Platform: macOS, Targets: Desktop only.

Function: Shows the character palette.
Example:

ShowCharacterPaletteMBS

Notes: Works on Mac OS X 10.3 and newer.

kUIOptionAutoShowMenuBar	1	Requests that the menubar automatically show itself when the user moves the mouse into the screen area that would ordinarily be occupied by the menubar. Only valid with kUIModeAllHidden.
kUIOptionAnimateMenuBar	2	Requests that the menubar animate on or offscreen, if the UIMode is also being changed such that the menubar will change visibility. Unlike other UI options, this option is not stored and only affects the behavior of this call to SetSystemUIMode. Valid for all modes. Available in Mac OS X 10.7 and later.
kUIOptionDisableAppleMenu	4	Disables all items in the Apple menu. Valid for all modes.
kUIOptionDisableProcessSwitch	8	The active application may not be changed while this process is active. Currently disables the Command-Tab and Command-Shift-Tab key sequences to switch the active process, and the global window rotation key sequence selected by the user in the Keyboard preference pane. SetFrontProcess may still be used to explicitly switch the active process. Only valid with modes other than kUIModeNormal.
kUIOptionDisableForceQuit	16	The Force Quit window may not be displayed while this process is active. Currently disables the Command-Option-Escape key sequence to open the Force Quit window and the Force Quit menu item in the Apple menu. Only valid with modes other than kUIModeNormal.
kUIOptionDisableSessionTerminate	32	The current login session may not be terminated while this process is active. Currently disables the Power key and the Restart, Shut Down, and Log Out menu items in the Apple menu. Only valid with modes other than kUIMode-Normal.

We have no way to close this window.

191.1.34 SystemControlByNameMBS(name as string) as memoryblock

MBS MacCF Plugin, Plugin Version: 6.2, Platforms: macOS, Linux, Targets: All.

Function: The SystemControlByNameMBS function retrieves system information and allows processes with appropriate privileges to set system information.
Example:

```
Var m1 as MemoryBlock = SystemControlByNameMBS("hw.physicalcpu")
Var m2 as MemoryBlock = SystemControlByNameMBS("hw.logicalcpu")

MsgBox "physicalcpu: "+str(m1.Long(0))+EndOfLine+"logicalcpu: "+str(m2.Long(0))
```

Notes: The name is given as an ASCII string.
Returns nil on any error.
See also:

- 191.1.35 SystemControlByNameMBS(name as string, input as memoryblock) as memoryblock 22232

191.1.35 SystemControlByNameMBS(name as string, input as memoryblock) as memoryblock

MBS MacCF Plugin, Plugin Version: 6.2, Platforms: macOS, Linux, Targets: All.

Function: The SystemControlByNameMBS function retrieves system information and allows processes with appropriate privileges to set system information.
Notes: The name is given as an ASCII string.
Returns nil on any error.
See also:

- 191.1.34 SystemControlByNameMBS(name as string) as memoryblock 22231

191.1.36 SystemControlMBS(name as memoryblock) as memoryblock

MBS MacCF Plugin, Plugin Version: 6.2, Platforms: macOS, Linux, Targets: All.

Function: The SystemControlMBS function retrieves system information and allows processes with appropriate privileges to set system information.
Example:

```
Function IsRosetta() As boolean
Const CTL_HW = 6
Const HW_MODEL = 2

Var mib,m as MemoryBlock

mib=newMemoryBlock(8)
mib.Long(0) = CTL_HW
mib.Long(4) = HW_MODEL

m=SystemControlMBS(mib)
if m<>nil then
if m.CString(0)="PowerMac" then
Return true
end if
end if
End Function
```

Notes: name is a MIB which can be constructed or queried with SystemControlNameToMIBMBS.
Returns nil on any error.
See also:

- 191.1.37 SystemControlMBS(name as memoryblock, input as memoryblock) as memoryblock 22233

191.1.37 SystemControlMBS(name as memoryblock, input as memoryblock) as memoryblock

MBS MacCF Plugin, Plugin Version: 6.2, Platforms: macOS, Linux, Targets: All.

Function: The SystemControlMBS function retrieves system information and allows processes with appropriate privileges to set system information.
Notes: Returns nil on any error.
name is a MIB which can be constructed or queried with SystemControlNameToMIBMBS.

- 191.1.36 SystemControlMBS(name as memoryblock) as memoryblock 22232

191.1.38 SystemControlNameToMIBMBS(name as string) as memoryblock

MBS MacCF Plugin, Plugin Version: 6.2, Platforms: macOS, Linux, Targets: All.

Function: Searches the given MIB for the given name.
Notes: Name is an ASCII string.
Returns nil on any error.
Blog Entries

- MBS Real Studio Plugins, version 13.1pr12

191.1.39 WindowsSystemMetricsMBS(what as Integer) as Integer

MBS Win Plugin, Plugin Version: 3.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The WindowsSystemMetrics function retrieves various system metrics (widths and heights of display elements) and system configuration settings.
Example:

```
const SM_CYSMICON = 50

MsgBox str(WindowsSystemMetricsMBS(SM_CYSMICON))
```

Notes: All dimensions retrieved by GetSystemMetrics are in pixels.
If the function fails, the return value is zero.

Values for the what parameter:

The SM_ARRANGE setting specifies how the system arranges minimized windows, and consists of a starting position and a direction. The starting position can be one of the following values:

The direction in which to arrange can be one of the following values:

see also
http://msdn.microsoft.com/en-us/library/windows/desktop/ms724385(v=vs.85).aspx

191.1.40 IsWindows95MBS as boolean

MBS Win Plugin, Plugin Version: 5.4, Platform: Windows, Targets: Desktop, Console & Web.

Deprecated: This item is deprecated and should no longer be used. **Function:** Checks whether operation system is Windows 95/98/ME.
Example:

```
if IsWindows95MBS then
MsgBox "Windows 95/98/ME"
else
MsgBox "no Windows 95/98/ME"
end if
```

Notes: Returns true or false on Windows and alway false on other platforms.
Blog Entries

- MBS Xojo Plugins, version 20.6pr4

191.1.41 IsWindowsAdminUserMBS as boolean

MBS Win Plugin, Plugin Version: 5.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Checks whether the current user is an Admin User on Windows.
Example:

```
if IsWindowsAdminUserMBS then
MsgBox "Is admin user."
else
MsgBox "no admin user."
end if
```

Notes: Returns true or false on Windows and alway false on other platforms.

191.1.42 IsWindowsNTMBS as boolean

MBS Win Plugin, Plugin Version: 5.4, Platform: Windows, Targets: Desktop, Console & Web.

Deprecated: This item is deprecated and should no longer be used. **Function:** Checks whether operation system is Windows NT/2000/XP.
Example:

```
if IsWindowsNTMBS then
MsgBox "Windows NT/2000/XP"
else
MsgBox "no Windows NT/2000/XP"
end if
```

Notes: Returns true or false on Windows and alway false on other platforms.
Blog Entries

- MBS Xojo Plugins, version 20.6pr4

191.1.43 WindowsGetProcessIntegrityLevelMBS as Integer

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The function gets the integrity level of the current process.
Example:

```
msgbox str(WindowsGetProcessIntegrityLevelMBS)
```

Notes: Integrity level is only available on Windows Vista and newer operating systems, thus GetProcessIntegrityLevel throws a C++ exception if it is called on systems prior to Windows Vista.

Returns the integrity level of the current process. It is usually one of these values:

191.1.44 WindowsIsApplicationRunAsAdminMBS as boolean

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The function checks whether the current process is run as administrator.
Example:

msgbox str(WindowsIsApplicationRunAsAdminMBS)

Notes: In other words, it dictates whether the primary access token of the process belongs to user account that is a member of the local Administrators group and it is elevated.

Returns true if the primary access token of the process belongs to user account that is a member of the local Administrators group and it is elevated. Returns false if the token does not.
Blog Entries

- MBS REALbasic Plugins Version 10.4 release notes
- Windows Admin functions
- MBS REALbasic Plugins, version 10.4pr3

191.1.45 WindowsIsProcessElevatedMBS as boolean

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The function gets the elevation information of the current process.
Example:

msgbox str(WindowsIsProcessElevatedMBS)

Notes: It dictates whether the process is elevated or not. Token elevation is only available on Windows Vista and newer operating systems, thus IsProcessElevated returns always false if it is called on systems prior to Windows Vista. It is not appropriate to use this function to determine whether a process is run as administrator.

Returns true if the process is elevated. Returns false if it is not.

191.1.46 WindowsIsUserInAdminGroupMBS as boolean

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The function checks whether the primary access token of the process belongs to user account that is a member of the local Administrators group, even if it currently is not elevated.
Example:

msgbox str(WindowsIsUserInAdminGroupMBS)

Notes: Returns true if the primary access token of the process belongs to user account that is a member of the local Administrators group. Returns false if the token does not.

191.2 module BuildConstantsMBS

191.2.1 module BuildConstantsMBS

MBS Main Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: A module with build constants for you.
Example:

MsgBox BuildConstantsMBS.DateTime

Notes: This module provides the date and time when the plugin was loaded to the Xojo IDE.
You can use this constant to know in your application when it was built. Not exactly, but within a few hours exact.
The examples above show when this page was rendered with our documentation tool.
Blog Entries

- MBS REALbasic Plugins, version 10.6pr8
- Build Time Constants

191.2.2 Constants

Constants

Constant	Value	Description
Date	"12. 1.2026"	The constant for the date. Format is dd.mm.yyyy like 24.12.2010. This is the date when the plugin was loaded to the Xojo IDE. You can use this constant to know in your application when it was built. Not exactly, but within a few hours exact.
DateTime	"Mon Jan 12 10:41:58 2026"	The constant for the date and time. This is the time when the plugin was loaded to the Xojo IDE. You can use this constant to know in your application when it was built. Not exactly, but within a few hours exact.
Day	12	The day.
Hour	10	The hour.
Minute	41	The minute.
Month	1	The month.
Second	58	The second.
Time	"10:41:58"	The constant for the time. Format is like hh:mm:ss like 11:22:33. This is the time when the plugin was loaded to the Xojo IDE. You can use this constant to know in your application when it was built. Not exactly, but within a few hours exact.
Year	2026	The year.

SM_ARRANGE	56	Flags specifying how the system arranged minimized windows. For more information about minimized windows, see the following Remarks section.
SM_CLEANBOOT	67	Value that specifies how the system was started: 0 Normal boot; 1 Fail-safe boot; 2 Fail-safe with network boot; Fail-safe boot (also called SafeBoot) bypasses the user's startup files.
SM_CMETRICS	83	(Windows 2000 or newer)
SM_CMONITORS	80	Number of display monitors on the desktop. (Windows 2000 or newer)
SM_CMOUSEBUTTONS	43	Number of buttons on mouse, or zero if no mouse is installed.
SM_CXBORDER	5	Width, in pixels, of a window border.
SM_CXCURSOR	13	Width, in pixels, of a cursor. The system cannot create cursors of other sizes.
SM_CXDLGFRAME	7	Thickness, in pixels, of the sizing border around the perimeter of a window that can be resized. (or SM_CXFIXEDFRAME)
SM_CXDOUBLECLK	36	Width, in pixels, of the rectangle around the location of a first click in a double-click sequence. The second click must occur within this rectangle for the system to consider the two clicks a double-click. (The two clicks must also occur within a specified time.)
SM_CXDRAG	68	Width, in pixels, of a rectangle centered on a drag point to allow for limited movement of the mouse pointer before a drag operation begins. This allows the user to click and release the mouse button easily without unintentionally starting a drag operation.
SM_CXEDGE	45	Width, in pixels, of a 3-D border.
SM_CXFRAME	32	Thickness, in pixels, of the sizing border around the perimeter of a window that can be resized. (or SM_CXSIZEFRAME)
SM_CXFULLSCREEN	16	Width of the client area for a full-screen window on the primary display monitor.
SM_CXHSCROLL	21	Width, in pixels, of the arrow bitmap on a horizontal scroll bar.
SM_CXHTHUMB	10	Width, in pixels, of the thumb box in a horizontal scroll bar.
SM_CXICON	11	The default width, in pixels, of an icon. TheLoadIcon function can load only icons of these dimensions.
SM_CXICONSPACING	38	Width, in pixels, of a grid cell for items in large icon view. Each item fits into a rectangle of this size when arranged. These values are always greater than or equal to SM_CXICON and SM_CYICON.
SM_CXMAXIMIZED	61	Default width, in pixels, of a maximized top-level window on the primary display monitor.
SM_CXMAXTRACK	59	Default maximum width, in pixels, of a window that has a caption and sizing borders. This metric refers to the entire desktop. The user cannot drag the window frame to a size larger than these dimensions.
SM_CXMENUCHECK	71	Width, in pixels, of the default menu check-mark bitmap.
SM_CXMENUSIZE	54	Width, in pixels, of menu bar buttons, such as the child window close button used in the multiple document interface.
SM_CXMIN	28	Minimum width, in pixels, of a window.
SM_CXMINIMIZED	57	Width, in pixels, of a normal minimized window.
SM_CXMINSPACING	47	Width, in pixels, of a grid cell for minimized windows. Each minimized window fits into a rectangle this size when arranged. These values are always greater than or equal to SM_CXMINIMIZED and SM_CYMINIMIZED.
SM_CXMINTRACK	34	Minimum tracking width, in pixels, of a window. The user cannot drag the window frame to a size smaller than these dimensions. A window can override these values by processing the WM_GETMINMAXINFO message.
SM_CXSCREEN	0	Width, in pixels, of the screen of the primary display monitor.
SM_CXSIZE	30	Width, in pixels, of a button in a window's caption or title bar.
SM_CXSMICON	49	Recommended width, in pixels, of a small icon. Small icons typically appear in window captions and in small icon view.
SM_CXSMSIZE	52	Width, in pixels, of small caption buttons.
SM_CXVIRTUALSCREEN	78	Width, in pixels, of the virtual screen. The virtual screen is the bounding rectangle of all display monitors. (Windows 98/ME and 2000 or newer)
SM_CXVSCROLL	2	Width, in pixels, of a vertical scroll bar; and height, in pixels, of the arrow bitmap on a vertical scroll bar.
SM_CYBORDER	6	Height, in pixels, of a window border.
SM_CYCAPTION	4	Height, in pixels, of a normal caption area.
SM_CYCURSOR	14	Height, in pixels, of a cursor. The system cannot create cursors of other sizes.
SM_CYDLGFRAME	8	Thickness, in pixels, of the frame around the perimeter of a window that has a caption but is not sizable. (or SM_CYFIXEDFRAME)
SM_CYDOUBLECLK	37	Height, in pixels, of the rectangle around the location of a first click in a double-click sequence. The second click must occur within this rectangle for the system to consider the two clicks a double-click. (The two clicks must also occur within a specified time.)
SM_CYDRAG	69	Height, in pixels, of a rectangle centered on a drag point to allow for limited movement of the mouse pointer before a drag operation begins. This allows the user to click and release the mouse button easily without unintentionally starting a drag operation.
SM_CYEDGE	46	Height, in pixels, of a 3-D border.

ARW_BOTTOMLEFT	0x0000L	Start at the lower-left corner of the screen (default position).
ARW_BOTTOMRIGHT	0x0001L	Start at the lower-right corner of the screen. Equivalent to ARW_STARTRIGHT.
ARW_HIDE	0x0008L	Hide minimized windows by moving them off the visible area of the screen.
ARW_TOPLEFT	0x0002L	Start at the upper-left corner of the screen. Equivalent to ARV_STARTTOP.
ARW_TOPRIGHT	0x0003L	Start at the upper-right corner of the screen. Equivalent to ARW_STARTTOP | SRW_STARTRIGHT.

ARW_DOWN	0x0004L	Arrange vertically, top to bottom.
ARW_LEFT	0x0000L	Arrange horizontally, left to right.
ARW_RIGHT	0x0000L	Arrange horizontally, right to left.
ARW_UP	0x0004L	Arrange vertically, bottom to top.

SECURITY_MANDATORY_UNTRUSTED_RID	= &h0	Means untrusted level. It is used by processes started by the Anonymous group. Blocks most write access.
SECURITY_MANDATORY_LOW_RID	= &h1000	Means low integrity level. It is used by Protected Mode Internet Explorer. Blocks write access to most objects (such as files and registry keys) on the system.
SECURITY_MANDATORY_MEDIUM_RID	= &h2000	Means medium integrity level. It is used by normal applications being launched while UAC is enabled.
SECURITY_MANDATORY_HIGH_RID	= &h3000	Means high integrity level. It is used by administrative applications launched through elevation when UAC is enabled, or normal applications if UAC is disabled and the user is an administrator.
SECURITY_MANDATORY_SYSTEM_RID	= &h4000	Means system integrity level. It is used by services and other system-level applications (such as Wininit, Winlogon, Smss, etc.)

191.3 class DCDeviceMBS

191.3.1 class DCDeviceMBS

MBS iOS Plugin, Plugin Version: 23.0, Platforms: macOS, iOS, Targets: All.

Function: A representation of a device that provides a unique, authenticated token.
Notes: Use the shared instance of the DCDevice class to generate a token that identifies a device. Call the generateToken method to get the token, and then send it to your server.

On your server, combine the token with an authentication key that you obtain from Apple, and use the result to request access to two per-device binary digits (bits). After authenticating the device, Apple passes the current values of the bits, along with the date they were last modified, to your server. Your server applies its business logic to this information and communicates the results to your app. For more information about server-side procedures, see Accessing and Modifying Per-Device Data.

To use the DCDevice class, your app must have an app ID that you register on the Apple Developer website.

Apple records the bits for you, and reports the bits back to you, but you,Äôre responsible for keeping track of what the bits mean. You,Äôre also responsible for determining when to reset the bits for a given device; for example, when a user sells the device to someone else.
Blog Entries

- News from the MBS Xojo Plugins in Version 23.0

- MBS Xojo Plugins, version 22.6pr1

Xojo Developer Magazine

- 21.3, page 10: News
- 21.2, page 9: News

191.3.2 Methods

191.3.3 available as boolean

MBS iOS Plugin, Plugin Version: 23.0, Platforms: macOS, iOS, Targets: All.

Function: Whether the class is available.
Example:

MessageBox "available: "+DCDeviceMBS.available.ToString

Notes: Returns true on macOS 10.15 and newer and iOS 11.0 or newer.

191.3.4 Constructor

MBS iOS Plugin, Plugin Version: 23.0, Platforms: macOS, iOS, Targets: All.

Function: The constructor.
Notes: Initializes the object pointing to the current device one internally.

191.3.5 currentDevice as DCDeviceMBS

MBS iOS Plugin, Plugin Version: 23.0, Platforms: macOS, iOS, Targets: All.

Function: A representation of the device for which you want to query the two bits of data.

191.3.6 generateToken(CompleteHandler as GenerateTokenCompletedMBS, tag as variant = nil)

MBS iOS Plugin, Plugin Version: 23.0, Platforms: macOS, iOS, Targets: All.

Function: Generates a token that identifies the current device.
Notes: Calls GenerateTokenCompletedMBS event later when done.

Your server uses the generated token in its requests to get or set the persistent bits for the current device. You should treat the token you receive in the completion block as single-use. Although the token remains valid long enough for your server to retry a specific request if necessary, you should not use a token multiple times. Instead, use this method to generate a new token.

The app you use to generate the token must be associated with your developer account; otherwise, the generation request fails.

191.3.7 Properties

191.3.8 Handle as Integer

MBS iOS Plugin, Plugin Version: 23.0, Platforms: macOS, iOS, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

191.3.9 Supported as Boolean

MBS iOS Plugin, Plugin Version: 23.0, Platforms: macOS, iOS, Targets: All.

Function: A Boolean value that indicates whether the device supports the DeviceCheck API.
Example:

MessageBox "Supported: "+DCDeviceMBS.currentDevice.Supported.ToString

Notes: For iOS 11.0 or newer and macOS 10.15 or newer.
(Read only property)

191.3.10 Constants

Errors

Constant	Value	Description
ErrorFeatureUnsupported	1	The feature is not supported on this device.
ErrorInvalidInput	2	Input to the server process was invalid.
ErrorInvalidKey	3	The key used is invalid.
ErrorServerUnavailable	4	The server application to talk to is not available.
ErrorUnknownSystemFailure	0	Unknown error in system.

191.3.11 Delegates

191.3.12 GenerateTokenCompletedMBS(token as MemoryBlock, Error as NSErrorMBS, Tag as Variant)

MBS iOS Plugin, Plugin Version: 23.0, Platforms: macOS, iOS, Targets: All.

Function: The event called asynchronously from generateToken when work is done.
Notes: token: An ephemeral token that identifies the current device.
error: The error that occurred, if any.

Your server uses the generated token in its requests to get or set the persistent bits for the current device. You should treat the token you receive in the completion block as single-use. Although the token remains valid long enough for your server to retry a specific request if necessary, you should not use a token multiple times. Instead, use this method to generate a new token.

The app you use to generate the token must be associated with your developer account; otherwise, the generation request fails.

191.4 class GlobalExceptionHandlerMBS

191.4.1 class GlobalExceptionHandlerMBS

MBS Util Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Installs an exception handler to show a message dialog with custom message before the app crashes.
Notes: The plugin allocates some memory which we release later to make sure there is free memory for the message box.

On Windows this method does not work as currently we use static runtime on Windows which does not allow the plugin to access the runtime inside the RB framework.

See also WinExceptionMBS, NSExceptionHandlerMBS and SignalHandlerMBS classes.

191.4.2 Events

191.4.3 GotException

MBS Util Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Called when an unhandled C++ exception was raised.
Notes: Your application is in a very instable state when this event is called. Don't do much here and quit soon with ExitMBS/AbortMBS.

191.5 class LinuxSysInfoMBS

191.5.1 class LinuxSysInfoMBS

MBS Linux Plugin, Plugin Version: 12.1, Platform: Linux, Targets: Desktop, Console & Web.

Function: The class to query memory and processor statistics.
Example:

```
Var l as new LinuxSysInfoMBS

MsgBox str(l.FreeRam)+" bytes free."
```

- 10.4, page 9: News

191.5.2 Methods

191.5.3 Constructor

MBS Linux Plugin, Plugin Version: 12.1, Platform: Linux, Targets: Desktop, Console & Web.

Function: Queries values and fills properties.

191.5.4 loads(index as Integer) as Double

MBS Linux Plugin, Plugin Version: 12.1, Platform: Linux, Targets: Desktop, Console & Web.

Function: 1, 5, and 15 minute load averages.

191.5.5 Properties

191.5.6 availablePhysicalPages as Integer

MBS Linux Plugin, Plugin Version: 12.1, Platform: Linux, Targets: Desktop, Console & Web.

Function: Return number of available physical pages of memory in the system.
Notes: (Read only property)

191.5.7 BufferRam as UInt64

MBS Linux Plugin, Plugin Version: 12.1, Platform: Linux, Targets: Desktop, Console & Web.

Function: Memory used by buffers.
Notes: (Read only property)

191.5.8 FreeHigh as UInt64

MBS Linux Plugin, Plugin Version: 12.1, Platform: Linux, Targets: Desktop, Console & Web.

Function: Available high memory size.
Notes: (Read only property)

191.5.9 FreeRam as UInt64

MBS Linux Plugin, Plugin Version: 12.1, Platform: Linux, Targets: Desktop, Console & Web.

Function: Available memory size.
Example:

```
Var l as new LinuxSysInfoMBS

MsgBox str(l.FreeRam)+" bytes free."
```

Notes: (Read only property)

191.5.10 FreeSwap as UInt64

MBS Linux Plugin, Plugin Version: 12.1, Platform: Linux, Targets: Desktop, Console & Web.

Function: Swap space still available.
Notes: (Read only property)

191.5.11 MemoryUnit as UInt64

MBS Linux Plugin, Plugin Version: 12.1, Platform: Linux, Targets: Desktop, Console & Web.

Function: Memory unit size in bytes.
Notes: (Read only property)

191.5.12 NumberOfProcesses as Integer

MBS Linux Plugin, Plugin Version: 12.1, Platform: Linux, Targets: Desktop, Console & Web.

Function: Number of current processes.
Example:

```
Var l as new LinuxSysInfoMBS

MsgBox str(l.NumberOfProcesses)+" processes"
```

Notes: (Read only property)

191.5.13 NumberOfProcessors as Integer

MBS Linux Plugin, Plugin Version: 12.1, Platform: Linux, Targets: Desktop, Console & Web.

Function: Return number of available processors.
Example:

```
Var l as new LinuxSysInfoMBS

MsgBox str(l.NumberOfProcessors)+" processors"
```

Notes: (Read only property)

191.5.14 NumberOfProcessorsConfigured as Integer

MBS Linux Plugin, Plugin Version: 12.1, Platform: Linux, Targets: Desktop, Console & Web.

Function: Return number of configured processors.
Notes: (Read only property)

191.5.15 PhysicalPages as Integer

MBS Linux Plugin, Plugin Version: 12.1, Platform: Linux, Targets: Desktop, Console & Web.

Function: Return number of physical pages of memory in the system.
Notes: (Read only property)

191.5.16 SharedRam as UInt64

MBS Linux Plugin, Plugin Version: 12.1, Platform: Linux, Targets: Desktop, Console & Web.

Function: Amount of shared memory.
Notes: (Read only property)

191.5.17 TotalHigh as UInt64

MBS Linux Plugin, Plugin Version: 12.1, Platform: Linux, Targets: Desktop, Console & Web.

Function: Total high memory size.
Notes: (Read only property)

191.5.18 TotalRam as UInt64

MBS Linux Plugin, Plugin Version: 12.1, Platform: Linux, Targets: Desktop, Console & Web.

Function: Total usable main memory size.
Notes: (Read only property)

191.5.19 TotalSwap as UInt64

MBS Linux Plugin, Plugin Version: 12.1, Platform: Linux, Targets: Desktop, Console & Web.

Function: Total swap space size.
Notes: (Read only property)

191.5.20 upTime as Integer

MBS Linux Plugin, Plugin Version: 12.1, Platform: Linux, Targets: Desktop, Console & Web.

Function: Seconds since boot.
Notes: (Read only property)

191.5.21 Valid as Boolean

MBS Linux Plugin, Plugin Version: 12.1, Platform: Linux, Targets: Desktop, Console & Web.

Function: Whether constructor got values.
Notes: Should be true on Linux and false on other platforms.
(Read only property)

191.6 class SignalHandlerMBS

191.6.1 class SignalHandlerMBS

MBS Util Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: A signal handler for an unix signal.
Notes: You can use this class to catch signals like SIGALRM oder SIGQUIT.

See
http://en.wikipedia.org/wiki/Signal_(computing)

See also WinExceptionMBS, NSExceptionHandlerMBS and GlobalExceptionHandlerMBS classes.

Xojo Developer Magazine

- 12.2, page 10: News

191.6.2 Methods

191.6.3 alarm(seconds as Integer)

MBS Util Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Targets: All.

Function: Set signal timer alarm.
Example:

SignalHandlerMBS.alarm 1

Notes: The alarm() function sets a timer to deliver the signal SIGALRM to the calling process after the specified number of seconds. If an alarm has already been set with alarm() but has not been delivered,

another call to alarm() will supersede the prior call. The request alarm(0) voids the current alarm and the signal SIGALRM will not be delivered.

Due to setitimer restriction the maximum number of seconds allowed is 100000000.

alarm sends signal 14 after the time out.

191.6.4 ClearFlag(signalIndex as Integer)

MBS Util Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Clears the flag with given index.
Notes: Please call this after you got IsFlagSet.

191.6.5 ClearFlags

MBS Util Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Clears all flags.

191.6.6 ClearStacktrace(signalIndex as Integer)

MBS Util Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Targets: All.

Function: Clears stored stack trace for the signal with given index.

191.6.7 Close

MBS Util Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Targets: All.

Function: Releases this object's resources.

191.6.8 IsFlagSet(signalIndex as Integer) as boolean

MBS Util Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Checks if a given flag was set.

191.6.9 QueryStacktrace(signalIndex as Integer, skip as Integer = 2) as string()

MBS Util Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Targets: All.

Function: Queries stack at the time the signal handler was triggered.
Notes: Useful to know later which code got the signal.
Works for flag handlers and for the event handlers if enabled.

191.6.10 SendSignal(PID as Integer, Signal as Integer) as boolean

MBS Util Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Targets: All.

Function: Sends a signal.
Example:

```
// send signal to a process
// PID is 17779 here
// 9 means kill on Mac OS X
call SignalHandlerMBS.SendSignal(17779, 9)
```

Notes: Returns true on success and false on failure.
Without a signal handler the target app could quit.

Lookup signal.h for the list of signals. They can be different on Mac and Linux.

191.6.11 SendSignalToSelf(Signal as Integer) as boolean

MBS Util Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Targets: All.

Function: Send a signal to the current process
Notes: Returns true on success and false on failure.
Without a signal handler the target app could quit.

191.6.12 SetDefaultHandler(signalIndex as Integer) as boolean

MBS Util Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Targets: All.

Function: Defines to use the default handler for the given signal number.
Example:

```
Const SIGALRM = 14
if SignalHandlerMBS.SetDefaultHandler(SIGALRM) then
MsgBox "Done"
```

```
else
MsgBox "Failed"
end if
```

Notes: Returns true on success and false on failure.

191.6.13 SetEventHandler(signalIndex as Integer, CollectStackTrace as boolean = false) as boolean

MBS Util Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Targets: All.

Function: Defines to call the Signal Event whenever a signal with the given number is received.
Notes: Returns true on success and false on failure.
If CollectStackTrace is true, you can later use QueryStacktrace to get the stack trace from the time the signal was captured.

191.6.14 SetFlagHandler(signalIndex as Integer, CollectStackTrace as boolean = false) as boolean

MBS Util Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Targets: All.

Function: Defines to set the flag whenever a signal with the given number is received.
Notes: Returns true on success and false on failure.
Please use IsFlagSet in your app regularly to check if the flag was set.

If CollectStackTrace is true, you can later use QueryStacktrace to get the stack trace from the time the signal was captured.

191.6.15 SetIgnore(signalIndex as Integer) as boolean

MBS Util Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Targets: All.

Function: Defines to ignore the event with the given number.
Example:

```
Const SIGALRM = 14
if SignalHandlerMBS.SetIgnore(SIGALRM) then
MsgBox "Done"
else
MsgBox "Failed"
end if
```

Notes: Returns true on success and false on failure.

191.6.16 SetPrintBacktraceAndAbortHandler(signalIndex as integer) as boolean

MBS Util Plugin, Plugin Version: 24.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Defines to use the plugin handler for the given signal number.
Example:

```
Call SignalHandlerMBS.SetPrintBacktraceAndAbortHandler(4) // illegal instruction
Call SignalHandlerMBS.SetPrintBacktraceAndAbortHandler(10) // bus error
Call SignalHandlerMBS.SetPrintBacktraceAndAbortHandler(11) // segmentation fault

// now cause a crash
Var p As ptr = Nil
p.Int32(0) = 0
```

Notes: The signal is handled by the plugin. We print the backtrace and abort.
We write details to a crash.txt file in the current folder.

191.6.17 SignalStatus(signalIndex as Integer) as Integer

MBS Util Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Targets: All.

Function: Queries the signal state.
Notes: Returns 0 (unknown), kSignalDefault, kSignalEvent, kSignalFlag or kSignalIgnored.

191.6.18 Events

191.6.19 Signal(n as Integer)

MBS Util Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Targets: All.

Function: A signal was called and you set an event handler.
Example:

```
Sub Signal(n as Integer)
// restore system handler in case we get that crash again!

MySignalHandlerMBS.SetDefaultHandler n

// Mac and Linux can have different signal numbers:
```

```
#if TargetMacOS then
Var c as string = "Signal "+str(n)+" on Mac OS X"
#elseif TargetLinux then
Var c as string = "Signal "+str(n)+" on Linux"
#else
Var c as string = "Signal "+str(n)+" on ?"
#endif

Var BackTraceLines() as string
#if mbs.BuildNumber>17662 and not TargetWin32 then // new in 13.0 plugins
BackTraceLines = BacktraceMBS
#endif

// show your bug reporter (or the MBS one)
'dim b as new Bugreporter
'b.ShowExceptionReporter c, BackTraceLines

// quit now without cleaning up the RB runtime which may crash again
ExitMBS 1
End Sub
```

Notes: This function may be called at any time, so you need to use code which is thread safe. (see ThreadMBS class)

191.6.20 Constants

Signal Handler Modes

Constant	Value	Description
kSignalDefault	1	The signal calls default handler.
kSignalEvent	3	The signal raises an event and sets the flag.
kSignalFlag	4	The signal sets a flag.
kSignalIgnored	2	The signal is ignored.
kSignalPrintBacktraceAndAbort	8	The signal is handled by the plugin. We print the backtrace and abort.

191.7 module SystemInformationMBS

191.7.1 module SystemInformationMBS

MBS Util Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: A module to collect all the system information functions.
Example:

msgbox "Welcome "+SystemInformationMBS.Username+"!"

191.7.2 Methods

191.7.3 AvailableRAM as Double

MBS Util Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the size of the available memory.
Example:

msgBox format(SystemInformationMBS.AvailableRAM/1024/1024,"0")+" MB of RAM free."

Notes: This function is useful if you want to know how much memory you can allocate without the system swapping.

On Windows, Mac OS X and Linux you can normally allocate up to 2 or 3 GB of memory in your address-room. A swap file on disc is used to cache memory which does not fit into physical memory.

So if you need to allocate a buffer to store temporary data, you can use this function to calculate a good size.
For example a file copy function could use something like this:

```
// a quarter of free memory is good to leave room for some OS buffers:
buffersize=SystemInformationMBS.AvailableRAM/4

// minimum 4 MB
if buffersize<1024*1024*4 then
buffersize<1024*1024*4
end if

// maximum 128 MB to make chunks not too big and application too unresponsible
if buffersize<1024*1024*128 then
buffersize<1024*1024*128
end if
```

In older plugins this function was named AvailableRAMMBS.

191.7.4 BusSpeed as Double

MBS Util Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns the speed of the System bus in Hz.
Example:

msgbox "Your main CPU has "+format(SystemInformationMBS.BusSpeed/1000000.0,"0")+" MHz"

191.7.5 Computername as string

MBS Util Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Returns the name of the computer.
Example:

msgbox "Hi, I'm "+SystemInformationMBS.Computername+"."

Notes: On Mac OS, the name is queried in this order:
1. Try to ask the Mac OS X Corefoundation for the name.
2. Try to ask via AppleEvents the Finder or FileSharing.
3. Read it from the system resources.

On Linux or Windows the system name.

In older plugins this function was named ComputerNameMBS.

191.7.6 CPUBrandString as string

MBS Util Plugin, Plugin Version: 10.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the CPU brand string.
Example:

MsgBox SystemInformationMBS.CPUBrandString

Notes: If it is an Intel x86 Chip or something compatible, you get strings like this: "Intel(R) Core(TM) i7 CPU M 620 @ 2.67GHz" (Same as CPUIDMBS.BrandString). But on PowerPC chips we return strings like "PowerPC G5 (970MP)" (same as CPUInfoMBS.CPUName).

May return "" if the processor is unknown.

191.7.7 CPUSpeed as Double

MBS Util Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Returns the Speed of the main CPU in Hz.
Example:

msgbox "Your main CPU has "+format(SystemInformationMBS.CPUSpeed/1000000.0,"0")+" MHz"

191.7.8 DomainName as string

MBS Util Plugin, Plugin Version: 10.1, Platform: Windows, Targets: All.

Function: Returns the domain name of a Windows PC.
Example:

msgbox SystemInformationMBS.DomainName

Notes: Returns an empty string on any error.

191.7.9 HardDiscSerial as string

MBS Util Plugin, Plugin Version: 10.3, Platforms: macOS, Windows, Targets: Desktop, Console & Web.

Function: Returns the hard disc serial number of the first hard disc which has a serial number.
Example:

MsgBox SystemInformationMBS.HardDiscSerial

Notes: This function can return "" if nothing is found.
Seems to return always empty string on Mac OS X 10.4 as the system properties dictionary does not contain the serial number there.

On Windows this function sometimes returns empty string, but later works again on the same machine. Reason unknown.

In Windows 8.1 it looks like WindowsWMIMBS.InitSecurity(false) must be called at app.open time as Xojo will do some things in background when opening first window which block our queries.

191.7.10 HostName as string

MBS Util Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the hostname for this computer.
Example:

MsgBox SystemInformationMBS.HostName

191.7.11 Is64bitWindows as boolean

MBS Util Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether the Windows you are using is a 64-bit Windows.
Example:

msgbox str(SystemInformationMBS.Is64bitWindows)

Notes: Returns true for x64 Windows editions for 32-bit applications.
This function could also be named isWoW64 for "is Windows on Windows 64 bit."
Only for Intel CPU.
Will return false if used on ARM CPU.

Returns always true on 64bit target.

191.7.12 isARM as Boolean

MBS Util Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Checks whether CPU is ARM.
Example:

```
If TargetMacOS Then
If SystemInformationMBS.isARM Then
MsgBox "Running ARM version on ARM CPU."
Elseif SystemInformationMBS.IsTranslated Then
MsgBox "Running Intel version on ARM CPU."
Else
MsgBox "Running Intel version on Intel CPU."
End If
End If
```

Notes: Returns true for:

- Raspberry Pi for Linux ARM
- iOS or Android on device.
- Apple Silicon Mac

Returns false for x86 CPUs, e.g. MacOS as well as iOS/Android in simulator.

191.7.13 isBigSur(orHigher as boolean = true) as boolean

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether the operation system is macOS 11 Big Sur or newer.
Notes: Returns 1 if this is Big Sur or newer, otherwise 0.

191.7.14 isCatalina(orHigher as boolean = true) as boolean

MBS Util Plugin, Plugin Version: 19.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether the operation system is MacOS 10.15 Catalina or newer.
Example:

```
MsgBox str(SystemInformationMBS.isMojave)
```

Notes: Returns true on MacOS 10.15 or newer.

191.7.15 isElCapitan(orHigher as boolean = true) as boolean

MBS Util Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Deprecated: This item is deprecated and should no longer be used. **Function:** Whether the operation system is Mac OS X 10.11 El Capitan or newer.
Example:

```
MsgBox str(SystemInformationMBS.isElCapitan)
```

Notes: Returns true on Mac OS X 10.11.
If orHigher is set, it will also return true on 10.12.

191.7.16 isHighSierra(orHigher as boolean = true) as boolean

MBS Util Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether the operation system is macOS 10.13 High Sierra or newer.
Example:

```
MsgBox str(SystemInformationMBS.isHighSierra)
```

Notes: Returns true on Mac OS X 10.13.
If orHigher is set, it will also return true on 10.14.

191.7.17 isLeopard(orHigher as boolean = true) as boolean

MBS Util Plugin, Plugin Version: 9.6, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Deprecated: This item is deprecated and should no longer be used. **Function:** Whether the operation system is Mac OS X 10.5 Leopard or newer.
Example:

```
MsgBox str(SystemInformationMBS.isLeopard)
```

Notes: Returns true on Mac OS X 10.5 or newer.

191.7.18 isLion(orHigher as boolean = true) as boolean

MBS Util Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Deprecated: This item is deprecated and should no longer be used. **Function:** Whether the operation system is Mac OS X 10.7 Lion or newer.
Example:

```
MsgBox str(SystemInformationMBS.isLion)
```

Notes: Returns true on Mac OS X 10.7 or newer.

191.7.19 isMacOSX as Boolean

MBS Util Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if being called on Mac OS X.
Example:

```
msgbox str(SystemInformationMBS.isMacOSX)
```

191.7.20 isMavericks(orHigher as boolean = true) as boolean

MBS Util Plugin, Plugin Version: 13.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Deprecated: This item is deprecated and should no longer be used. **Function:** Whether the operation system is Mac OS X 10.9 Mavericks or newer.
Example:

MsgBox str(SystemInformationMBS.isMavericks)

Notes: Returns true on Mac OS X 10.9 or newer.

191.7.21 isMojave(orHigher as boolean = true) as boolean

MBS Util Plugin, Plugin Version: 18.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether the operation system is MacOS 10.14 Mojave or newer.
Example:

MsgBox str(SystemInformationMBS.isMojave)

Notes: Returns true on MacOS 10.14 or newer.

191.7.22 isMonterey(orHigher as boolean = true) as boolean

MBS Util Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether the operation system is macOS 12 Monterey or newer.
Notes: Returns 1 if this is Monterey or newer, otherwise 0.

191.7.23 isMountainLion(orHigher as boolean = true) as boolean

MBS Util Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Deprecated: This item is deprecated and should no longer be used. **Function:** Whether the operation system is Mac OS X 10.8 Mountain Lion or newer.
Example:

MsgBox str(SystemInformationMBS.isMountainLion)

Notes: Returns true on Mac OS X 10.8 or newer.

191.7.24 isSequoia(orHigher as boolean = true) as boolean

MBS Util Plugin, Plugin Version: 24.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether the operation system is macOS 15 Sequoia or newer.
Example:

```
If SystemInformationMBS.isSequoia Then
MessageBox "Is Sequoia or heigher"
Else
MessageBox "Is older version"
End If
```

Notes: Returns true if this is Sequoia or newer, otherwise false.

191.7.25 isSierra(orHigher as boolean = true) as boolean

MBS Util Plugin, Plugin Version: 16.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Deprecated: This item is deprecated and should no longer be used. **Function:** Whether the operation system is macOS 10.12 Sierra or newer.
Example:

```
MsgBox str(SystemInformationMBS.isSierra)
```

Notes: Returns true on Mac OS X 10.12.
If orHigher is set, it will also return true on 10.13.

191.7.26 isSnowLeopard(orHigher as boolean = true) as boolean

MBS Util Plugin, Plugin Version: 9.6, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Deprecated: This item is deprecated and should no longer be used. **Function:** Whether the operation system is Mac OS X 10.6 Snow Leopard or newer.
Example:

MsgBox str(SystemInformationMBS.isSnowLeopard)

Notes: Returns true on Mac OS X 10.6 or newer.

191.7.27 isSonoma(orHigher as boolean = true) as boolean

MBS Util Plugin, Plugin Version: 23.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether the operation system is macOS 14 Sonoma or newer.
Example:

```
If SystemInformationMBS.isSonoma Then
MessageBox "Is Sonoma or heigher"
Else
MessageBox "Is older version"
End If
```

Notes: Returns true if this is Sonoma or newer, otherwise false.

191.7.28 isTahoe(orHigher as boolean = true) as boolean

MBS Util Plugin, Plugin Version: 25.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether the operation system is macOS 26 Tahoe or newer.
Example:

```
If SystemInformationMBS.isTahoe Then
MessageBox "Is Tahoe or heigher"
Else
MessageBox "Is older version"
End If
```

Notes: Returns true if this is Tahoe or newer, otherwise false.

191.7.29 IsTranslated as Integer

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries whether application is translated on Apple Silicon Macs.
Example:

```
If TargetMacOS Then
If SystemInformationMBS.isARM Then
MsgBox "Running ARM version on ARM CPU."
Elseif SystemInformationMBS.IsTranslated Then
MsgBox "Running Intel version on ARM CPU."
Else
MsgBox "Running Intel version on Intel CPU."
End If
End If
```

Notes: Returns 1 if Intel code gots translated to ARM code.
Returns 0 for a native ARM application.
Returns -1 if unknown.

191.7.30 isVentura(orHigher as boolean = true) as boolean

MBS Util Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether the operation system is macOS 13 Ventura or newer.
Example:

```
If SystemInformationMBS.isVentura(False) Then
MessageBox "Is Ventura exactly."
ElseIf SystemInformationMBS.isVentura(True) Then
MessageBox "Is Ventura or heigher"
Else
MessageBox "Is older version"
End If
```

Notes: Returns true if this is Ventura or newer, otherwise false.

191.7.31 isWindows10(orHigher as boolean = false) as Boolean

MBS Util Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Returns true if called on Windows 10.
Example:

```
msgbox str(SystemInformationMBS.isWindows10)
```

Notes: And False on Mac OS, Linux, Windows 7/Vista/XP/2000/ME/98/95/8/8.1.
If orHigher, than it returns true if OS Version is newer.

191.7.32 isWindows11(orHigher as boolean = false) as Boolean

MBS Util Plugin, Plugin Version: 21.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Returns true if called on Windows 11.
Example:

msgbox str(SystemInformationMBS.isWindows11)

Notes: And False on Mac OS, Linux, Windows 7/Vista/XP/2000/ME/98/95/8/8.1/10.
If orHigher, than it returns true if OS Version is newer.

191.7.33 isWindows2000(orHigher as boolean = false) as Boolean

MBS Util Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Deprecated: This item is deprecated and should no longer be used. **Function:** Returns true if called on Windows 2000.
Example:

msgbox str(SystemInformationMBS.isWindows2000)

Notes: And False on Mac OS X, Linux, Windows 7/XP/Vista/ME/98/95.
If orHigher, than it returns true if OS Version is newer.

191.7.34 isWindows7(orHigher as boolean = false) as Boolean

MBS Util Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Returns true if called on Windows 7.
Example:

msgbox str(SystemInformationMBS.isWindows7)

Notes: And False on Mac OS X, Linux, Windows Vista/XP/2000/ME/98/95.
If orHigher, than it returns true if OS Version is newer.

191.7.35 isWindows8(orHigher as boolean = false) as Boolean

MBS Util Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Returns true if called on Windows 8.
Example:

msgbox str(SystemInformationMBS.isWindows8)

Notes: And False on Mac OS X, Linux, Windows 7/Vista/XP/2000/ME/98/95.
If orHigher, than it returns true if OS Version is newer.

191.7.36 isWindows81(orHigher as boolean = false) as Boolean

MBS Util Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Returns true if called on Windows 8.1
Example:

msgbox str(SystemInformationMBS.isWindows81)

Notes: And False on Mac OS X, Linux, Windows 7/Vista/XP/2000/ME/98/95/8/10.
If orHigher, than it returns true if OS Version is newer.

191.7.37 isWindowsVista(orHigher as boolean = false) as Boolean

MBS Util Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Deprecated: This item is deprecated and should no longer be used. **Function:** Returns true if called on Windows Vista.
Example:

msgbox str(SystemInformationMBS.isWindowsVista)

Notes: And False on Mac OS X, Linux, Windows 7/XP/2000/ME/98/95.
If orHigher, than it returns true if OS Version is newer.

191.7.38 isWindowsXP(orHigher as boolean = false) as Boolean

MBS Util Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Deprecated: This item is deprecated and should no longer be used. **Function:** Returns true if called on Windows XP.
Example:

msgbox str(SystemInformationMBS.isWindowsXP)

Notes: And False on Mac OS X, Linux, Windows 7/Vista/2000/ME/98/95.
If orHigher, than it returns true if OS Version is newer.

191.7.39 isYosemite(orHigher as boolean = true) as boolean

MBS Util Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Deprecated: This item is deprecated and should no longer be used. **Function:** Whether the operation system is Mac OS X 10.10 Yosemite or newer.
Example:

MsgBox str(SystemInformationMBS.isYosemite)

Notes: Returns true on Mac OS X 10.10 or newer.

191.7.40 LogicalRAM as Double

MBS Util Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Deprecated: This item is deprecated and should no longer be used. **Function:** Returns the size of the logical installed memory.
Example:

msgBox format(SystemInformationMBS.LogicalRAM/1024/1024,"0")+" MB of RAM built in."

Notes: On Windows the total virtual memory size.
On Linux always 4 GB.

In older plugins this function was named LogicalRAMMBS.

191.7.41 MACAddress as string

MBS Util Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Returns the hardware ethernet address of the first ethernet card.
Example:

msgBox SystemInformationMBS.MACAddress

Notes: It returns a string with 6 bytes.
Works now with MBS Plugin 2.6 for Mac OS Classic, Carbon inside Classic and Mac OS X, but may not work for a Classic application running on Mac OS X. And may fail on some machines if no OpenTransport is running.

On Windows and Mac OS X you can have multiple ethernet cards and you should use a command line tool with the shell class to find what you need.

For example on Windows:

ipconfig /all

or on Mac OS X:

ifconfig -a

You can replace this function with usage of the NetworkInterface class in newer RB versions.

Added Linux support in version 16.4.

191.7.42 MACAddressString as string

MBS Util Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Returns the hardware ethernet address of the first ethernet card.
Example:

msgBox SystemInformationMBS.MACAddressString

Notes: Same as MACAddress, but with different format of output.

You can replace this function with usage of the NetworkInterface class in newer RB versions.

The plugin asks on Mac OS X the IOKit framework for the primary ethernet interface. We are not sure what Apple really defines for being the primary one, so let's test it:

- Ethernet on and Airport off ->Ethernet MAC Address
- Ethernet off and Airport on ->Ethernet MAC Address

Added Linux support in version 16.4.

191.7.43 MacBoardID as string

MBS Util Plugin, Plugin Version: 19.4, Platform: macOS, Targets: Desktop, Console & Web.

Deprecated: This item is deprecated and should no longer be used. **Function:** Queries board-id for Mac.
Example:

MsgBox SystemInformationMBS.MacBoardID

Notes: e.g. "Mac-1234567890123456"

191.7.44 MacBugFixVersion as Integer

MBS Util Plugin, Plugin Version: 10.3, Platform: macOS, Targets: All.

Function: The BugFix part of the Mac OS version number.
Example:

MsgBox str(SystemInformationMBS.MacBugFixVersion)

Notes: The bug fix system version number; in 10.4.17 this would be the decimal value 17.

Intel apps running in Rosetta on Apple M1 will report 10.16 instead of 11.x.

191.7.45 MacHasHardwareAcceleratedCoreImage as boolean

MBS Util Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Deprecated: This item is deprecated and should no longer be used. **Function:** Queries whether hardware acceleration is used for CoreImage.
Example:

```
if SystemInformationMBS.MacHasHardwareAcceleratedCoreImage then
msgbox "CoreImage should be very fast."
else
msgbox "CoreImage may be slow."
end if
```

Notes: Queries OpenGL whether programmable fragments are supported.

191.7.46 MachineID(flags as Integer = 15) as string

MBS Util Plugin, Plugin Version: 10.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a Machine ID for the current computer.
Example:

```
// this is how we build it.
Var t as string = "MachineID"+SystemInformationMBS.HardDiscSerial+SystemInformationMBS.MacSerialNumber+SystemInformationMBS.MacModel+SystemInformationMBS.CPUBrandString

// you could extend it with SystemInformationMBS.WinProductKey

Var m as string = MD5StringMBS(t)

MsgBox "Machine ID: "+SystemInformationMBS.MachineID+EndOfLine+"My Machine ID: "+m
```

Notes: Returns a 32 byte long hex string with a Machine ID.
Example value: "EE537483656B25996B51B7F4C99F9083".

This ID is based on the results of the MacSerialNumber, MacModel, CPUBrandString and HardDiscSerial functions. If all 4 functions have no value, the result is always "A2254DEF74A74608D76D1BA49BD2E82A". Also the result could change in future if we fix a bug in one of the functions so that the result values differ.

It is not based on the MACAddressString function as your MAC Address can change when switching between wired and wireless networks. Also we do not check the PhysicalRAM as RAM is a typical thing which changes over time.

You can store this value in some prerences/license file and later compare it agains the current value to see if the machine may have changed. In that case ask user to revalidate license, for example by asking for the serial number.

It can happen that 2 PCs have the same MachineID, typical two virtual machines. So this ID is not unique. But it is very likely that two different computers produce different MachineIDs.

Added flags parameter in 14.1:

flagHardDiscSerial	1	Use hard disk serial.
flagMacSerialNumber	2	Use Mac Serial number (on Mac)
flagMacModel	4	Use Mac Model (on Mac)
flagCPUBrandString	8	Use CPU Brand String.
flagWinProductKey	16	Use Product Key (on Windows only)

The Machine ID may be different if one of the components returns a different result. Result may be different in whether app runs as admin or not on Windows.

In Windows 8.1 it looks like WindowsWMIMBS.InitSecurity(false) must be called at app.open time as Xojo will do some things in background when opening first window which block our queries.

191.7.47 MacMajorVersion as Integer

MBS Util Plugin, Plugin Version: 10.3, Platform: macOS, Targets: All.

Function: The major Mac OS version number.
Example:

```
// show major version number
MsgBox str(SystemInformationMBS.MacMajorVersion)

// and show all three version numbers together:
MsgBox str(SystemInformationMBS.MacMajorVersion)+"."+str(SystemInformationMBS.MacMinorVersion)+"."+str(SystemInformationMBS.MacBugFixVersion)
```

Notes: The major system version number; in 10.4.17 this would be the decimal value 10.

On macOS Big Sur, this returns 11 in Apple Silicon application and 10 in Intel application.
On macOS Monterey this returns 12.
If your Intel application is build with older SDK (e.g. Xojo 2019), the result reported version will still be macOS 10.16.

191.7.48 MacMinorVersion as Integer

MBS Util Plugin, Plugin Version: 10.3, Platform: macOS, Targets: All.

Function: The minor Mac OS version number.
Example:

```
MsgBox str(SystemInformationMBS.MacMinorVersion)
```

Notes: The minor system version number; in 10.4.17 this would be the decimal value 4.

191.7.49 MacModel as string

MBS Util Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns the Mac model string.
Example:

```
msgbox SystemInformationMBS.MacModel
```

Notes: for example "<powermac7,3>".

191.7.50 MacProductName as string

MBS Util Plugin, Plugin Version: 25.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Queries the product name of the Mac.
Example:

```
MessageBox _
SystemInformationMBS.MacProductName + EndOfLine + _
SystemInformationMBS.MacProductSOCName + EndOfLine + _
SystemInformationMBS.MacModel + EndOfLine + _
SystemInformationMBS.ComputerName
```

Notes: Only for Apple Silicon Macs.

191.7.51 MacProductSOCName as string

MBS Util Plugin, Plugin Version: 25.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Queries the name of the system on chip in a Mac.
Example:

```
MessageBox _
```

SystemInformationMBS.MacProductName + EndOfLine + _
SystemInformationMBS.MacProductSOCName + EndOfLine + _
SystemInformationMBS.MacModel + EndOfLine + _
SystemInformationMBS.ComputerName

Notes: Only for Apple Silicon Macs.

191.7.52 MacROMBootVersion as string

MBS Util Plugin, Plugin Version: 19.4, Platform: macOS, Targets: Desktop, Console & Web.

Deprecated: This item is deprecated and should no longer be used. **Function:** Returns boot ROM version string.
Example:

MsgBox SystemInformationMBS.MacROMBootVersion

Notes: e.g. "220.270.99.0.0 (iBridge: 16.16.6571.0.0,0)"

191.7.53 MacSerialNumber as string

MBS Util Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns the serial number of your local Mac.
Example:

msgbox SystemInformationMBS.MacSerialNumber

Notes: May return an empty string in case of an error.
(e.g. when being user on Windows or if the Mac does not know its serialnumber)

191.7.54 MacUUID as string

MBS Util Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns the unique identifier for the given Mac.
Example:

msgbox SystemInformationMBS.MacUUID

Notes: Returns "" on any error.

191.7.55 MacVRAMSize as Int64

MBS Util Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Deprecated: This item is deprecated and should no longer be used. **Function:** Queries the size of the main video graphics memory size.
Example:

msgbox format(SystemInformationMBS.MacVRAMSize,"0")+" Bytes VRAM."

Notes: Walks over the list of displays, asks on each display for its VRAM size and returns the first value found.

For some reason this seems not to return more than 256 MB of memory.

191.7.56 OSName as string

MBS Util Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a string to display which OS Version you have.
Example:

msgBox SystemInformationMBS.OSName
' may show: Mac OS X

Notes: Return values possible:
Windows NT
Windows 2000
Windows XP
Windows Vista
Mac OS
Mac OS X
Linux

and a few other Windows versions like 6.2 alias 8.

In older plugins this function was named OSNameMBS.

191.7.57 OSVersionString as string

MBS Util Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a string to display which OS Version you have.

Example:

msgBox SystemInformationMBS.OSVersionString
' may show: Mac OS X 10.1.2

Notes: GetOSVersionStr returns the version string of the OS.
Some Possible values:
"System 7.5.3",
"MacOS 8",
"MacOS 9.1",
"MacOS X 10.4.1",
"Windows NT 3.5",
"Windows 2000 (Service Pack 3)".

In older plugins this function was named OSVersionStrMBS.

On macOS Big Sur, this returns 11.x in Apple Silicon application and 10.6 in Intel application.
On macOS Monterey this returns 12.x.
If your Intel application is build with older SDK (e.g. Xojo 2019), the result reported version will still be macOS 10.16.

191.7.58 PhysicalRAM as Double

MBS Util Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the size of the physical installed memory.
Example:

msgBox format(SystemInformationMBS.PhysicalRAM/1024/1024,"0")+" MB of RAM built in."

Notes: On old Windows versions some hundred KBs less for DOS.

Result changed from integer to double in plugin version 3.4 to return correct results on 2 GB RAM. In v5.2 changed to return correct values on Macs with more than 4 GB of RAM.

On Windows the total physical memory size.

In older plugins this function was named PhysicalRAMMBS.

191.7.59 ProcessorCount(Mode as Integer = 0) as Integer

MBS Util Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the number of processors on the target system.
Example:

```
MsgBox _
str(SystemInformationMBS.ProcessorCount(SystemInformationMBS.kProcessorCountDefault ))+" default"
+ EndOfLine + _
str(SystemInformationMBS.ProcessorCount(SystemInformationMBS.kProcessorCountLogical ))+" logical"
+ EndOfLine + _
str(SystemInformationMBS.ProcessorCount(SystemInformationMBS.kProcessorCountPhysical))+" physical"
```

Notes: With plugin version 18.0, we added mode parameter. Pass 2 for physical CPU (kProcessorCountPhysical) and 1 for logical CPU count (kProcessorCountLogical) on Mac/Win.

On Windows or Mac OS the number of cores.
On Linux the number of configured CPUs.

Returns 1 on any error.

191.7.60 ShortUsername as string

MBS Util Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Returns the short name of the current user.
Example:

```
msgbox "Welcome "+SystemInformationMBS.ShortUsername+"!"
```

Notes: On Linux and Mac OS X the short user name.

On all other cases the same as UserName function.

191.7.61 SystemFont as string

MBS Util Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the name of the used system font.
Example:

msgbox "You are using the system font "+SystemInformationMBS.SystemFont+"."

Notes: On Windows the system function returns "System" for our tests. Please tell us if this function is not working for you correct on Windows.

On Linux something like "Sans 10" is returned.

In older plugins this function was named SystemFontMBS.

191.7.62 Username as string

MBS Util Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Returns the name of the current user.
Example:

msgbox "Welcome "+SystemInformationMBS.Username+"!"

Notes: Code for Multiple User on Mac OS 9 is build in, but I can't test it.

This is tried on Mac OS:
1. Mac OS X Username function.
2. AppleEvent to FileSharing.
3. Multiple User Username (Mac OS 9)
4. System username from system resource.

In older plugins this function was named UserNameMBS.

191.7.63 WinBuildNumber as Integer

MBS Util Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The build number of the operating system.
Example:

MsgBox str(SystemInformationMBS.WinBuildNumber)

Notes: For example returns 2600 on Windows XP Build 2600.

191.7.64 WinCSDVersion as string

MBS Util Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Deprecated: This item is deprecated and should no longer be used. **Function:** A string, such as "Service Pack 3", that indicates the latest Service Pack installed on the system.
Example:

MsgBox SystemInformationMBS.WinCSDVersion

Notes: Shows here "Service Pack 3" on a Windows XP installation.
If no Service Pack has been installed, the string is empty.

191.7.65 WindowsAero as boolean

MBS Util Plugin, Plugin Version: 10.1, Platform: Windows, Targets: All.

Deprecated: This item is deprecated and should no longer be used. **Function:** Whether Windows is using the Aero Interface?
Example:

msgbox str(SystemInformationMBS.WindowsAero)

Notes: True if aero is used. False if the status is unknown (e.g. on Windows XP) or Aero is not used.

191.7.66 WindowsNativeMachine as Integer

MBS Util Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries the native machine type.
Notes: This may return ARM64 on a Windows with ARM CPU.

191.7.67 WindowsProcessMachine as Integer

MBS Util Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries the machine type of the current process.
Notes: This may return AMD64, while running in emulation on ARM64.

191.7.68 WinMajorVersion as Integer

MBS Util Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The major version number of the operating system.
Example:

MsgBox str(SystemInformationMBS.WinMajorVersion)

Notes: Returns 5 on Windows 2000/XP and 6 on Windows Vista/7/8.

191.7.69 WinMinorVersion as Integer

MBS Util Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The minor version number of the operating system.
Example:

MsgBox str(SystemInformationMBS.WinMinorVersion)

Notes: Returns 0 on Windows 2000/Vista and 1 on Windows XP/7 and 2 on Windows 8.

191.7.70 WinPlatformId as Integer

MBS Util Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The operating system platform.
Example:

MsgBox str(SystemInformationMBS.WinPlatformId)

Notes: This member can be VER_PLATFORM_WIN32_NT (2).
e.g. 2 on Windows XP.

191.7.71 WinProductKey as string

MBS Util Plugin, Plugin Version: 11.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Returns the product key of the Windows installation.
Notes: Returns "" on any error.
See also:

- 191.7.72 WinProductKey(path as string, name as string, keyStartIndex as Integer = 52) as string 22282

191.7.72 WinProductKey(path as string, name as string, keyStartIndex as Integer = 52) as string

MBS Util Plugin, Plugin Version: 11.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Returns the product key of the Windows installation.
Notes: Returns "" on any error.
With the right path and name you can read also the office versions.

For Office 10, it looks like you need to use 808 as offset.
See also:

- 191.7.71 WinProductKey as string 22281

191.7.73 WinProductType as Integer

MBS Util Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Any additional information about the system.
Example:

MsgBox str(SystemInformationMBS.WinProductType)

Notes: e.g. 1 on Windows XP.

This member can be one of the following values:

VER_NT_DOMAIN_CONTROLLER	2	The system is a domain controller and the operating system is Windows Server 2008, Windows Server 2003, or Windows 2000 Server.
VER_NT_SERVER	3	The operating system is Windows Server 2008, Windows Server 2003, or Windows 2000 Server. Note that a server that is also a domain controller is reported as VER_NT_DOMAIN_CONTROLLER, not VER_NT_SERVER.
VER_NT_WORKSTATION	1	The operating system is Windows Vista, Windows XP Professional, Windows XP Home Edition, or Windows 2000 Professional.

191.7.74 WinServicePackMajor as Integer

MBS Util Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Deprecated: This item is deprecated and should no longer be used. **Function:** The major version number of the latest Service Pack installed on the system.
Example:

MsgBox str(SystemInformationMBS.WinServicePackMajor)

Notes: For example, for Service Pack 3, the major version number is 3. If no Service Pack has been installed, the value is zero.

191.7.75 WinServicePackMinor as Integer

MBS Util Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Deprecated: This item is deprecated and should no longer be used. **Function:** The minor version number of the latest Service Pack installed on the system.
Example:

MsgBox str(SystemInformationMBS.WinServicePackMinor)

Notes: For example, for Service Pack 3, the minor version number is 0.

191.7.76 WinSuiteMask as Integer

MBS Util Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: A bit mask that identifies the product suites available on the system.
Example:

MsgBox str(SystemInformationMBS.WinSuiteMask)

Notes: e.g. 256 on Windows XP.

This member can be a combination of the following values.

191.7.77 Constants

ProcessorCount Modes

VER_SUITE_BACKOFFICE	4	Microsoft BackOffice components are installed.
VER_SUITE_BLADE	&h0400	Windows Server 2003, Web Edition is installed.
VER_SUITE_COMPUTE_SERVER	&h4000	Windows Server 2003, Compute Cluster Edition is installed.
VER_SUITE_DATACENTER	&h0080	Windows Server 2008 Datacenter, Windows Server 2003, Datacenter Edition, or Windows 2000 Datacenter Server is installed.
VER_SUITE_ENTERPRISE	2	Windows Server 2008 Enterprise, Windows Server 2003, Enterprise Edition, or Windows 2000 Advanced Server is installed. Refer to the Remarks section for more information about this bit flag.
VER_SUITE_EMBEDDEDNT	&h0040	Windows XP Embedded is installed.
VER_SUITE_PERSONAL	&h0200	Windows Vista Home Premium, Windows Vista Home Basic, or Windows XP Home Edition is installed.
VER_SUITE_SINGLEUSERTS	&h0100	Remote Desktop is supported, but only one interactive session is supported. This value is set unless the system is running in application server mode.
VER_SUITE_SMALLBUSINESS	1	Microsoft Small Business Server was once installed on the system, but may have been upgraded to another version of Windows. Refer to the Remarks section for more information about this bit flag.
VER_SUITE_SMALLBUSINESS_RESTRICTED	&h0020	Microsoft Small Business Server is installed with the restrictive client license in force. Refer to the Remarks section for more information about this bit flag.
VER_SUITE_STORAGE_SERVER	&h2000	Windows Storage Server 2003 R2 or Windows Storage Server 2003is installed.
VER_SUITE_TERMINAL	&h0010	Terminal Services is installed. This value is always set. If VER_SUITE_TERMINAL is set but VER_SUITE_SINGLEUSERTS is not set, the system is running in application server mode.
VER_SUITE_WH_SERVER	&h8000	Windows Home Server is installed.

Constant	Value	Description
kProcessorCountDefault	0	Default behavior.
kProcessorCountLogical	1	Logical Processors
kProcessorCountPhysical	2	Physical Processors

Windows Machine Types

Constant	Value	Description
kWindowsMachineAMD64	&h8664	ARM in 64-bit.
kWindowsMachineARM32	&h01c0	ARM in 32-bit.
kWindowsMachineARM64	&hAA64	AMD 64-bit x86.
kWindowsMachineI386	&h014c	Intel 32-bit x86.
kWindowsMachineUnknown	0	Unknown.

Chapter 192

SystemConfiguration

192.1 class SCNetworkReachabilityMBS

192.1.1 class SCNetworkReachabilityMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: A class to check network reachability.
Notes: The SCNetworkReachability class allow an application to determine the status of a system's current network configuration and the reachability of a target host. In addition, the reachability can be monitored with a notification being provided when/if the status has changed.

The term "reachable" reflects whether a data packet, sent by an application into the network stack, can be sent to the the target host/address. Please note that there is no guarantee that the data packet will actually be received by the host.

Requires Mac OS X 10.3 or newer.
Subclass of the CFObjectMBS class.

192.1.2 Methods

192.1.3 CreateWithAddress(ip as string) as boolean

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Creates a reference to the specified network address.
Notes: Returns true on success.

192.1.4 CreateWithAddressPair(LocalIP as string, RemoteIP as string) as boolean

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Creates a reference to the specified network address.
Notes: Returns true on success.
LocalIP: The local address associated with a network connection.
RemoteIP: The remote address associated with a network connection.
One of the IP addresses can be empty.

192.1.5 CreateWithName(name as string) as boolean

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Creates a reference to the specified network host/node name.
Notes: Returns true on success.

192.1.6 ErrorString(errorcode as Integer) as string

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Returns an error string for a given SC Error Code.
Notes: A utility function which works at any time.

192.1.7 Properties

192.1.8 Error as Integer

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Returns the last error code.
Notes: A utility function which works with all SystemConfiguration methods.

(Read only property)

192.1.9 Flags as Integer

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Determines if the given target is reachable using the current network configuration.
Notes: Returns 0 on any error.

kSCStatusOK	= 0	Success
kSCStatusFailed	= 1001	Non-specific failure
kSCStatusInvalidArgument	= 1002	Invalid argument
kSCStatusAccessError	= 1003	Permission denied - must be root to obtain lock - could not create access/create preferences
kSCStatusNoKey	= 1004	No such key
kSCStatusKeyExists	= 1005	Key already defined
kSCStatusLocked	= 1006	Lock already held
kSCStatusNeedLock	= 1007	Lock required for this operation
kSCStatusNoStoreSession	= 2001	Configuration daemon session not active
kSCStatusNoStoreServer	= 2002	Configuration daemon not (no longer) available
kSCStatusNotifierActive	= 2003	Notifier is currently active
kSCStatusNoPrefsSession	= 3001	Preference session not active
kSCStatusPrefsBusy	= 3002	Preferences update currently in progress
kSCStatusNoConfigFile	= 3003	Configuration file not found
kSCStatusNoLink	= 3004	No such link
kSCStatusStale	= 3005	Write attempted on stale version of object
kSCStatusMaxLink	= 3006	Maximum link count exceeded
kSCStatusReachabilityUnknown	= 4001	Network reachability cannot be determined

See the event for the flag constants.
(Read only property)

192.1.10 Events

192.1.11 Changed(flags as Integer)

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: The reachability changed.
Notes: useful constants:

kSCNetworkFlagsTransientConnection	= 1
kSCNetworkFlagsReachable	= 2
kSCNetworkFlagsConnectionRequired	= 4
kSCNetworkFlagsConnectionAutomatic	= 8
kSCNetworkFlagsInterventionRequired	= 5
kSCNetworkFlagsIsLocalAddress	= 65536
kSCNetworkFlagsIsDirect	= 131072

Flags that indicate whether the specified network nodename/address is reachable, requires a connection, requires some user intervention in establishing the connection, and whether the calling application must initiate the connection using the (TBD???) API.

kSCNetworkFlagsTransientConnection
This flag indicates that the specified nodename/address can be reached via a transient (e.g. PPP) connection.

kSCNetworkFlagsReachable
This flag indicates that the specified nodename/address can be reached using the current network configuration.

kSCNetworkFlagsConnectionRequired
This flag indicates that the specified nodename/address can be reached using the current network configuration but a connection must first be established.

As an example, this status would be returned for a dialup connection that was not currently active but could handle network traffic for the target system.

kSCNetworkFlagsConnectionAutomatic
This flag indicates that the specified nodename/address can be reached using the current network configuration but a connection must first be established. Any traffic directed to the specified name/address will initiate the connection.

kSCNetworkFlagsInterventionRequired
This flag indicates that the specified nodename/address can be reached using the current network configuration but a connection must first be established. In addition, some form of user intervention will be required to establish this connection (e.g. providing a password, authentication token, etc.).

kSCNetworkFlagsIsLocalAddress
This flag indicates that the specified nodename/address is one associated with a network interface on the current system.

kSCNetworkFlagsIsDirect
This flag indicates that network traffic to the specified nodename/address will not go through a gateway but is routed directly to one of the interfaces in the system.

192.2 class SCPreferencesMBS

192.2.1 class SCPreferencesMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: A class for System Configuration Preferences.
Notes: Please remember that you may need root access to change something.

The SCPreferences classes allow an application to load and store XML configuration data in a controlled manner and provide the necessary notifications to other applications that need to be aware of configuration changes.

The stored XML configuration data is accessed using a prefsID. A
nil value indicates that the default system preferences are to be accessed.
A string which starts with a leading "/" character specifies the path to the file containing te preferences to be accessed. A string which does not start with a leading "/" character specifies a file relative to the default system preferences directory.

The Path APIs make certain assumptions about the layout of the preferences data. These APIs view the data as a collection of dictionaries of key/value pairs and an associated path name. The root path ("/") identifies the top-level dictionary. Additional path components specify the keys for sub-dictionaries.

For example, the following dictionary can be accessed via two paths. The root ("/") path would return a dictionary with all keys and values. The path "/path1" would only return the dictionary with the "key3" and "key4" properties.

```
<dict>
<key>key1</key>
<string>val1</string>
<key>key2</key>
<string>val2</string>
<key>path1</key>
<dict>
<key>key3</key>
<string>val3</string>
<key>key4</key>
<string>val4</string>
</dict>
</dict>
```

Each dictionary can also include the kSCResvLink key. The value associated with this key is interpreted as a "link" to another path. If this key is present, a call to the GetPathValue() API will return the dictionary specified by the link.

Subclass of the CFObjectMBS class.
Blog Entries

- MBS Xojo Plugins, version 20.5pr4
- MBS Real Studio Plugins, version 12.5pr7

192.2.2 Methods

192.2.3 AddValue(key as CFStringMBS, value as CFObjectMBS) as boolean

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Adds data for a preference key.
Notes: This function associates new data with the specified key. In order to commit these changes to permanent storage a call must be made to CommitChanges.

Returns true if the value was added; false if the key already exists or if an error occurred.

192.2.4 ApplyChanges as boolean

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Requests that the currently stored configuration preferences be applied to the active configuration.
Notes: Returns true if the lock was obtained; false if an error occurred.

192.2.5 CommitChanges as boolean

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Commits changes made to the configuration preferences to persistent storage.
Notes: This function commits any changes to permanent storage. An implicit call to Lock/Unlock will be made if exclusive access has not already been established.

Note: This routine commits changes to persistent storage. Call ApplyChanges to apply the changes to the running system.

Returns true if the lock was obtained; false if an error occurred.

192.2.6 Create(name as CFStringMBS, prefid as CFStringMBS) as boolean

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Initiates access to the per-system set of configuration preferences.
Notes: name: A string that describes the name of the calling process.
prefsID: A string that identifies the name of the group of preferences to be accessed/updated.

192.2.7 CreateUniquePathChild(prefix as CFStringMBS) as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Creates a new path component within the dictionary hierarchy.
Notes: prefix: A string that represents the parent path.
Returns a string representing the new (unique) child path; nil if the specified path does not exist.

192.2.8 CreateWithAuthorization(name as CFStringMBS, prefid as CFStringMBS, AuthorizationHandle as Integer) as boolean

MBS MacCF Plugin, Plugin Version: 12.5, Platform: macOS, Targets: All.

Function: Initiates access to the per-system set of configuration preferences.
Notes: name: A string that describes the name of the calling process.
prefsID: A string that identifies the name of the group of preferences to be accessed/updated.
AuthorizationHandle: Handle to authorization object for root access.

192.2.9 ErrorString(errorcode as Integer) as string

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Returns an error string for a given SC Error Code.
Notes: A utility function which works at any time.

192.2.10 GetPathLink(path as CFStringMBS) as CFObjectMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Returns the link (if one exists) associated with the specified path.
Notes: path: A string that represents the path to be returned.
The dictionary associated with the specified path; nil if the path is not a link or does not exist.

192.2.11 GetPathValue(path as CFStringMBS) as CFDictionaryMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Returns the dictionary associated with the specified path.
Notes: path: A string that represents the path to be returned.
Returns the dictionary associated with the specified path; nil if the path does not exist.

192.2.12 GetValue(key as CFStringMBS) as CFObjectMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Returns the data associated with a preference key.
Notes: This function retrieves data associated with a key for the prefsID.

You could read stale data and not know it, unless you first call Lock.

Returns the value associated with the specified preference key; If no value was located, nil is returned.

192.2.13 KeyList as CFArrayMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Returns an array of currently defined preference keys.
Notes: Returns nil on any error.

192.2.14 Lock(wait as boolean) as boolean

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Locks access to the configuration preferences.
Notes: This function obtains exclusive access to the configuration preferences associated with this prefsID. Clients attempting to obtain exclusive access to the preferences will either receive an kSCStatusPrefsBusy error or block waiting for the lock to be released.

wait: A boolean flag indicating whether the calling process should block waiting for another process to complete its update operation and release its lock.

Returns true if the lock was obtained; false if an error occurred.

192.2.15 RemovePathValue(path as CFStringMBS) as boolean

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Removes the data associated with the specified path.
Notes: path: A string that represents the path to be returned.
Returns a boolean indicating the success (or failure) of the call.

192.2.16 RemoveValue(key as CFStringMBS) as boolean

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Removes the data associated with a preference key.
Notes: This function removes the data associated with the specified key. In order to commit these changes to permanent storage a call must be made to CommitChanges.

Returns true if the value was removed; false if the key did not exist or if an error occurred.

192.2.17 SetComputerName(name as CFStringMBS) as boolean

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Updates the computer/host name in the system preferences.
Notes: In order to commit these changes to permanent storage a call must be made to CommitChanges.
A call to ApplyChanges is also required for the new name to become active.
A boolean indicating the success (or failure) of the call.

192.2.18 SetLocalHostName(name as CFStringMBS) as boolean

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Updates the local host name in the system preferences.
Notes: In order to commit these changes to permanent storage a call must be made to CommitChanges.

A call to ApplyChanges is also required for the new name to become active.

192.2.19 SetPathLink(path as CFStringMBS, link as CFObjectMBS) as boolean

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Associates a link to a second dictionary at the specified path.
Notes: path: A string that represents the path to be updated.
link: A string that represents the link to be stored at the specified path.
Returns a boolean indicating the success (or failure) of the call.

192.2.20 SetPathValue(path as CFStringMBS, value as CFDictionaryMBS) as boolean

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Associates a dictionary with the specified path.
Notes: path: A string that represents the path to be updated.
value: A dictionary that represents the data to be stored at the specified path.
Returns a boolean indicating the success (or failure) of the call.

192.2.21 SetValue(key as CFStringMBS, value as CFObjectMBS) as boolean

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Updates the data associated with a preference key.
Notes: This function adds or replaces the value associated with the specified key. In order to commit these changes to permanent storage a call must be made to CommitChanges.

Returns true if the value was set; false if an error occurred.

192.2.22 Signature as CFBinaryDataMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Returns a sequence of bytes that can be used to determine if the saved configuration preferences have changed.
Notes: A CFBinaryDataMBS that reflects the signature of the configuration preferences at the time of the call to Create.

192.2.23 Unlock as boolean

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Releases exclusive access to the configuration preferences.
Notes: This function releases the exclusive access "lock" for this prefsID. Other clients will be now be able

to establish exclusive access to the preferences.

Returns true if the lock was obtained; false if an error occurred.

192.2.24 Properties

192.2.25 Available as Boolean

MBS MacCF Plugin, Plugin Version: 20.5, Platform: macOS, Targets: All.

Function: Whether this class is available.
Notes: Returns true on macOS.
(Read only property)

192.2.26 Error as Integer

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Returns the last error code.
Notes: A utility function which works with all SystemConfiguration methods.

kSCStatusOK	= 0	Success
kSCStatusFailed	= 1001	Non-specific failure
kSCStatusInvalidArgument	= 1002	Invalid argument
kSCStatusAccessError	= 1003	Permission denied - must be root to obtain lock - could not create access/create preferences
kSCStatusNoKey	= 1004	No such key
kSCStatusKeyExists	= 1005	Key already defined
kSCStatusLocked	= 1006	Lock already held
kSCStatusNeedLock	= 1007	Lock required for this operation
kSCStatusNoStoreSession	= 2001	Configuration daemon session not active
kSCStatusNoStoreServer	= 2002	Configuration daemon not (no longer) available
kSCStatusNotifierActive	= 2003	Notifier is currently active
kSCStatusNoPrefsSession	= 3001	Preference session not active
kSCStatusPrefsBusy	= 3002	Preferences update currently in progress
kSCStatusNoConfigFile	= 3003	Configuration file not found
kSCStatusNoLink	= 3004	No such link
kSCStatusStale	= 3005	Write attempted on stale version of object
kSCStatusMaxLink	= 3006	Maximum link count exceeded
kSCStatusReachabilityUnknown	= 4001	Network reachability cannot be determined

(Read only property)

192.3 Globals

192.3.1 kSCNetworkReachabilityMBSTypeID as Integer

MBS MacCF Plugin, Plugin Version: 12.4, Platform: macOS, Targets: All.

Function: Returns the CoreFoundation TypeID for SCNetworkReachability.

192.3.2 kSCPreferencesMBSTypeID as Integer

MBS MacCF Plugin, Plugin Version: 12.4, Platform: macOS, Targets: All.

Function: Returns the CoreFoundation TypeID for SCPreferences.

192.4 class SystemConfigurationMBS

192.4.1 class SystemConfigurationMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: A class for the global System Configuration framework functions.
Notes: See the file "SCSchemaDefinitions.h" for details on the constants.

192.4.2 Methods

192.4.3 ComputerName as string

MBS MacCF Plugin, Plugin Version: 7.8, Platform: macOS, Targets: All.

Function: Gets the current computer name.
Example:

```
Var s as new SystemConfigurationMBS
msgbox s.ComputerName
```

Notes: Returns "" on an error.

192.4.4 ComputerNameEncoding as Integer

MBS MacCF Plugin, Plugin Version: 7.8, Platform: macOS, Targets: All.

Function: The encoding of the computer name.

192.4.5 ConsoleUser as string

MBS MacCF Plugin, Plugin Version: 7.8, Platform: macOS, Targets: All.

Function: Gets the name of the currently logged-in user.
Example:

```
Var s as new SystemConfigurationMBS
msgbox s.ConsoleUser
```

Notes: Returns the user currently logged into the system; "" if no user is logged in or if an error was encountered.

192.4.6 ConsoleUserGID as Integer

MBS MacCF Plugin, Plugin Version: 7.8, Platform: macOS, Targets: All.

Function: Gets the group ID of the currently logged-in user.
Notes: The group ID of the current console user.

192.4.7 ConsoleUserUID as Integer

MBS MacCF Plugin, Plugin Version: 7.8, Platform: macOS, Targets: All.

Function: Gets the user ID of the currently logged-in user.
Notes: The user ID of the current console user.

192.4.8 kSCCompAnyRegex as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

192.4.9 kSCCompGlobal as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

192.4.10 kSCCompHostNames as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

192.4.11 kSCCompInterface as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

192.4.12 kSCCompNetwork as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

192.4.13 kSCCompService as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

192.4.14 kSCCompSystem as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

192.4.15 kSCCompUsers as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

192.4.16 kSCDynamicStoreDomainFile as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

192.4.17 kSCDynamicStoreDomainPlugin as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

192.4.18 kSCDynamicStoreDomainPrefs as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

192.4.19 kSCDynamicStoreDomainSetup as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

192.4.20 kSCDynamicStoreDomainState as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

192.4.21 kSCDynamicStorePropNetInterfaces as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

192.4.22 kSCDynamicStorePropNetPrimaryInterface as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

192.4.23 kSCDynamicStorePropNetPrimaryService as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

192.4.24 kSCDynamicStorePropNetServiceIDs as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

192.4.25 kSCDynamicStorePropSetupCurrentSet as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

192.4.26 kSCDynamicStorePropSetupLastUpdated as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

192.4.27 kSCEntNet6to4 as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

192.4.28 kSCEntNetAirPort as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

192.4.29 kSCEntNetDHCP as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

192.4.30 kSCEntNetDNS as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

192.4.31 kSCEntNetEthernet as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

192.4.32 kSCEntNetFireWire as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

192.4.33 kSCEntNetInterface as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

192.4.34 kSCEntNetIPv4 as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

192.4.35 kSCEntNetIPv6 as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

192.4.36 kSCEntNetL2TP as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

192.4.37 kSCEntNetLink as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

192.4.38 kSCEntNetModem as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

192.4.39 kSCEntNetPPP as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

192.4.40 kSCEntNetPPPoE as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

192.4.41 kSCEntNetPPPSerial as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

192.4.42 kSCEntNetPPTP as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

192.4.43 kSCEntNetProxies as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

192.4.44 kSCEntUsersConsoleUser as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

192.4.45 kSCPrefCurrentSet as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

192.4.46 kSCPrefNetworkServices as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

192.4.47 kSCPrefSets as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

192.4.48 kSCPrefSystem as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

192.4.49 kSCPropInterfaceName as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

192.4.50 kSCPropMACAddress as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

192.4.51 kSCPropNet6to4Relay as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

192.4.52 kSCPropNetAirPortAllowNetCreation as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

192.4.53 kSCPropNetAirPortAuthPassword as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

192.4.54 kSCPropNetAirPortAuthPasswordEncryption as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

192.4.55 kSCPropNetAirPortJoinMode as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

192.4.56 kSCPropNetAirPortPowerEnabled as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

192.4.57 kSCPropNetAirPortPreferredNetwork as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

192.4.58 kSCPropNetAirPortSavePasswords as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

192.4.59 kSCPropNetDNSDomainName as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

192.4.60 kSCPropNetDNSSearchDomains as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

192.4.61 kSCPropNetDNSServerAddresses as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

192.4.62 kSCPropNetDNSSortList as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

192.4.63 kSCPropNetEthernetMediaOptions as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.
