

Database and Software Hosting

EHS Data offers two hosting options to take the hassle out of managing your system:

- Renting **MonitorPro** licenses and hosting with us (SaaS).
- Buying **MonitorPro** licenses and hosting with us.

We offer our hosted services in a choice of geographic location depending on where you are in the world, including the UK, Canada, USA, and Australia. We manage the licensing side of things, including MSSQL, operating systems, and associated software required to use **MonitorPro** such as Microsoft Office.

How Hosting with MonitorPro Can Help Your Business

Many of our clients are now utilising the benefits of outsourcing their application hosting. Including:

- Removal of the need to replace and maintain aging hardware.
- Lagging behind with software release schedules and updates.
- IT departments with conflicting priorities.
- Provision of application support specific to **MonitorPro** through our dedicated **MonitorPro** team.

Our IT support staff and our developers only support and develop **MonitorPro**, so are experts in what they do. Most application support staff in large organisations simply cannot be expected to have an in-depth knowledge of each bespoke application they are tasked with supporting.

Hosting your **MonitorPro** with EHS Data takes away all these problems. Only our staff are involved, and we can quickly and easily resolve problems. We keep your hardware updated to the latest specifications and update **MonitorPro** for you seamlessly when it's released.

Hosting Options

SaaS	Self-hosted	Buy licenses & host with us
Rent the licenses annually and host with us.	You host the software onsite at your location.	Buy licenses and pay an annual fee to host with us.
<ul style="list-style-type: none"> • Lower Upfront cost for licensing. • Dedicated IT team to look after the hosted platform. • Superfast Gigabit connectivity to our servers. • Always upgraded to the latest version within 30 days of release. • All accessed through your web browser. • Servers designed and spec'd out to handle even the heaviest of loads. 	<ul style="list-style-type: none"> • Hardware which is often old, poorly specified or shared with other applications. • Application support not specific to MonitorPro. • IT departments with conflicting priorities. • Version behind release schedule with updates. • Local installs of cumbersome thin client deployments. 	<ul style="list-style-type: none"> • Low cost for hosting. • Dedicated IT team to look after the hosted platform. • Superfast Gigabit connectivity to our servers. • Always upgraded to the latest version within 30 days of release. • All accessed through your web browser. • Servers designed and spec'd out to handle even the heaviest of loads.

No Downtime Issues

When hosting **MonitorPro** with us there are no regular periods of downtime and uptime is currently over 99.9%. Any **MonitorPro** updates or planned outages are completed out of hours for that geographical location ensuring you can access **MonitorPro** whenever you need to.
