

Implementation Notes

Arni Magnusson

February 7, 2026

The following overview gives an idea (but no promises) of which functions may work for databases other than MS SQL Server.

Browse database

Function	Gets information from	Works for
dbOverview	sqlTables(), sqlColumns()	All ODBC databases
dbStorage	sys.allocation_units, sys.indexes, sys.partitions, sys.schemas, sys.tables	MS SQL Server
dbTime	sys.tables, sys.views	MS SQL Server

Browse table

Function	Gets information from	Works for
tableDim	tableNrow(), tableNcol()	All ODBC databases
tableHead	sqlQuery()	All ODBC databases
tableNcol	sqlColumns()	All ODBC databases
tableNrow	sqlQuery()	All ODBC databases
tableOverview	sqlColumns(), tableNrow()	All ODBC databases

Helper functions

Function	Gets information from	Works for
tableQuote	(self-contained)	All ODBC databases
