Virtuozzo
Application Platform

Virtuozzo Application Platform is a DevOps-friendly Platform-as-a-Service (PaaS) that simplifies the management of both cloud-native and traditional applications. Through automation and intuitive interfaces, it enables faster time-to-market across multi-cloud and hybrid cloud environments.

- Automated creation, scaling, clustering, and security updates
- White-labeled DevOps panels for both administrators and developers
- Built-in marketplace with pre-configured stacks for one-click deployment
- Kubernetes support with automated operations
- Flexible deployment: public, private, hybrid, or multi-cloud
- Infrastructure-agnostic: deploy on bare metal or any existing IaaS
- Already available across over 100 local data centers

"

"We wanted to build a platform that we could use to automate the DevOps philosophy with CI/CD, security, A/B testing, deployment and infrastructure, as a single service. With Virtuozzo Application Platform and our expertise, we created the perfect solution."

Platform as a Service: Sovereign, Flexible, Efficient

Virtuozzo PaaS empowers local service providers to offer Anything-as-a-Service. Our platform serves as the backbone — delivering automation, a rich marketplace with packaged templates, and built-in business tools to provision and manage services and customers with ease.

layershift

Damien Ransome
Co-Founder

"Before we provided just the basic LAMP stack via the Plesk control panel. That works fine for a single server, but if customers needed more, like a load balancer, it was quite a lot of effort for us to provision and maintain that service. Now we can do that for our customers really easily: it's just a few clicks."

Simplified Application Management Platform

Provisioning & Scaling

- Fast and easy provisioning of containers, clusters, and environments
- Zero code changes for deploying traditional or cloud-native apps
- Automatic vertical and horizontal scaling with customizable load alerts
- Unified management via UI, SSH, CLI, and API

High Availability & DevOps Automation

- Built-in clustering for databases and application servers for failover protection
- Advanced load balancing with flexible traffic distribution methods
- CI/CD automation integrated out of the box
- Multi-cloud and multi-region interoperability

Cost Optimization

- Eliminate overprovisioning with efficient container-based virtualization
- Pay-as-you-use pricing to match actual resource consumption
- Run both containers and virtual machines in one unified platform
- Reduce infrastructure costs without compromising performance

Database Management Automation

Built-in clusterization of popu lar databases with possibility to activate the required replication mode without manual setup

- Supported replication modes: Primary-Primary, Primary-Secondary, Galera
- Load balancing with ProxySQL
- Scalability and auto-discovery
- Multi-region deployment and automated failover
- User-friendly GUI for cluster management
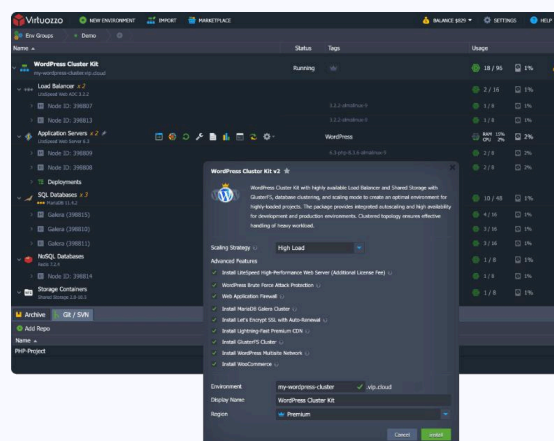

Kubernetes Management Automation

Virtuozzo Application Platform includes built-in Kubernetes support delivered through a unique nested container architecture providing high density, efficiency, and powerful automation.

- Automated deployment, scaling, node discovery, and updates
- High resource efficiency through nested containers
- Pay-per-use pricing model for end users
- Integrated troubleshooting and monitoring tools
- Out-of-the-box load balancing and SSL
- Multi-cloud and on-prem cluster provisioning with no vendor lock-in
- Built-in GitLab CI/CD and storage
- High-availability (HA) control plane

WordPress as a Service

Virtuozzo delivers a next-gen WordPress hosting solution with preconfigured environments, automated standalone and multi-region deployment, clustering, and auto-scaling. Designed to replace outdated shared hosting and overbuilt enterprise platforms, it offers a modern, cost-effective alternative that's easy to adopt and scale.

- One-click deployment with auto-scaling, clustering and multi-region setup
- Unified WordPress management via an intuitive UI
- Built-in monitoring, alerting, and metering
- Tailored for web agencies and end users
- Scalable, flexible, and more affordable than legacy cPanel/ Plesk or mega-host alternatives

Multi-Cloud and Multi-Region Application Management

Virtuozzo PaaS enables seamless application management across multi-cloud and multi-region environments through a unified platform. It supports private cloud deployments, as well as integration with major hyperscalers — offering full control, scalability, and compliance.

- Unified operations and management
- Geographic flexibility and resilience
- Compliance with data residency regulations
- Cost optimization through flexible deployments

Proven by a global network of Service Providers

Virtuozzo delivers a next-gen WordPress hosting solution with preconfigured environments, automated standalone and multi-region deployment, clustering, and auto-scaling. Designed to replace outdated shared hosting and overbuilt enterprise platforms, it offers a modern, cost-effective alternative that's easy to adopt and scale.
