Best-of-Breed Solution for Connectivity and Asset Management

PATCH MANAGER is a best-of-breed software application for flawlessly managing your physical layer assets and connectivity. In addition to allowing you to take complete control over your floor space, rack space, IT equipment, and connectivity, PATCH MANAGER enables you to gain clear insight into the purpose and usage of every asset and cable in your infrastructure.

DCIM Key Features

Connectivity Management

- Detailed end-to-end connection tracing across your data center(s)
- Fully customizable views, displaying only the information that you require
- Highlight connection routes in floor plans
- Route generation and change control for new circuits
- Cable label management
- Be on top of your fiber management with strand level detail
- Manage any type of cable (fiber, copper, power)

System Integration

- Extensive standard JSON/REST API
- Data import, data modification, data retrieval, change control
- Sample code and fully documented description of usage are available for the implementation process

PATCH MANAGER data center connection tracing

Capacity Planning

- Plan your rack space usage and data center floor space
- Manage the lifecycle of your data center assets
- Import from existing data sources

Highly Customizable Asset Management

- Track asset status and lifecycle
- User-defined data fields for storing custom information against any asset
- Smart search capabilities
- Bulk add, change, and delete
- Management and engineering reporting

Data Center Visualization

- Realistic 2D and 3D visualization, rack elevations
- Import floor plans
- Accurate equipment and cabinets dimensions
- Manage overhead cabinets, trays, and underfloor cabling

Fully Extensible Data Model

- Extensive template library
- Store custom information on any object
- Create custom data types
- Configure resources (e.g., floor space, electrical power, and cooling)
- Automatically calculate total consumption and provision of resources

PATCH MANAGER General Features

Manage Your Changes

- Work Orders for managing your 'Moves', 'Adds' and 'Changes'
- Features to coordinate work with teams and projects
- Automatically generated bills of materials
- Automated notification e-mails

Report and Analyze

- Powerful reporting functionality
- Easily generate customized reports
- Tabular and graphical elements in reports
- Export to Excel/PDF/JSON

Software-as-a-Service (SaaS) or In-House

PATCH MANAGER is available as a SaaS solution or as an in-house deployment. Having offered our PATCH MANAGER SaaS solution since 2010, we are a highly experienced provider, and have a proven track record of operating a secure and reliable service, with a global reach.

In-house, it can be deployed on Windows or Linux operating systems, with out-of-the-box database support for most widely used commercial and open-source database management systems.

Easily Navigate Through Hierarchical Levels & Visualize Your Network

- 2D and 3D visualization
- Detailed physical network hierarchy
- Interactive graphical views
- Detailed and accurate cabinet elevations
- Easy-to-use drag-and-drop features
