

Build business process in 5 minutes.

Collect and measure process metrics.
Optimize and improve your business efficiency.

Effectively engage multiple internal or external organization units into your business process.

Works with web & email.

What is Postoz?

Postoz is a web-based business process system that lets you create and deploy business processes in few minutes. Build business processes the creative way you want or by cloning from shared business process templates. Add collaborators, implement user interface with drag & drop web form components, configure & visualize process transitions, and *deploy business processes over internet, instantly.*

Built with Postoz (Click on them to view it)

[YOUR OWN](#)

It's web-based. All you need is a web browser and an internet connection. There is nothing to download or install. Don't have to worry about upgrades and patches. With postoz you can fully focus on what is most important, your business & strategic goals.

You understand your business better than anyone. Why sacrifice operational innovations by purchasing ready-made solutions?. Your business & you craft a solution. No coding required. No gaps between process design and process implementation.

Easily track an item in your business process with details about Where is it in the process cycle?. Who is working on it?. Seamlessly track business process that span across multiple organization units.

Measure & understand about process bottle necks, operational efficiencies of your business with quantitative process metrics. Create custom reports on these metrics or export metrics data to XLS file.

Have a innovative business process to share?. Want to use processes shared by other organizations?. Process exchange is market place for sharing/exchanging business processes.

Why we built Postoz?

Postoz is focused on an issue, most enterprises are coping with -
" Using email for workflow management "

Email has proved as wonderful communication medium. The flexibility of email allows enterprises to structure their workflow system with ease. But monitoring, tracking, measuring & optimising email based workflows are tough.

At one end, there are expensive bloatware workflow/business process systems that requires multiple months of customization and at other end, there are one-size-fits-all ready-made solutions that kills operational innovations & effectiveness.

We launched Postoz in 2011 as we felt the need for SaaS hosted, human centric, web-based business process system.
