BF GAMES

BF Games has a long-standing reputation as a leading game provider, operating in over 24 licensed jurisdictions. With a diversified portfolio of more than 150 high-quality games, we deliver top-tier entertainment to players around the globe.

To make our offer even more compelling, we invite you to **explore our Jackpot solutions** - designed specifically for online operators looking to boost engagement and retention.

JACKPOTS

HOW IT WORKS?

- 1.** Jackpots start from a base pot amount, set by the operator.
- 2.** A part of each player's bet contributes to the total Jackpot value.
- 3.** When the Jackpot reaches the trigger level, it becomes active.
- 4.** From that moment, any random win could trigger the Jackpot and award the entire Jackpot amount!

JACKPOTS

HOW IT LOOKS?

Live Jackpots

Displays current values, with up to 3 active jackpots.

Happy Hour

Shows jackpot status and active time period.

Jackpots Info

Full set of details including minimum bets, terms, and jackpot values.

JACKPOTS

HAPPY HOUR

In addition to classic Jackpots, we also offer special Happy Hour Jackpots. While classic Jackpots are triggered when a set amount is reached, **Happy Hour Jackpots are active during specific time periods.**

These could be special hours designed to boost player activity.

They can also run for longer periods, such as an entire weekend, to support larger campaigns!

HOW TO CONFIGURE JACKPOT?

Minimal set of configuration parameters is: **Min trigger value, Max trigger value, (Visible) Increment**

	Base Value	Min Trigger Value	Max Trigger Value	Average Trigger Value	Visible Increment %	Hidden Increment %	Min Hidden Value	Max Hidden Value	Average Hidden Value	Total RTP %	Min Total Bet to Win	Max Total Bet to Win	Average Total Bet to Win
Jackpot: Gold	€ 0.00	€ 5,000.00	€ 10,000.00	€ 7,500.00	0.50%	0.00%	€ 0.00	0.00%	€ 0.00	0.50%	€ 1,000,000.00	€ 2,000,000.00	€ 1,500,000.00

By setting these 3 fields like in the table above we configured a jackpot that will be triggered between 5 and 10k eur - there will be a randomly selected trigger value somewhere in this range.

The increment was set to 0.5%.

Once the jackpot pot reaches the hidden trigger, the jackpot is awarded.

Columns in blue are informational columns.

- **Average Trigger Value** will be 7.5k (middle of trigger value range) - this will be the averageTotal jackpot amount.
- **Total RTP** - this states how much additional rtp we add to the game by enabling this jackpot. If the game for instance game has rp 96% then we we'll enable this jackpot for the game, the overall RTP will grow to 96.5%
- **Min Total Bet to Win** - minimum amount that needs to be wagered by players before jackpot is won.
- **Max Total Bet to Win** - jackpot for sure will be won once this amount will be wagered.
- **Average Total Bet to Win**

MORE ADVANCED CONFIGURATION (1/2)

The issue with previously configured jackpot is it will start from 0 each time it's won - and then it doesn't look appealing. What we can do here is to add a Base value for it, which in fact is an initial value of the jackpot:

	Base Value	Min Trigger Value	Max Trigger Value	Average Trigger Value	Visible Increment %	Hidden Increment %	Min Hidden Value	Max Hidden Value	Average Hidden Value	Total RTP %	Min Total Bet to Win	Max Total Bet to Win	Average Total Bet to Win
Jackpot: Gold	€ 500.00	€ 5,000.00	€ 10,000.00	€ 7,500.00	0.50%	0.00%	€ 0.00	0.00%	€ 0.00	0.54%	€ 900,000.00	€ 1,900,000.00	€ 1,400,000.00

Now the jackpot starts from 500.00 eur at the beginning and after each time it has been won.

This will of course increase the jackpot RTP, which grew to 0.54%. Also "Average Total Bet to Win" went down since the initial jackpot value is already closer to the Trigger value compared to the previous example when it started from 0.

MORE ADVANCED CONFIGURATION (2/2)

In order to make the starting pots more attractive to the player we can configure a Hidden Increment.

	Base Value	Min Trigger Value	Max Trigger Value	Average Trigger Value	Visible Increment %	Hidden Increment %	Min Hidden Value	Max Hidden Value	Average Hidden Value	Total RTP %	Min Total Bet to Win	Max Total Bet to Win	Average Total Bet to Win
Jackpot: Gold	€ 500.00	€ 5,000.00	€ 10,000.00	€ 7,500.00	0.50%	0.05%	€ 409.09	€ 863.64	€ 636.36	0.59%	€ 818,181.82	€ 1,727,272.73	€ 1,272,727.27

Hidden increment works like regular (visible) increment, it's taken as a bet percentage, but it doesn't increase the current jackpot pot - it is added to the future starting pot.

In the example above the jackpot will start (in average) from Base Value + Average Hidden Value, which is $500 + 636 = 1136$ (in average).

Setting hidden increment:

- Increases jackpot RTP
- Decreases Average Total Bet to Win by making starting pot closer to trigger - which makes jackpot is awarded more often.
