

FACT SHEET

INVENTORY CONTROL SYSTEM

DYNAMIC OMNICHANNEL INVENTORY

Teamwork Commerce inventory control is a cloud-centered solution accessed directly through a web browser, as well as the Teamwork Commerce POS mobile application. This requires limited installation and can be instantly activated with ease.

The inventory platform is the infrastructure that powers Teamwork Commerce, operating around a precise cloud stock ledger. Retailers can monitor every detail, from unit availability to location and status, every facet is centrally managed and verified for accuracy.

The Teamwork platform allows retailers to manage every unit on hand across all sales channels. Brands should have complete control over their inventory, securing stock and controlling access. The Teamwork platform allows key front-end functionality directly from the POS app on iPad. Associates can initiate a count, record the items and send the memo to the cloud, with signature verification.

HIGHLIGHTS

- Sku Level Visibility
- Granular Stock Control
- Buffer Stock Levels
- Automated Replenishment
- Multi-Location Support
- Unit Level Status
- Logic Based Allocation
- Precise Stock Ledger

THE TEAMWORK DIFFERENCE

Monitor stock levels from all channels with a range of specific delineating information to drive a seamless fulfillment workflow. The natively integrated omnichannel platform enables inventory visibility from the point of sale & CloudHQ supporting an engaged customer experience.

DYNAMIC INVENTORY CONTROL SYSTEM

The management team can then review the new count memo against the existing ledger & make adjustments as needed.

These counts do not have to be accepted but can be recorded to build reports about stock counts and provide a better long term representation of inventory.

The inventory platform also allows associates to make adjustments on the fly. Damaged or defective items can be assigned that status & removed from the on-hand inventory, synchronizing directly to the cloud and ensuring consistency around every unit of inventory from every channel.

Teamwork Commerce inventory control is also easily expandable to include the essential needs of stock operations. The Teamwork stock counter app is an additional open source application that can be integrated with RFID counter technology to create a more accurate stock count and leverage additional technology.

ICS FUNCTIONALITY

DYNAMIC MANAGEMENT

Automatically section off warehouse inventory based on channel sell rate, to ensure stock is available where customers demand it.

SWITCH ON/OFF

Turn on or off a store with the tap of a button, retailers can completely customize where inventory is assigned and how it will be fulfilled, in less than a minute.

BUFFER STOCK

You want every unit on hand to be sold, but not oversold... Buffer levels can be configured by % or unit value ensuring key items are always available to sell.

LOGIC BASED ALLOCATION

The platform can tell you when to order more, giving you customized recommendations based on trends & historical performance data.

STOCK COUNTS

Count the whole store or a section, with stock checks easily initiated from the POS application and verified in the Cloud Headquarters by management.

ITEM LEVEL STATUS

Acknowledging what is available & what is not available is essential for eCommerce, Teamwork can help you see why the item is not available.
