

Table of Contents

Preface	ix
I Background	1
1 Why do we learn statistics?	3
1.1 On the psychology of statistics	3
1.2 The cautionary tale of Simpson's paradox	6
1.3 Statistics in psychology	9
1.4 Statistics in everyday life	11
1.5 There's more to research methods than statistics	11
2 A brief introduction to research design	13
2.1 Introduction to psychological measurement	13
2.2 Scales of measurement	17
2.3 Assessing the reliability of a measurement	22
2.4 The "role" of variables: predictors and outcomes	24
2.5 Experimental and non-experimental research	25
2.6 Assessing the validity of a study	27
2.7 Confounds, artefacts and other threats to validity	31
2.8 Summary	41
II Describing and displaying data with JASP	43
3 Getting started with JASP	45
3.1 Installing JASP	46
3.2 Analyses	47
3.3 Loading data in JASP	48
3.4 The spreadsheet	48
3.5 Changing data from one measurement scale to another	51
3.6 Quitting JASP	51
3.7 Summary	52
4 Descriptive statistics	53
4.1 Measures of central tendency	55
4.2 Measures of variability	62
4.3 Skew and kurtosis	71
4.4 Descriptive statistics separately for each group	74

4.5	Standard scores	76
4.6	Summary	77
5	Drawing graphs	81
5.1	Histograms	82
5.2	Boxplots	84
5.3	Saving image files using JASP	87
5.4	Summary	87
III	Statistical theory	89
6	Introduction to probability	97
6.1	How are probability and statistics different?	98
6.2	What does probability mean?	99
6.3	Basic probability theory	104
6.4	The binomial distribution	107
6.5	The normal distribution	111
6.6	Other useful distributions	116
6.7	Summary	120
7	Estimating unknown quantities from a sample	121
7.1	Samples, populations and sampling	121
7.2	The law of large numbers	129
7.3	Sampling distributions and the central limit theorem	131
7.4	Estimating population parameters	137
7.5	Estimating a confidence interval	145
7.6	Summary	150
8	Hypothesis testing	151
8.1	A menagerie of hypotheses	152
8.2	Two types of errors	155
8.3	Test statistics and sampling distributions	157
8.4	Making decisions	159
8.5	The <i>p</i> value of a test	162
8.6	Reporting the results of a hypothesis test	165
8.7	Running the hypothesis test in practice	167
8.8	Effect size, sample size and power	168
8.9	Some issues to consider	174
8.10	Summary	177

IV Statistical tools	179
9 Categorical data analysis	181
9.1 The χ^2 (chi-square) goodness-of-fit test	181
9.2 The χ^2 test of independence (or association)	195
9.3 The continuity correction	200
9.4 Effect size	201
9.5 Assumptions of the test(s)	202
9.6 Summary	203
10 Comparing two means	205
10.1 The one-sample z -test	205
10.2 The one-sample t -test	212
10.3 The independent samples t -test (Student test)	216
10.4 The independent samples t -test (Welch test)	226
10.5 The paired-samples t -test	229
10.6 One sided tests	234
10.7 Effect size	236
10.8 Checking the normality of a sample	239
10.9 Testing non-normal data with Wilcoxon tests	244
10.10 Summary	246
11 Correlation and linear regression	249
11.1 Correlations	249
11.2 Scatterplots	259
11.3 What is a linear regression model?	260
11.4 Estimating a linear regression model	262
11.5 Multiple linear regression	265
11.6 Quantifying the fit of the regression model	267
11.7 Hypothesis tests for regression models	271
11.8 Regarding regression coefficients	275
11.9 Assumptions of regression	277
11.10 Model checking	278
11.11 Model selection	285
11.12 Summary	288
12 Comparing several means (one-way ANOVA)	289
12.1 An illustrative data set	289
12.2 How ANOVA works	291
12.3 Running an ANOVA in JASP	301
12.4 Effect size	302
12.5 Multiple comparisons and post hoc tests	303
12.6 Assumptions of one-way ANOVA	307

12.7	Removing the normality assumption	311
12.8	Repeated measures one-way ANOVA	315
12.9	The Friedman non-parametric repeated measures ANOVA test	319
12.10	On the relationship between ANOVA and the Student <i>t</i> -test	321
12.11	Summary	321
13	Factorial ANOVA	323
13.1	Factorial ANOVA 1: balanced designs, no interactions	323
13.2	Factorial ANOVA 2: balanced designs, interactions allowed	335
13.3	Effect size	342
13.4	Assumption checking	345
13.5	Analysis of Covariance (ANCOVA)	346
13.6	ANOVA as a linear model	350
13.7	Different ways to specify contrasts	357
13.8	Post hoc tests	361
13.9	The method of planned comparisons	364
13.10	Factorial ANOVA 3: unbalanced designs	365
13.11	Summary	376
V	Endings, alternatives and prospects	377
14	Bayesian statistics	379
14.1	Probabilistic reasoning by rational agents	380
14.2	Bayesian hypothesis tests	385
14.3	Why be a Bayesian?	387
14.4	Bayesian <i>t</i> -tests	395
14.5	Summary	397
15	Epilogue	399
15.1	The undiscovered statistics	399
15.2	Learning the basics, and learning them in JASP	407
16	References	411
