

V-SAFE Reports with Symptom Keyword = BRAIN FOG

compiled by Craig Paardekooper

V-Safe is the largest collection of vaccine testimonies on the planet.

One of the reasons why the CDC was so reluctant to release the free-text entries of the V-Safe reports is because these entries are the personal testimonies of vaccine effects – numbering 390,000 per release, and numbering millions in total.

Having censored and erased hundreds of thousands of testimonies of vaccine injury from Facebook, the government was equally reluctant to be the provider of what is the largest collection of vaccine testimonies on the planet – collected by the CDC themselves !

Perhaps this is <<the longest story ever told>>, the testimony of 1 million people.

Many thanks to ICAN (<https://icandecide.org/v-safe-data/>) who pursued the CDC through the courts until they finally conceded and began to release this data on January 15th 2024.

Data is from all 4 releases, up until June 15th 2024, reported by 1,092,715 Covid <<vaccine>> recipients. The next release is on July 15th, 2024.

Data

Data Source : V-SAFE (CDC) : download (June 2024) @ <https://icandecide.org/v-safe-data/>

Total number of V-Safe reports with symptom keyword BRAIN FOG = 7827

Percentage of V-Safe reports with symptom keyword BRAIN FOG = 0.43005 %

(V-Safe) Total number of Covid <<vaccine>> recipients with this symptom = 6432

(V-Safe) Percentage of Covid <<vaccine>> recipients with this symptom = 0.58863 %

Limitations

This report shows the incidence of a symptom amongst a <<vaccinated>> population of 1092715 in the V-SAFE database. The onset of a high incidence after <<vaccination>> suggests possible cause - requiring further investigation of - 1) Other databases, such as VAERS and EUDRA, 2) Clinical literature and scientific papers.

What's with the brain fog!!! It comes and goes. It is distracting and requires focused efforts at patient care management. I'm maybe blowing it up some but I figured this would have passed by now. I don't recall any other immunization having this persistent activity. Also, the injection site was more tender today than yesterday. Ok thanks for listening ðŸ™‚ðŸ™‚ðŸ™‚

Brain fog more noticeable today but I have had it since tested + covid 19 6 weeks ago

brain fog : Case 456: ID LC4-91933-18760

Lower back pain, but the day I got the vaccine, I got the COVID brain fog that I had severely when I was positive. I was still getting over the fog when I got the vaccine, and it came back with a vengeance about 45mins to an hour later with it progressively getting worse throughout the day. It was still bad the next day, but it is getting better. Basically a reset from when I was able to return to work. This commentary is not mobile device friendly which is why I didn't enter anything my first check in because I couldn't edit what I was typing without erasing everything. I have had no fever or anything other than lower back muscle aches/tightness and then the brain fog.

Yesterday, I woke from a nap completely disoriented and had to ask questions of my family to explain specifics of my day up to that point. I remember things boy did not know if I had dreamed it, or if it had occurred. This morning, I woke up disoriented and had to take a few minutes to reconstruct what day it was, and what had happened the day before. Only this morning did I wonder if it might be connected to the vaccine. It felt like "brain fog."

I have had Covid and had the brain fog/ white feeling before before passing out. This was back but not as intense as when i had Covid. The scar where i had pre cancerous cells removex from my breast also burns, just like when i had Covid. Clamminess and hot/ cold just like Covid symptoms i had were also present.

I had what was thought to maybe be an allergic response with my first vaccine for which I received epinephrine. It was then determined to probably be a vasovagal event. Before my second vaccine I ate salty food and drank 60 Oz water. In the 30 min of monitoring after the vaccine I had a few moments of brain fog where I could not form sentences. These episodes improved with bearing down.

About 3 hours after receiving the vaccination, I experienced a combination of brain fog, light-headedness, and headache for about 3 hours. The brain fog was the most notable. I wouldn't have wanted to drive a car during that time based on how I was feeling. It seemed like my cognitive abilities were diminished for that short time.
