

V-SAFE Reports with Symptom Keyword = TACHYCARDIA

compiled by Craig Paardekooper

V-Safe is the largest collection of vaccine testimonies on the planet.

One of the reasons why the CDC was so reluctant to release the free-text entries of the V-Safe reports is because these entries are the personal testimonies of vaccine effects – numbering 390,000 per release, and numbering millions in total.

Having censored and erased hundreds of thousands of testimonies of vaccine injury from Facebook, the government was equally reluctant to be the provider of what is the largest collection of vaccine testimonies on the planet – collected by the CDC themselves !

Perhaps this is <<the longest story ever told>>, the testimony of 1 million people.

Many thanks to ICAN (<https://icandecide.org/v-safe-data/>) who pursued the CDC through the courts until they finally conceded and began to release this data on January 15th 2024.

Data is from all 4 releases, up until June 15th 2024, reported by 1,092,715 Covid <<vaccine>> recipients. The next release is on July 15th, 2024.

Data

Data Source : V-SAFE (CDC) : download (June 2024) @ <https://icandecide.org/v-safe-data/>

Total number of V-Safe reports with symptom keyword TACHYCARDIA = 3786

Percentage of V-Safe reports with symptom keyword TACHYCARDIA = 0.20802 %

(V-Safe) Total number of Covid <<vaccine>> recipients with this symptom = 3081

(V-Safe) Percentage of Covid <<vaccine>> recipients with this symptom = 0.28196 %

Limitations

This report shows the incidence of a symptom amongst a <<vaccinated>> population of 1092715 in the V-SAFE database. The onset of a high incidence after <<vaccination>> suggests possible cause - requiring further investigation of - 1) Other databases, such as VAERS and EUDRA, 2) Clinical literature and scientific papers.

tachycardia : Case 217: ID 6C8-22658-82597

On Friday December 18th at 2:45 p.m. I received my first dose of the vaccine. After the injection while waiting in the observation area, I noticed my arm felt cold and felt weaker. I was able to move my hand and did not have tingling. I was cleared to leave after 15 minutes. While driving home approximately 35 minutes after the injection I had a quick onset hot flash (felt like it came from my left arm which is where I received the injection). Then my heart started pounding. I noticed on my Apple Watch that my heart rate was climbing. It topped out at 170. I was having difficulty in breathing but that was related to my heart rate. I pulled over and called 911. I felt as if I was going to pass out. After 2 minutes or so my heart slowed and stayed at a rate between 120-130. I never lost consciousness. I canceled the ambulance and felt as if I could drive home. 30 minutes later the episode happened again. All the same symptoms as the first. The pounding felt harder and it was slightly harder to breathe until the rate came down again. Again, I felt as if I was going to lose consciousness but never did. Each episode lasted about 2 minutes from hot flash to slower heart rate. This time the ambulance came. No rash. No hives. No swelling. BP-160/90 HR-120-130 Sinus Tachycardia on a 3 lead EKG I did not need transport to the hospital. I started feeling much better around 5:00 p.m. The coldness I felt in my arm was gone. My arm no longer felt weak. The hot flash, rapid heart rate and faint feeling did not return.

Was in ER last night after experiencing symptoms 5 hours after vaccine was given. Was Prescribed, Pepcid, Benadryl and steroids to take for three days. Testing performed, blood work, vitals, EKG, chest X-ray and Covid-19 test. Symptoms that brought me to the ER were,

chest pain, visual disturbance, sweats, chills, numbness, tingling, tachycardia, high blood pressure.

Last night had to go to ER to be evaluated. Prescribed to take, Pepcid, Benadryl and steroids. They performed multiple test. Believe it was due to the vaccine. Symptoms I had were chest pain, sweats, chills, numbness, tingling, tachycardia and high blood pressure.

About twelve hours after I received my second shot, I woke up feeling hot, tachycardia, sore all over, mild sore throat, and fatigue. I did not have any reaction with the first shot (only a extremely mild sore arm). The immune response from the second shot was enough to keep

me home from work (I am an ER nurse who never calls in sick). I would have been able to work, but we thankfully had extra staffing and I was thankful I was able to stay home, because I remained sore (especially in my hips) till about 24 hrs post shot. Tylenol & ibuprofen were my best friends! I just thought Id share so the older population know what to expect and be prepared. Thank you for all you do! I feel lucky to be part of the good side of this future history lesson. Take care, (b)(6), RN

I received outpatient IV fluids to help manage the flare up of POTS

I have Postural Orthostatic Tachycardia Syndrome and usually experience a flare up of the condition after any vaccine, especially the flu shot so not surprised at all to find myself in quite a bit of a flare up that started a few days after this vaccine. So getting through work was a challenge last night (Im an inpatient oncology nurse). Of course, I get flares of it if I get any kind of virus too so I will keep getting my vaccines. Eventually Itll calm back down.

Hey! It's me now. Very frustrating. Not really sure what's going on. I do well at night and early morning feel bad again. I had two episodes of tachycardia in the hospital but my EKGs looked fine. But after a bolus of fluids and toradol, I felt better and was discharged Sunday at 3:00pm. But today, back to Dr this am .Very weak, could barely walk, not dehydrated, had Tachycardia, blood pressure up, no fever, had cold extremities and light sensitivity. Drs office tried to give me fluids and hit my artery which blew up like an egg! We left and went to the ER. High B/P, tachycardia, Blood work, chest X-ray, CAT scan of head, Bolus of fluid with toradol, etc. Started feeling better after the bolus. The Dr said he wanted to give me Lebatolol 100mg tid to suppress my adrenal gland and Fioricet for the headaches and light sensitivity. What do you think?

I have Postural Orthostatic tachycardia Syndrome, which does cause fatigue. I tried to register on your website on Tuesday, after getting the vaccine on Monday. Did not get the code till the wee hours on Wednesday. Tried again Wednesday. Finally got the code, but this

is the first check in message I have gotten. The day after the shot, I had tachycardia from early to mid-morning. Although tachycardia is a POTS symptom, it is very rare for me to have it in the morning.

**im not really sure how answer due to having this HR issue which began a week and a half after first vaccine, but is assumed to be caused by being covid positive. I have a cardiology appt

Became covid + one week after first vaccine. Only symptom was/is postural tachycardia which is still happening. Have been referred to cardiologist to assess. So I am still out of work due to covid symptom, not due to vaccine.

I experienced a slight degree of vertigo, for about 2 hours, following my vaccination. I also experienced mild pain/itching, at the injection site as well as experiencing elevated energy (no tachycardia/elevated heart rate, or change in my diastolic/systolic bp). The energy that I experienced, was analogous to a massive adrenaline rush, which I am still experiencing.

Forgot to report on the 24-48 hr, I was experiencing tachycardia at rest 110-120 bpm, from 36hr-48hr I was having frequent voiding like every 30 minutes even though I had not drank excess fluids, maybe 16oz -24oz in a 24 hr period, it was about the same time when the chills kicked it and started to subside in the morning when my very frequent voids stopped as well. Today pulse has almost returned to normal ranges and no excessive voids.

About 3 days after both shot 1 & 2 i had episodes of my Paroxysmal Atrial Tachycardia.

tachycardia : Case 2665: ID E8B-25228-59335

I want to comment on previous days. 1/29, had episode of tachycardia after filling out v-safe for the day. Experienced dizziness + weakness - HR was 100. Episode resolved and then I experienced myalgias, fatigue, headache which persisted 1/30 and 1/31 as reported. I've been taking ibuprofen and acetaminophen prn but pretty much around the clock. Upon reflection, tachycardiac episode also occurred on 1/1 (Fri after first dose). Also was tachycardiac to 100s and experienced weakness + dizziness.

Slept for over 24 hours straight. No appetite. Diarrhea 3 hours after vaccination. Vomiting 9 hours after vaccination. Concerned because I am deathly allergic to all Penicillins and sulfa drugs. Also have an underlying condition...SVT. Super ventricular tachycardia. Had an ablation done on March 6, 2014 but have been fine since then and have yearly checkups with cardiologist. I am on several medications and dont know if these after effects are normal.

I do have a history of tachycardia so I don't know how to tell if it was a result of the vaccine, heart rate went to 202 for a short time. Then on the next day I had a headache, nauseated, temperature of 99.8 then a day later the red area about an inch below the injection site turned red and is still red today.

I have developed viral myocarditis with sudden cardiac death and an ICD implant. The myocarditis is suspected as result of COVID in March 2020. Following my first vaccine I developed many of the same symptoms I had with COVID. I had discussed with my physician. Suspected I was a long hauler. After the initial vaccine the fatigue and shortness of breath worsened. I was unable to walk a flight of stairs. On January 12 I had to call 911 for syncope and chest pain. I coded 3 times was on the vent twice. I feel that recognizing long term cardiac conditions are poorly studied and followed. I continued with uncontrolled hypertension. I had a long term history of vertigo which had become almost intolerable since COVID and after the initial vaccine. It is suspected my vertigo was related to self limiting ventricular tachycardia. The result of viral myocarditis.

Experienced an episode of racing heartbeat up to 134 bpm out of nowhere Second episode a few hours later bpm were at 124. I used my Kardia mobile device and was 134 bpm and mentioned possible Atrial fibrillation along with sinus tachycardia. I went back into back into normal sinus rhythm a few times after. I went to the emergency walk in center to have an ekg done on request of my cardiologist. It was normal as well as my vitals except for blood pressure of 150/82. I have no heart problems and take no medications This was a scary episode that I hope doesnt return.

Phone call to my dr at clinic

Yesterday had rapid heartbeat show up at 4.30pm. Wasnt sure if from shot, a separate episode of my supraventricular tachycardia, or the vaccine triggering my own tachycardia. Called physician to find out if taking my prescribed med atenolol was ok. By time I got reply from office, rapid heartbeat had mostly resolved. I attempted to count heartbeats at about 112/minute at height of episode (not sure) but my normal tachycardias have been clocked as fast as one time at 284 years ago. Not sure how to rate, probably disconcerting but not severe since Im used to tachycardia sensations.

This is regarding the day after shot: I got worse. Dizzy, nauseous that I was going to vomit but didn't, my upper back and neck were already bothering me, but then my lower back down into my hips greatly achy. More headache. No diarrhea. When I had to get up to give my pup her pain med (I didn't want to get up) I felt like a zombie I was moving so slow and wanted to lay back down. So uncomfortable. I took 2 more ibuprofen around 6 and I took one of my other meds. That's when I got tachycardia for about an hour or so and thought I was going to have to go to hospital if it didn't stop. I was scared I've never had a problem with my meds and ibu. I hadn't eaten all day because I didn't have appetite so I forced myself to eat about 5 crackers and drink orange juice. That was earlier in the day. After ibu, I laid down again and tried to rest so my heart rate would go down. I drank more water. Later on strangely like about 9 I gave pup eyedrop and I felt better but my hr was still up. I ate some canned peaches and more water. Today. I'm still a little achy and my lymph node is still swollen. But I feel much better.
