

Keep Your Self Storage Facilities Secure

Verkada's integrated cameras, alarms and 24/7 professional monitoring solution protects your facilities and your customers' property by detecting intruders early and taking action to stop them.

The solution

Detect suspicious activity

Using advanced AI analytics, Verkada cameras can detect if a person appears on your property after hours. For more complete site coverage, third-party wired intrusion sensors — such as long range outdoor motion detectors — can be paired with nearby Verkada cameras via the Verkada alarm panel.

Verify the threat

If an alarm event is triggered by a camera or intrusion sensor, our team of professional monitoring agents can review footage to verify that there is a real person present, helping you avoid false alarm fines.

Respond in real time

Agents will dispatch police and share live camera footage with them. Agents will also try to immediately scare off the intruder by talking down to them through a powerful speaker, and can turn on sirens and strobes for additional deterrence.

“

I was asleep when we had an incident at one of our sites. Verkada immediately video verified the intrusion event and dispatched the police. I woke up to a message that the intruder had been caught, and we had clear video evidence to prove it.

Katie Cowen,
Director of IT,
Movelt Storage

Key benefits

Detect intruders before they do damage

Protect your perimeter with cameras that can detect intruders the minute they set foot on your property.

Take immediate action against intruders

In addition to notifying law enforcement, our agents can talk down to intruders through a powerful speaker to scare them off.

Use cameras as your alarm system

Detect intruders using just cameras and get all the benefits of a monitored alarm system without any extra hardware.

Cut back on expensive in-person guards

Cameras detect intruders and agents can take action, reducing the need for live guards patrolling or watching cameras.

Get priority police response

Monitoring agents will video-verify alarm events to eliminate false alarms and make it more likely that the police will show up quickly.

Professional monitoring with video verification is included in the LIC-BA and LIC-BV Alarm Licenses. One Alarms License is required for each unique site address and supports up to 50 monitored cameras. Professional monitoring is provided by fully redundant, US-based, UL-listed central monitoring stations with Five Diamond Certification from The Monitoring Association. Certified monitoring centers are also available in Canada, the UK and Australia.
