

# Access Control for K-12 Schools

## Access Control

Modern cloud-based access control to protect students and staff

From the building perimeter to interior classroom doors, improve security and streamline access with a modern, hybrid-cloud access control system. Readers and intercoms in high-traffic areas offer a secure, convenient entry experience for visitors and staff, while wireless locks bring the security of access control to lower-trafficked doors without the cost and complexity of wired set-ups. With unified access control across every door, school districts can effectively trigger lockdowns in seconds, monitor real-time door states, and easily manage doors, schedules, and users at any scale, from anywhere.

## Benefits of Verkada's hybrid-cloud solution

**Plug-and-play scalability** with no servers, databases, or desktop applications

**Remote, district-wide management** from computers or phones, anywhere, any time

**Constant improvement** over time with quarterly feature updates and automatic firmware updates

**Local reliability** with on-board storage and P2P communication to maintain operations during network outages

### Mountain View Los Altos Union High School District

"The ease of use has been transformative, and ultimately, this helps us keep our campuses safe across multiple cities."

**Bob Fishtrom,**  
Director of IT Services

**MVLA**  
HIGH SCHOOL DISTRICT

## One integrated platform to strengthen school security

### Video Security

Gain visual context on door events, and get alerted to tailgating events or if a person of interest tries to enter.

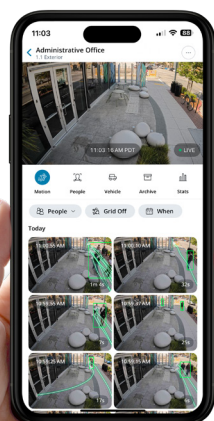

### Intercom

Expand your access control deployment by using an Intercom as a standalone door controller and reader.

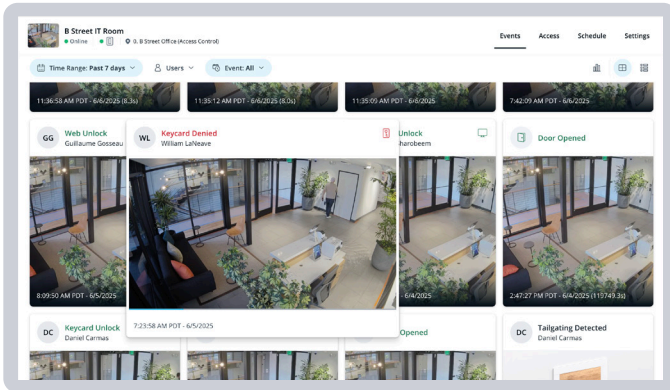

### Guest

Provide mobile credentials to visitors in advance that gives them access to the areas they need.

## Key features for K-12

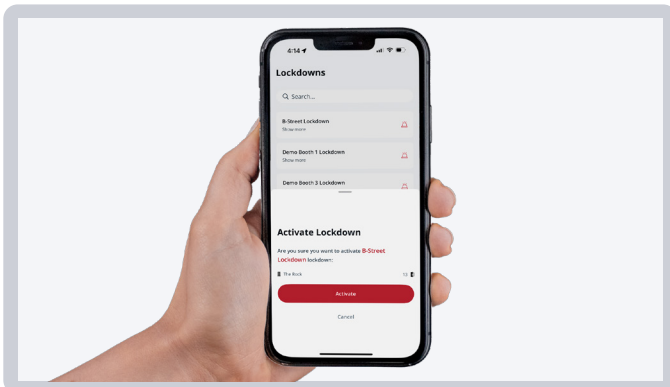

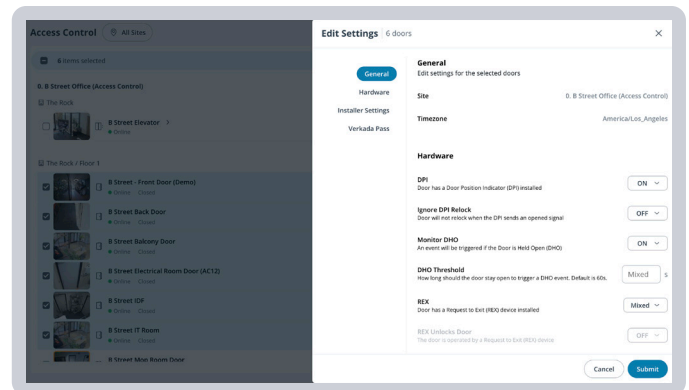

### Strengthen school perimeter security

- Tailor building access before, during, or after school hours with customizable schedules that balance student traffic with keeping bad actors out.
- Get proactive alerts with relevant camera footage for unexpected ingress and egress.
- Monitor that classroom doors remain closed, locked, and latched using the wireless locks' built-in door position indicator and latch bolt monitor.
- Quickly revoke credentials upon staff departure in a few clicks or automatically via SCIM/SSO integrations.
- Properly verify visitors with clear video intercoms. Flag persons of interest instantly using the integrated camera to block access to the school building.
- Provide visitors or contractors with temporary credentials to give them just the level of access they need.

### Streamline system management

- Quickly edit door access schedules in bulk for holidays, after-school events, or unexpected closures.
- Provision physical and mobile credentials in seconds, and design and print badges with a few clicks.
- Further customize and automate your system with APIs, webhooks, and out-of-the-box integrations.
- Automate user management with SCIM and SSO integrations.

### Accelerate emergency response

- Trigger a building or campus-wide lockdown in a matter of seconds via desktop, mobile app, or a physical panic button, immediately restricting access to school buildings and classrooms.
- With wireless locks, faculty can easily confirm lockdowns are in effect based on intuitive LED feedback and can also trigger local lockdowns with the lock's internal push button.
- Instantly share floor plans and live camera feeds with first responders, and remotely unlock specific doors as they move through the facility.

### Try Verkada free

Our 30-day trial includes access control devices and full access to the Command management platform.
