Access Control for

Manufacturing

Access Control
Enterprise-Grade Door Security for Manufacturing

From factories to warehouses, improve security and streamline access with a modern, hybrid-cloud access control system. Verkada provides critical insights that allow you to be more proactive about your facilities' security, while making it simple to manage doors, schedules, and users at any scale, from anywhere.

Benefits of Verkada's hybrid-cloud solution

Eliminate on-prem servers and enjoy easy installation and minimal maintenance, while ensuring maximum reliability

Remote, multi-site management lets you securely manage devices and users from a computer or phone, anywhere, any time

Native camera integration provides critical visual context on every door, helping to accelerate investigations

Real-time alerts let you respond to events as they happen, from a door propped open to a lost badge

Unlimited doors, sites, and users allow your access control system to easily grow with your organization

Seamlessly transition from your existing system and bring your readers, locks, and credentials along, if desired

User-friendly and intuitive software is quick to learn - no training needed

Automatic firmware updates keep your system secure and up-to-date with no manual work

Deter cybersecurity threats with enhanced user security – SSO, MFA, and SAML authentication

Quarterly feature updates and a 10-year warranty included at no additional cost

Belron International

"What stood out about Verkada was the native integration between video and access control, along with the ease of use and management. You have a badge around your neck or your phone in your pocket, and it just works."

Ash Hussain,
IT Lead

BELRON®

One integrated platform to strengthen facility security

Video Security

Gain visual context on door events, get tailgating alerts, and let authorized vehicles in using license plate numbers.

Alarms

Quickly disarm your alarm system simply by badging in at a door.

Intercom

Expand your access control deployment by using an Intercom as a standalone door controller and reader.
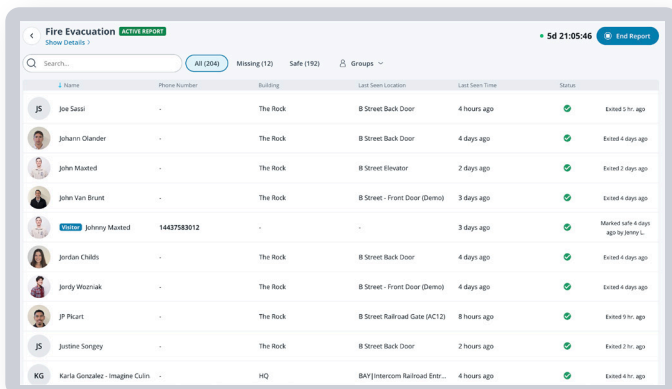

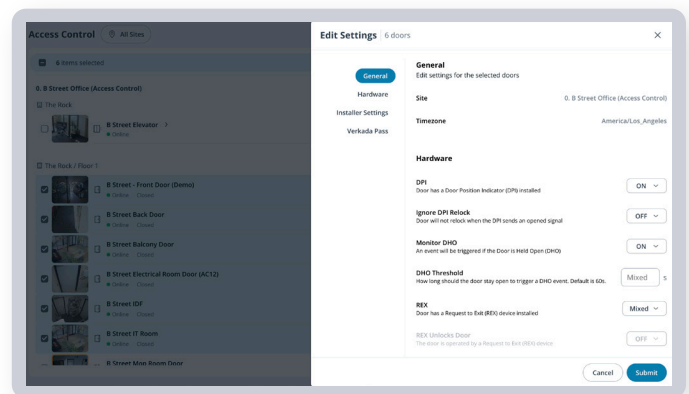

Key Features for Manufacturing

Protect critical entry points

- Role-based access permissions and anti-passback policies help safeguard labs, IT rooms, and production areas.
- Get alerted right away to any forced entries, tailgating, or wire tampering. If a breach happens, quickly view video clips of the door events to hasten response.
- Choose the right credential method for each area, from streamlined license plate unlock for authorized vehicles to secure keycard + PIN code for the most sensitive areas.
- Quickly revoke credentials upon employee departure, or auto-deactivate a badge that hasn't been used for a certain period of time.

Streamline system management

- Quickly adjust door access schedules in bulk for holidays or unexpected closures.
- Provision physical and mobile credentials in seconds, and design and print badges with a few clicks.
- Automate user management with SCIM and SSO integrations, or upload via CSV or API.
- Set access expiration dates for temporary employees.
- Easily run reports to get insights on door usage, schedule changes, security concerns, and more.
- Further customize and automate your system with APIs, webhooks, and out-of-the-box integrations.

Accelerate emergency response

- Know who is safe or missing during an emergency evacuation with pre-built roll call reports and badge readers at muster stations.
- In case of active threats or disgruntled individuals, lock down entrances with a single click.
- Instantly share floor plans and live camera feeds with first responders via SMS or a direct link, and remotely unlock doors if needed as they move through the facility.

Try Verkada free

Our 30-day trial includes access control devices and full access to the Command management platform.
