

Healthcare

Create Safer Spaces to Enable Outstanding Care

Keep patients, staff, and sensitive assets safe with state-of-the-art security products, including alarms, cameras, access control, visitor management, and air quality sensors. Bring your entire security operation together under one cloud-managed platform, complete with robust privacy controls.

Patient and staff safety

Respond rapidly to incidents with AI-powered investigation tools and alerts

Building security

Keep bad actors out, deter unauthorized access, and strengthen perimeter security

Operational efficiency

Optimize day-to-day care operations with video-driven insights

Why Healthcare Organizations Choose Verkada

Coastal Family Health Center

"The software is so intuitive. Not long after we set up the system, it felt like we had been using it forever."

Chuck Clark,
Director of IT

Experience a new level of simplicity with Verkada. All you need is the hardware and Command, our software platform, which updates automatically. Centrally manage all Verkada devices and users from any browser or mobile device. Gain actionable insights with information integrated across devices.

Access footage from anywhere and rapidly investigate with AI-powered search

Instantly share footage via SMS or a direct link and auto-generate incident reports

IT-friendly with bandwidth-efficient cameras and no DVRs/NVRs to upkeep

Up to 10-year warranty, predictable renewal costs, and unlimited user seats

Compliance with industry standards – SOC 2 Type 2, ISO 27001/27017/27018, and support for HIPAA requirements

Empower teams with intelligent alerts and a simple, intuitive interface

Strengthen liability protection with unlimited archiving and 24/7 recording

Easy multi-site management with granular user permissions

Top-rated technical support – available 24/7 via email, phone, or live chat

Built on Zero Trust principles with enhanced user security – SSO, MFA, and SAML authentication

Protect Patients and Frontline Staff to Support Exceptional Care

Chapters Health System

"Simple is the word that stands out with Verkada. Getting people onboarded was easy, we had no issues or complications. Investigations take minutes when they used to take hours."

Michael Parkin,
Director of IT Security

Help staff feel safer at work

- With the prevalence of workplace violence, panic buttons at nurses' stations or reception desks offer a critical lifeline during heated incidents.
- With one click, frontline staff can promptly alert internal security, dispatch the police, or activate visual or loudspeaker warnings to raise internal alerts.
- Pair Verkada cameras with panic buttons to immediately pull up high-resolution footage of the incident and expedite emergency response.

Safeguard newborns, patients, and seniors

- With Helix, automatically sync real-time location system (RTLS) data with video footage to gain visual context and quickly locate missing children, patients, and costly medical equipment.
- Automatically lock down doors to deter unauthorized removal of newborns by pairing Verkada controlled doors with your infant abduction prevention system.
- AI-enabled cameras can alert you in seconds when at-risk patients or seniors are detected outside their rooms or the facility.

Monitor safety in a privacy-respecting way

- With remote access to camera feeds, care staff can conveniently monitor patients from their desks while reducing burnout. Detect patient distress or self-harm behaviors early to enable quick intervention.
- Maintain patient privacy and help support HIPAA data minimization requirements by blurring faces on live footage, setting privacy regions, and tiering user permissions, such as restricting staff to view only live camera streams.

Accelerate investigations and response times

- From locating missing patients to investigating altercations, search across your entire camera fleet in just minutes. Use face search, motion search, or simply describe people or vehicles using everyday language in a search bar.
- Enable staff and security teams to rapidly respond to incidents by accessing footage from any device, anywhere, and auto-generating incident reports.
- Protect bystanders' privacy by blurring their faces in video evidence before sharing with police via SMS or a direct link.

Enhance Building Security to Deter Threats and Unauthorized Access

Prism Health

"If a security event triggers an alert, I get an email and text message with a link to the footage. Within seconds, I can determine the cause and share the video with first responders as needed."

Matthew Shaw,
Director of Infrastructure
and Information Services

Prism Health
NORTH TEXAS

Protect critical access points

- Centrally manage thousands of doors and employee access credentials, with the ability to auto provision and deprovision credentials.
- Guard against theft and trespassing in staff-only areas, IT rooms, and medication storage areas with role-based permissions or badge in and badge out policies.
- Get alerted right away to any forced entries, tailgating, or wire tampering. If a breach happens, quickly view video clips of the door events to hasten response.

Increase visitor security

- Instead of paper logbooks, impress visitors or outpatients with a seamless check-in experience that safeguards PHI – featuring built-in photo ID capture, badge printing, screening forms, e-signing, and native EMR and EHR integrations.
- Automatically check visitors against patient-specific and sitewide watchlists, as well as optional known offender databases.
- Real-time visibility allows front desk staff to enforce visitor limits and verify authorized visitors at checkpoints like ICUs.

Keep bad actors out

- Video intercoms installed outside of lobby entrances or loading docks allow staff to answer calls and visually verify appointment holders, visitors, and deliveries prior to granting access.
- Flag past offenders or restricted visitors as persons of interest (POIs) and link any associated license plates. Receive alerts when they drive in or return to any of your healthcare facilities.

Enhance perimeter security

- Enhance staff safety at night with proactive loitering and crowd alerts, along with long-range infrared cameras installed in parking lots.
- Safeguard assets and patient records with rapid intrusion detection for motion, door, and glass break events.
- Trained virtual agents can quickly verify if a real person is present before calling the police, helping to ensure priority response.

Optimize Operations to Enhance Patient Care and Increase Efficiency

Maintain environments with air quality sensors

- Safeguard medicines and supplies from damage with real-time alerts for humidity, temperature, and air quality in storage units or refrigerators.
- Minimize operational disruptions by monitoring IT and MDF/IDF rooms for temperature and humidity fluctuations.
- Detect unhealthy air, elevated noise levels, and illicit smoking or vaping to protect patients and staff.

Innovive Health

"Our HR and administrative teams have tiered, role-based access levels. They use the cameras to monitor crowd density, and have proactive alerts enabled to prevent overcrowding."

Dave Ledoux,
Chief Information Officer

Deliver a better patient experience

- Use Occupancy Trends and heatmaps to track inbound and outbound traffic and activity hotspots in outpatient clinics, senior care facilities, and across hospital departments such as ER, radiology, laboratories, and pharmacies.
- Apply these insights to pinpoint busy times and optimize staffing, helping to decrease wait times and reduce patient frustration.

Audit processes more effectively

- Maintain high standards of care by easily auditing critical processes such as sanitation, infection control, and medication preparation.
- Quickly investigate medication errors with intuitive search filters or sync your Pharmacy Management System (PMS) with Verkada for rapid footage retrieval.
- Use video insights to improve staff training and reduce future errors.

Enable remote care monitoring

- With bandwidth-efficient cameras that install in minutes via PoE, effortlessly set up temporary monitoring zones for patients in specialized or critical care, whether in wards, rooms, or residences.

- Video data is protected through encryption at rest and in transit, support for SSO and MFA, and tampering alerts for added security.

Modern Protection for Any Space

Hospitals

- Enhance safety for frontline staff and patients
- Streamline SOC operations
- Increase visitor security
- Optimize patient experiences
- Increase traceability with uneditable audit logs

Clinics & medical offices

- Accelerate emergency response
- Strengthen liability protection
- Deter after-hours theft and intrusion
- Increase perimeter monitoring
- Improve operations with video insights

Long-term care facilities

- Respond rapidly to incidents
- Safeguard patients and seniors
- Protect against unauthorized entry
- Streamline visitor management and deliveries

One Platform to Simplify Healthcare Security

Video Security

- AI-enabled hybrid cloud cameras record continuously with up to 365 days of onboard retention
- Bandwidth-friendly – operate at only 20-50 Kbps in steady state
- No DVRs or NVRs – simple to install via PoE

Helix

- Pair any third-party data with Verkada video footage for visual context
- Combine RTLS data to quickly find missing children, patients, and equipment
- Pair Pharmacy Management System (PMS) data with video footage to investigate medications errors

Wireless Panic Button

- With one click, alert internal security, call the police, or trigger a visual or loudspeaker warning
- Pair with nearby cameras to immediately see what is going on in the vicinity
- Wear on a lanyard or mount on a wall or under a counter

Viewing Station

- Simplify live monitoring for security teams
- Stream up to 30 camera feeds per page (up to 10 pages) on a single display
- Customize page layouts to prioritize the display of high-activity areas
- Plug-and-play, zero configuration needed

Alarms

- Protect facilities with intrusion sensors and built-in professional monitoring
- Reduce false alarms and get priority police response with optional video verification
- Easily manage schedules, settings, and users without calling a third-party

Horn Speaker

- Talk down directly from a desktop or mobile device with one click
- Play pre-recorded messages as automated alarm responses
- Communicate emergency messages in real time to employees

Access Control

- Manage door schedules, user access, and lockdown scenarios from anywhere
- View access logs and get instant alerts
- Auto provision user access credentials with Azure AD and SCIM integration
- Pair with cameras for LPR-enabled entry

Air Quality Sensors

- Remotely monitor humidity, temperature, noise, TVOCs, PM 2.5, and more
- Set real-time alerts to protect against unwanted conditions
- Pair with cameras for visual context of unusual readings

Mailroom

- Quickly scan, match, and log all shipments with a mobile app
- Automatically notify recipients and easily track package pickups

Intercom

- Manage visitors, deliveries, and dock access with a 3-in-1 device: video intercom, camera, and single-door controller
- Improve security by visually confirming individuals before remotely granting entry
- Configure smart routing schedules

Guest

- Create custom check-in workflows for outpatients and inpatient visitors
- Surface relevant patient information with native EMR and EHR integration
- Pair with cameras and access control for enhanced visibility and security

Cellular Gateway

- Easily deploy Verkada devices in hard-to-wire locations like parking lots or for temporary monitoring zones
- Use the Verkada data plan or bring your own data plan

Serving healthcare organizations everywhere

Ambulatory surgery centers

Behavioral & mental health facilities

Blood banks & laboratories

Clinics & medical offices

Dialysis centers

Hospitals

Imaging & radiology centers

Long-term care facilities

Non-profit health centers

Pharmacies

Rehabilitation centers

Urgent care centers
