# HOW TO EXTRACT A PHOTO

PiCKLEBERRYPOP

# FOR PS/PSE USERS

# HOW TO EXTRACT A PHOTO
## FOR PS/CC USERS AND PSE USERS

First duplicate your image and
then select the background layer:

With the lasso tool, select your subject...
keep as close to the edges as you can,
but it doesn't have to be maxi-perfect

Right click on your selection and click on fill

Make sure you have "content-aware"
Selected in the drop down then click ok

Here's what you should be looking at now:

Now click on the top layer, your duplicated
image and click on your quick selection tool
(grouped with the magic wand in PS)

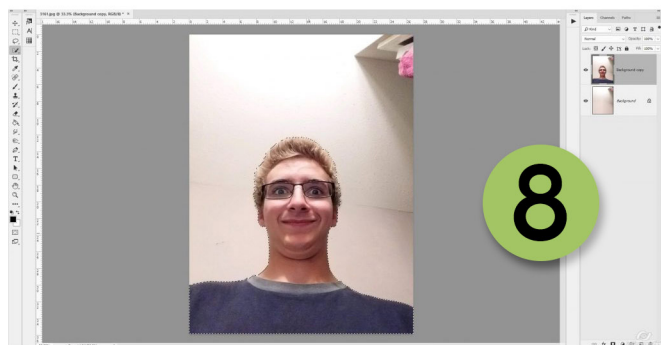

You can find it here in PSE:

Select your subject ... get as close to
on the edges as you can this time.
You can swap between the subtract and
add quick selection tools to help get
all the little details if necessary

**8**

When you're done, in Photoshop,
click on the Select and Mask button.

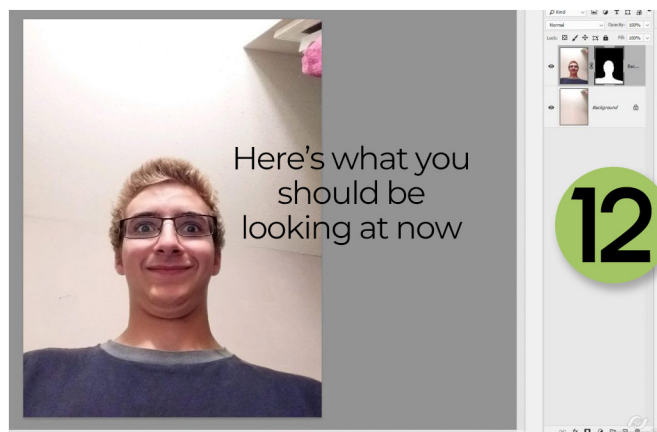

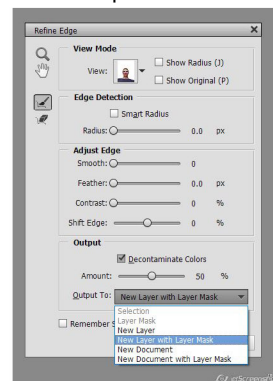

In PSE, you will need to click on the
Refine Edge button

**9**

Brush around the edges of your subject
(noted here with a red line). Notice I didn't brush
ON the edges but just outside

**10**

PiCKLEBERRYPOP
real life • real memories

When you're finished, for PS users,
select the Layer Mask option under the
Output drop down and click ok

**11**

or PSE users, select the New Layer
with Layer Mask option under Output To:

Here's what you
should be
looking at now

**12**

You can apply the layer mask by
right clicking and click on Apply

**13**

Here's what you get - and now you can scrap it!

**14**
