HOW TO CREATE OFFSET TiTLES #2

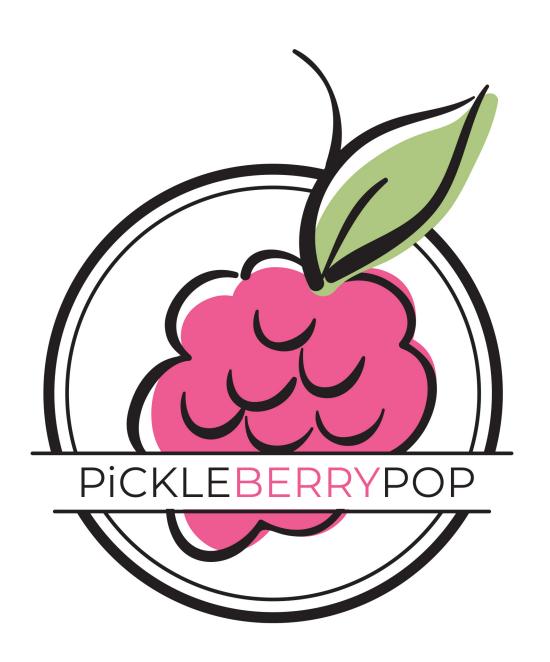

PiCKLEBERRYPOP

FOR PS/PSE USERS

OFFSET 2

This is an offshoot tutorial of our Terrific Titles tutorial. See our Tutorials List and look for it under the "Typeface" category.

This works for all font types at any size with any kerning & leading settings.

First, type out your text in black. It doesn't have to be "true" black (#000000). I can't think of any instance in digital scrapbooking that I have ever used true black. This will be your "shadow" layer

JENYURKO

Duplicate the text layer.
This will be your "highlight" layer - change it to whatever color you want to use as your highlight color:

JENYURKO

Duplicate your highlight layer and change it to whatever color you want to use as your "main" color.

JENYURKO

Click on the bottom text layer (the shadow layer) and, using your arrow keys, nudge it to the right & down. I bumped mine to the right 5 times and down once:

JeNYURKO

Now click on the middle text layer (the highlight layer) and, again using your arrow keys, nudge it to the left. I bumped mine to the left 3 times:

JeNYURKO

That's all there is to it! Again, this works with any font, so have fun :)
