

ADOBE TYPEKIT

FOR PS & PSE USERS

ADOBE TYPEKIT

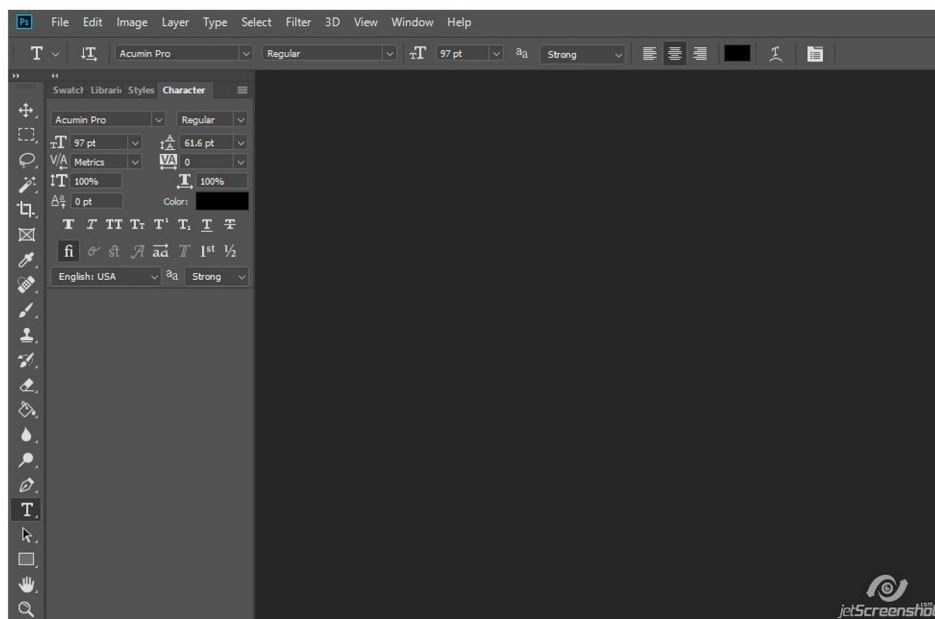

Since I've been down a computer (for what seems like ages already), I've had to use a reformatted laptop out of my daughter's room that she's been using for her drawing tablet.

It literally only has Clip Paint Studio installed on top of what is usually included in Windows 10 operating system.

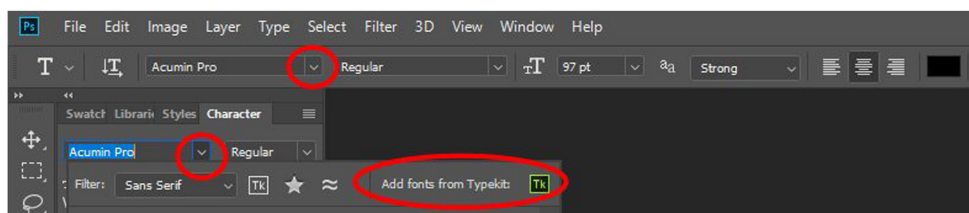

I.E. Nothing for digital scrapbooking! So I went in search of a few fonts (to "get by" while I wait for my computer to be repaired), and I learned something new with PS CC.

There's this thing called TYPEKIT and it's amazing. I wish all fonts were available through Adobe's Typekit!

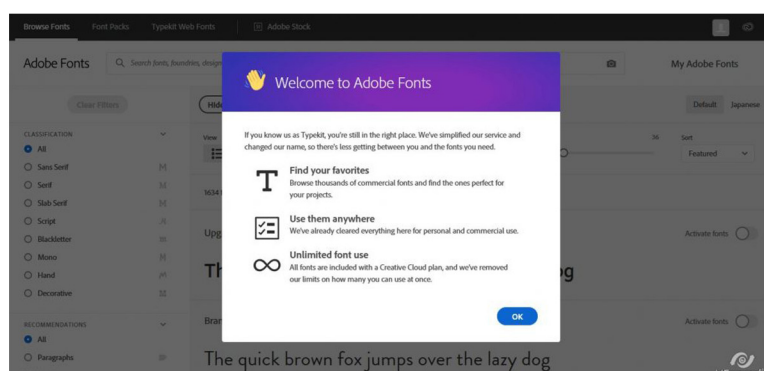

I like to have my Character palette at the ready in my PS (it makes my work flow much faster):

If you click on the little down arrow next to the current font name, you'll see "Add fonts from Typekit" – click that green Tk button

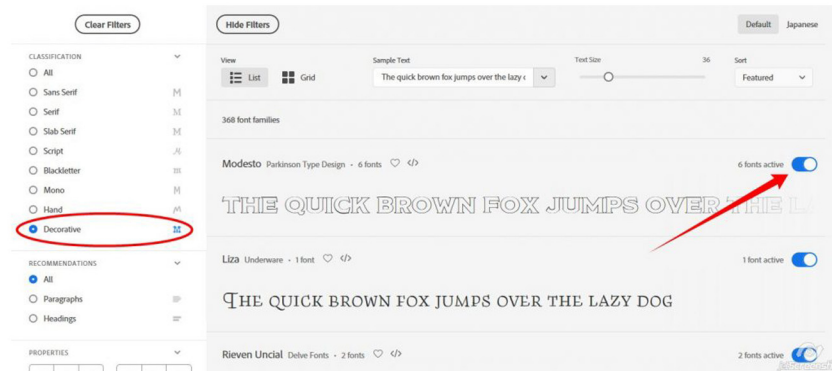

You'll be taken to a web page with all of Adobe's Fonts listed. You may be prompted to sign in to get to this page

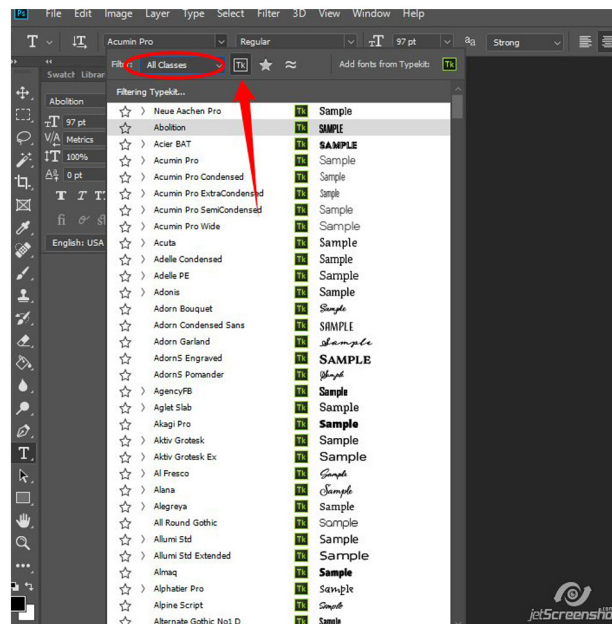

(and... BONUS for us designers, these fonts are all unlimited commercial use!)

Now you can sort by classification, recommendations, properties... even language.
Once you find a font you want, you just click on the slider button to activate it

Back in Photoshop, click on the little down arrow again and.... MAGiC!
Whatever fonts you activated on Adobe now appear in your font list in PS!

This comes in SUPER handy being scrappers and designers
who like to use (and hoard?) a lot of fonts –
no installation, no mess, just fonts! What a concept!
