# Bantam

## Extra Small

50 lbs. (23 kg)  
28"- 40" (71-102cm)

## Small

100 lbs. (45 kg)  
36"- 54" (91-137cm)

## Medium

200 lbs. (91 kg)  
4'- 5'6" (122-167cm)

# Evolv

## Medium

200 lbs. (91kg)  
4'- 5'6" (122-167cm)

## Large

280 lbs. (127kg)  
5'- 6'2" (153-188cm)

## XT

350 lbs. (159 kg)  
6'- 6'10" (183-208cm)

The EasyStand Bantam combines sit-to-stand and supine positioning in a single standing frame. Starting from a seated position is a more natural transition to standing; however, for some children, transfers to a supine position may be more manageable. The Bantam allows positioning from supine to sitting to standing. For users with limited hip and/or knee range of motion, supine positioning with hip-knee flexion can be used as part of a positioning strategy. The addition of supine positioning expands the Bantam's positioning capabilities. Its adjustability creates the opportunity to stand children with positioning challenges.

# Glider

## Medium

200 lbs. (91kg)  
4'- 5'6" (122-167cm)

## Large

280 lbs. (127kg)  
5'- 6'2" (153-188cm)

# StrapStand

350 lbs. (159kg)  
5'- 6'5" (153-196cm)

Active standing technology in the EasyStand Glider enhances the functional experience of standing compared to a passive stander. The Glider combines lower-body range of motion with active upper-body engagement while still allowing users to maintain a supported standing position. The Glider is designed to encourage movement of the ankles, knees, and hips during standing. During use, the design allows for active weight-bearing through the lower extremities.

The EasyStand StrapStand features a dual-hinged lift design intended to support a gradual transition to standing. Using dual-hinged lifting arms, the StrapStand gently raises a user vertically and then gradually pulls them to the standing position, which may help reduce localized knee pressure compared to designs that rely on forward knee loading. The StrapStand gives people the option to stand without transferring. Often, users may have difficulty with self-transfers, or patient lifting may be a concern for caregivers. In these cases, standing can be performed directly from a wheelchair, bed, or other seated surface when clinically appropriate.
