

# The Poisoned Well

## Breast-feeding Effects of the COVID Jab

By Craig Paardekooper

V-Safe was the CDC's app for surveying the vaccinated population. It had check box fields where input was constrained to binary answers. It also had text input fields where the users could specify their symptoms.

The initial release of data from the V-Safe system showed that 7% of all vaccinated had to seek medical treatment following the vaccine. This was shocking enough. However the CDC did not release the data from the free text input fields until ordered to by a judge. 780,000 records with free text data have been released so far following the court order. This data was released in two batches, each of 390,000 records.

When a search is made of all text entries containing the word "baby", the V-Safe records show many cases where the babies became nauseous, feverish or irritated following breast-feeding by a vaccinated mother. The babies developed inflamed lymph nodes, diarrhea (sometimes mixed with blood), and a rash/hives. In many cases the babies became fussy and no longer wanted to nurse.

In Appendix A I have provided a listing of all the V-Safe text entries where "baby" is mentioned.

These records suggest that the adverse effects are caused by exposure to the vaccine in the breast milk - that the "cup" from which the baby drinks is infected. So we can investigate if the vaccine is effecting the breasts of women - "poisoning the well".

In order to answer this question I used a computer to calculate the relative incidence (Proportional Reporting Ratio) of each breast symptom in VAERS for 100 different vaccines. I wanted to see if the COVID jab stood out for any of these breast symptoms.

Lower confidence limit of Proportional Reporting Ratio for each symptom of breast disorder after administration of COVID 19 monovalent vaccine.

<b>SYMPTOM1</b>	<b>COVID19</b>
Exposure via breast milk	10.35385087
Maternal exposure during breast feeding	7.969684406
Ultrasound breast	7.21578486
Breast discomfort	5.486584937
Breast enlargement	4.164339869
Breast tenderness	3.74605781
Breast mass	3.340681606
Breast swelling	3.247677681
Breast cyst	3.147732854
Breast pain	3.115400726
Breast inflammation	2.882415773
Breast cancer	2.799651265
Biopsy breast	2.670012328
Breast engorgement	2.49663915
Breast oedema	2.453880194
Physical breast examination	2.300756591
Breast discharge	1.821356791
Invasive ductal breast carcinoma	1.685003272
Breast cancer metastatic	1.641741201
Magnetic resonance imaging breast	1.348273181
Breast cancer recurrent	1.25739525
Ultrasound breast abnormal	1.209091071
Breast induration	1.153926399
Breast discolouration	1.01236166

It can be seen that the COVID 19 monovalent vaccine generates safety signals for 16 symptoms of breast disorder, and a further 8 symptoms occur with a significant excess incidence but fall just short of safety signal.

Lower confidence limit of Proportional Reporting Ratio for each symptom of breast disorder after administration of COVID 19 bivalent vaccine (“Booster”)

<b>SYMPTOM1</b>	<b>COVID19-2</b>
Breast conserving surgery	8.975438741
Biopsy breast abnormal	7.517012224
Intraductal proliferative breast lesion	5.37803502
Computerised tomogram breast abnormal	4.716686417
HER2 negative breast cancer	4.716686417
Metastases to breast	4.716686417
Breast calcifications	4.643914615
Magnetic resonance imaging breast abnormal	4.120013619
Breast cancer stage I	4.003461582
Breast cancer female	3.113148284
Ultrasound breast abnormal	2.660796274
Ultrasound breast normal	2.360580656
Biopsy breast normal	2.049746328
Breast prosthesis removal	1.762012282
Invasive ductal breast carcinoma	1.468073885
Breast mass	1.418311291
Biopsy breast	1.362479854
HER2 positive breast cancer	1.325419138
Invasive breast carcinoma	1.325419138
Breast atrophy	1.178958721
Breast hyperplasia	1.178958721
Breast feeding	1.16560585
Breast cancer recurrent	1.129526774

It can be seen that the COVID 19 bivalent vaccine generates safety signals for 12 symptoms of breast disorder, and a further 10 symptoms occur with a significant excess incidence but fall just short of safety signal.

## **EXPOSURE OF INFANTS TO VACCINE**

The strongest signal generated by the monovalent COVID vaccine is **EXPOSURE** during breast-feeding - doctors have observed that babies are exposed to the vaccine during breast feeding! They would only make this observation if they believed that the baby was affected by the mother's vaccine. This is also observed for one other vaccine - the flu vaccine.

## **RANK CONSISTENCY**

How do COVID vaccines rank with other vaccines on breast related symptoms. COVID vaccines consistently has the top rank for almost EVERY symptom related to breast disorder. We could call this Rank Consistency. It shows that the ordinal ranking of the magnitude of effect of the vaccine is consistent - not just the size of the effect, but its relative magnitude compared to other vaccines. See Appendix B.

## **RELATED SYMPTOM CONSISTENCY**

It is surprising that COVID vaccines have safety signals for this number of different breast related symptoms.

Notice that the symptoms are all related. Such consistency of adverse effects across multiple related symptoms shows a very powerful effect is operating. The high incidence of one related symptom confirms the high incidence of another. I term this Related Symptom Consistency.

## **DEVELOPMENTAL CONSISTENCY**

With COVID monovalent vaccine, most of the breast symptoms seem to be **PRECURSORS OF CANCER**.

With COVID bivalent vaccine, most of the breast symptoms are the **MANIFESTATION OF CANCER**, including carcinomas, lesions and their metastasis.

So, the two tables show Developmental Consistency - namely that what was nascent with the monovalent has become full grown with the bivalent.

## **RELATED TREATMENT CONSISTENCY**

Doctors know that something is going on - hence the very high incidence of ultrasounds, magnetic resonance imaging, physical breast examinations and breast biopsies. Why would they be testing so much for something that does not exist, especially when testing itself is so expensive and time consuming. I refer to this as Related Treatment Consistency. When there is a high incidence of testing and treatments for a particular condition, this suggests that the condition is more prolific.

Given this high incidence of testing, it is **IMPOSSIBLE** that doctors do not know what is happening. But they are silenced by fear for their careers and by the inability to admit their mistakes and culpability.

“The well from which the baby drinks has been poisoned “

## **PSYCHOLOGICAL EFFECTS**

And what are the psychological effects of poisoning the breast milk?

Is it not to alienate the baby from the mother and the mother from the baby - depriving the baby of being held – depriving the baby of love ? Breast sensitivity and breast disorder will discourage the mother from feeding the baby. Contamination of the milk will make the baby ill, discouraging it from nursing. The result is ISOLATION

Is it not the deep sense of GUILT a mother must feel when she realises her own milk made the baby sick... a feeling of acute self-negation...a silent cry of “what am I?”

## **PHYSICAL EFFECTS**

And what are the physical effects of poisoning the breast milk ?

Is it not to place the baby in danger of malnutrition ? In poorer countries breast feeding is the only source of sustenance.

Is it not to poison the baby and render it less healthy – to create a dependent less able to engage in farming, agriculture and household chores – deficient in productive labour and an intense burden upon poor families?

Is it not to create a customer for life ? A revenue stream for pharmaceutical industries ?

## APPENDIX A – VSAFE Free Text Entries

I'm breastfeeding and my baby vomited today

I am breastfeeding (2.5 month old baby).

I have a teething fussy baby so that's probably why I'm so tired!

I am nursing an infant. No side effects seen with baby either.

34 weeks pregnant and baby continues to be active today!

I'm breastfeeding and my baby has not wanted to nurse well since I received the vaccine. Not sure if it's related or something else

Breastfeeding mom baby has rash

Lactating (breastfeeding 6 month old baby)

My exclusively breastfed baby (5 weeks old) had been uncharacteristically, inconsolably fussy in the past 24 hours. Unsure if this is a developmental stage or a vaccine effect.

My baby is teething. Pretty sure that's why I'm tired

I have a 4 month old baby and I just worked three 12 hour shifts and one 8 hour shift so it's hard to say what's causing my symptoms.

I'm breastfeeding and I think you should add that as a question on this app. Baby is doing great by the way. Seemed a little more sleepy yesterday but today is perfect. No changes noted to my milk supply.

Still pregnant and baby doing fine.

Breastfeeding. Baby ok.

Breastfed baby has fever and has for two days

I am nursing and so far, no problems with breast milk supply or any reactions in baby :)

I had a baby today.

I am breastfeeding and my baby has been really fussy the last two days

Breastfeeding. Baby fine.

Still pregnant. Baby doing well

My nursing baby also had a fever today. Hers up to 101.8

My 2 month old baby I'm breastfeeding has inflamed lymph nodes.

I am breastfeeding and baby has a rash today. He is also getting over a cold though so may not be related

I'm a nursing mom. My 3 month old baby had explosive poops. Don't know if that means anything or is a complete coincidence.

My baby and husband tested positive for Covid

Currently breastfeeding, no issues for my baby

I forgot to mention on my other check-ins, I am breastfeeding. My baby is 16 weeks old.

Nursing 8 mo baby with fevers up to 103.3 and vomiting and diarrhea

Please note i have a baby and so am not sure whether these are related to vaccine. Also got vaccine very early in morning

Im breastfeeding and all day my baby has been very very **fussy** and **inconsolable**, which is incredibly unusual for him

Delivered a term baby

I have a food baby since we just had Christmas dinner.

My exclusively breast fed baby was extra **fussy** today, I don't know if that was related to the vaccination or not

Nursing 8 mo baby still **febrile** this morning

Two month old baby I'm nursing is extra **fussy** with **inflamed lymph nodes**

I am breastfeeding, baby is 3mo old. FYI in case you're study antibodies passed in breast milk

I'm breastfeeding my baby and he's been extra **fussy** lately. Not sure if there is a correlation but it is worth noting.

My wife and baby daughter have **covid** now

I am breastfeeding and my baby has developed **hives**

I am currently breastfeeding and my baby has had a low grade **fever** starting 24hr after I got the vaccine.

My breastfed baby is still a little **pale** today but better than yesterday

Improving milk supply (hydration relate) though baby still with **mucous poop/constipated** since I got shot

The six week old baby that I am breast-feeding has had a **rash** over the last week, but I highly doubt that has anything to do with the vaccine

Today (Day 4) "I'm breastfeeding and my baby got a **rash** on his left cheek and abdomen" it may not be related at all to the vaccine but I thought I would log it in the system).

I am breastfeeding mother & my baby has a **fever** of 103 today

Runny nose; tired breastfed baby

I am breastfeeding. Baby is 16 months old. He has not seemed to have any symptoms

Baby delivered 12/24

Breastfeeding (baby fine)

Also lack of sleep from baby contributing

Delivered baby today.

I'm currently breastfeeding and my baby had slept more than usual today

Also want to report that I'm breastfeeding. My baby got her first feeding post vaccine today. No reactions/symptoms yet to report.

The head ache was last night after work, may have just been working, i work 3pm to 11pm. Then get up at 5:30am to babysit my 1 and 3 year old grandbabies. I just feel slightly more stiff than most Mondays.

Breastfeeding baby with **diarrhea** and **fussiness** for 48 hours so far.

Still pregnant. Healthy baby

My breastfeed baby continues to have low grade **fever**

Breastfeeding, baby is 2 mos old and received his 2 mo vaccinations today

I am breastfeeding no effects on baby

Cold like symptoms, but baby was **sick** and likely not related to vaccine

I'm breastfeeding, doesn't seem to be any issues with baby either.

Could be related to having a 9 month old baby! But a little more tired and a headache today compared to previous days.

Breastfeeding 6 month old baby

I was pregnant at the time of my 1st vaccination. Two days later, I noticed no fetal movement. The baby was **stillborn**. Not sure if it's related but wanted to provide that information to this program.

Lactating mother- no issues with baby.

Continuing to breastfeed. Baby not experiencing symptoms

Fetal ultrasound today at 18w1d and baby is great!

I am a breastfeeding mom to a 6 month old and we are admitted to the hospital for **high blood pressure** (for baby) of unknown origins for certain.

Breastfeeding mom- baby is feeling good

Birth of healthy term baby

Delivered a baby today

Recently pregnant, any information on impact on baby?

Breastfed baby has had **diarrhea** for 2 days now

Breastfeeding mom and baby is good as well

Changes in breast milk in first 12 hours, baby **refused breast**

Breastfeeding. Baby **fussy**. No fever

I breastfeed. My baby has had 3 episodes of **vomiting** since vaccine.

I'm nursing-and my baby has been doing just great too!

my baby is breastfed and has been good

I am breastfeeding and my baby did not have any noticeable changes in behavior.

My baby has **blood in his poop** today

Baby was **warmer** than normal but no fever. (Breastfeeding)

Nose bleed but I take baby as a and have had this before vaccine

Nursing mom, baby is good as well

I am breastfeeding and my baby has developed a **rash**

Not sure it's related or relevant - but after the morning and midday breastfeeding my baby (8 months) **vomited** a little. I'm not worried, but thought I'd mention it.

I breast feed: baby is doing well too

9 mo old breastfed baby went back to taking naps today after 2 days of **no day naps**

I'm nursing-baby is 9 mos-and he's still great-no s/e!

No symptoms, I am breastfeeding and I haven't noticed any problems in my baby either.

Breast feed baby has rash

Low breast milk supply, baby butt rash

My baby died in utero 1/2/2020, I got the vaccine 12/21. She was 24 weeks.

My baby that I breastfeed is having loose stools but is otherwise fine!

Nursing baby. He has diarrhea.

Nursing mom, baby is good as well

I have had diarrhea and lower abdominal cramping and constant pain since the day after the shot. I am 17 weeks pregnant. Baby is fine I went to my OB

Baby 1 degree warmer than normal and extra cranky

Fussier baby- breastfeeding (may be coincidence)

I am breastfeeding, baby has temp of 100 today

Decrease in breastmilk supply. Baby has diarrhea

Slight sinus congestion, sneezing, and sore red throat is diminished but still present. My baby who is breast-feeding appears to have similar symptoms. Swab PCR test was negative.

I am breastfeeding my baby. Incase this is something to note as I know there is no data on this from the studies.

I am breastfeeding. No issues with this or with baby.

Breastfed baby developed viral rash

Nursing mom, milk production decreased, baby is good

I am breastfeeding a 5 month old baby, I'm not sure if that is considered a health condition that I need to report.

I breast feed: and the baby is doing great!

I am breastfeeding- baby is fine

Runny nose. Baby fevered

Migraine (I have a history of migraines). Other health condition: breastfeeding (8 month old baby)

My baby has diarrhea and isn't breastfeeding quite as well. I have swollen glands under my arm and in my neck on the left side (side of injection). Probably unrelated but who knows?

Baby sounded great today at appt

I had a still born baby at 24 weeks 4 days after my vaccine.

I am breastfeeding and the baby was sleepy yesterday, and extremely cranky today. No fever.

My 6mo old baby who is exclusively breastfed got a red raised rash surrounding her mouth and on her neck beginning 1-2 days following my Covid vaccine. Unsure if it is related but sharing knowing that this vaccine has not been well studied in lactating women.

Nursing mom, baby is good as well

I was unable to sleep much last night due to my baby waking up, I contribute my fatigue to this

I am not getting enough sleep due to baby at home

Fatigue due to less sleep last night (have a 3 month old baby that was up a lot), likely not due to vaccine

Currently Breastfeeding -baby got very sick with fever we went to the ER

These symptoms are not uncommon for me. I also got my first menstrual cycle today since having my baby in November.

I am breastfeeding. Baby is doing well

Baby **doesn't want to nurse**, maybe unrelated but never happened before. He is 6 months old.

I am breastfeeding and my baby also has a **rash**. I am at the er with him now to get him checked out. I am also having bad night sweats saturating my clothing and cold sweats with hot flashes during the day.

Gave birth to healthy baby girl (b)(6)

I breast feed and the baby is also doing well

My breastfed babys **temp** finally is gone.

I think the baby makes me tired

Primarily feeling a little fatigued and some muscle aches late last night and earlier today. Has mostly a baby by later today.

Breastfeeding, baby is asymptomatic so far

Lactating mom, no issues for mom or baby

Breastfeeding baby who has low grade fever again today

I am breastfeeding. So far everything has been fine for me and my 3 week old baby.

Breastfeeding, baby asymptomatic

**Fussy** baby that is being breastfed

My breastfed baby was very **fussy**.

Pelvis pain but I just had a baby

Skin feels hot and prickly. Since last vaccine baby has **not slept** well, she is breast feed. Not sure if it's related but it's the worst sleep of her life and start at the same time as the first vaccine

Mildly fatigued. Could be because I'm babysitting 2 toddler grandkids.

My breastfed baby seemed particularly **tired and fussy** today. Wondering if there is a relationship to the vaccine. Also last night, my skin felt cold last night.

**Diarrhea** in BF baby

Breastfeeding and baby is asymptomatic

I am breast feeding and I noticed a **rash** on my baby that began the day after injection and is spreading. Raised scattered bumps

My breastfeeding baby had a **fever** and non specific pain in the middle of the night last night.

I am nursing my 18 month old baby and he had **diarrhea** yesterday evening

I do have a baby that I am up a lot overnight nursing so some tiredness likely due to that

Booster shot 1/8/21 10:15 am Tired by end of work day. Really sore arm. Headache around dinner after baby down 8ish Took Tylenol Didn't feel good but fell asleep easily around 11p. Woke up at midnight with chills and struggled to get warm, also achy. Sleep was a struggle. Next two and a half hrs was on and off sleep. By 3am couldn't sleep. Achy low Back and legs. More hot and sweaty st this point. No more chills. Took shower and bath and more Tylenol. Slept until 6 to nurse Baby. Woke up sweaty. Still headache. Slept on and off until 11. Took more Tylenol. Headache wraps from forehead to nape of neck and remains. More mild now (12:50p). // headache

remains (4:20). Note re baby (5m old, exclusively nursing / drinking pumped breast milk) Had 3+episodes of large amounts of spit up / vomit after nursing once I was home and in hrs before bed. Felt a little Warm. But not concerned enough to take temp. Slept through night. Up just before 6. breast milk pumped a few hours following each immunization has been labeled, stored separately, and frozen. Please let me know if there is a way to contribute this or participate in research for lactating moms. Phone: (b)(6), email: (b)(6)

Exclusively breastfeeding - baby is now accepting my milk

Currently nursing baby and so far no symptoms with baby either

Breastfed baby is much better today

Dizzy, and my breastfed baby had a tiny fever and vomiting yesterday

Vaginal bleeding for the first time since I had my baby over 7 months ago

Got my injection in my left deltoid, left breast/axillary isn't sore anymore. Yes, I'm still nursing. Hopefully my baby gets some antibodies from me.

Still breastfeeding, no issues with me or baby.

I didn't mention before that I'm breastfeeding and my baby is doing well too

I am breastfeeding and since day 2 post vaccine my baby has had a lot of abdominal pain and fussiness. Not sure if it's linked

Breastfeeding baby has more gas and some blood in stool.

Breastfeeding baby. Night terrors increasing

I'm breastfeeding and my baby got a temp of 102.4 last night

I have an 11 day old baby so fatigue is probably not a vaccine related symptom

Breastfeeding baby very fussy but no rash or visible signs of reaction

Breastfeeding fine and baby's bloody stool has resolved. Baby still more fussy

Decreased pump milk output (normally 12 oz was 8 oz). Did not notice change in baby actually feeding from breast over weekend.

Currently breastfeeding, baby had diarrhea 12 hours after vaccine for for 24 hours

I am breastfeeding my baby gets allergic after dinking my milk

I have a 7-month-old baby that I breastfeed. He has a 102.2 degree fever today.

My baby has a rash which started day after vaccine. I am breastfeeding

I have a 2 week old baby so the fatigue is probably not a symptom of the vaccine

Breastfeeding a 5 week old baby who was born premature at 35 weeks. I am diagnosed with Lupus.

Breastfeeding baby still doing great

I am a lactating mother. Not sure if the fatigue is from the shot or overtired baby.

I'm also a sleep deprived mom to a newborn baby. Headache could be due to this.

Decreased milk production, increased fussing of baby

So random but haven't had my period since having my baby 15months ago got a period the day after each vaccine.

In nursing and my baby had a fever yesterday. Approximately 27 hours post vaccine.

Breastfeeding, everything fine with me and baby.

I am breastfeeding and my baby has a **rash** but unsure if this is connected yet, planning to contact pediatrician tomorrow.

Breastfed baby developed **hives** yesterday

My baby who I am breastfeeding is still **congested**.

I did not get an alert to check in the past two days. But would like to add that my headache persisted into Sunday, stopped by Sunday afternoon. I believe I took 4 full doses of extra strength Tylenol over the course of the weekend. My baby, who is exclusively breastfed had a couple **vomiting** episodes the evening feeding after coming home from work. He developed a diaper **rash** on Saturday and we are still treating it (this is Tuesday). I also didn't realize strange / vivid dreams could be a side effect. That occurred Friday into Saturday. I also had tenderness under my armpits - had a prior dx of HS (mildest stage, just under arms) - last flare was in 2017. The tenderness gave me pause to think I might be having another one but there was not a lump, just tender to touch.

Delivered baby at 36 weeks and 6 days

Am breastfeeding. Baby has had no reaction

I am breastfeeding my 8 month old baby and he had 4 episodes of **vomiting** 7 hrs after I received the injection

My nursing baby seems more tired also

Still a decrease in milk pump output (9vs 12) baby seems to be nursing fine with no issues

Still breastfeeding no changes in baby's health

My baby I am breastfeeding has **boogers** again after the second shot. The doctor says it's a virus. The first shot we ended up **ER from a fever siezure**

Currently breastfeeding- baby seems more **tired**

Notice baby has been very active since after receiving the vaccine on last Friday at 11:30AM. Not sure if it is vaccine related

Breastfeeding. Baby seems more **tired**

Breastfed baby has had a **fever** for the past 3 days. Unsure if related

I have no issues - Please note that I am a breastfeeding mom and baby has had no issues.

Breastfed baby has **hives**

I did not have a rash, but it wouldn't let me type with an answer of "none." Thought I should note that my breastfeeding baby had a **fever** yesterday of 102F. Negative for COVID on PCR today and fine today.

My daughter who was nursing had a low grade **fever** 99.3 today I wonder if it was related or could be teeth you never know with a baby!

Active baby since vaccine

I dont have symptoms but my baby have 4months born I breastfeed him and he had **diarreas** for1 day

I am 31 weeks pregnant, baby is still moving really well.

Just FYI. I am breastfeeding. Neither the baby or I have not had any apparent side effects and the baby has been acting normal.

Breastfeeding baby is **congested**.

I am currently breast-feeding. My baby got a **fever** a day and a half after the second shot was administered

Delivered my baby on 1/11/21, at 38W6D. No complications.

I forgot to mention i am breastfeeding and the baby is good too. I feel good.

Breastfeeding and baby has been **cranky**

My 7mo breastfed baby still has a **fever** of 102.2

Nursing baby 18 mo had **vomiting**

Still 9oz instead of normal 12 oz of pumped milk. Baby doesn't seem fussy at breast

I went into preterm labor last night and delivered my baby at 35 weeks

Im a breastfeeding mother and my 7 month old baby has a **rash** on the bottoms of her feet. I don't know if its related but thought it was worth mentioning.

Yes. After my injection I came home and discovered my wife had taken a Covid test. She found out that she was positive. Neither her or I have symptoms. She feels fine. I found out she had the test due to her babysitting contact for my daughter in her home. She don't tell me. Took the test and failed. My daughters symptoms have been very mild. She lost sense of smell that suddenly came back. We all three feel good.

I have a 7 week old infant, have been nursing baby has been **irritable** all day rectal **temp** 99.4

Breastfed baby had **diarrhea** - maybe from vaccine?

I am breastfeeding and baby is doing fine too.

My breastfed baby has been **cranky** and having trouble sleeping since my second vaccine

Babys **rash** is thought to be eczema by pediatrician, likely not related to vaccination but hard to tell for sure. She has also had a low grade 100.0 **temp**. Just want to provide data in case a pattern emerges.

I am breastfeeding my 3-month-old baby.

I think baby has been **crabby**, but also getting several teeth.

Im a nursing mom. No issues so far with my baby.

My muscle is just sore from shot also im am a breastfeeding mom babyb seems good to

I am currently breastfeeding, baby is 4.5 months old

I breastfeed, and a day after my vaccine, my baby had an elevated **temperature**, no fever though.

I am breastfeeding. So far no observed changes in my milk or baby.

I feel this migraine (classical + aura .... persisting into splitting HA) is likely a symptom of pregnancy, as I had a similar situation at about 34 weeks with my first baby as well)

Currently breastfeeding. Baby had a more **mucusy poop with some tinge of blood**.

Breastfeeding, baby is doing great

Not a condition, but I am nursing 5 month old baby. Is anyone looking at symptoms of babies nursing? Not a milk study.

I am breastfeeding, and my baby has had terrible **diaper rash** today and yesterday -- which also happens when he receives a vaccine himself. Since lactating women weren't invited in any of the clinical trials, I thought this information might also be valuable.

My baby had a cough Friday so I think my throat hurts from kissing her, but definitely sore throat and cough and congestion

I am doing well, I am a breastfeeding mom and baby started to get **lethargic** today and developed **fever**, looks like it could be an ear infection and we will have him checked on at doctors again tomorrow

Beast feeding: I dont have reaction but i have a baby with 4 months born and he have **rash**

I am a breastfeeding mother to a newborn baby

Currently breastfeeding and the baby isnt showing any symptoms.

I'm a breastfeeding mom, no effects to baby

My baby (5 weeks at initial injection and 8 at second) **may not be viable**. Not necessarily vaccine related but worth reporting just in case

Nose is running but my baby has a cold right now so i may have gotten it too

Breastfeeding still, baby seems fine

Dizziness, skin sensitivity, **rash** on baby who Im breastfeeding, extra **fussy** baby, **swollen lymph nodes** on baby

Breastfeeding - baby has **diarrhea**

Again, I just want ypu to be aware that I am breastfeeding. I have not noticed any changes in my baby or milk supply. in

More generally the arm I got the injection hurts but it might also be due to post workout pain or from holding a baby

Breastfeeding and baby receiving milk was extremely **irritabl**r

I am pregnant and yesterday during my OB appointment the **babys heartrate** was 180-200

I **miscarried** my baby after my first injection.

Delivered healthy term baby on 1/19/21, right after 2nd vaccine

I am breastfeeding and neither my baby or I have experienced any adverse reactions

I am breastfeeding, baby 16 months and did not sleep as well as normal

Breastfeeding baby asymptomatic

I am breastfeeding my newborn baby who now has a **rash** and **swollen lymph nodes**. She had a low grade **fever** of 99.4 along with extra **fussiness** after I received the shot.

On the evening of the vaccine and all day the next day I had fever, headache, chills, body aches, weakness, lightheadedness, injection site pain. I was unable to do any of my normal activities, including keeping a grand baby.

Breastfed baby **vomited** the first milk she ate post-vaccination which is not typical of her.

I don't know if this is vaccine related, but my nursing **baby's poops changed** about 2 days after I got the vaccine and lasted about 4ish days. The only other time that happened with her was when she got her 2 month vaccines.

My newborn baby still has a **rash** after I received the shot. Her **temp** was 99 last night

Breastfeeding infant has had **diarrhea** every day since I received the injection. Baby also developed a mild **fever** on day 2 following injection. Has consumed my breast milk consistently since receiving injection

I'm breastfeeding. I have not noticed any changes in baby or my breastmilk.

Delivered my baby

I am breastfeeding and baby has been **fussy**, runny nose, and cough with low grade fever

I had preterm premature rupture of membranes one week after getting first dose of vaccine. Labor was induced and I had my 34 week old baby the next day.

I am breastfeeding. No issues with baby.

I have not seen a difference in my breastmilk supply or my baby

Breast milk is still a little different in color. Faint blue/gray hue. Baby seems to be sleeping a bit more than usual.

The arm i got the shot hurts pretty bad, more than what i thought imagined when they said sore arm. I cant hold my baby.

I am breastfeeding baby is doing fine

Breastfeeding and baby is doing great too

Baby seems **lethargic** today. **Not as much fetal movement** today

Again, **full body rash** on my baby that Im breastfeeding. Why isnt anyone calling me? Dont you want this data about breastfeeding mothers and their newborns??

Im breastfeeding and my babys **poop was a different consistency and color**

Sore throat (I think my baby gave me strep)

I am currently breastfeeding and no ill effects to baby. No immediate reaction, however 6 hours later my thought process was foggy, fatigue, and body aches began to only progress for about 36hours. After 24 hours redness warmth swelling and itching at injection site began lasting 3 days which steadily improving.

Breast milk supply is staying consistent and baby is not showing any abnormal symptoms

Queasy. Also, I am breastfeeding & baby had very slight **temperature** and **spit up** 3 times last night while I was feeling queasy (may or may not be related to vaccine).

I have also been taking care of my sick baby (a cold) so very likely these symptoms are from infection rather than vaccination

I am breastfeeding, and my **babys stool looked a little green and had some tiny specks of blood** this seems to have resolved, but happened a day or two after the vaccine. It looked similar to his stool after he received his 2 month vaccines.

Im nursing and my baby has been very **fussy** the last two and a half days.

My baby still has a **rash** but it seems to be improving a little

Baby is experiencing **upset stomach & diarrhea**

Delivered baby today; symptoms due to this

Some nerve pain at an old surgery site. My nursing baby has also had a low grade **fever and diarrhea** today.

I have a scar from a BCG vaccine I received as a baby in the Soviet Union that is itching and red and slightly swollen. Yesterday I indicated these symptoms were at the injection site, but its actually about 2 inches below, at the scar.

Baby **didn't sleep**

Cramps, but could be because we are trying for a baby. Implantation cramps possible.

I am breastfeeding no problems with baby

Breastfed 9 month old baby has **diarrhea**

I am 37 weeks and 6 days pregnant. I started having contractions about 5 hours after receiving the vaccine, and the contractions continued for about 24 hours before slowing and stopping (did not lead to birth, midwives checked the baby and the baby is in fine condition.) I don't think it's related to the vaccine but I do feel it's worth reporting.

Breastfeeding baby also having **diarrhea**

Baby now has **diarrhea**

I am breastfeeding my baby after first vaccine

My breastfed baby was a bit **warm** last night

Babysat my grandson who was sick so may be getting a cold from him.

I am a breastfeeding mother and potentially the baby was little more **crabby** over the weekend but was not feverish.

**Rash** is still on my baby that I breastfeed. However, it seems to be improving.

Delivered baby on 1/20. Fatigue due to newborn.

My breastfed baby has a **fever**.

My baby, who is breastfeeding experienced **vomiting**

I am a breastfeeding/nursing mom to a 6mo baby

Breastfed baby developing **redness and irritation around eye**

Baby is active since couple of hours after the shot that I got around 2:33pm

I am breastfeeding. No effects on baby.

These symptoms may be due to having a newborn baby at home...

I am 36 weeks pregnant, baby failed non stress test and I am now admitted to labor and delivery for monitoring

Breastfeeding and milk supply down and my baby is sleeping more than normal

Decreased urine output and breastfed baby with decreased urine output x4 days (no change in fluid intake)

Breastfeeding normally, baby good

Nursing mother, baby had **fever** unrelated to other condition ruled out by pediatrician

Very active baby since injection

Im currently breastfeeding and my baby has become **feverish**

## APPENDIX B - RANKING OF 100 DIFFERENT VACCINES FOR EACH SYMPTOM

It is remarkable that none of the other 98 vaccines generate a signal for these breast symptoms, bar one instance with VARZOS.

BREAST BIOPSY : Only COVID19 monovalent generates a safety signal

Select Symptom:

Show  entries Search:
