

V-SAFE Reports with Symptom Keyword = BALANCE

compiled by Craig Paardekooper

V-Safe is the largest collection of vaccine testimonies on the planet.

One of the reasons why the CDC was so reluctant to release the free-text entries of the V-Safe reports is because these entries are the personal testimonies of vaccine effects – numbering 390,000 per release, and numbering millions in total.

Having censored and erased hundreds of thousands of testimonies of vaccine injury from Facebook, the government was equally reluctant to be the provider of what is the largest collection of vaccine testimonies on the planet – collected by the CDC themselves !

Perhaps this is <<the longest story ever told>>, the testimony of 1 million people.

Many thanks to ICAN (<https://icandecide.org/v-safe-data/>) who pursued the CDC through the courts until they finally conceded and began to release this data on January 15th 2024.

Data is from all 4 releases, up until June 15th 2024, reported by 1,092,715 Covid <<vaccine>> recipients. The next release is on July 15th, 2024.

balance : Case 81: ID E9J-15905-31885

This morning, I had a strange episode when I got up from bed, I had no balance or coordination. I fell in my room and couldn't speak. I was conscious but could not coordinate my thoughts. When I tried to explain to my husband what I was feeling, I couldn't. I was blabbing. The words wouldn't come out. It lasted approximately 10min and then the dizziness went away, I was able to speak again, and was able to stand up. I don't know if this has anything to do with the vaccine but this had never occurred to me before. I've been feeling fine since this morning.

No. For the record, i am in generally very good physical condition, consequently, the initial reaction I had, roughly 10-24 hours after the vaccination was very disconcerting. In many ways it replicated the symptoms I had during my worst day of Covid....really severe chills, balance very unsteady, fatigue.... and one symptom I did not have while infected....fever. I received the vaccination app. 3-4 weeks after my last Covid symptoms. The first symptoms were on Dec 11, tested positive Dec 17...vaccination Jan 21. ????

I have vestibular balance issues as a precondition. Due to a tumor in cochlea many years ago. My balance seems notably worse since the second shot. Should I be concerned or will this pass in few days? My balance is always made worse by stress and fatigue. If Im feeling

either or both as a result of the vaccine that could explain the increase in dizziness over the past 48 hours since the shot.

I do not have any symptoms today but I order to write this I needed to select something. I signed up for v safe a week today (2/22) after my initial moderna shot (2/15). I wanted to let you know that about 12hrs after my first shot, that night, I had some side effects. I began to have chills and shaking. I took some Tylenol and covered in blankets to help with that. A few hours later I woke up feeling lightheaded, nauseated, and very hot. I got up and thought I was going to vomit but then I actually fainted for a second or lost balance. Ended up falling on ground, but not seriously hurt, just a bit bruised. I immediately no longer felt nauseous as I lay on the ground for a few minutes. After that generally felt achy and a bit sore for the next couple of days. But otherwise fine and nothing since. I should also note that I had covid in December 2020. So that may have factored in to my reaction to the first dose of the vaccine. Thank you.

Right after vaccine, I had a mild headache, injection site redness and pain, flu like symptoms. I took 4 Tylenol over 36 hr period. Extreme fatigue. My 82 yr old mother in law was clobbered. Dizziness that resulted two serious falls where she could not get up. Could not walk because of balance issues. Bp dropped to 100/60. Had to help her in and out of bed. Did not eat. Got Pedialyte for restore extreme dehydration. She is better on 4th day. Almost took in to ER. Then her brother age 78 got vaccine same day developed extreme flu like symptoms and temp of 102. Down feeling badly for 2 days also.

Yes. About 1&1/2 hours after I had my first dose I started feeling lightheaded. Then I was so off balance I had to hold on so I wouldnt fall. Then I had to drive to pick up my prescriptions. It was very scary. If people saw me walking they probably assumed I was intoxicated. The next day I was ok. Now Im afraid to get my second dose because most people have worse symptoms than the first one.
