

## V-SAFE Reports with Symptom Keyword = EXTREMITIES

compiled by Craig Paardekooper

V-Safe is the largest collection of vaccine testimonies on the planet.

One of the reasons why the CDC was so reluctant to release the free-text entries of the V-Safe reports is because these entries are the personal testimonies of vaccine effects – numbering 390,000 per release, and numbering millions in total.

Having censored and erased hundreds of thousands of testimonies of vaccine injury from Facebook, the government was equally reluctant to be the provider of what is the largest collection of vaccine testimonies on the planet – collected by the CDC themselves !

Perhaps this is <<the longest story ever told>>, the testimony of 1 million people.

Many thanks to ICAN ( <https://icandecide.org/v-safe-data/> ) who pursued the CDC through the courts until they finally conceded and began to release this data on January 15th 2024.

Data is from all 4 releases, up until June 15th 2024, reported by 1,092,715 Covid <<vaccine>> recipients. The next release is on July 15th, 2024.

### Data

Data Source : V-SAFE (CDC) : download (June 2024) @ <https://icandecide.org/v-safe-data/>

Total number of V-Safe reports with symptom keyword EXTREMITIES = 828

Percentage of V-Safe reports with symptom keyword EXTREMITIES = 0.04549 %

(V-Safe) Total number of Covid <<vaccine>> recipients with this symptom = 730

(V-Safe) Percentage of Covid <<vaccine>> recipients with this symptom = 0.06681 %

### Limitations

This report shows the incidence of a symptom amongst a <<vaccinated>> population of 1092715 in the V-SAFE database. The onset of a high incidence after <<vaccination>> suggests possible cause - requiring further investigation of - 1) Other databases, such as VAERS and EUDRA, 2) Clinical literature and scientific papers.

## Sample of 828 Reports with Symptom Keyword = EXTREMITIES

extremities : Case 1: ID YGK-17036-53336

Received Benadryl

Histamine release: tingling - head and extremities, mild dizziness. Right neck and shoulder soreness.

extremities : Case 144: ID 8CR-27508-23227

I forgot to mention that we on day 1: about 10 mins after receiving the vaccine, I experienced a tingling feeling in my left foot, leg and arm (same side as vaccine). No itching or rashes present. The tingling was on and off for the rest of the day and then starting itching a bit at night time. I have no allergies but do have a history of Intrahepatic cholestasis of pregnancy (dx 2 years ago when pregnant) and wasn't sure if related. I did take a Benadryl that night and the next day I was fine. But unusual to have the tingling/zinging feeling in extremities (started on left side and that night went to the right side).

I could only extend and lift my L arm to shoulder level as it was too painful and stiff to go higher. I was able to use my R hand to raise my L arm high above my head with minimal pain and then stretch, including putting my L hand behind my head and down my back while using my R hand on my L elbow to stretch. Then, within just a couple of minutes, both of my arms and both of my legs started violently shaking uncontrollably for what must have been about ten minutes. I became very chilled. I was cognizant the whole time. I could tell my heart rate went way up so I took deep breaths and hugged myself tightly for a few minutes till my extremities stopped shaking.

Hey! It's me now. Very frustrating. Not really sure what's going on. I do well at night and early morning feel bad again. I had two episodes of tachycardia in the hospital but my EKGs looked fine. But after a bolus of fluids and toradol, I felt better and was discharged Sunday at 3:00pm. But today, back to Dr this am. Very weak, could barely walk, not dehydrated, had Tachycardia, blood pressure up, no fever, had cold extremities and light sensitivity. Drs office tried to give me fluids and hit my artery which blew up like an egg! We left and went to the ER. High B/P, tachycardia, Blood work, chest X-ray, CAT scan of head, Bolus of fluid with toradol, etc. Started feeling better after the bolus. The Dr said he wanted to give me Lebatolol 100mg tid to suppress my adrenal gland and Fioricet for the headaches and light sensitivity. What do you think?

Home health giving me an IV

A new medication was given to me Monday, a Beta blocker, that is supposed to keep my body from going into the fight or flight mode.( Suppressing my Adrenal gland) Ive been living Ground Hog Day for the past few days but this morning I think he saw his shadow!!! I havent slept all night, which will have to be addressed, but I am walking, able to text, no numbness or tingling in extremities and headache is under control so far. Our plan is to have a Nurse Anesthetist come to the house for a few days, for a high octane IV, to help flush my system out!

extremities : Case 578: ID KXJ-33900-86719

Painful bilateral lymphadenopathy involving the axillary, Cervical, and inguinal regions. Also experienced deep migratory pain that I would describe as bone pain. For example, my mandible hurt for several hours. I also felt the pain in various extremities, unrelated to the location of the shot. My skin has also been painful to the touch, even with light clothing rubbing against it. Severe muscle pains have been greatest in the extremities, but also throughout my chest and back. Difficulty concentrating or completing simple tasks, possibly due to the severe fatigue.

extremities : Case 594: ID LN5-10335-87285

Had itchy throat and eyes today. Took an allergy pill all I am fine. I would like to report on the day of injection, about 5 minutes after, I felt a rush of heat all through my body, then tingling in extremities, neck and tongue. It came on fast and left as fast as it came on. The nurses monitored me and gave me cold water to sip. I felt fine within a couple of minutes once it started to subside. Is this a problem, before I get second shot?
