

## V-SAFE Reports with Symptom Keyword = MENTAL

compiled by Craig Paardekooper

V-Safe is the largest collection of vaccine testimonies on the planet.

One of the reasons why the CDC was so reluctant to release the free-text entries of the V-Safe reports is because these entries are the personal testimonies of vaccine effects – numbering 390,000 per release, and numbering millions in total.

Having censored and erased hundreds of thousands of testimonies of vaccine injury from Facebook, the government was equally reluctant to be the provider of what is the largest collection of vaccine testimonies on the planet – collected by the CDC themselves !

Perhaps this is <<the longest story ever told>>, the testimony of 1 million people.

Many thanks to ICAN ( <https://icandecide.org/v-safe-data/> ) who pursued the CDC through the courts until they finally conceded and began to release this data on January 15th 2024.

Data is from all 4 releases, up until June 15th 2024, reported by 1,092,715 Covid <<vaccine>> recipients. The next release is on July 15th, 2024.

### Data

Data Source : V-SAFE (CDC) : download (June 2024) @ <https://icandecide.org/v-safe-data/>

Total number of V-Safe reports with symptom keyword MENTAL = 1972

Percentage of V-Safe reports with symptom keyword MENTAL = 0.10835 %

(V-Safe) Total number of Covid <<vaccine>> recipients with this symptom = 1766

(V-Safe) Percentage of Covid <<vaccine>> recipients with this symptom = 0.16162 %

### Limitations

This report shows the incidence of a symptom amongst a <<vaccinated>> population of 1092715 in the V-SAFE database. The onset of a high incidence after <<vaccination>> suggests possible cause - requiring further investigation of - 1) Other databases, such as VAERS and EUDRA, 2) Clinical literature and scientific papers.

The Symptom Check texts for the 2 days after I received the vaccine came late at night, and by the time I had a chance to try to respond to them, they were no longer valid. I developed a fever of 100.7°F, along with dizziness, mild chills, and mild muscle aches, approximately 33 hours after receiving the first vaccine dose. by the time I woke up the next morning (around 14 hours later), the fever, chills, and muscle aches were gone, but the dizziness remain, and I felt lethargic and experienced mental fogginess. All of those symptoms lasted for an additional ten hours, and then subsided (around 3-4 PM yesterday).

mental : Case 604: ID WZR-28883-61881

Experienced minimal allergic symptoms 45 min after injection. I have food sensitivities but no food allergies. 8 hours after my injection the skin around my eyes became very red/painful/itchy, my eyelids became puffy and my eyes started watering. This is an allergic reaction I'm used to because it's happened to me probably about 5 times now in my life. It kicks in when I spend too much time in houses that are filled with cats and cat dander. But I haven't done anything that would've caused it this time. Less than 10 minutes after the tenderness/itching around my eyes started up, the pain in my arm from the injection kicked in and began feeling like a big bruise. After another 4 hours I noticed I'd developed a few itchy hives around the edges of my face. They went away after about an hour. My eyes had only watered for about 15 minutes. But the soreness/itchiness around my eyes and the puffy eyelids lasted for 12 hours. I am allergic to most everything environmental but have no known allergies to medicines/foods.

I had environmental allergy shots just over 48 hours after my covid vaccine in both arms. The arm that had both the covid vaccine and allergy shot had more severe reaction than the other non-covid vaccine arm. Allergy shots may need more than 48 hours post covid vaccine due to the more severe reaction I had with the combined shots side effects.

mental : Case 640: ID AD9-19107-14383

The day I got the vaccine, I woke up at 2 am shivering in a puddle of sweat. Then couldnt fall back asleep because I couldnt get comfortable due to how bad my arm hurt. By 9 amThe following day all symptoms had subsided but it felt like the recovery period after a cold - kind of groggy and irritable, and I was mentally foggy.

Still have some itchyess today.I never got a follow-up data information to share on the first day of the injection. Two years ago I had DVT Blood Clots in my Right Leg and Extensive Multiple Bilateral Pulmonary Embolisms which required Experimental Emergency Thrombolysis Surgery with tPA. On Tuesday, about 5 minutes after my COVID-19 Moderna injection, I experience severe pain on the posterior of my right leg above the knee bend and left of my hamstring. There was severe pain for about 10 minutes then it went away. About 2 hours later, on my right leg (the same leg) where I had the DVT blood clots 2 years earlier, I experience major pain to the right quadricep area for about two hours then it went away. Please have someone contact me from the CDC by telephone at (b)(6) because I feel it should be reported about the side effects I experience as being a DVT Blood Clot survivor and Pulmonary Embolism survivor. Today the galloping whack a mole itchyess is about 95% gone now. Thank you,(b)(6)

I felt pretty much back to normal within 30 hours. One unusual symptom was short 'flashes' of nerve pain most noticeable in my fingers. For the first 24 hours, it was noticeable that I did not feel fully like I usually do, but overall the symptoms were tolerable. I never came fully to the point of having chills, but close at times. Felt a bit fatigued. Am expecting more exacerbated symptoms from the second shot on 2/26/21. Very grateful to science and our healthcare workers and very glad we have new Governmental administration!

I had my first symptoms of COVID on December 28. I got tested on January 2 and the PCR test was positive. My symptoms were chills, malaise, aches, mental fogginess and tiredness. I never had any fever! I isolated from my wife and she never caught it. We both got vaccinated on January 28. The first night I had a bad headache and didnt sleep well. The headache went away on the 29th. I still felt a bit tired with a little pain at the injection site. No fever. I didnt sleep well on the 29th, but no headache. As of yesterday, I feel pretty much back to normal.

mental : Case 1887: ID WCN-11210-21205

What about the emotional and psychological effects? I feel mentally drained and emotionally abandoned. Its feels more devastating than a physical illness I would recover from.

Mental fogginess

mental : Case 1899: ID V2E-24688-88818

Rash /itching on my feet coming & going, last night I had dl swelling under my eyes & today started w/swelling of my upper eyelids, just enough to know it's there, but not serious enough to need treatment. I have many allergies to different meds, foods, enviomental, no anaphylaxis to anything but Walnuts. Honestly, I'm a little concerned to get the 2nd shot !

mental : Case 1900: ID 6AB-25031-16288

Slight mental fuzziness

mental : Case 1901: ID 56H-20168-84040

Slight chest discomfort- could be caused by environmental allergies and unrelated to the vaccine.

mental : Case 1902: ID 3FA-11776-17552

Mentally foggy

mental : Case 1903: ID ZM2-93002-95777

Possible nausea. It is difficult to determine whether some of these symptoms are attributed to the vaccine or related to a variety of underlying health conditions or comorbities/ environmental factors related to being my father's caregiver. It is commonplace for me to experience some of these symptoms regardless. Unsure if exacerbated by the first vaccine dose.

mental : Case 1912: ID Z9N-18718-68942

My sleep schedule is very skewed of late (I'm going to sleep when I want to be getting up), and my night's rest was markedly broken today by environmental factors. I'm just now getting up for the day (approx. 3:20 PM Pacific). My daily schedule is somewhat physically rigorous at this time, so other health factors may be contributing to today's state (e.g. IBS).

mental : Case 1913: ID 8UA-12905-30550

Yesterday evening after my last v check in I had a sudden full body allergic reaction with hives on my body, lips, and eyes, sore throat, hoarse voice, runny, nose, diahrea, and cramps. I was able to control it with 2 benadryl and a famotadine. I think it was an environmental trigger but don't know what caused it but it was due to my immune system being so hyperreactive to the vaccine. I am better now and today my only symptoms are mild each and shoulder pain.

mental : Case 1914: ID R6S-10696-07725

mental : Case 1916: ID K9Y-35238-28321

I logged in to this a few days late. Id report on day two, 24 hours after receiving my first dose, I had a sudden strange and intense headache come on. It worsened if I exerted myself. I tested with my eyes closed and it went away fast, within a half hour. I then felt a little mentally cloudy and mild fatigue the rest of the day, but woke up feeling fine since.
