

V-SAFE Reports with Symptom Keyword = OVUL

compiled by Craig Paardekooper

V-Safe is the largest collection of vaccine testimonies on the planet.

One of the reasons why the CDC was so reluctant to release the free-text entries of the V-Safe reports is because these entries are the personal testimonies of vaccine effects – numbering 390,000 per release, and numbering millions in total.

Having censored and erased hundreds of thousands of testimonies of vaccine injury from Facebook, the government was equally reluctant to be the provider of what is the largest collection of vaccine testimonies on the planet – collected by the CDC themselves !

Perhaps this is <<the longest story ever told>>, the testimony of 1 million people.

Many thanks to ICAN (<https://icandecide.org/v-safe-data/>) who pursued the CDC through the courts until they finally conceded and began to release this data on January 15th 2024.

Data is from all 4 releases, up until June 15th 2024, reported by 1,092,715 Covid <<vaccine>> recipients. The next release is on July 15th, 2024.

Data

Data Source : V-SAFE (CDC) : download (June 2024) @ <https://icandecide.org/v-safe-data/>

Total number of V-Safe reports with symptom keyword OVUL = 26

Percentage of V-Safe reports with symptom keyword OVUL = 0.00143 %

(V-Safe) Total number of Covid <<vaccine>> recipients with this symptom = 26

(V-Safe) Percentage of Covid <<vaccine>> recipients with this symptom = 0.00238 %

Limitations

This report shows the incidence of a symptom amongst a <<vaccinated>> population of 1092715 in the V-SAFE database. The onset of a high incidence after <<vaccination>> suggests possible cause - requiring further investigation of - 1) Other databases, such as VAERS and EUDRA, 2) Clinical literature and scientific papers.

Sample of 26 Reports with Symptom Keyword = OVUL

ovul : Case 1: ID 3CL-26132-81372

I strained my back at work while bathing a critically ill covid patient. I'm a nurse-this is unrelated to the vaccine. Also pretty sure I was ovulating last night during my shift so I had some ovulation pain (similar to every cycle) so while I've had these symptoms....I don't believe they are related to the vaccine in any way.

ovul : Case 2: ID G8M-33669-31223

Breast tenderness resolving - suspect it's a usual ovulation thing that falls under a myalgia category. Not pregnant. Weird.

ovul : Case 3: ID KY4-76787-08004

Missed ovulation which is usually normal

ovul : Case 4: ID JA6-24023-53496

My periods are normally 25 days, but my last cycle which just just ended was 28 days. I track my cycle using ovulation predictor strips and basal body temperature and based on that, I ovulated later than usual. However I still ovulated and had a normal period so I don't believe this impacted my ability to conceive.

ovul : Case 5: ID NH5-19727-72108

Brief pain, also ovulating, think it may have been that

ovul : Case 6: ID RCJ-18283-25116

Since receiving my first vaccine my menstrual cycle had been off. I am normally very regular and since the vaccine I ovulated really and my period came 3 days early which is unheard of for me.

ovul : Case 7: ID XAE-10467-43085

Am bleeding today when its supposed to be my ovulation

ovul : Case 8: ID QVB-22467-43228

This vaccine has altered my hormones, my ovulation was very delayed (I track this extremely carefully) I am extremely anxious with heart palpitations, sleepy poorly and lightheaded

ovul : Case 9: ID S4R-47656-30562

I dont think related to vaccine. Ovulation pain.

ovul : Case 10: ID NGL-18812-30111

Deep body aches, especially lumbar, neck and shoulders, upper arms, upper legs.. mental fogginess. Symptoms began about 4 hours after in ovulation, have become steadily more pronounced.

ovul : Case 11: ID W4W-17302-17754

One old tattoo i have keeps getting a mild rash on it. And also my period started half a cycle earlier this month. As in i should have been ovulating. Idk if that's related but it sure is an interesting correlation.

ovul : Case 12: ID REE-47754-93249

Ovulation, trying to conceive

ovul : Case 13: ID 4FD-91875-75800

I have no idea if this is random or related, but my menstrual cycle was so slow this month. Usually im like clockwork and very tuned into my body. Ovulation was a few days late but i was expecting menstration on the 15/16th and it did not arrive until 1/31.

ovul : Case 14: ID KBA-24942-97119

I am 5 days late ovulating this month (my cycle is normally like clock work). Checked using LH strips, BBT, and other fertility indicators.

ovul : Case 15: ID 77C-27190-50726

Period and ovulation seem to be coming sooner, same after the first shot. Period lengths seemed to be shorter

ovul : Case 16: ID MGP-10961-19141

I was ovulating near the end of January, I had unprotected sex because I want a baby. I did not become pregnant. After second dose of Moderna my period started one week early.

ovul : Case 17: ID CE9-30967-64004

Mild cramping/discomfort ovaries- reproductive system. I am around the time of ovulation.

ovul : Case 18: ID CD4-27227-67874

Mild cramping similar to ovulating cramps

ovul : Case 19: ID GWX-22747-78208

My symptoms may be due to ovulating

ovul : Case 20: ID 7MA-17154-25446

I have been tracking my ovulation monthly and it is fairly regularly- I received the second shot on day 11 of my menstrual cycle. My ovulation was very late and didnt occur until day 19. Im not sure its related but I dont know why else I would ovulate 5 days late so I wanted to report it.

ovul : Case 21: ID TU9-20565-09500

Delayed ovulation and missed menstrual cycle

ovul : Case 22: ID MYM-15901-23796

Severe ovulation pain, cycle day 17

ovul : Case 23: ID QLQ-16313-44002

My period is a week early- I am 7 months postpartum (still nursing) and this is only my 3rd menstrual cycle but it was shorter than my first two which were similar to my pre-pregnancy cycle. I think I may have ovulated early (before the vaccine) so I dont think this is necessarily vaccine-related but figured I would report it.

ovul : Case 24: ID FN2-21343-87338

Redness around a ovulation site

ovul : Case 25: ID 3VW-16564-54485

Seems like I may have ovulated (hallmark abdominal pain) today, which is very early (cycle day 6).

ovul : Case 26: ID 82A-11867-98231

Spotting on CD7 (practice nfp; ovulation confirmed in previous cycle)
