

V-SAFE Reports with Symptom Keyword = PALSY

compiled by Craig Paardekooper

V-Safe is the largest collection of vaccine testimonies on the planet.

One of the reasons why the CDC was so reluctant to release the free-text entries of the V-Safe reports is because these entries are the personal testimonies of vaccine effects – numbering 390,000 per release, and numbering millions in total.

Having censored and erased hundreds of thousands of testimonies of vaccine injury from Facebook, the government was equally reluctant to be the provider of what is the largest collection of vaccine testimonies on the planet – collected by the CDC themselves !

Perhaps this is <<the longest story ever told>>, the testimony of 1 million people.

Many thanks to ICAN (<https://icandecide.org/v-safe-data/>) who pursued the CDC through the courts until they finally conceded and began to release this data on January 15th 2024.

Data is from all 4 releases, up until June 15th 2024, reported by 1,092,715 Covid <<vaccine>> recipients. The next release is on July 15th, 2024.

Right side of lower lip feels numb no evidence of a palsy or drooping

palsy : Case 33: ID Q23-50756-06293

Hi my last entry an hour ago, time had expired. So don't know if you got it. But I'll repeat what I stated earlier. I took the vaccine on 12/22/20. I'm a 52 yo male, and I take minoxidil for my hair loss. So on 12/23 and 12/24 I woke up with a swollen face. It's not bell palsy. I've had this allergic reaction when I found out that I was allergic to Oxfloxin, an antibiotic. So I took Benadryl and it went away. And I long stopped taking Minoxidil, and it hasn't happened since. Any thoughts?

palsy : Case 130: ID QG9-26397-17675
For my Bell's palsy

I don't think I have any symptoms directly related to the vaccine. However, I just developed symptoms and diagnosed with Bell's palsy. I have some facial pain before the vaccine, which might be the prodrome for Bell's palsy. I have started high dose steroids for Bell's palsy. Wondering whether I should skip the 2nd dose vaccine if I'm not recovered from Bell's palsy.

Diagnosed with Bells Palsy today

palsy : Case 179: ID 3V2-16342-99948
Moderate Bells palsy. I am having left eye not blinking and left side of mouth lips is not closing

palsy : Case 180: ID VZ6-17851-23908
Couldnt get anyone to see me. Im like a pariah since I had the Covid vaccine. I will try telehealth if my insurance covers it. If I have facial drooping I will go to the ER. Probably get Covid there, too. Can you tell Im angry?

Moderate, but persistent headache to base of skull and intermittently on left. Neck and shoulders achy. Left side of nose, cheek and lips feel odd. Not asleep, but odd. No facial droop or uneven face. Left eye feels odd when blinking at times, but doesnt look different. My Dr is not in the office and the urgent care wont see me because I had the Covid vaccine. Im not going to the ER where everyone is sick with Covid. This is very frustrating. Im concerned this could be the beginning of Bells Palsy. Taking ibuprofen constantly for headache and anti-inflammatory effects.

Saw PCP, ENT and dentist after first dose, not second one. Wondering about mild case of Bells Palsy??? Mild taste and tongue sensations and increased ringing ears have occurred daily since 12/27/20 when I got first dose.

Forgot to mention yesterday: I have had some degree of tongue sensations and odd taste, sometimes metallic, since immediately after receiving my first dose on 12/27/20. Varies in degree each day but never goes away. Also pre-existing tinnitus has been worse ever since as well. Between dose 1 and dose 2, I saw ENT doctor and dentist. Nothing they can tell by exam & dental x-rays is causing problems, but dentist said nerve pattern for tongue sensations are related to ear nerves. Could this be a mild form of Bell's Palsy? Otherwise, no side effects except mild swelling at injection site for second dose, so I am wondering if my immune system is not responding to the second one???

palsy : Case 535: ID KG2-30209-70771

Just a thought; given the side effects I had from Moderna could it be that the muscle weakness and neuropathy like symptoms effect the diaphragm. Muscle weakness decreasing coughing and deep breathing and air exchange leading to pneumonia and respiratory failure. If your nerves that are responsible for taste and smell can be effected then couldnt the nerve that controls your breathing/diaphragm? Other side effects like Bells Palsy are also neurological. It is well known that neurological symptoms are much harder to treat and are usually chronic.

Bells Palsy to left side of face that started 3 hours after 2nd shot.

palsy : Case 605: ID EHX-93506-85335

This was a pretty challenging 24 hrs. I have had what feels like Bell's Palsy on my right side, swollen air passages, tearing eyes, burning sensation and itching under the skin all over my body. The swelling and novacaine feeling that started in the cheek on the side I got the injection and then started radiating out from there. I had swelling in my lips and my eyes with the right eye twitching for about an hour. The burning and itching under my skin started to dissipate this morning, and the swollen lips, throat and eyes started to dissipate about 2 am this morning. The cheek where all this started just aches now.
