

V-SAFE Reports with Symptom Keyword = SHINGLES

compiled by Craig Paardekooper

V-Safe is the largest collection of vaccine testimonies on the planet.

One of the reasons why the CDC was so reluctant to release the free-text entries of the V-Safe reports is because these entries are the personal testimonies of vaccine effects – numbering 390,000 per release, and numbering millions in total.

Having censored and erased hundreds of thousands of testimonies of vaccine injury from Facebook, the government was equally reluctant to be the provider of what is the largest collection of vaccine testimonies on the planet – collected by the CDC themselves !

Perhaps this is <<the longest story ever told>>, the testimony of 1 million people.

Many thanks to ICAN (<https://icandecide.org/v-safe-data/>) who pursued the CDC through the courts until they finally conceded and began to release this data on January 15th 2024.

Data is from all 4 releases, up until June 15th 2024, reported by 1,092,715 Covid <<vaccine>> recipients. The next release is on July 15th, 2024.

Data

Data Source : V-SAFE (CDC) : download (June 2024) @ <https://icandecide.org/v-safe-data/>

Total number of V-Safe reports with symptom keyword SHINGLES = 2512

Percentage of V-Safe reports with symptom keyword SHINGLES = 0.13802 %

(V-Safe) Total number of Covid <<vaccine>> recipients with this symptom = 1623

(V-Safe) Percentage of Covid <<vaccine>> recipients with this symptom = 0.14853 %

Limitations

This report shows the incidence of a symptom amongst a <<vaccinated>> population of 1092715 in the V-SAFE database. The onset of a high incidence after <<vaccination>> suggests possible cause - requiring further investigation of - 1) Other databases, such as VAERS and EUDRA, 2) Clinical literature and scientific papers.

Rash behind my ear and pain and swelling behind my ear and into my head. Visited urgent care. Possibly shingles.

shingles : Case 171: ID YBE-88933-70116

It is the least painful injection that I have ever had. If I push on the injection area there is a little pain. At first I was worried that nothing was injected, but now if I push hard enough

there is a little ache so I guess I did get something. It is certainly not like the flu shot I got a couple of months ago and not 1/100th as bad as the shingles vaccine.

shingles : Case 172: ID U2D-13438-55763

Taking Valacyclovir for a shingles outbreak on my back. This is probably due to the torn Plantar in my foot. This is not unusual as these outbreaks of shingles occur when I am in pain

I caught a nasty virus in the beginning of July last year from work. I had lingering symptoms and 3 months after being acutely sick an ENT dr. said he felt I had caught covid because the long term fatigue, fogginess in thinking is showing up in people who had covid. I developed sores in my mouth about 2 weeks after I was initially sick in July, again in the end of October, then again a couple days ago. The ENT dr. Told me he feels I have had shingles outbreaks along branches of my trigeminal nerves due to immunoneuro fatigue. I don't no if this lastest episode is related to getting my 2nd covid vaccine dose on Jan 5 or not.

shingles : Case 464: ID CKD-22605-00076

No idea if its related, but I had the vaccine on Monday and yesterday (Wednesday morning) I woke up with an outbreak of shingles in my right ear. I had similar outbreaks of shingles in my 30s when under a lot of stress and it was decided that it was a fluke. Had not had it in a long time. I did not take anything for fear that it might interfere with the vaccine working properly. The rash Im referring to is the rash in my right ear- I have no other skin eruptions anywhere else.

shingles : Case 655: ID 75N-18173-01739

I saw the doctor 3 days after getting vaccine.

A large red swollen area with clear vesicles erupted on my back 2 days after receiving vaccine. Cultures of the fluid were positive for herpes 1 virus. Rash looked a lot like shingles. Taking antiviral medication improved it a lot. Hopefully that will not hinder vaccine. I have a picture in my phone if wanted. The scab on the blistered area has now peeled off. There is still some surrounding redness today.

I had my Shingles shot, one in Ictober and the other one two weeks before Xmas. I told the nurse this before she gave me the shot, she said that was fine. However, last evening and this morning, my tight arm starting hurting like someone had punched me in it. I had my Covid in the left arm. I thought that was peculiar since it had been over a month ago that I got my final Shingles shot and it was the other arm. Right now, my right arm feels ok, but, I thought it strange enough to document.

I keep forgetting to answer this part. I have PSA & take Humira. I stopped it 8 days before getting the vaccine & will resume taking it on 1/24, 8 days after my vaccination. During this time I experienced a flare up with lesions on my fingers, hands, feet, & outer ears. I had a similar response when I received the new shingles vaccine 9/20, so I anticipated this could arise. I wanted to be sure to inform CDC since people with compromised immune system cannot be part of studies. I want to help in anyway I can, so I am willing to discuss anything further. I went to Urgent Care Center

I am 99.99% sure that due to the vaccine (received on Wed 20th) I had my first ever shingles outbreak. It started the day after vaccination and by Friday (22) I had a bad outbreak. The Dr. confirmed it looks like shingles. The pain is pretty bad but I am managing. I still think the vaccine is worth taking and important to public health but it should be documented that at least one person probably had a shingles outbreak due to the

vaccine. And I do get the vaccine didn't "cause" me to get shingles. I had the outbreak due to my immune system being suppressed. I just wanted someone to know.

I believe the vaccine kicks the immune response which triggers said response in the bodys weakest area. The day after the shot I felt achy in my lower back by my kidneys. I have had gastritis in the past and felt similar symptoms of that over the fast 4 days. An irritated stomach. I also have had neuropathy from shingles vaccine and felt that neuropathy in my right leg and foot yesterday. Painful. Gone today. I have a weakness in that area. Basically Im saying wherever your body is weakest thats where the vaccine reaction will manifest. Thats my opinion because Im familiar with the locations of discomfort I have felt since the first shot.

The injection site is sore and a light red. The redness is about 2 inches in diameter and sore. Seems more bothersome in the evening. Both yesterday evening and today. Im very concerned and would like to get a call back from someone if possible. I had a really bad reaction to the shingles vaccine last spring. I had no problem with the first the two injections. The second one was a whole different story. I got a high fever chills and my injection site became super red, hot and even developed a staph infection. I have a real concern that this may happen with my second COVID injection due in March. I feel that the redness of the COVID injection is increasing in size. Please let me know if its safe for me to take the second COVID shot.

I called the health care dept in my area and they said to get ahold of my doctor but did not take my name or number. I was able to see my doctor on day 5 after the 2nd dose and he said that my body had such an immune response to the vaccine that it awakened my dormant chicken pox virus and that I had shingles. I am still suffering from the shingles, nerve pain, numbness on my left hand and my arm around my injection site is still painful.

in-person visit with my internist (again this is unrelated to the Covid-19 vaccine)

I developed a mild case of shingles the day before my second vaccine. I did not realize it was shingles until the next day and confirmed it with my internist. I had the two dose shingles vaccine about 2.5 years ago and the case I have is mild. I do not think it is related to the Covid-19 vaccine but in an attempt to be strictly accurate I am including this information.

shingles : Case 2210: ID 28C-18346-09930

Chiropractic and had to start bathroom for sinus infection and change valtrex from every 12 hours to every 8 hours hope to get my biologic in a couple of weeks since I skipped it and would not take it between the two vax doses.

Tinnitus continues and the shingles are getting pink and trying to break out again, even with me taking one gram of valtrex twice a day for weeks prior to shot.... trying to reduce the outbreakI will now go to valtrex every 8 hours for at least 10 days before I reduce it to every 12 hours.... Biologic xolair makes the shingles bad and I even skipped my dose between the two vax doses.

shingles : Case 2211: ID RPP-31305-03723

This seems to have triggered shingles which I had previously 5 years ago. One vaccination after that. Pain follows the nerve pattern of my previous outbreak along the left side of my head, particularly in the eye temporal area. Blood pressure elevated. In hjbdsire thus happened after the first shot but more delayed -after 48 hours whereas this started within 3-4 hours and became pronounced after 12 hours.

I was not signed up with this app until yesterday. I received my 2nd vaccine on Feb. 19th. That night I started feeling flu symptoms and they kept getting worse over the next few days and my fever went up to 99.8. My normal temperature is 96.8. My fever is almost gone now. But it lasted nearly a week. Yesterday I noted I didnt have fever and thats because I had to buy a new thermometer. On Tuesday night my arm started swelling rapidly and itching. A rash also developed. It is setting down now. My muscles, joints, bones and head ached. I never took any pain meds because I was curious to see what was going on. My muscles are fatigued from all the. I think it will take a while for my body to get back to normal. This was really the worse pain I have ever been in. I live at very healthy lifestyle so I guess Im lucky that this is the sickest Ive ever been. It was worse than the shingles vaccine.

Eye doctor.

Severe Blisters all around mouth, lips and slightly in right eye. Showed up on 2/25 and went to ER on 2/26. They are assuming its shingles based off of how it looks but were confused as I am not having any pain or itching. It feels very uncomfortable. Went to Eye doctor today on 2/27 because of affected right eye and she also has said it seems like shingles. Prescribed Valacyclovir by ER and Zirgan ophth gel for eye by eye doctor. Also today a slight lump appeared under chin area. Would appreciate if someone can reach out to help find out cause.

Was just getting over Shingles when I received my Pfizer Booster. Normally I would have waited a few weeks before getting vaccinated if recently had other virus such as Shingles, BUT... this was the COVID Booster Vax and I had side effects with the first Pfizer Shot. After the Booster, I experienced a moderate to severe increase in PostHerpetic Neuralgia. On a scale of 1-10, with 10 being the worst, this is the PostHerpetic Pain increase I experienced. 24 Hours Pain Level 9. 48 Hours Pain Level 7. 72 Hours pain Level 3. Not sure if this was my body building antibodies from the Pfizer Vax triggering the Shingles Virus, or if this was tested in trials. Please feel free to reach out to me if you need me to be part of a focus group regarding this issue. Getting the Pfizer Vax was well worth the unexpected "Reawakening" of Shingles.

Still have the abdominal and side pain that I mentioned. It started with first shot then subsided to a bearable pain, then after second shot got significantly worse. At this point after having it be a medical head scratcher, I'd say it is shingles.? 2nd shot definitely made whatever the first shot activated worse. No idea but I do want to let you know so you can have the info. I had a cat scan after first shot to r/o gall bladder etc issues. At this point, I have to think it's shingles though no lesions have shown up yet.

I went to my dermatologist.

I developed a rash on my backside which began to itch and hurt. I went to the dermatologist today and I was diagnosed with shingles...the doctor wanted to put me on the viral drug Valtrex but she was not sure if it was safe to do since I only had the 2nd dose of Pfizer 4 days ago.

shingles : Case 2493: ID R2N-52473-73399

I have been diagnosed with shingles. Is there a possibility that the two are related or is it just coincidence.

Telehealth with my Neurologist, who had been treating me for Shingles

Still experiencing a mild re awakening of Shingles Virus & PostHerpetic Neuralgia following Pfizer Booster shot. I should have waited a few weeks after Shingles was completely gone before getting a vaccine of any kind, but everyone has been waiting for COVID Vax, myself included. Would be willing to be part of any focus group that may need to research if MRNA Vax building antibodies also aggravated Shingles condition. I would also be willing to be tested for antibodies to see if this possibly interfered with the effectiveness of the Pfizer Vax. (b)(6)
