

V-SAFE Reports with Symptom Keyword = TINGL

compiled by Craig Paardekooper

V-Safe is the largest collection of vaccine testimonies on the planet.

One of the reasons why the CDC was so reluctant to release the free-text entries of the V-Safe reports is because these entries are the personal testimonies of vaccine effects – numbering 390,000 per release, and numbering millions in total.

Having censored and erased hundreds of thousands of testimonies of vaccine injury from Facebook, the government was equally reluctant to be the provider of what is the largest collection of vaccine testimonies on the planet – collected by the CDC themselves !

Perhaps this is <<the longest story ever told>>, the testimony of 1 million people.

Many thanks to ICAN (<https://icandecide.org/v-safe-data/>) who pursued the CDC through the courts until they finally conceded and began to release this data on January 15th 2024.

Data is from all 4 releases, up until June 15th 2024, reported by 1,092,715 Covid <<vaccine>> recipients. The next release is on July 15th, 2024.

Data

Data Source : V-SAFE (CDC) : download (June 2024) @ <https://icandecide.org/v-safe-data/>

Total number of V-Safe reports with symptom keyword TINGL = 22350

Percentage of V-Safe reports with symptom keyword TINGL = 1.22802 %

(V-Safe) Total number of Covid <<vaccine>> recipients with this symptom = 18307

(V-Safe) Percentage of Covid <<vaccine>> recipients with this symptom = 1.67537 %

Limitations

This report shows the incidence of a symptom amongst a <<vaccinated>> population of 1092715 in the V-SAFE database. The onset of a high incidence after <<vaccination>> suggests possible cause - requiring further investigation of - 1) Other databases, such as VAERS and EUDRA, 2) Clinical literature and scientific papers.

Sample of 3000 Reports with Symptom Keyword = TINGL

tingl : Case 9: ID 6P2-32954-27010

After receiving the vaccination, I waited 15 minutes for any adverse reaction per the instructions of my company. After 15 minutes I left and got a few miles down the road when

my symptoms started. It started with heart palpitations, and then progressed to shortness of breath and tingling in my whole body but mainly in my mouth and chest area. I didn't think I would make it to the hospital or back to the vaccination site so I called 911 and EMTs assessed me. My blood pressure was elevated during my assessment and the last blood pressure checked was 170/90 the last time the EMTs checked it which is abnormal for me. All symptoms were clear after about 30 minutes.

I had rapid heart rate, shortness of breath and tingling about 25 minutes after vaccination

Called and talked to the doctor who injected the Botox yesterday.

Last night I had numbness of my right cheek, from above my right eyebrow, around my eye socket, along my cheekbone and my cheek. It went away after 2 hours and was kind of a hot or cold or tingly sensation, which moved lower along my jawline, and then decreased. I

went to sleep and woke up and it was gone and have not had it or anything else all day. I also got Botox injection yesterday evening between my eyebrows for the first time. That doctor said those symptoms were not related to the Botox. I have my doubts about that.

tingl : Case 719: ID LEL-59221-40755

I read a news report today that mentioned the tingling people were experiencing in (b)(6). I didn't even think of it again but I definitely had what begin as lip tingling and progressed to my lower face/cheeks. I noticed this probably 20 min or so after injection as I was driving home so it was after the 15 min wait time. I thought maybe panic attack but I don't get those and I was not apprehensive about the vaccine and then it stopped and I didn't think about it again until I read the report this morning. So lasted maybe 15 min, I kept poking my face to see if it was numb but didn't seem to be. Thank you.

tingl : Case 1250: ID 6C8-22658-82597

On Friday December 18th at 2:45 p.m. I received my first dose of the vaccine. After the injection while waiting in the observation area, I noticed my arm felt cold and felt weaker. I was able to move my hand and did not have tingling. I was cleared to leave after 15 minutes. While driving home approximately 35 minutes after the injection I had a quick onset hot flash (felt like it came from my left arm which is where I received the injection). Then my heart started pounding. I noticed on my Apple Watch that my heart rate was climbing. It topped out at 170. I was having difficulty in breathing but that was related to my heart rate. I pulled over and called 911. I felt as if I was going to pass out. After 2 minutes or so my heart slowed and stayed at a rate between 120-130. I never lost consciousness. I canceled the ambulance and felt as if I could drive home. 30 minutes later the episode happened again. All the same symptoms as the first. The pounding felt harder and it was slightly harder to breath until the rate came down again. Again, I felt as if I was going to lose consciousness but never did. Each episode lasted about 2 minutes from hot flash to slower heart rate. This time the ambulance came. No rash. No hives. No swelling. BP-160/90 HR-120-130 Sinus Tachycardia on a 3 lead EKG I did not need transport to the hospital. I started feeling much better around 5:00 p.m. The coldness I felt in my arm was gone. My arm no longer felt weak. The hot flash, rapid heart rate and faint feeling did not return.

I came down with a nasty viral illness in the beginning of July. I was tested once for covid and it came back negative. I had severe fatigue after I got over the acute illness, and some other lingering symptoms. In October, an ENT dr. Told me he was sure I caught covid and was having a post viral syndrome. One of the long term symptoms has been weird trigeminal tingling on the right side of my fave for months. That started to drastically reduce a few hours after my first dose of the vaccine and has almost gone away since then.
