

V-SAFE Reports with Symptom Keyword = VAGINA

compiled by Craig Paardekooper

V-Safe is the largest collection of vaccine testimonies on the planet.

One of the reasons why the CDC was so reluctant to release the free-text entries of the V-Safe reports is because these entries are the personal testimonies of vaccine effects – numbering 390,000 per release, and numbering millions in total.

Having censored and erased hundreds of thousands of testimonies of vaccine injury from Facebook, the government was equally reluctant to be the provider of what is the largest collection of vaccine testimonies on the planet – collected by the CDC themselves !

Perhaps this is <<the longest story ever told>>, the testimony of 1 million people.

Many thanks to ICAN (<https://icandecide.org/v-safe-data/>) who pursued the CDC through the courts until they finally conceded and began to release this data on January 15th 2024.

Data is from all 4 releases, up until June 15th 2024, reported by 1,092,715 Covid <<vaccine>> recipients. The next release is on July 15th, 2024.

Data

Data Source : V-SAFE (CDC) : download (June 2024) @ <https://icandecide.org/v-safe-data/>

Total number of V-Safe reports with symptom keyword VAGINA = 855

Percentage of V-Safe reports with symptom keyword VAGINA = 0.04698 %

(V-Safe) Total number of Covid <<vaccine>> recipients with this symptom = 625

(V-Safe) Percentage of Covid <<vaccine>> recipients with this symptom = 0.0572 %

Limitations

This report shows the incidence of a symptom amongst a <<vaccinated>> population of 1092715 in the V-SAFE database. The onset of a high incidence after <<vaccination>> suggests possible cause - requiring further investigation of - 1) Other databases, such as VAERS and EUDRA, 2) Clinical literature and scientific papers.

I had chills & malaise all day after 2nd shot, nothing after 1st. But an odd thing happened just after my 2nd shot, probably coincidence but I took Bactrim for nailbed infection that started before the shot. Weird thing is I have been fighting candida for almost 2 weeks now after- severe vaginal & oral. I am in good health, not immune suppressed and never prone to candidal infections so I just thought it was a weird. Have taken PO Diflucan, clotrimiazole lozenges, and Nystatin and it's still persisting in my mouth..

I had a vaginal sore that showed up approx 1 day after, has lasted 4 days. STD tests negative.

vagina : Case 408: ID AHN-94214-33826

Saw blood from vagina. Not sure if cycle is starting again. It just ended on 1/14. Usually have very monthly regular cycles.

vagina : Case 409: ID 89B-97890-97005

Might be unrelated, but I did notice a change in my menstrual cycle. My cycle ended three days before getting the vaccine, but two days after getting the vaccine, I had vaginal bleeding again that is still continuing. Again, it could be unrelated. I am currently using nexplanon for birth control, I dont know if that could have an effect either, but it is atypical for me to have vaginal bleeding immediately after completing a full (6 day) menstrual cycle.

Upon conferring with some peers and fellow healthcare providers, I concluded that my symptoms were vaccine related and wanted to report. For both doses, for the first three days following, I experienced moderate to at times severe uterine cramping as well as moderate vaginal bleeding with passage of blood clots. This is abnormal because I have had an IUD in place for 2 years and have not experienced any periods or vaginal bleeding, nor have I experienced similar camping (even pre-IUD with a normal period). This is concerning to me and other women I've spoken with who have had similar experiences.
