Verkada

Proactively Protect People and Spaces Against COVID-19

Verkada's COVID-19 response suite leverages powerful edge-based computing capabilities across video security, access control, air quality sensors, alarms, guest and mailroom solutions to help organizations keep people and environments safe.

Remote monitoring
Verkada cameras are ready out-of-the-box for remote viewing on any device.

Crowd notifications
Be alerted when cameras detect a number of people in-frame that exceeds a pre-set threshold.

Health screens and questionnaires
Screen visitors and employees for COVID symptoms before they enter the workplace with tailored sign-in flows.

Contact tracing with face search
Search relevant footage containing a match for a person's face—even while wearing a mask.

Access groups and schedules
Provision groups of people with access to facilities and specific doors at designated times.

Touchless check-in
Encourage germ-free sign-in via QR code from a mobile device, and remotely unlock doors by integrating with access control.

Live and historical heatmaps
View heatmaps on floor plans to optimize cleaning efforts and crowd control in high-traffic areas.

Person of interest alerts
Be notified immediately via SMS or email if an at-risk or affected individual arrives onsite.

Environmental health and safety
Ensure that proper ventilation and cleaning protocols are being followed by monitoring AQI and TVOCs with the air quality sensors.
