

V-SAFE Reports with Symptom Keyword = BLISTER

compiled by Craig Paardekooper

V-Safe is the largest collection of vaccine testimonies on the planet.

One of the reasons why the CDC was so reluctant to release the free-text entries of the V-Safe reports is because these entries are the personal testimonies of vaccine effects – numbering 390,000 per release, and numbering millions in total.

Having censored and erased hundreds of thousands of testimonies of vaccine injury from Facebook, the government was equally reluctant to be the provider of what is the largest collection of vaccine testimonies on the planet – collected by the CDC themselves !

Perhaps this is <<the longest story ever told>>, the testimony of 1 million people.

Many thanks to ICAN (<https://icandecide.org/v-safe-data/>) who pursued the CDC through the courts until they finally conceded and began to release this data on January 15th 2024.

Data is from all 4 releases, up until June 15th 2024, reported by 1,092,715 Covid <<vaccine>> recipients. The next release is on July 15th, 2024.

Data

Data Source : V-SAFE (CDC) : download (June 2024) @ <https://icandecide.org/v-safe-data/>

Total number of V-Safe reports with symptom keyword BLISTER = 3856

Percentage of V-Safe reports with symptom keyword BLISTER = 0.21187 %

(V-Safe) Total number of Covid <<vaccine>> recipients with this symptom = 2722

(V-Safe) Percentage of Covid <<vaccine>> recipients with this symptom = 0.2491 %

Limitations

This report shows the incidence of a symptom amongst a <<vaccinated>> population of 1092715 in the V-SAFE database. The onset of a high incidence after <<vaccination>> suggests possible cause - requiring further investigation of - 1) Other databases, such as VAERS and EUDRA, 2) Clinical literature and scientific papers.

I have a lesion or blistering rash with dry patched skin going up my ear. I am not sure if this is due to my vaccine or not. I felt something on my earlobe and used my finger to push against it and it left a big hole and was bleeding. After the bleeding stopped it had a big deep open wound. Once again I am nor sure I'd this is a side affect because I have never had anything like this before. It is scabbed over today and a little swollen.

I saw the doctor 3 days after getting vaccine.

A large red swollen area with clear vesicles erupted on my back 2 days after receiving vaccine. Cultures of the fluid were positive for herpes 1 virus. Rash looked a lot like shingles. Taking antiviral medication improved it a lot. Hopefully that will not hinder vaccine. I have a picture in my phone if wanted. The scab on the blistered area has now peeled off. There is still some surrounding redness today.

I have tiny tiny blisters on my left hand 2 fingers. I appear then like pop. Then you see and feel them under the skin and then they raise up again. Actually had them a couple hours after vaccine but thought it was something else but as my husband and I sat and went day by day my actions. We both think its from the vaccine. It started with a terrible pain in my patty of my middle finger that hurt and thought it was sliver. Today finally I took clippers

and realized it was a cluster of tiny blisters. Now patty part feels fine no pain but blister surround finger inside and Dow to my ringer finger. My vaccine was also in my left arm. But I have felt fine and still feel fine. Just odd blisters. .

After my 2nd dose on day 4 I broke out in a blister rash on my left side, had sharp, hot nerve pain on my left side since the day after my 2nd dose and then my left hand went numb. I called the health care dept in my area and they said to get ahold of my doctor but did not take my name or number. I was able to see my doctor on day 5 after the 2nd dose and he said that my body had such an immune response to the vaccine that it awakened my dormant chicken pox virus and that I had shingles. I am still suffering from the shingles, nerve pain, numbness on my left hand and my arm around my injection site is still painful.

Yesterday and today have had some small skin blisters, like poison ivy or sumac. First on my inner arm, then around the sides of my belly. I put Benadryl lotion and calamine, which seems to have stopped any further spreading. Im not sure if this is related. But, it is dormant if the year and nothing is growing. Ill continue watching it.
