

V-SAFE Reports with Symptom Keyword = BLURR

compiled by Craig Paardekooper

V-Safe is the largest collection of vaccine testimonies on the planet.

One of the reasons why the CDC was so reluctant to release the free-text entries of the V-Safe reports is because these entries are the personal testimonies of vaccine effects – numbering 390,000 per release, and numbering millions in total.

Having censored and erased hundreds of thousands of testimonies of vaccine injury from Facebook, the government was equally reluctant to be the provider of what is the largest collection of vaccine testimonies on the planet – collected by the CDC themselves !

Perhaps this is <<the longest story ever told>>, the testimony of 1 million people.

Many thanks to ICAN (<https://icandecide.org/v-safe-data/>) who pursued the CDC through the courts until they finally conceded and began to release this data on January 15th 2024.

Data is from all 4 releases, up until June 15th 2024, reported by 1,092,715 Covid <<vaccine>> recipients. The next release is on July 15th, 2024.

Data

Data Source : V-SAFE (CDC) : download (June 2024) @ <https://icandecide.org/v-safe-data/>

Total number of V-Safe reports with symptom keyword BLURR = 3569

Percentage of V-Safe reports with symptom keyword BLURR = 0.1961 %

(V-Safe) Total number of Covid <<vaccine>> recipients with this symptom = 2934

(V-Safe) Percentage of Covid <<vaccine>> recipients with this symptom = 0.26851 %

Limitations

This report shows the incidence of a symptom amongst a <<vaccinated>> population of 1092715 in the V-SAFE database. The onset of a high incidence after <<vaccination>> suggests possible cause - requiring further investigation of - 1) Other databases, such as VAERS and EUDRA, 2) Clinical literature and scientific papers.

I have been fine everyday but my first 15 minutes after my injection I had symptoms. Within 5 minutes of my injection was, I felt flushed, chest tightness, and my heart. My vision also was blurry. My blood pressure was taken and it was elevated along with my heart rate. I was taken to the ER. After about 40 minutes my heart rate came down. The chest tightness stuck around for about an hour and subsided. I was not given any meds in the ER. I came home and slept the entire afternoon and evening. The next morning I felt fine and have had no symptoms what so ever.

Blurred vision, dizziness

blurr : Case 1057: ID HUZ-18499-75225

I developed sudden onset of blurred vision and pain in my left eye on 1:14/2021. Later noticed pain left eyebrow area, tingling sensation in front of left ear, head pain in left temporal and parietal region. Got admitted and tests negative for stroke, covid negative. No explanation other than possible inflammation, responded to IV steroids. Concern for mild case of Bells palsy

I wasnt given the opportunity to notify you about the reaction I had after the the first vaccine. I had a red rash on my arms and trunk and blurred vision and shortness of breath. This occurred within a half hour after the vaccination. I returned to the site where it was given and treated by medical personnel. I was given 2 Benadryl and transported to the hospital by ambulance. I went to the ER and received prednisone and was monitored for a couple of hours. I dont know if I can get the second vaccination. No Dr has been able to tell me because it is so new to them. Could you please let me know if it is safe?

I was seen by my Ophthalmologist, who stated that the Vaccine boosted my immune system that targeted my transplanted cornea, causing it to reject the cornea. I have started a medicine regiment in the effort to fight the rejection.

blurr : Case 2090: ID YE5-16719-32054

Had symptoms of Migraine with blurred vision for a short while yesterday

blurr : Case 2091: ID 7ZS-37560-66680

I got my second shot at 6 pm on 02/02/21. I didnt have any reaction except some mild point tenderness at the injection site, until about noon today. Now my arm hurts like it did with the first shot. That lasted 4-5 days. Around 1:30pm this afternoon, I sat down at my computer to work after a lunch break and my near vision was blurry. It was like my contacts were dry or not quite in the right place, but its been a couple of years since Ive worn contacts. If they stay blurry, Ill go get them checked.

Mild Confusion, struggle finding correct words periodically. Main more intense problem today is with my eyes. Blurry vision, both near and far, with and without glasses on. I have 20/15 vision and wear glasses to correct astigmatism and for reading. Right eye feels strange.

Following the shot, while I was in my waiting period at the facility, I felt lightheaded and my vision blurred. It was the feeling one gets before fainting. I then was attended by the Fire Rescue personnel at Military Circle who took my blood pressure and checked my oxygen level. They reported that my blood pressure was quite low when I was lightheaded and had the blurred vision episode. I then laid on a cot for a period of time and drank the water provided. (No other beverages, such as juice were available. These types of beverages would be helpful when one feels faint.) Now, almost four hours later, I feel tired and my neck is sore, but I do not have other symptoms besides those and a slight soreness at the shot site.

Should have reported this earlier. I have no idea if this is relevant to the vaccine but I'm 66 years old and I've never had this situation arise. 2 hours after vaccine and I'm feeling fit as a fiddle I noticed that my vision out of my right eye on the bottom quarter is blurred out it's kind of like a white light noise. It lasted for about 45 minutes no more and then went away. I'm feeling great and I appreciate your attention to detail feel free to contact me if you need more information that there really isn't anything else. the only thing I've had a negative allergic reaction to in my life has been statins which I deal with and continue to take
