

V-SAFE Reports with Symptom Keyword = BURNING

compiled by Craig Paardekooper

V-Safe is the largest collection of vaccine testimonies on the planet.

One of the reasons why the CDC was so reluctant to release the free-text entries of the V-Safe reports is because these entries are the personal testimonies of vaccine effects – numbering 390,000 per release, and numbering millions in total.

Having censored and erased hundreds of thousands of testimonies of vaccine injury from Facebook, the government was equally reluctant to be the provider of what is the largest collection of vaccine testimonies on the planet – collected by the CDC themselves !

Perhaps this is <<the longest story ever told>>, the testimony of 1 million people.

Many thanks to ICAN (<https://icandecide.org/v-safe-data/>) who pursued the CDC through the courts until they finally conceded and began to release this data on January 15th 2024.

Data is from all 4 releases, up until June 15th 2024, reported by 1,092,715 Covid <<vaccine>> recipients. The next release is on July 15th, 2024.

Data

Data Source : V-SAFE (CDC) : download (June 2024) @ <https://icandecide.org/v-safe-data/>

Total number of V-Safe reports with symptom keyword BURNING = 7458

Percentage of V-Safe reports with symptom keyword BURNING = 0.40978 %

(V-Safe) Total number of Covid <<vaccine>> recipients with this symptom = 6450

(V-Safe) Percentage of Covid <<vaccine>> recipients with this symptom = 0.59027 %

Limitations

This report shows the incidence of a symptom amongst a <<vaccinated>> population of 1092715 in the V-SAFE database. The onset of a high incidence after <<vaccination>> suggests possible cause - requiring further investigation of - 1) Other databases, such as VAERS and EUDRA, 2) Clinical literature and scientific papers.

burning : Case 179: ID PRW-14995-16375

I did get a rash about 2 inches away from the inject site the day of the shot, but I thought it was just from the bigger bandaid I put on it when I got home? It has scabbed over and seems to be healing well. The day of the shot, it felt like it was burning and I had to put ice on it. The burning feeling was only the day of the shot. I didn't mention it previously because I didn't get one of these texts on the day of the injection and then I then I just shrugged it off as nothing, but now that I'm thinking about it, would this be considered a rash? Thought maybe I should say something. It only bothered me, really, the first day. It doesn't look super nice, but I really think it was own fault for putting a bigger bandaid on and then leaving it for a long time.

I didn't get signed up for visage on Tuesday when I had my vaccine but I did want to report to you that I had a reaction within 5 minutes. This includes a stinging on the tongue followed by a metallic taste followed by mild but noticeable shortness of breath with flushing and warmth of the head, neck and hands followed by burning on the bottom of my feet and then swelling of my lips. The symptoms started to resolve within 10-15 minutes. I was treated with PO Benadryl and Pepcid. Within 20-30 minutes the symptoms were gone. I experienced a headache on and off that evening and then no further symptoms.

I am a physician and have consulted with multiple physicians. I will see an allergist on Monday.

I continue with an allergic reaction that started 30 minutes after I received the vaccine. I had a near syncopal event and so he have had burning in my face and arms and a mild bumpy rash on my face. I felt fine when I woke up this am but around 1 pm my face and arms starting burning again and mild chest tightness. I am on Benadryl, Zyrtec, Pepcid and prednisone. Hope this ends soon. Someone needs to record my reaction. I believe it was anaphylactoid.

burning : Case 432: ID 3UK-31964-84009

12/24 I noticed a sensitivity to smells from a febreze trash bag that caused burning in my nose and throat. At first I thought it was a chemical reaction due to the bag. The next day I smelled a scentsy wax and had a similar reaction. Then this morning I put on a jacket that I

had washed the night before and had a similar sensitivity. May have nothing to do with the vaccine, but I've never had that reaction before so thought it was odd

burning : Case 453: ID S7V-12605-20960

On December 23rd I started feeling weak in the evening. The next day, I had diarrhea, was coughing, a headache intermittently and the fatigue returned. I quarantined Christmas Eve and at 10:30 Christmas morning was tested for the coronavirus at the hospital. One thing I forgot to mention was Thursday afternoon I made some popcorn but burned it a little. I didn't notice not smelling the burnt smell but I did notice that the popcorn didn't have much flavor. In the middle of that night I woke up and smelled smoke and after checking to make sure my house wasn't burning down, it occurred to me that I hadn't smelled the smoke earlier. Which added to the list of symptoms.

I spoke to a teledoc yesterday. He said not enough data to determine if these are normal systems but that if I develop paralysis to go to the clinic immediately because of a link to Bells Palsy in the vaccine trials and only the left side of my head and face are affected

Stinging/burning sensation has moved to include my arm. My left eye is more consistently in pain. Muscle weakness on left side. Similar symptoms to temporary nerve damage, but have not gone to a clinic because I assume this is normal if I've reported it and have heard nothing.

Site has improved greatly. On day 2-5 became red, hard, and extremely painful to touch. A sharp burning pain. The area has almost resolved. I do want to point out that I was tested and found Covid 19 positive on November 30,2020. I just saw a CDC report that suggested one wait 90 days before receiving vaccine. Obviously I did not wait, and hoping that fact does not affect the effectiveness of the vaccine.

48 hours after vaccine I found myself in the ER. As I was going to bed , my face began to burn severely and my skin was extremely red and I became nauseated. The burning and redness moved to arms and trunk to the waist. My wife is a nurse and gave me 75mg benedryl. My bp dropped to 88/58. By the time I arrived at ER my bp was up into normal range and symptoms were improving. I was given Pepcid and Benedryl IV and sent home. I did not experience difficulty breathing but my face felt tight. This happened again on the 6th and 7th day post vaccine as well, it was just not as severe. Benedryl was taken again.

burning : Case 1766: ID FQK-24225-13316

On January 7, approximately 23 hrs after I got the vaccine, I developed severe burning in my arm. It quickly spread to my neck and chest. My skin felt like it was on fire and was covered with a splotchy rash. My head was tingling. I called my doctor and was told to go to ER. I took 50mg Benadryl within 5 minutes of the start of symptoms and was given steroids in the ER and monitored for 4 hrs. I had GI upset within hours of getting vaccine. Should I get the second dose since I had an allergic reaction?

Symptoms started a few hours after injection Aggravation of sciatic nerve on left leg. A flare up of a previous injury (burning and tingling sensation) Tenderness in left buttock results in shooting pain and numbness down the leg from any applied pressure. (As if nerve was sitting just below surface) Tenderness centralized on glute maximus

unable to attend without nerve pain for now than 30 seconds. Which resulted in burning and numbness sensation shoot from glutemead down through calf. Advil / Tylenol not as much help as before. Leg throbs and pain/burning subsides minutes after I lay back down leaving a general achiness behind constantly. Overall hypersensitivity of sciatic nerve, certain positions reduce all pain to dull baseline throbbing but any movement after flares of issue. 30+ hours after sciatica pain reduced to back off knee and glut maximus but still cannot stand pain frees
