

V-SAFE Reports with Symptom Keyword = CHEST PAIN

compiled by Craig Paardekooper

V-Safe is the largest collection of vaccine testimonies on the planet.

One of the reasons why the CDC was so reluctant to release the free-text entries of the V-Safe reports is because these entries are the personal testimonies of vaccine effects – numbering 390,000 per release, and numbering millions in total.

Having censored and erased hundreds of thousands of testimonies of vaccine injury from Facebook, the government was equally reluctant to be the provider of what is the largest collection of vaccine testimonies on the planet – collected by the CDC themselves !

Perhaps this is <<the longest story ever told>>, the testimony of 1 million people.

Many thanks to ICAN (<https://icandecide.org/v-safe-data/>) who pursued the CDC through the courts until they finally conceded and began to release this data on January 15th 2024.

Data is from all 4 releases, up until June 15th 2024, reported by 1,092,715 Covid <<vaccine>> recipients. The next release is on July 15th, 2024.

Data

Data Source : V-SAFE (CDC) : download (June 2024) @ <https://icandecide.org/v-safe-data/>

Total number of V-Safe reports with symptom keyword CHEST PAIN = 7621

Percentage of V-Safe reports with symptom keyword CHEST PAIN = 0.41874 %

(V-Safe) Total number of Covid <<vaccine>> recipients with this symptom = 6338

(V-Safe) Percentage of Covid <<vaccine>> recipients with this symptom = 0.58002 %

Limitations

This report shows the incidence of a symptom amongst a <<vaccinated>> population of 1092715 in the V-SAFE database. The onset of a high incidence after <<vaccination>> suggests possible cause - requiring further investigation of - 1) Other databases, such as VAERS and EUDRA, 2) Clinical literature and scientific papers.

Was in ER last night after experiencing symptoms 5 hours after vaccine was given. Was Prescribed, Pepcid, Benadryl and steroids to take for three days. Testing performed, blood work, vitals, EKG, chest X-ray and Covid-19 test. Symptoms that brought me to the ER were, chest pain, visual disturbance, sweats, chills, numbness, tingling, tachycardia, high blood pressure.

Last night had to go to ER to be evaluated. Prescribed to take, Pepcid, Benadryl and steroids. They performed multiple test. Believe it was due to the vaccine. Symptoms I had were chest pain, sweats, chills, numbness, tingling, tachycardia and high blood pressure.

In the middle of the night, for about a hour, I experienced something I've never before had. Acute, pinpoint chest pain, left side. Pulse normal, no elephant on chest, no sweats, not pleurisy, just weird. I chose to not wake my wife or call anyone due to lack of accompanying symptoms, just dealt with it for an hour. Then I fell asleep. Nothing since. Just reporting. I'm a dentist, familiar with internal med. Thanks!

I heard my arm might be sore so I did some arm workouts and massage to prevent soreness. Right after I worked out my arm, I had VERY slight chest pains (5-7x) that I think was due to an quick, atypical arm workout. The sharp, tolerable pains lasted only for a couple minutes. No shortness of breath, dizziness or heart rate change noted.

After i got the injection i felt like something was stuck in my throat. Plus i felt it going down to my chest. It wasn't chest pains or short of breath. I was breathing fine and swallowing fine. Plus i felt a funny taste in my mouth afterwards. But after i waited my 15 minutes i was fine. The EMS was checking up on me. I felt fine. My symptoms were mild.

Called primary care doctor on 1/11 to see if I should have any follow up regarding the chest pain, and she said not unless it got worse/recurred

Overnight from 1/10 to 1/11, I had a four hour period of intense chest pain that radiates to my back in between my shoulder blades. Pain rated 7-8 out of 10. Seemed very similar to an episode of pericarditis I had about 20 years ago (pain worse when laying down, improved somewhat when sitting up, worse with swallowing). Had I not had the previous experience, the pain was bad enough I would have gone to the emergency room. Except for some dull pain that persisted through the day on 1/11, this has not recurred since my

Approx 15 minutes after injection I could feel it in my chest, like an unusual feeling/ slight warming, within 30 seconds of that I had a heart flutter. Then within 5 minutes of that I had 3 chest pains within a minute or two sharp and very short duration I believe it was my heart. After that I had no more symptoms besides a sore arms starting about 6 hours after injection. I do feel a bit more tired than normal today but nothing severe.

Yesterday after I got the vaccine, I felt foggy, had pain immediately up my arm to my neck and collarbone. The left side of my face tingled about an hour after. I had left sided chest pain. I couldnt tell if i had an increase in difficulty breathing due to having asthma. I felt the face tingling for two hours with the left sided chest pain. I felt foggy for about two hours after and had the neck, shoulder and collarbone pain till i went to sleep. I am unsure if i had a reaction or not. I did feel the shot go in.

I dont know if chest wall discomfort is a thing. I did notice slight discomfort before the shot but afterward my coworker asked if I was having chest pain. Maybe worth looking into? I would not call my chest symptom pain its more of a noticeable discomfort. Not like life threatening MI symptoms. I would not consider going to the doctor as a result its more of an observation for others.

Tuesday, January 19th: received the shot at 1:30 pm, developed chills and a headache immediately. Started having chest pains/tightness around 2, which lasted until 6 pm. I had shallow breathing but felt like it was more of an anxious response to chest pains. There was a tingling sensation in my lips and face, with a little puffiness. Around 7 pm I developed a 100.6 F fever (temporal temp). Felt exhausted. Wednesday: Woke up feeling energized, like I could run a marathon. Went downhill around noon- felt dizzy, severe chills and exhaustion, cough, and raise in temperature (100.2 F, temporal). Thursday: Woke up feeling like I had a cold: sore throat, cough, chills, runny nose, and sneezing. Developed a rash along my left arm where I had the shot, accompanied by hives- itchy. Took an antihistamine and it slowly subsided. Friday: Woke up with a rash along my left arm, hives, and mildly swollen armpits- itchy. Still have cold symptoms. Saturday: Cold symptoms still. Only redness is on my left arm, the opposite side of my elbow (where an iv is usually placed).
