

V-SAFE Reports with Symptom Keyword = DIZZINESS

compiled by Craig Paardekooper

V-Safe is the largest collection of vaccine testimonies on the planet.

One of the reasons why the CDC was so reluctant to release the free-text entries of the V-Safe reports is because these entries are the personal testimonies of vaccine effects – numbering 390,000 per release, and numbering millions in total.

Having censored and erased hundreds of thousands of testimonies of vaccine injury from Facebook, the government was equally reluctant to be the provider of what is the largest collection of vaccine testimonies on the planet – collected by the CDC themselves !

Perhaps this is <<the longest story ever told>>, the testimony of 1 million people.

Many thanks to ICAN (<https://icandecide.org/v-safe-data/>) who pursued the CDC through the courts until they finally conceded and began to release this data on January 15th 2024.

Data is from all 4 releases, up until June 15th 2024, reported by 1,092,715 Covid <<vaccine>> recipients. The next release is on July 15th, 2024.

Data

Data Source : V-SAFE (CDC) : download (June 2024) @ <https://icandecide.org/v-safe-data/>

Total number of V-Safe reports with symptom keyword DIZZINESS = 78109

Percentage of V-Safe reports with symptom keyword DIZZINESS = 4.2917 %

(V-Safe) Total number of Covid <<vaccine>> recipients with this symptom = 61781

(V-Safe) Percentage of Covid <<vaccine>> recipients with this symptom = 5.6539 %

Limitations

This report shows the incidence of a symptom amongst a <<vaccinated>> population of 1092715 in the V-SAFE database. The onset of a high incidence after <<vaccination>> suggests possible cause - requiring further investigation of - 1) Other databases, such as VAERS and EUDRA, 2) Clinical literature and scientific papers.

10 minutes after the vaccine I had sudden cold hands (the kind of inside cold like Propofol gives you), with palpitations and dizziness. Self limited in a few minutes. Similar episode but shorter and less intense within next half an hour. Then on the way home 2 presyncopal episodes. The fact that I had not eaten all day and wasn't well hydrated might have contributed. Then waves of chest warmth/heat/burning sensation and chest awareness/tension.

5 hrs after receiving shot, I became so dizzy and almost passed out at work. I am a PACU nurse. 2 MDs and 2 RNs attended to me immediately, said my pupils were dime sized, hooked me up in cardiac monitor & vital signs which were all fine. So dizzy I couldn't walk without ha going on to someone. Husband picked me up and took me home and I went straight to bed. Was a little dizzy still when I got up this morning, but am completely asymptomatic by lunchtime. I do not believe, nor do my medical team that this was covid related but just felt I should report it

I was admitted 12-18 to 12-19

Yesterday after I reported that felt jittery with elevated HR and BP I was rushed to the ER for adverse reaction. I had dizziness, chills, flushed skin, elevated VS, chest pain, and tingling. I was medicated with benadryl, famotidine, zofran, solumedrol, and fluids. I was admitted into the hospital for observation. Symptoms started about 1.5 hours after vaccine was given and improved a couple of hours after medications given

I consulted with a nurse at the location where I received my vaccine. She told me multiple patients have reported tachycardia and dizziness immediately after receiving the vaccine.

Within two minutes of receiving the vaccine I experienced tachycardia and dizziness that lasted 10 minutes. At around 20 minutes I experienced chest tightness. On the first day after receiving the vaccine I experienced site soreness, headache, and extreme fatigue. There should be a place to enter prior symptoms and not only current-day symptoms.

I have not gone, but tomorrow, 12/22/2020 I will go to my outpatient clinic for a checkup.

Large bruising from the knuckles down to the wrist. Day of injection, I had a very bad reaction and got dizzy, lightheaded, shaking/trembling, chills, cough, and severe headache about a 9 on 1-10 pain scale. I also have had consistent pain in my shoulders and mid-back area. I am very worried about these symptoms and would like feedback. Thank you.

See previous comment. After ER nausea and dizziness were mild walking to the car. Tongue remained numb and while driving home extended to a wide area around my lips.

Tongue numbness within first 15 minutes with extra saliva in frequent waves. Within 30 minutes severe nausea after first few sips of water with severe dizziness. Was sent to ER and given zofran and Benadryl.

About 45 mins after receiving vaccine, I felt pre syncopal. I am prone to syncope and know this feeling well. I also have honeybee allergy and had epipen with me. I sat down in floor of Costco and continued to feel dizzy but no hives, nausea, problems swallowing or breathing issues. I did give epi though and called 911. They advised since no other sx of anaphylaxis, I could call someone to pick me up and take me home. There was no "second wave" and I felt well after.

Yesterday I had mild dizziness after getting the vaccine that lasted a few hours. I do not have any dizziness today. I have a chronic health condition called POTS that causes dizziness and sensitivity to medications so I'm unclear if the vaccine actually caused the dizziness or if it was coincidentally. I am also 5 weeks pregnant right now. My only symptom today is mild pain at the injection site.

I think there was an interaction between the vaccine and the muscle relaxer and Xanax I take. I felt actually hungover today, very dizzy, dehydrated, and nauseated throughout the day until 2 or so. I normally take those two medicines (muscle relaxer: cyclobenzaprine 5mg; Xanax alprazolam .5mg) together and don't experience the hungover feeling the next day.

When I got the shot I became extremely nauseous within the first 5 minutes. In the next 5 minutes I had a bad headache. In the next 5 minutes I had extreme pressure in my head with ringing in my ears, lightheadedness, and dizziness. The symptoms subsided over the next hour and I had mild nausea with a mild headache for the following 3 days
