

V-SAFE Reports with Symptom Keyword = FINGERS

compiled by Craig Paardekooper

V-Safe is the largest collection of vaccine testimonies on the planet.

One of the reasons why the CDC was so reluctant to release the free-text entries of the V-Safe reports is because these entries are the personal testimonies of vaccine effects – numbering 390,000 per release, and numbering millions in total.

Having censored and erased hundreds of thousands of testimonies of vaccine injury from Facebook, the government was equally reluctant to be the provider of what is the largest collection of vaccine testimonies on the planet – collected by the CDC themselves !

Perhaps this is <<the longest story ever told>>, the testimony of 1 million people.

Many thanks to ICAN (<https://icandecide.org/v-safe-data/>) who pursued the CDC through the courts until they finally conceded and began to release this data on January 15th 2024.

Data is from all 4 releases, up until June 15th 2024, reported by 1,092,715 Covid <<vaccine>> recipients. The next release is on July 15th, 2024.

Data

Total number of V-Safe reports with symptom keyword FINGERS = 4721

Percentage of V-Safe reports with symptom keyword FINGERS = 0.2594 %

(V-Safe) Total number of Covid <<vaccine>> recipients with this symptom = 4121

(V-Safe) Percentage of Covid <<vaccine>> recipients with this symptom = 0.37713 %

Limitations

This report shows the incidence of a symptom amongst a <<vaccinated>> population of 1092715 in the V-SAFE database. The onset of a high incidence after <<vaccination>> suggests possible cause - requiring further investigation of - 1) Other databases, such as VAERS and EUDRA, 2) Clinical literature and scientific papers.

fingers : Case 350: ID 233-22721-29228

Oddly my hands are peeling, when nothing has changed in my hand washing, soap, hand sanitizer, or winter lotion routine. Noticed one finger the first days after vaccination but today it turned to sloughing my whole hands. Haven't had a space to report it here but the first two nights my pre existing neuropathy in hands and feet was so flared and intense I couldn't sleep. Started in my R arm/ hand, where it's normally very mild in outside fingers

only, and moved throughout and to other limbs. Inflammatory process made sense to me given the vaccine doing its job, so other than being tired, I didn't worry about it. My hands also felt tight and subjectively swollen through the night, but was gone by morning and never objectively visible. I'm fine, but it's definitely odd.

fingers : Case 759: ID B72-10087-07458

I experienced loss of touch in my fingertips on my left hand last evening for about 30 minutes. It seemed to be from poor circulation and it was very strange and concerning. After wiggling my fingers continuously and running under hot water it subsided but it did take about 30 minutes.

fingers : Case 760: ID K KU-91945-19674

Injection was in left arm and 30 minutes later I couldn't feel my arm. It was cold and numb and I couldn't really move my hand. I passed out a few times and I started to feel weird, almost a little drunk. Afterwards, my friend called 911. My left arm was numb and cold. My feet and especially toes and the fingers on my right hand were numb and cold with a slight tingling sensation. I was taken to UAB ER. I was discharged a few hours later when I was more cognitively aware of my environment and able to shuffle, not walk, but shuffle a little bit forwards and backwards.

fingers : Case 946: ID TE3-31138-67420

BONE PAIN! DEEP BONE PAIN! fingers, toes, ribs, scapula, heel, if I lay still usually only 1 area of deep bone pain, moving hurts

fingers : Case 947: ID CZB-33162-14784

A random weird acute/sharp "twinge" in my index and ring fingers on the arm where I received the vaccine. Could be related, could not be, don't recall it prior to receiving the vaccine. Almost like quick versions of the tips of those fingers "falling asleep". Overall, would equate the pain of the injection arm/site as similar to the anthrax vaccine.

fingers : Case 948: ID A7N-10630-53545

I have pain in my shoulder joint but it think it is from the way I was give the shot. She went in high on my shoulder and I immediately had tingling in my arm and fingers that lasted thru the night. The tingling is gone but I have pain in the shoulder when lifting my arm.

I was kept for almost 2 hours at the hospital I received the vaccine at due to the adverse reaction. A nurse and physician were monitoring my vitals and I was given 1 dose of Benadryl.

Immediately after getting the vaccine on my left deltoid my entire left arm felt like it had fallen asleep. I had a lot of weakness in the arm and tingling in my left hand. I didn't have the strength to pick up a bottle of water with my arm. My left hand/fingers got very cold. I was monitored for 30 minutes due to this and when I finally started to leave my legs got really weak and almost collapsed. I was then sent back for observation for another 45-60 minutes and given a dose of Benadryl. I still have some weakness in my left arm.

honestly i feel like ive developed some sort of micro-clot directly under the injection site from my 2nd dose. NOT nerve pain, but as if a specific part of my arm keeps falling asleep & then tingles as it intermittently gets reprofused. ive had this feeling for 2 days now form injection site down to my last 2 fingers. my last 2 fingers are significantly cooler to touch then the rest of my hand. weird. is this a trend being seen by anyone else?

I keep forgetting to answer this part. I have PSA & take Humira. I stopped it 8 days before getting the vaccine & will resume taking it on 1/24, 8 days after my vaccination. During this time I experienced a flare up with lesions on my fingers, hands, feet, & outer ears. I had a similar response when I received the new shingles vaccine 9/20, so I anticipated this could arise. I wanted to be sure to inform CDC since people with compromised immune system cannot be part of studies. I want to help in anyway I can, so I am willing to discuss anything further. I do not answer calls I dont recognize so please leave VM or email: (b)(6)

fingers : Case 1928: ID DTY-15788-88478

Tingling seems to be less intense in general but still there. Notice most when driving and at night while laying in bed. Briefly today when getting up after being seated at a desk chair for over an hour, my legs felt weightless. Was keeping fingers crossed that I wouldn't collapse. No tingling at that time, but an odd feeling of maybe you call it weakness, but weightless in a way. I danced throughout my childhood, age 3-20. Jog regularly save for the last year of the pandemic. Run a 5K every year. Bucycled a 6K for a fund raiser in September, so it's defintiely concerning to think that something may effect my physical being. Keeping optimistic that this will pass sooner than later.

The day of the vaccine about 4 hours later, I started experiencing chest pain. It was not tightness or a heartburn feeling type of chest pain. I have asthma, and it is the type of chest pain I start feeling right before I get bronchitis, almost like breathing in mist and the irritation that comes from having a cough, but I had not had a cough that would have caused this sensation. The next day, I was extremely fatigued, had a headache, chills, started getting a cough, and was sent home early from work. The day after, Friday, I had a fever of 102 and was essentially bedridden. I started using my nebulizer and my dr called me in some prednisone. These symptoms continued through the weekend and began lifting that Sunday. However, on Monday, my lymph node under my ear started swelling on my left side (the same side as the shot), my ear became clogged, my sinuses on my left side had shooting pain every time I inhaled, and although I could breathe through my nostrils, they felt full and had immense pressure. Additionally my headache became worse and I began experiencing intense muscle pain right at the base of my skull on the left side near my occipital lymph node that was radiating into my head and making the headache and sinus pain worse. Now, 11 days after my first dose of the vaccine, I still have the ear pain, swollen lymph node under my ear/behind my jaw, sinus pain, muscle pain at the base of my skull, a headache, and extreme pressure in my head/sinus area that has not lifted. I started on an antibiotic Friday night (the 22nd) in hopes that this is a sinus and ear infection. Ibuprofen helps the headache slightly but makes the pressure in my head feel worse and makes the joints in my hands and forearms hurt and my fingers swell for some reason.

Within 5 min after receiving 1st dosage (2PM EST Fri 01/22/2021), experienced several tingling/shooting pain that went up my left (injection) arm to my shoulders/spine & down to my fingertips. 10 -15min later, my entire arm went numb from shoulder to fingertips. I was unable to feel or move my arm or fingers. After being moved to our work site clinic next door, I was examined by medical staff. After 1 hr I was able to move my fingertips but not fingers or arm. I was allowed to head home. 4-5 hrs (after injection), I was able to feel move my fingers, and arm very slightly. 8hrs l (after injection) I went to sleep. When I awoke the next AM (20 hrs after injection), I had full feeling in my fingers & hand and full hand/fingers movement. Arm was no longer numb but area between elbow and shoulder was swollen slightly and sore (without being touched; touched cause immense pain). Arm was able to be able to be lifted up to elbow height w/o pain. Lifting higher cause shooting pain. 48 hr (after injection) Arm area between elbow and shoulder was still swollen slightly and sore (without being touched; touched cause immense pain). Arm was able to be able to be lifted up to elbow height w/o pain. Lifting higher cause shooting pain. Mon 01/25/21 @ 9AM EST (67hrs after injection) upper arm area is no longer swollen but still slightly sore (but only when touched). 72 hr after injection (Mon 01/25/21 @ 2PM EST), soreness in upper arm (even from touching arm) is completely gone.

During the night the pain in my arm definitely kept me awake. Finally had to take something to go to sleep. I went skiing all day today and felt chilled in a way that I thought was related to the vaccine. Not just typically being cold. At one point the fingers on my shot arm were tingling and I have never had that happen simply from cold. It felt like my hand was asleep. Gone now. The pain this a.m. was up into my left trapezoid muscle and hurt when I put my skis up there to carry them however could have been just from sleeping weird because I was restless and in pain most of the night. The day I got it I went home and clean the house for five hours and it never bothered me at all. Felt about 6 PM and this is my non-dominant arm. Then today I skied for three hours so honestly except for a restless night it has been a minor event. The soreness is almost gone now.

I received the Pfizer COVID vaccine on Wednesday, January 20th at 1:15 PM. After I got the vaccine, I went in to the observation tent for observation. I sat down and immediately felt a tingle sensation in my fingers on my left hand and my arm hurt at the injection site on my left arm. After I left the observation and returned home, the rest of the day/night, my left arm hurt where I received the shot, I had a headache, my neck hurt, and I felt a little nauseous. The next day, January 21st, I felt a slight tingle sensation in both my hands and

feet on my left and right side. January 22nd, the slight tingle sensation in both hands and feet on my left and right side continued, and I had a very bad headache. The slight tingle sensation has continued to present day along with some muscle soreness in my arms and legs. The tingle sensation is intermittent throughout the day in my fingers and toes. I have no numbness and it is not painful. It is just a slight minor tingle sensation. I messaged my doctor on January 25th and was advised to monitor it and contact her back if it doesn't go away. Present day is January 27th, 1 week since receiving the vaccine, I still have slight tingling sensation in my fingers and toes on my left and right side.

This feeling in my mouth happened so quickly & so strong that i mentioned it to my coworker while waiting the 15min before we could leave. By 5PM today the metal/cool like sensation in my mouth moved throughout my whole body. Right now it feels as of the cool sensation is bouncing around my whole body between my head, face, each hand, my feet, fingers & toes. Approximately 4 hours after injection i began to feel spacey & very weird, almost drunk like. The spacey/drunken feeling lasted 2hours before subsiding. Now i just feel the cool sensation bouncing around my body.

I have tiny tiny blisters on my left hand 2 fingers. I appear then like pop. Then you see and feel them under the skin and then they raise up again. Actually had them a couple hours after vaccine but thought it was something else but as my husband and I sat and went day by day my actions. We both think its from the vaccine. It started with a terrible pain in my patty of my middle finger that hurt and thought it was sliver. Today finally I took clippers

and realized it was a cluster of tiny blisters. Now patty part feels fine no pain but blister surround finger inside and Dow to my ringer finger. My vaccine was also in my left arm. But I have felt fine and still feel fine. Just odd blisters. .

fingers : Case 2604: ID E77-10290-71120

I felt pretty much back to normal within 30 hours. One unusual symptom was short 'flashes' of nerve pain most noticeable in my fingers. For the first 24 hours, it was noticeable that I did not feel fully like I usually do, but overall the symptoms were tolerable. I never came fully to the point of having chills, but close at times. Felt a bit fatigued. Am expecting more exacerbated symptoms from the second shot on 2/26/21. Very grateful to science and our healthcare workers and very glad we have new Governmental administration!

Would like to report yesterday about 30 minutes after receiving 2nd dose, left eye started feeling numb, but started to subside after about 15 minutes and applying my cool fingers over my eye. My BP was elevated, but also started decrease after sitting still and just focusing on my breathing. Throughout the rest of the day, the symptoms of my left eye were mild. During the night I experienced some chills and moderate pain at injection site. Woke up this morning with severe headache and nausea. After several hours the headache began to subside on its own.
