

V-SAFE Reports with Symptom Keyword = HEART RATE

compiled by Craig Paardekooper

V-Safe is the largest collection of vaccine testimonies on the planet.

One of the reasons why the CDC was so reluctant to release the free-text entries of the V-Safe reports is because these entries are the personal testimonies of vaccine effects – numbering 390,000 per release, and numbering millions in total.

Having censored and erased hundreds of thousands of testimonies of vaccine injury from Facebook, the government was equally reluctant to be the provider of what is the largest collection of vaccine testimonies on the planet – collected by the CDC themselves !

Perhaps this is <<the longest story ever told>>, the testimony of 1 million people.

Many thanks to ICAN (<https://icandecide.org/v-safe-data/>) who pursued the CDC through the courts until they finally conceded and began to release this data on January 15th 2024.

Data is from all 4 releases, up until June 15th 2024, reported by 1,092,715 Covid <<vaccine>> recipients. The next release is on July 15th, 2024.

After hours on call phone call

High blood pressure and heart rate

heart rate : Case 3: ID 6P2-32954-27010

After receiving the vaccination, I waited 15 minutes for any adverse reaction per the instructions of my company. After 15 minutes I left and got a few miles down the road when my symptoms started. It started with heart palpitations, and then progressed to shortness of breath and tingling in my whole body but mainly in my mouth and chest area. I didn't think I would make it to the hospital or back to the vaccination site so I called 911 and EMTs assessed me. My blood pressure was elevated during my assessment and the last blood pressure checked was 170/90 the last time the EMTs checked it which is abnormal for me. All symptoms were clear after about 30 minutes.

I had rapid heart rate, shortness of breath and tingling about 25 minutes after vaccination

heart rate : Case 275: ID 6C8-22658-82597

On Friday December 18th at 2:45 p.m. I received my first dose of the vaccine. After the injection while waiting in the observation area, I noticed my arm felt cold and felt weaker. I was able to move my hand and did not have tingling. I was cleared to leave after 15 minutes. While driving home approximately 35 minutes after the injection I had a quick onset hot flash (felt like it came from my left arm which is where I received the injection). Then my heart started pounding. I noticed on my Apple Watch that my heart rate was climbing. It topped out at 170. I was having difficulty in breathing but that was related to my heart rate. I pulled over and called 911. I felt as if I was going to pass out. After 2 minutes or so my heart slowed and stayed at a rate between 120-130. I never lost consciousness. I canceled the ambulance and felt as if I could drive home. 30 minutes later the episode happened again. All the same symptoms as the first. The pounding felt harder and it was slightly harder to breathe until the rate came down again. Again, I felt as if I was going to lose consciousness but never did. Each episode lasted about 2 minutes from hot flash to slower heart rate. This time the ambulance came. No rash. No hives. No swelling. BP-160/90 HR-120-130 Sinus Tachycardia on a 3 lead EKG I did not need transport to the hospital. I started feeling much better around 5:00 p.m. The coldness I felt in my arm was gone. My arm no longer felt weak. The hot flash, rapid heart rate and faint feeling did not return.

heart rate : Case 324: ID 5JG-20968-11482

About 30 minutes after vaccination while driving home, tingling was noted in injection arm, traveling up the left arm into the left neck and around the lips. Tingling resolved but the next day tingling was noted to be diffuse, light and scattered through arms, hands, fingers, and legs equally and bilaterally. No dermatomal or distinct nerve distribution. Tingling worsened by sitting on legs, became dense tingling in the anterior shins upon standing, but then resolved a few minutes later to the more diffuse light tingling. No notable difference in strength (able to hike and cook). No notable numbness. No rashes, no shortness of breath, no changes in heart rate.

This happened on Day 5, not today. my heart rate dropped to 60, usually 75-85.y blood pressure dropped to 102/60., usually 136/84. I felt lightheaded and very, very tired. This lasted for about 2 hours.

heart rate : Case 504: ID CXW-78217-11219

On Wed 12/23 I had about a 2.5 hour period where my heart rate was elevated into the 130's. I actually didn't notice it, but saw it on my Garmin App later. I wear a Garmin watch that monitors my wrist heart rate all the time, I've never seen that before with the exception of exercising of course. Tr most strenuous thing I did was make dinner. Don't know if this is related or not.

I heard my arm might be sore so I did some arm workouts and massage to prevent soreness. Right after I worked out my arm, I had VERY slight chest pains (5-7x) that I think was due to

an quick, atypical arm workout. The sharp, tolerable pains lasted only for a couple minutes. No shortness of breath, dizziness or heart rate change noted.

heart rate : Case 1358: ID N2F-28823-33711

I would like to report that on the evening I received the shot, I had heart palpitations. My heart rate dropped down to the upper 50s. I could not take a deep breath because the right up chest area hurted so much. The pain in the chest lasted for two days. By the 3rd day it was gone. My heart rate went back into the 80s by the next day. The soreness in the upper left arm where I had the injection lasted for approximately 3 days. I am afraid to take the second injection. The palpitations were so bad until my family wanted me to go to the ER. I was afraid to go to sleep that night. I had a similar episode on Sunday night (1/3/2021).

Increased heart rate with walking and 3-5 stairs (to 125-140) I noticed this the first vaccines too but didn't report it as I was only 4 weeks out of having Covid pneumonia (2.5 weeks post returning to work/ finishing steroids and antibiotics, and wasn't sure if it was the vaccine or just typical recovery. Now I know it's the vaccine as my heart rate has been down to the lower 90s with gentle to moderate exercise consistently for 2 weeks now (I'm an occupational therapist in an acute hospital). And heart was fine day prior to the vaccine. After the first vaccine heart rate returned to what it had been within a few days.

High heart rate

heart rate : Case 1837: ID 4R3-32480-18610

I would like to report what happened to me. I had the vaccination on Tuesday the 5th at 2:20. Within 10 minutes my mouth started producing s extra saliva and I began feeling nauseous. My mouth felt like I was getting cotton mouth. My face started getting red and neck also. My heart rate began elevating. The doctor took my vitals. I then started getting the chills. I stayed for about 2 hours. The doctor and nurse walked me out and got me to my husband and daughter. They also gave me a Benadryl pill but wasn't working quick enough so they gave me a Benadryl shot. When walking out, felt a sharp pain in my head down to the back of my spine. My legs collapsed and I couldn't talk. I began crying. I was also shaking uncontrollably. My family eventually got me home into bed and it took four days for me to feel normal. It was very scary. I am an extremely fit person and I felt it affected my nervous system. It was very scary!

I could only extend and lift my L arm to shoulder level as it was too painful and stiff to go higher. I was able to use my R hand to raise my L arm high above my head with minimal pain and then stretch, including putting my L hand behind my head and down my back while using my R hand on my L elbow to stretch. Then, within just a couple of minutes, both of my arms and both of my legs started violently shaking uncontrollably for what must have been about ten minutes. I became very chilled. I was cognizant the whole time. I could tell my heart rate went way up so I took deep breaths and hugged myself tightly for a few minutes till my extremities stopped shaking.

It has been 1 week since I received the vaccine. Immediately after receiving the vaccine I was light headed, heart rate rose into the 100s then dropped into the 60s. Blood pressure rose to 173/114. Almost passed out. Took me to ER and my upper torso, both arms, neck and face broke out into a rash. And My tongue started to swell. About 30 hours later I had fever, chills, and body aches. This lasted 24 hours. Then I had a horrific headache. I felt weak and still do. For the first 4 days I had no appetite and still do not have much of one. I also have lupus but am not on any immunosuppressant medications.

Called my PCP to discuss my symptoms and occupational health at the hospital

At the 24 hour mark my sympathetic nervous system became unregulated, my heart rate went up and I could not sit still, I also developed a tic of my left upper body. My arm and shoulder and neck were most affected. This lasted an hour and then I became nauseas. I have barely slept in 48 hours. Last night I experienced hallucinations and could hear the

sound of an old tv in my left ear. I have had a headache since the injection and I feel increasing pressure in my ears. I cant calm down to sleep, very anxious and unregulated

heart rate : Case 2624: ID JAF-24403-48030

I received my vaccine at approximately 2:15 pm on 1/5/21. I had no immediate reaction. At 7 pm that night my heart rate elevated to around 90-100 bpm. That continued non-stop until 3 am the next morning. I did not sleep at all in that time. After that I just had a bad

headache. My arm ached for a couple days and there was a red spot at the injection site. That went away in a couple days. On 1/12/21 exactly a week to date of the vaccine the injection site became red and very itchy. That lasted for 3 days. I treated it with Benadryl and hydrocortisone cream. Since then I have been fine and normal.

My temperature reading is a little bit higher than my normal, which has been about 97.5 F, but not really what I would call a fever. One thing that has been different since I got the shot is that my resting heart rate was elevated, up about 6 bpm, but again this is not serious, just an observation. And its starting to go back down now to my more normal rate of about 74 bpm.
