

V-SAFE Reports with Symptom Keyword = MIGRAINE

compiled by Craig Paardekooper

V-Safe is the largest collection of vaccine testimonies on the planet.

One of the reasons why the CDC was so reluctant to release the free-text entries of the V-Safe reports is because these entries are the personal testimonies of vaccine effects – numbering 390,000 per release, and numbering millions in total.

Having censored and erased hundreds of thousands of testimonies of vaccine injury from Facebook, the government was equally reluctant to be the provider of what is the largest collection of vaccine testimonies on the planet – collected by the CDC themselves !

Perhaps this is <<the longest story ever told>>, the testimony of 1 million people.

Many thanks to ICAN (<https://icandecide.org/v-safe-data/>) who pursued the CDC through the courts until they finally conceded and began to release this data on January 15th 2024.

Data is from all 4 releases, up until June 15th 2024, reported by 1,092,715 Covid <<vaccine>> recipients. The next release is on July 15th, 2024.

Data

migraine : Case 652: ID DR6-68216-54682

The site is slightly red and annoyingly itchy, but I often have a reaction to this type of bandaid, so the redness and itchiness may have nothing to do with the vaccine. I have had a migraine since yesterday that worsened after the shot, but that could also be unrelated. I appreciate all your hard work on this vaccine! Thank you for keeping us healthcare workers safe! :)

migraine : Case 655: ID RA9-20434-11170

Same as yesterday: injection site this morning was just hot to the touch. But I forgot to mention it yesterday. This is for 12/29/20 (date of vaccination). I got this feeling about maybe 10 or 15 minutes after my vaccination. Stay with me here, okay? A doctor put me on the nasal version of generic Imitrex (Sumatriptan). Imitrex "nukes" your headache, right? I get a weird feeling in the back of my head when sumatriptan is doing said headache nuking. It makes me visualize a mushroom cloud in my mind whenever I feel it. I got THAT feeling. I sat there trying to figure out why I was associating that feeling with migraines (especially since I wasn't having any auras). Then it clicked: I just got a new vaccine that I am a Guinea pig for. Ding ding! But I hung out for an extra 20 minutes before going anywhere. I was talking fine. No other odd sensations. It's in the back of my head, but in the middle? Imagine a high ponytail (I have an undercut, hence why I say High pony tail), that feeling is right where the pony tail sits. But it's IN my brain? It's... Really to explain. But you guys are asking for side effects, so I'm being 100% honest.

Triggered hemiplegic migraine which included paresthesia down right arm and mouth and tongue tingliness. No difficulty breathing but did take Benadryl and Tylenol to be on the safe side. Also had dizziness. These symptoms were approximately 20 minutes after getting the vaccine. 30' minutes after taking Benadryl and Tylenol, the dizziness and mouth/tongue tingling subsided. Then extreme fatigue but could be due to the Benadryl. Next day I was also very tired despite rest.

migraine : Case 1190: ID Q3G-26054-50370

I have migraines, and it's possible that the headache and nausea is due to unrelated migraine (or migraine triggered by the vaccine)

migraine : Case 1191: ID UMP-10652-94945

Migraine- I have history of migraines

migraine : Case 1192: ID H4A-26861-79064

I have migraines so not sure it's related

migraine : Case 1193: ID WJY-15348-84449

Muscle/deltoid is very mildly sore today and also a bit swollen. It was like this the first couple of days after I got the injection. It may be because I started to do upper body exercises again and may have triggered that muscle to flare a bit. Very mild but just wanted it noted. Also, headache may possibly be hormone migraine and not related to the vaccine. I get them with my menstrual cycle either before or during and it is right before. Took migraine medication and headache is gone..

migraine : Case 1194: ID 4LF-11935-15756

Blurred vision similar to migraine

migraine : Case 1195: ID YQE-27799-32184

Symptoms overlap with ongoing conditions of fibromyalgia and chronic migraine, root cause unclear.

migraine : Case 1551: ID CVB-46059-64148

The headache was so severe I was crying, curled up in a ball. The pain was in the center of my forehead and behind my eyes, like a migraine. But at one point the pain throbbed throughout my head, I felt it all around my skull almost. I took 2 ibuprofen to sleep it off, and when I woke it was the same intense pain, so I took 2 acetaminophen to function at work. The pain killers worked and I haven't felt pain in the last few hours.

Chills and migraine on the evening vaccine was administered. Arm pain extending down arm to hand with hand weakness

migraine : Case 1983: ID JPC-10484-26837

I felt great until this afternoon, almost 24 hours after the injection. I am nauseous, but that can be the migraines, as can be the nausea. The discomfort is MUCH milder than the flu shot on steroids that i got this past fall. As a teacher, we got flu shots and those are much easier, as you know. This first injection was easy as pie, but i wonder from reading my symptoms, how much is your Moderna and how much is added to Covid-19 and vaccine newness, and an assault upon the US Capital, along with threats of assaults on state Capitals and a Presidential Inauguration, you can see potential statistical differences pre and post January 6 2021. Just a thought.

migraine : Case 2384: ID WTU-22701-85553

About 15 minutes after receiving the vaccine yesterday I started to get a very mild headache and felt a rush of warmth through my body, all very mild. The headache progressively got worse and about 10 pm my ears were ringing and I had a lot of pressure behind my eyes. I don't really get headaches and I have no history of migraines

migraine : Case 2385: ID 7LU-19564-33001

triggered migraine

migraine : Case 2386: ID GRG-20740-43172

I've had migraine headaches since I was 5 years old. And it's been everyday since last year. So I don't think the headaches are the side effects of the vaccine. I also have fibromyalgia and passing out episodes following severe migraine headaches (8 to 9/10 of pain scale), plus type 2 diabetes.

I suffer a little from migraines but I have been getting sometimes pulsing light pain at my temple. Last Wednesday I noticed it in the evening, upon waking in the middle of the night, I went to the toilet and my head pulsed and headache from ears up. I went back to bed and it was much better 15 minutes later. This little pulsing was at my right temple. This evening the light pulsing is on my left temple side. It was Thursday night when my head felt that pulsing in the middle of the night when I got up. Last night I had no problem. Ive had migraines in the past that move from one side of my head to the other. I think I am better now.

migraine : Case 2944: ID 9B8-54759-00361

I drank wine on Friday and had migraines and nausea yesterday and today. I took sumatriptan and soften. I felt sore all over my body yesterday but that can happen with sumatriptan sometimes. I don't know if the vaccine had anything to do with my migraines, nausea and body pain. It could have been red wine, the vaccine or both.
