

V-SAFE Reports with Symptom Keyword = NUMB

compiled by Craig Paardekooper

V-Safe is the largest collection of vaccine testimonies on the planet.

One of the reasons why the CDC was so reluctant to release the free-text entries of the V-Safe reports is because these entries are the personal testimonies of vaccine effects – numbering 390,000 per release, and numbering millions in total.

Having censored and erased hundreds of thousands of testimonies of vaccine injury from Facebook, the government was equally reluctant to be the provider of what is the largest collection of vaccine testimonies on the planet – collected by the CDC themselves !

Perhaps this is <<the longest story ever told>>, the testimony of 1 million people.

Many thanks to ICAN (<https://icandecide.org/v-safe-data/>) who pursued the CDC through the courts until they finally conceded and began to release this data on January 15th 2024.

Data is from all 4 releases, up until June 15th 2024, reported by 1,092,715 Covid <<vaccine>> recipients. The next release is on July 15th, 2024.

Data

Data Source : V-SAFE (CDC) : download (June 2024) @ <https://icandecide.org/v-safe-data/>

Total number of V-Safe reports with symptom keyword NUMB = 17980

Percentage of V-Safe reports with symptom keyword NUMB = 0.98791 %

(V-Safe) Total number of Covid <<vaccine>> recipients with this symptom = 13802

(V-Safe) Percentage of Covid <<vaccine>> recipients with this symptom = 1.26309 %

Limitations

This report shows the incidence of a symptom amongst a <<vaccinated>> population of 1092715 in the V-SAFE database. The onset of a high incidence after <<vaccination>> suggests possible cause - requiring further investigation of - 1) Other databases, such as VAERS and EUDRA, 2) Clinical literature and scientific papers.

Called and talked to the doctor who injected the Botox yesterday.

Last night I had numbness of my right cheek, from above my right eyebrow, around my eye socket, along my cheekbone and my cheek. It went away after 2 hours and was kind of a hot or cold or tingly sensation, which moved lower along my jawline, and then decreased. I went to sleep and woke up and it was gone and have not had it or anything else all day. I also got Botox injection yesterday evening between my eyebrows for the first time. That doctor said those symptoms were not related to the Botox. I have my doubts about that.

After I filled out yesterday's check in I had numbness in my throat and tongue and returned to my vaccination site. Symptoms began about 25 mins after injection and got worse for the next 10 minutes where the symptoms started in my throat and progressed to my tongue. Symptoms stayed stable and I was sent to the ER just in case it was going to progress. My symptoms remain stable and around 630 to 7 at night my tongue was no longer numb and by 8 o'clock my throat also felt normal. My injection occurred at 2:44 PM. I was also hypertensive and tachycardic during the episode.

I read a news report today that mentioned the tingling people were experiencing in (b)(6). I didn't even think of it again but I definitely had what begin as lip tingling and progressed to my lower face/cheeks. I noticed this probably 20 min or so after injection as I was driving home so it was after the 15 min wait time. I thought maybe panic attack but I don't get those and I was not apprehensive about the vaccine and then it stopped and I didn't think about it again until I read the report this morning. So lasted maybe 15 min, I kept poking my face to see if it was numb but didn't seem to be. Thank you.

Yesterday i had reported i felt good which for the most part i did. I did some mountain bike riding with my husband. There were alot of narrow wodden bridges, bumps, rocks, roots and sharp turns. All the things that make it fun. Its an activity that requires you to have your wits about you. Right as we started out i noticed my concentration was off. I still rode but the lack of focus made it challenging. At the end of the day i realized i was very tired. Could have been any of a number contrubuting factors. My husband just suggested maybe it was the vaccine. This is " the most wonderful time of the year" but al can be the "most stressful time" with good and this year an addedmeasure

About 30 minutes after vaccination while driving home, tingling was noted in injection arm, traveling up the left arm into the left neck and around the lips. Tingling resolved but the next day tingling was noted to be diffuse, light and scattered through arms, hands, fingers, and legs equally and bilaterally. No dermatomal or distinct nerve distribution. Tingling worsened by sitting on legs, became dense tingling in the anterior shins upon standing, but then resolved a few minutes later to the more diffuse light tingling. No notable difference in strength (able to hike and cook). No notable numbness. No rashes, no shortness of breath, no changes in heart rate.

numb : Case 1093: ID Z7X-24352-60783

I had the shot on 12/24 at 11:45 am or so. Had no issues until 3:30 pm on 12/24 when I started to have severe joint pain on the right side of my body, same side of the vaccine administration. The pain was localized at the joint between the hip and the right leg and later that evening on my knee as well. The pain was so severe that I was limping when walking, worst going up and down the stairs. Even sitting down was painful. I called the Moderna medical reporting number and informed them of the side effect experienced. I'm a pharmacist and I also spin on my bike daily so going up and down the stairs has never been an issue. As the evening progressed noticed a bit of stiffness on my neck as well, right side only. Didn't take anything yesterday to manage the pain because had a glass of wine in the afternoon. This morning the pain was the same. Took 800 mg of ibuprofen. It has helped but still tough to go up and down the stairs.

numb : Case 1920: ID 7LX-12047-25233

I don't think I checked in yesterday- I got really nauseated at work from smelling seafood. It was prolonged and zofran did not work. Lasted almost 2 hours gradually getting less. I am still able to eat just select foods - hardly ate yesterday- today was better and I ate small amounts but more then I've been- I was off work. Both the tongue numbness and sometime mucous membranes part of my lips are numb. I continue to have increased surges of saliva secretions, altered taste and aversions to a lot of foods/I took several Doses of miralax last night and this morning and finally had the first bowel movement in a week. I'm still bloated, get full fast, and have frequent heartburn.

My upper face feels different it's not numb and I have feeling but the only way to describe it would be a mild numbness. It's not on one side more across the forehead upper cheeks and eyelids. It comes and goes. I do have allergies and started taking nasal spray last week and it might be that. It just feels a little off but isn't inconvenient. My ears are plugged so I really feel it is more of a sinus/allergies thing not a side affect

numb : Case 2606: ID 37N-24330-06408

Few hours after getting the vaccine I had a very mild numbness on all my face, lips and my tongue. It was barely noticeable at first but then when I went to bed for the night I woke up in the middle of the night with faster heartbeat for a few seconds and I noticed the numbness was all over my body, specially on my thighs. a kind of numbness when you get on the face when you go to a dentist but much more mild. I still could feel my skin but it was a little numb to the pressure. It didn't completely feel natural. I thought it was because I slept on my side at first but then when I touched my other side it felt the same. I still could walk normally but I was really worried. The numbness got better the next morning but it came back at night. Today is the 3rd day that I got the vaccine and I still can feel the very

mild numbness on my face, specially the left side of the face and lips.(I got vaccinated on the left arm as well.)
