RESTORATION PARTS
CATALOG

ISP WEST

Welcome

Welcome to **ISP** WEST, we are your one stop shop specializing in air-cooled Volkswagens, run by VW enthusiasts for VW enthusiasts. We restore cars, manufacture replacement parts, import/export cars, and sell NOS (New Old Stock) new and used parts.

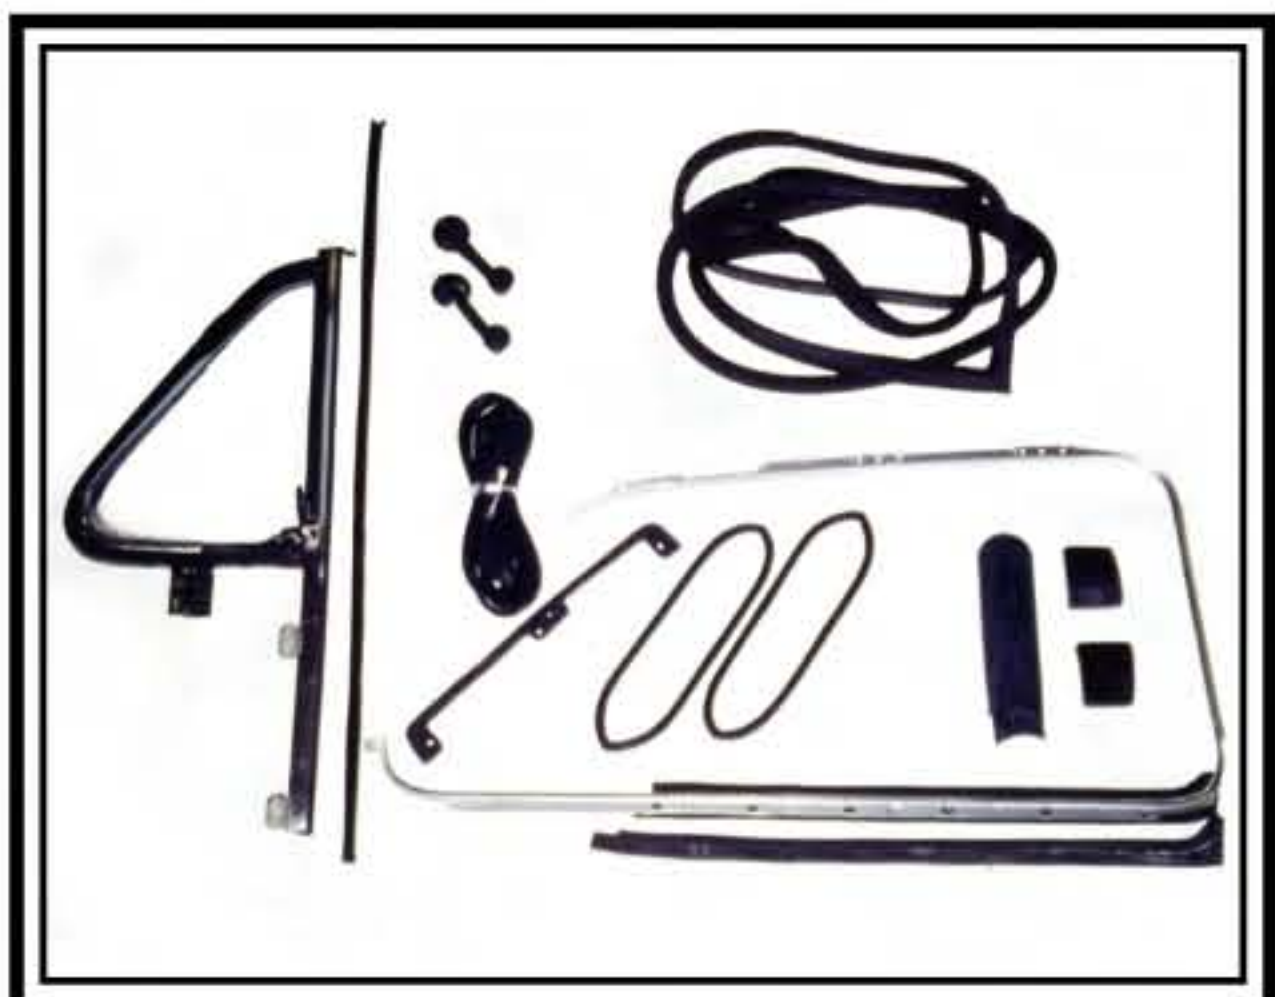

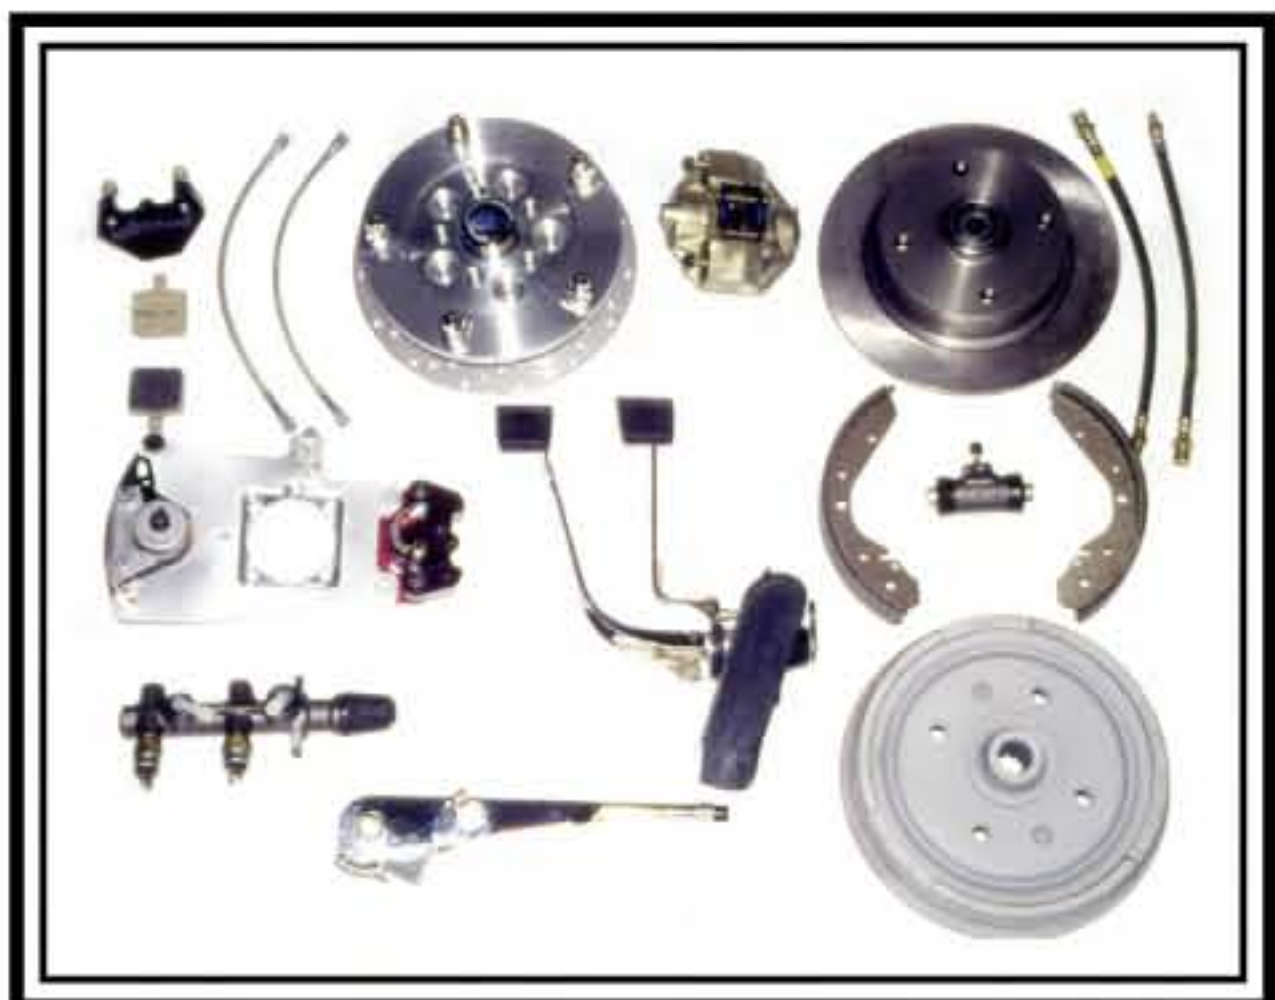

What We Do

At **ISP** WEST we handle every stage of the restoration process in-house. Why go to ten different places to get your bodywork, paint, upholstery, mechanicals, parts & assembly work done when you have everything you want in one place at **ISP** WEST.

Drop off your car, or we can find you the car you want, we will build and restore it to your requirements and specifications. When your car is fully finished, you can drive away in your 'new' car, just the way you've always dreamed of. You too can experience the same feeling that someone felt back in the 50's, 60's or 70's when they bought their VW brand new.

Restoring any car to a high standard is a complicated process, but at **ISP** WEST we can handle everything. Through our quality and schedule controls, we time everything right to meet your plans while keeping a close eye on your budget, to ensure you get the best restored car for your money.

With specializing in full body off VW restorations, we can offer features that the VW Factory could not offer when your car was made. With re-chroming, powder coating, ceramic coating and accessories, your car will stay looking better than new for many years.

If you are a Do-It-Yourselfer and are restoring your car yourself, we can help you with hard to find, NOS, reproduction and used parts. Whether you need a bulb, master cylinder, muffler or window seal for your daily driver or show car, we have it all at **ISP WEST**. We ship Worldwide everyday.

Here at **ISP WEST**, we stock over 2500 individual VW parts needed to complete your Type 1, 2 or 3 restoration. We continuously search Worldwide for parts, and at times manufacturing our own, for our ongoing and future restorations, as well as for our retail and internet store. We can almost say 'Yes we have it' and 'Yes we can do it'.

Who We Are

Since our very first car, we have been dedicated and loyal Volkswagen lovers, from love at first sight to happily ever after. Unlike some stores, at **ISP WEST** you will be greeted by fellow enthusiasts who passionately drive their VW's everyday.

ISP WEST grew from being after-hours garage hobbyists to full restoration professionals. Since 1990 **ISP WEST** officially embarked on a lifelong commitment to do what we love and in the best way we know how. We hope that you will enjoy reading our catalog, and see our commitment to offer you the best service.

Where We Are

We are located in Los Angeles County, 30 minutes from LAX Airport and Disneyland. Call us 310-637-2100, fax us 310-637-1019, email us sales@vwispwest.com or visit our website and on-line store at www.vwispwest.com

How to use this catalog

All parts itemized in this list are broken down into 10 main groups which correspond to the main units of the vehicle. Each main unit consists of several sub-groups, the number of which varies according to the size and design of the unit.

Within the main and/or sub-groups the parts are listed and numbered in their constructional order.

Each part number consists of nine figures. The first three figures designate the type and model. The next figure shows the main group. The following two figures indicate the sub-group. The last three figures represent the actual numerical designation of the part. In the event of modifications to the material or design one or two letters are added to the part number of those parts which are not interchangeable with the previous parts. The alphabetical order indicates the number of modifications made.

The required color code is denoted by 3 numbers or a combination of numbers and letters.

Designation such as front - rear - left - right are determined from the driving seat in driving direction. If part is available in left and right - hand versions, the odd end figure usually designates the left - hand part and the following item with an even end figure

CHASSIS NUMBER

The first two digits of the chassis number are the first two digits of the basic model number of the vehicle - such as 31 for a Notch or 14 for a Karmann Ghia.

The third digit is the model year of the vehicle--so a "148" is a 1968 Karmann Ghia.

The last six or seven digits are the consecutive production numbers for that specific model year. Here is an example.

FOR ENGINE NUMBERS: PLEASE REFER TO THE CHASSIS AND ENGINE NUMBER CHART, LISTED BEFORE EACH MODEL SECTION.

IDENTIFICATION PLATE LOCATION:

Types 1, 3, 14, 18, 34- At front of vehicle under hood. Chassis number also stamped on frame tunnel beneath rear seat or luggage panel.

1968-79 Type 2 - Right side of cab partition behind passenger seat.

1950-71 Type 2 - Chassis number stamped on right side of engine compartment.

1972-79 Type 2 - Chassis number stamped on left engine cover plate.

1970-79 All Types - Left side of instrument panel visible through windshield.

ENGINE CODE LOCATION

Prefix to engine number:

Type 1 - 1967-71 Type 2 - Stamped on generator/ alternator support flange.

Type 3 - Stamped on crankcase between distributor and crankcase breather.

Where is the Chassis Number? : Beetle

SUPER BEETLE / BUGS:

Stamped on frame tunnel under the rear seat.
Metal tag riveted to front apron under hood

SUPER BEETLE:

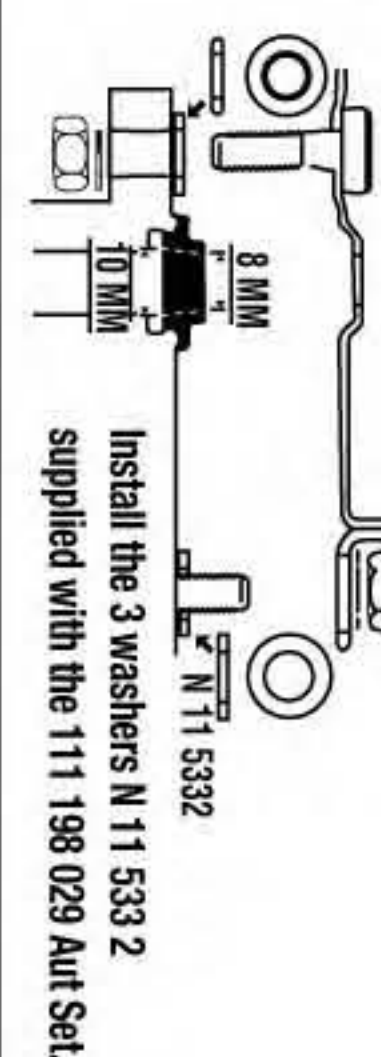

How do I know if I have a Super Beetle?
Super Beetles have springs instead of shocks in the front.

Year:	Chassis #	Last Motor # In Year	Changes
to 1949	 138 554	1-0-169 913

1963	4 846 836 5 677 118	7 893 119	
1964	5 677 119 6 502 399	8 796 622	Last 40 hp for U.S. delivery.
1965	115 000 001 115 979 200	9 800 000	
1966	116 000 001 116 1021 300		Last of 6v electric system in U.S.
1967	117 000 000 117 999 000		12v
1968	118 0000 001 118 1016 100		First year of padded dash and gas door on quarter panel.
1969	119 0000 001 119 1200 000		Introduction of IRS rear axle
1970	110 2000 001 110 3100 000		
1971	111 2000 001 111 3200 000		Super beetle introduced.
1972	112 2000 001 112 3200 000		
1973	113 2000 001 113 3200 000		
1974	114 2000 001 114 2999 000		
1975	115 2000 001 115 2600 000		
1976	116 2000 001 116 2200 000		
1977	117 2000 001 117 2200 000		Last year for Bug Sedan.
1978	118 2000 001 118 2050 000		
1979	119 2000 001 119 2050 000		Last year for Bug Convertible.

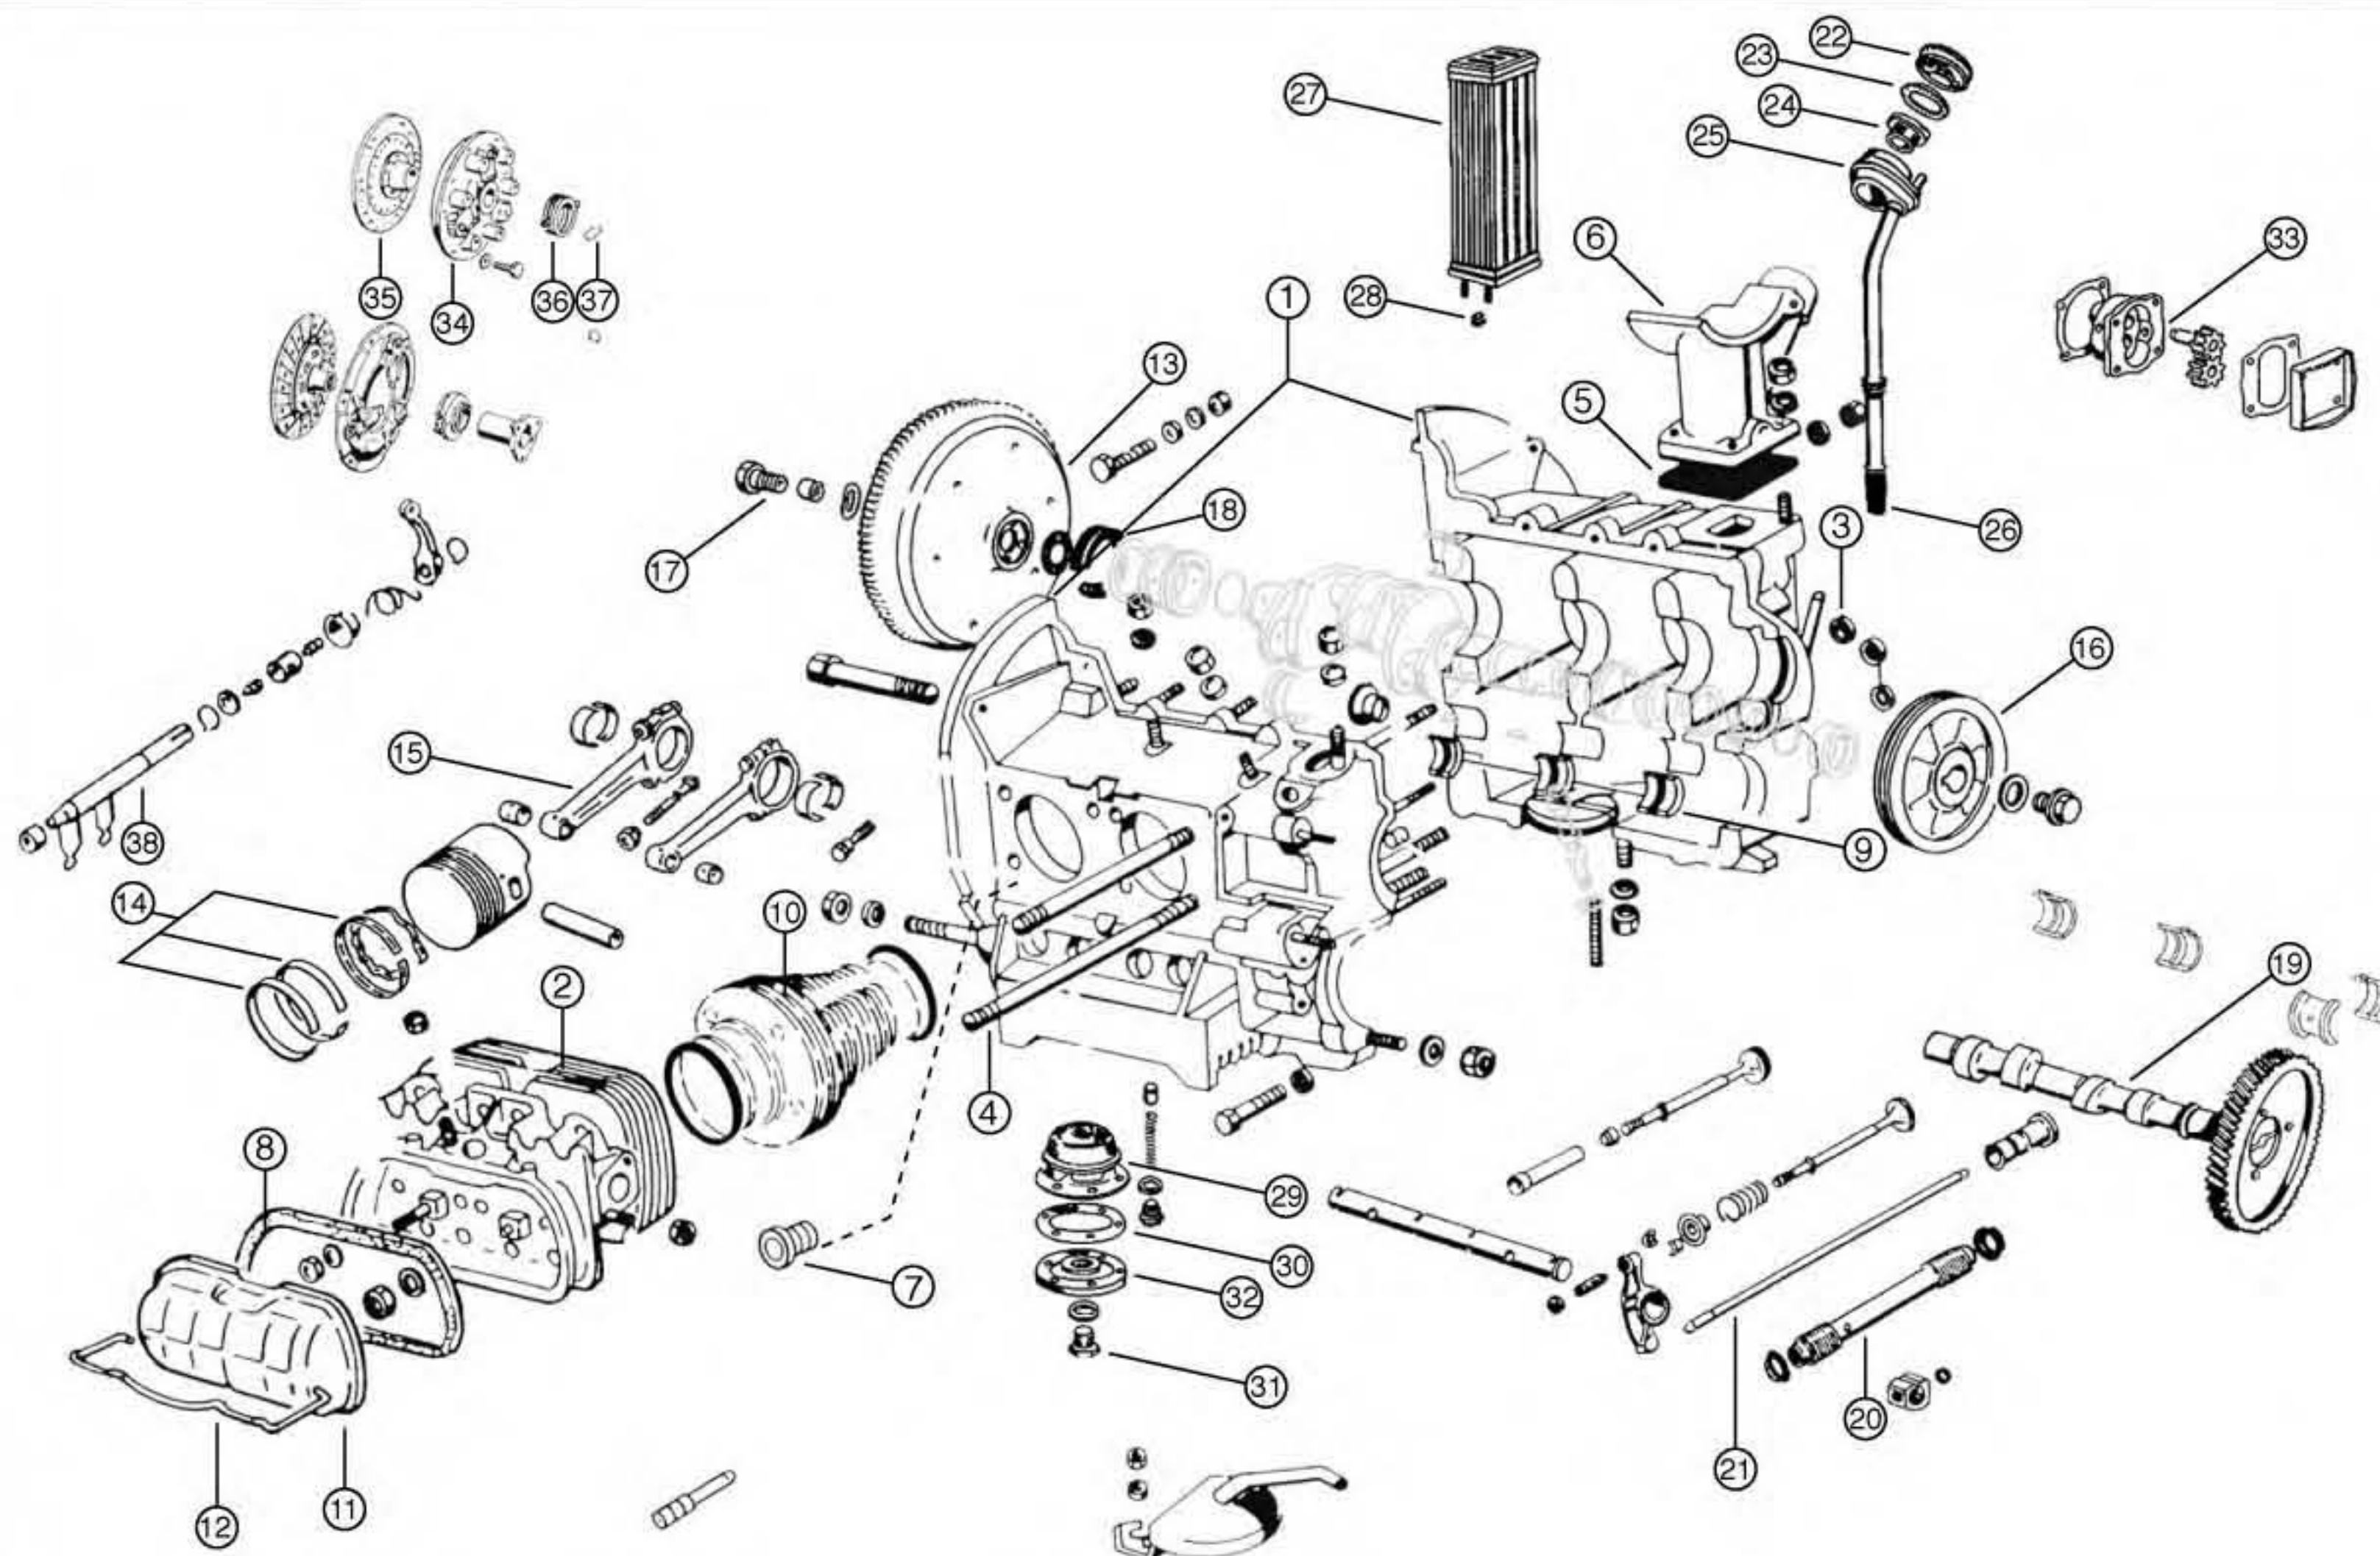

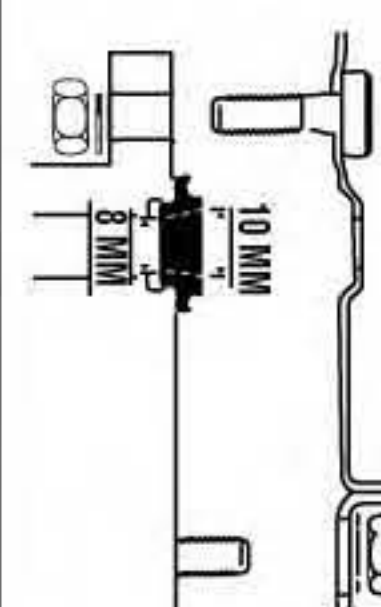

Notes:

1. The model number for all bugs built prior to 1955 corresponds to the calendar year they were built. For example a bug model 1954 was built during the year 1954. On August 1, 1955 VW started production for the following year's model, called the Model Year. For instance, a Bug with chassis number 2083 355 is a 1959 model built sometime in November 1958.
2. Beginning in 1965 the VW numbering system changed. Two digits were added in the front, which specified the model type. The 3rd digit indicates the model year. For instance, if the chassis number for a 1965 hardtop sedan would be 115 205 652, then for the 1965 convertible would be 155 205 652.
3. In 1971 the Super Beetle was introduced. The numbering system was slightly changed. The Super Beetles sedans were identified by the number "3" as the second digit in the chassis number. The 1971-1979 convertible models displayed the number "5" as the second digit just like the previous years although they featured Super Beetle components. 1971-1977 standard Beetles retained the number "1" as the second digit.

NOTE: Matching a new crankcase with previous oil cooler.
Type 1:

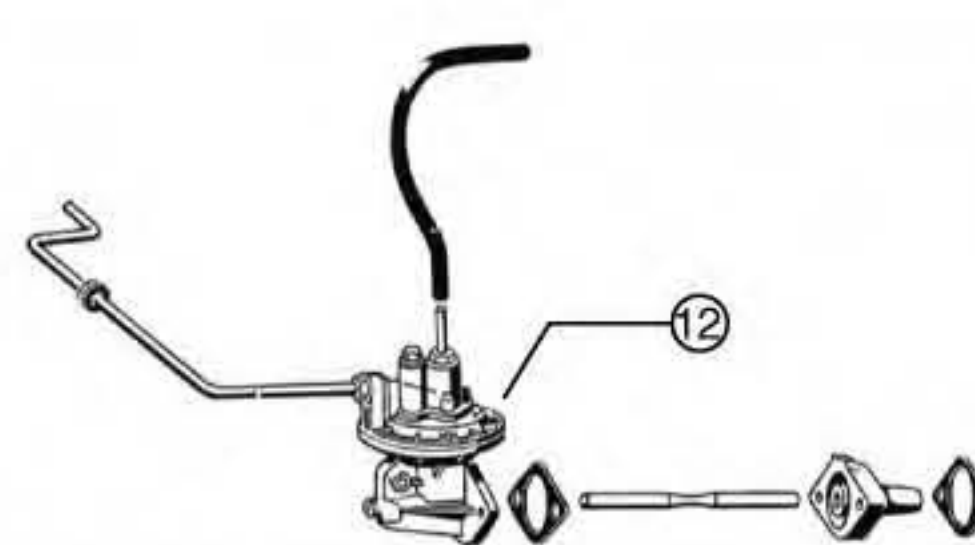

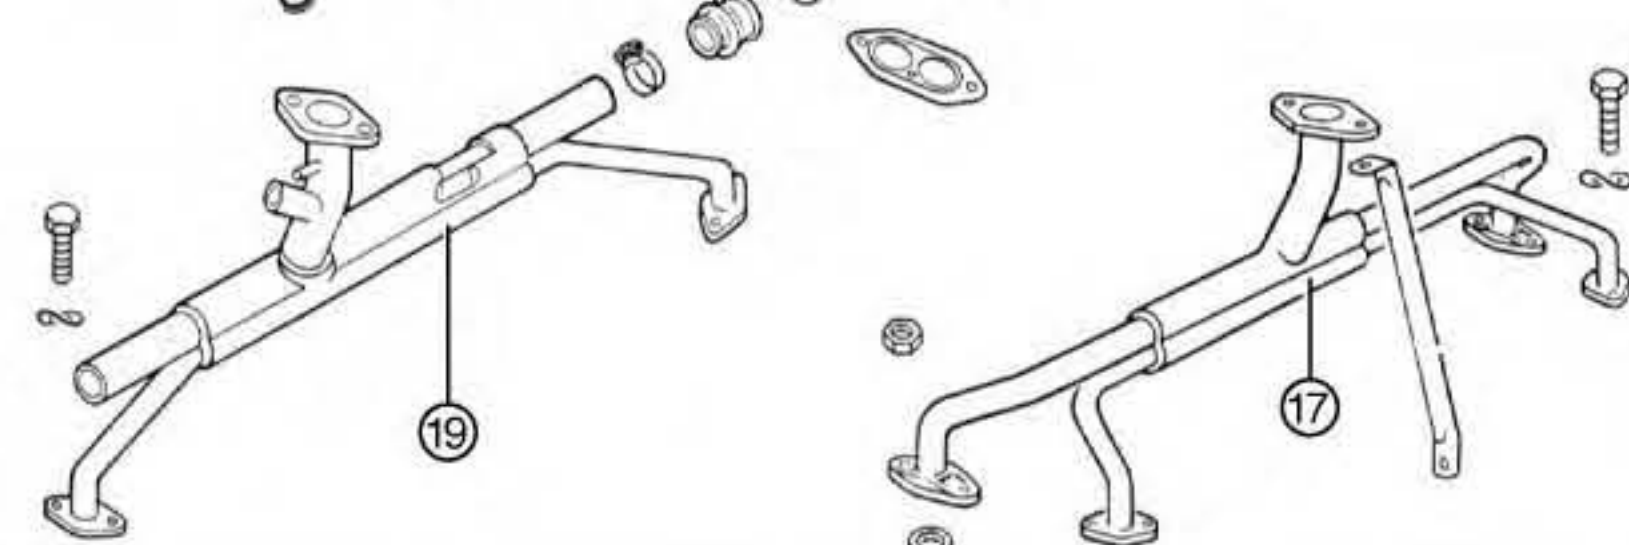

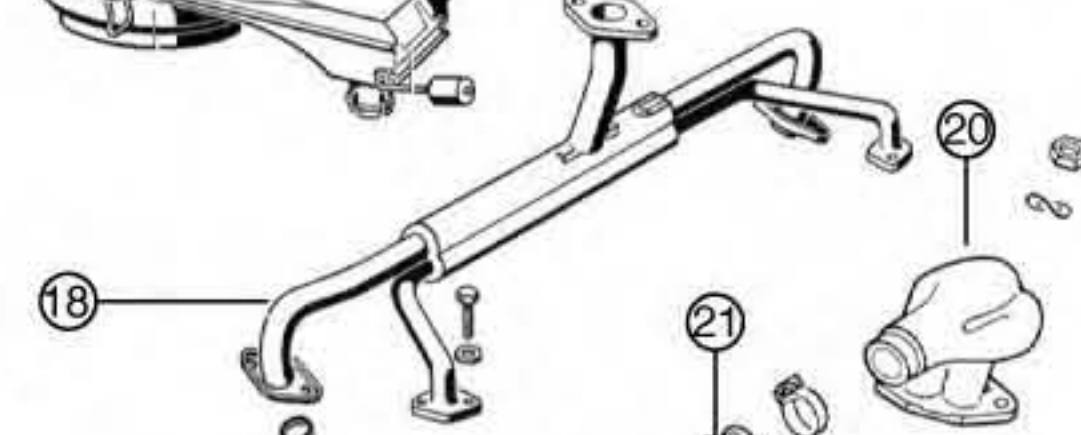

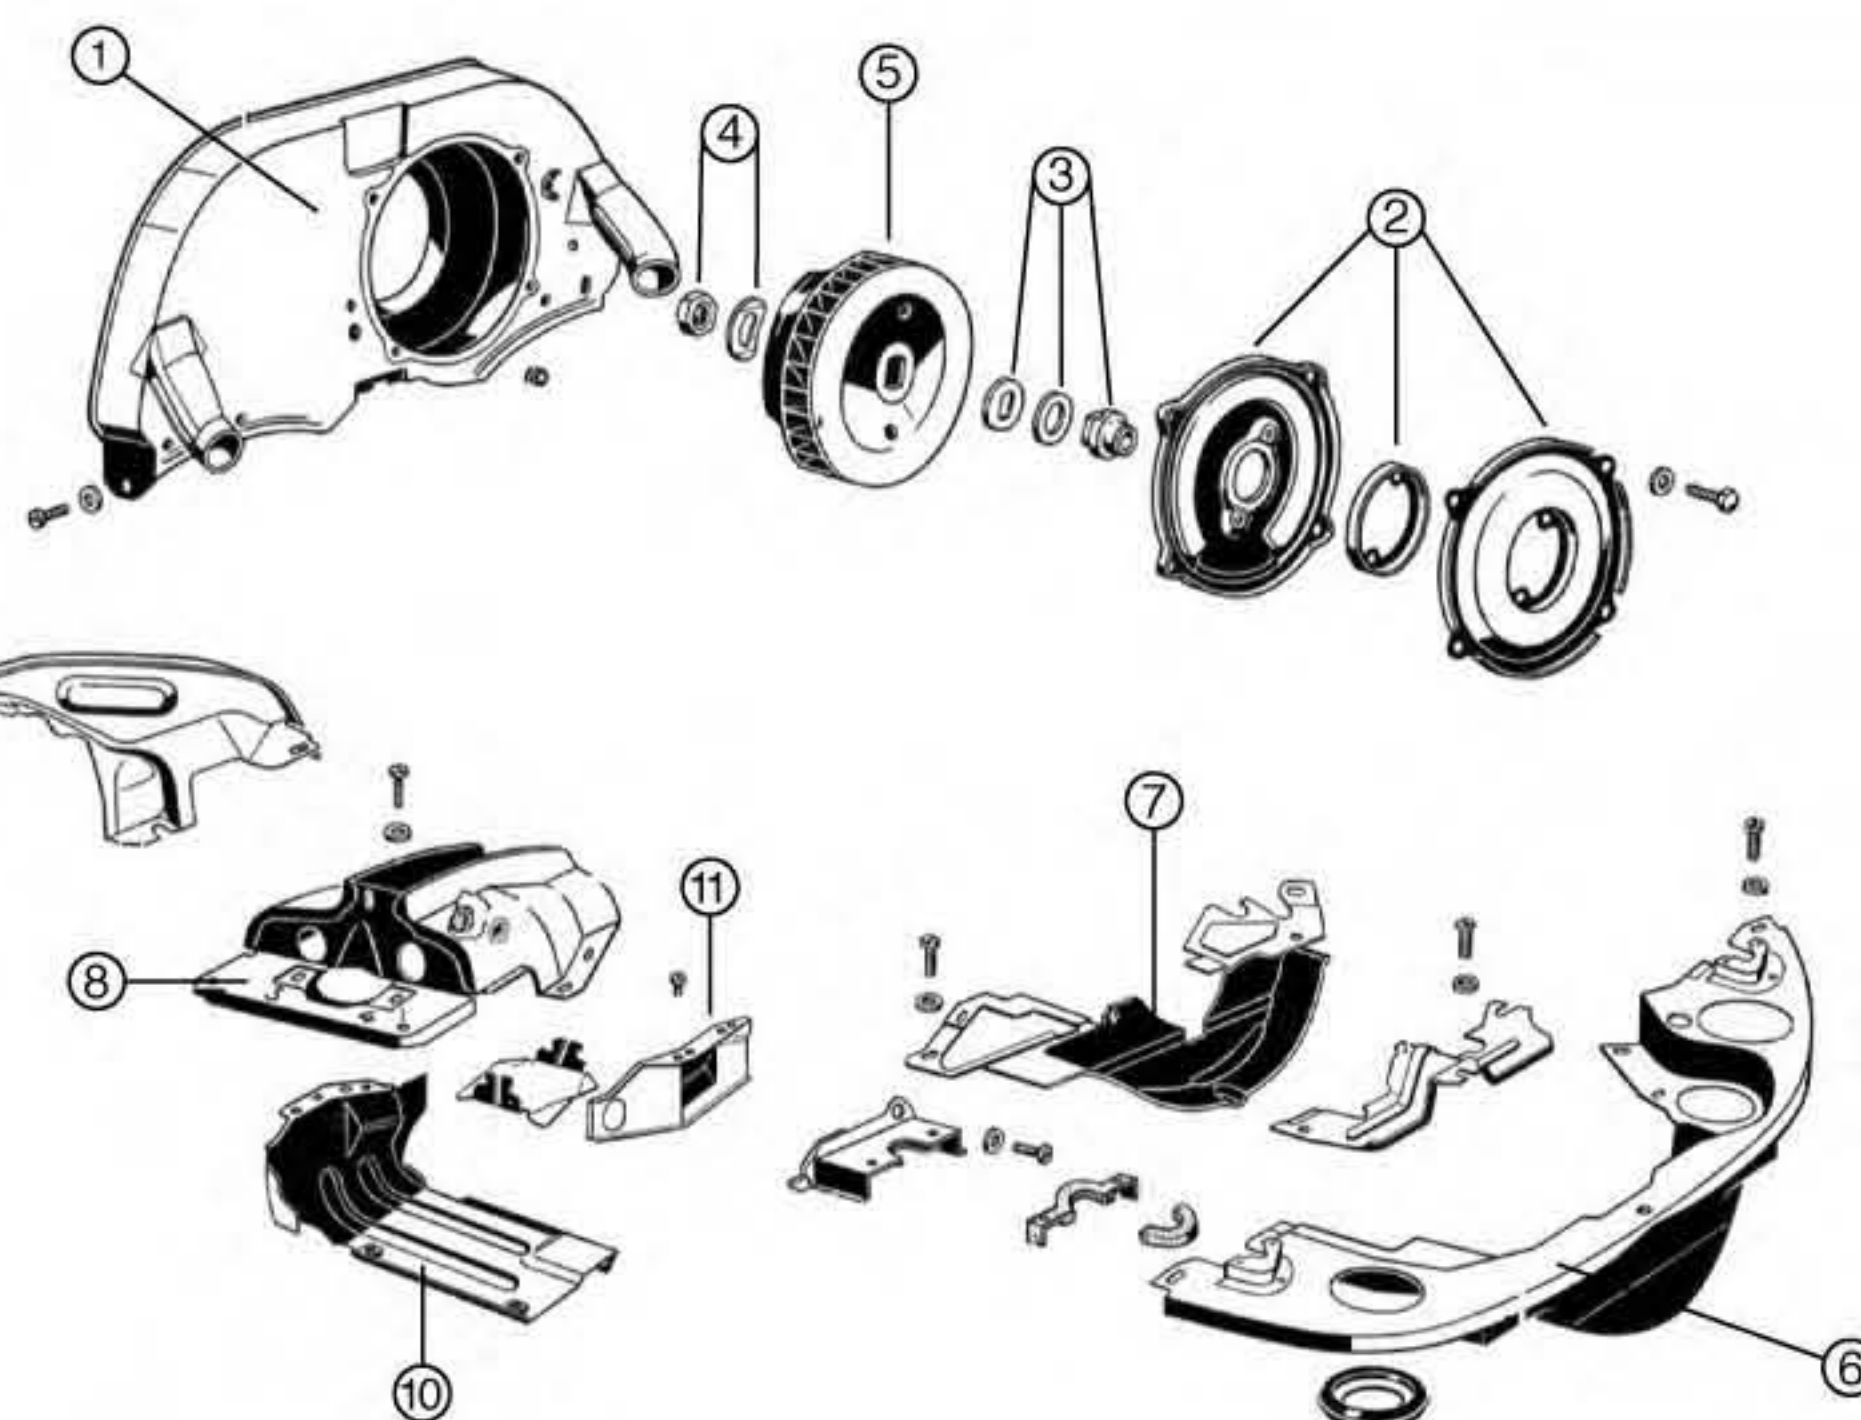

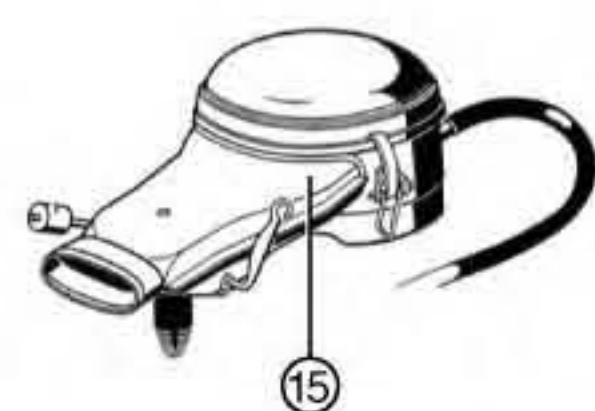

Matching previous crankcase with a new oil cooler.
The 3 washers N 11 533 2 supplied with the 111 198 029 Aut Set are not used.

ISP WEST

Adjusting Cables

1 - Partly open roof, detach trim panel and push it to rear. Close roof again.

2 - Remove small cap in crank, take screw out and remove crank.

- | | |
|------------|----------------------|
| 1 - Cap | 5 - Escutcheon |
| 2 - Screw | 6 - Screw |
| 3 - Washer | 7 - Cable drive gear |
| 4 - Crank | |

3 - Take escutcheon off.

4 - Back off two screws holding drive gear about six turns.

5 - Pull drive gear down until the gear no longer engages in the cables.

6 - Pull the two rear guides back level with the brackets on the top panel.

7 - Insert the lifters of the rear guides into the brackets in a vertical position.

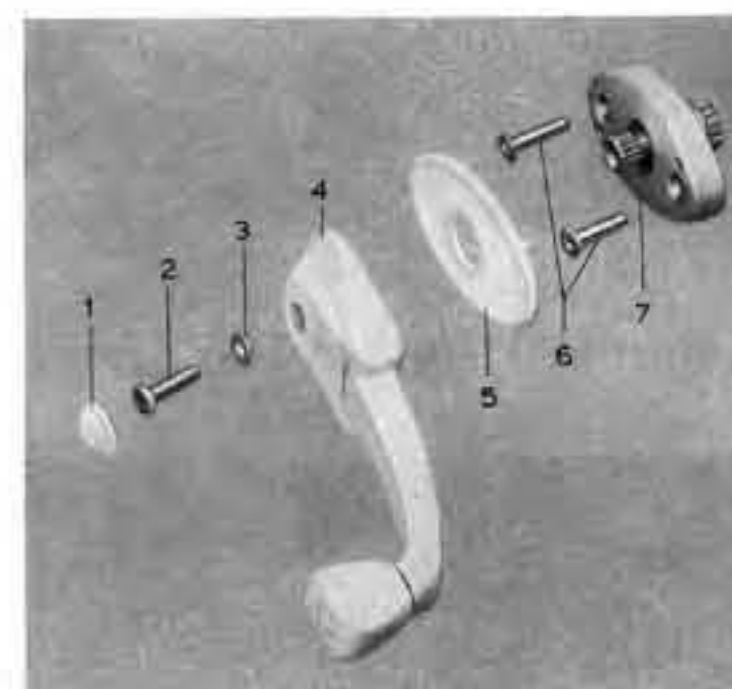

8 - Turn the drive gear shaft to the right as far as it will go (max. 12 turns).

9 - Press drive gear up again and tighten screws. Make sure that the gear engages in the cables properly.

10 - Fit escutcheon and crank.

11 - Check cable adjustment by opening and closing roof a few times.

12 - Pull trim panel to front and attach it to the top panel.

Adjusting Height of Top Panel

Front

1 - Open roof slightly, detach trim panel and push it to the rear.

2 - Close roof.

3 - Loosen screws in front guides.

4 - Adjust the height of the panel by turning the knurled nuts on each side.

5 - Tighten screws in front guides again.

6 - Pull trim panel to the front and attach it to the top panel.

12/66

Note:

On 25 November 1966, from Chassis No. 317 107 627, the front vertical adjustment of the steel sliding roof was simplified by the discontinuation of the previously used knurled nut M42x1 and the installation of a countersunk-head screw M10x1. These changes made it necessary to modify the steel sliding roof panel and the front guides.

Repair notes:

The previous type parts will still be available. New roof panels can be installed on older vehicles and old roof panels can be installed in new vehicles, provided the appropriate parts for the front vertical adjustment are also used.

The adjustment instructions in this Section "Steel Sliding Roof" remain valid in principle. Instead of "knurled nut" read "countersunk-head screw".

Rear

- 1 - Detach trim panel and push it to the rear.
- 2 - Close roof until the lifters in the rear guides are just about to lift.
- 3 - Loosen nuts on upper pins.
- 4 - Adjust the position of the lifter pin with the screw in the lifter until the height is correct.

- 5 - Tighten the nuts again.

- 6 - Check that roof slides parallel and adjust cables if necessary.

- 7 - Pull trim panel to front and attach it to the top panel.

- 1 - The long seal (velvet strip) is cemented to the front and sides of the roof opening and the short seal is cemented to the rear, using D 12 universal adhesive.

- 2 - Ensure that the short seal is cemented round to the ends of the rear panel corners. The long seal must be fitted so that there is no space between the two seals.

- 3 - There is also a rubber seal cemented to the rear edge of the sliding panel. The roof panel must be removed when it is necessary to renew this seal.

Water which enters the roof opening, runs along the channels in the roof frame and drains away through hoses in the front and rear roof pillars and side panels.

When blocked, the front drain hoses can be cleared from above with compressed air or flexible steel wire after opening the roof. The fenders must be removed to clear the rear hoses from below.

When installing a new drain hose, ensure that it is not kinked.

It is advisable to apply a small amount of D 12 adhesive to the hoses and cement them on the drain-pipes.

5/66

Note:

On 21 April 1966, from Chassis No. 316 249 508, the previously used special sealing compound was replaced with an elastic rubber seal to attain better sealing between the casing, into which the roof panel slides, and the roof.

Primed **bodies and roofs without fittings** obtained from the Parts Department must be subsequently sealed at the roof casing. To do this, the rubber seal, Part No. 317 877 297, must be evenly and firmly pressed into the channel-shaped edge round the roof casing. The rubber seal must not be pulled taut as otherwise it will contract in time and cause drafts.

Sliding Roof Trouble Shooting

- 1 - Roof panel lifts on one side

Cause

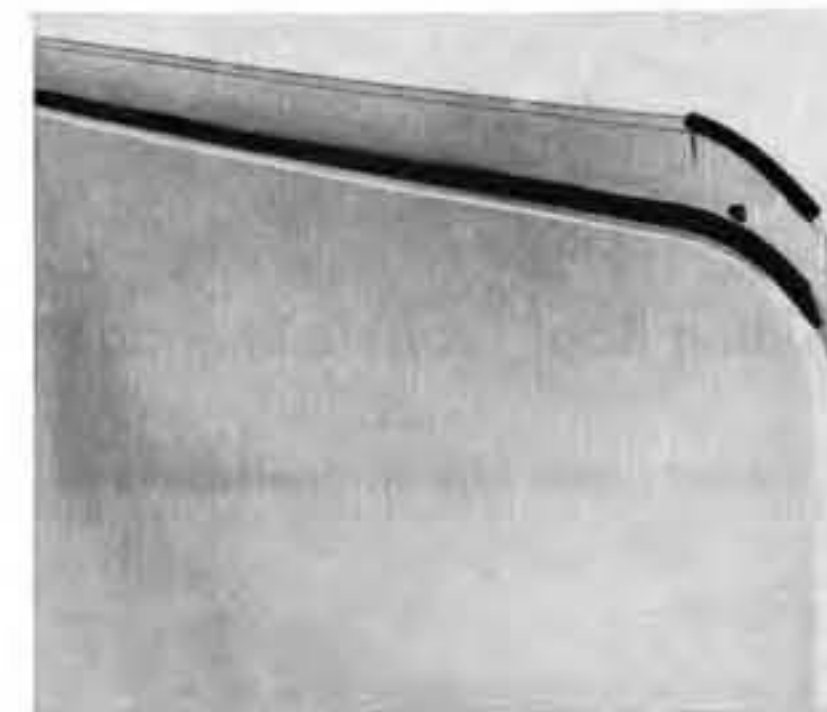

- a - Lifter is not contacting the ramp.

- b - Cables or drive gear damaged.

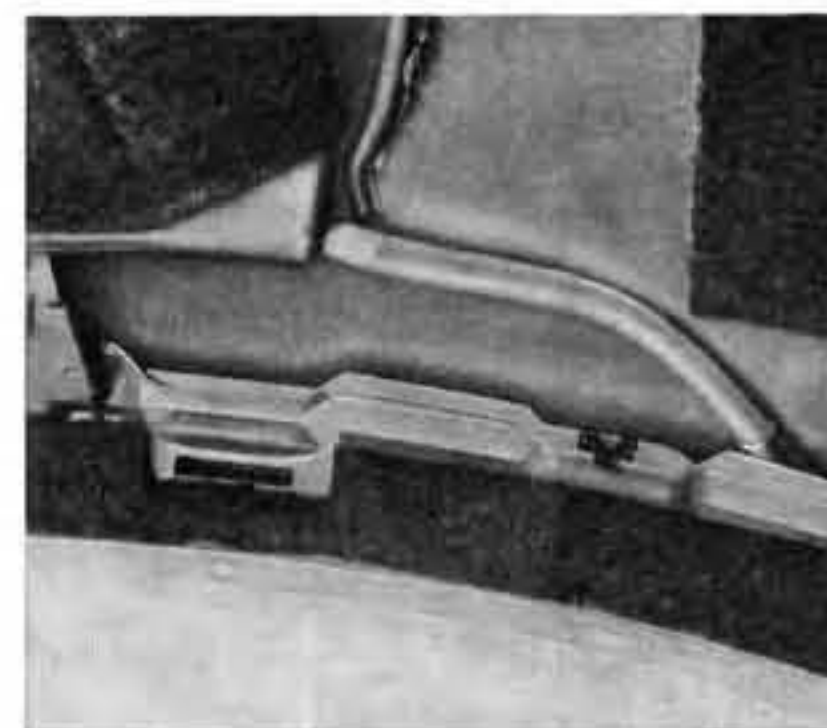

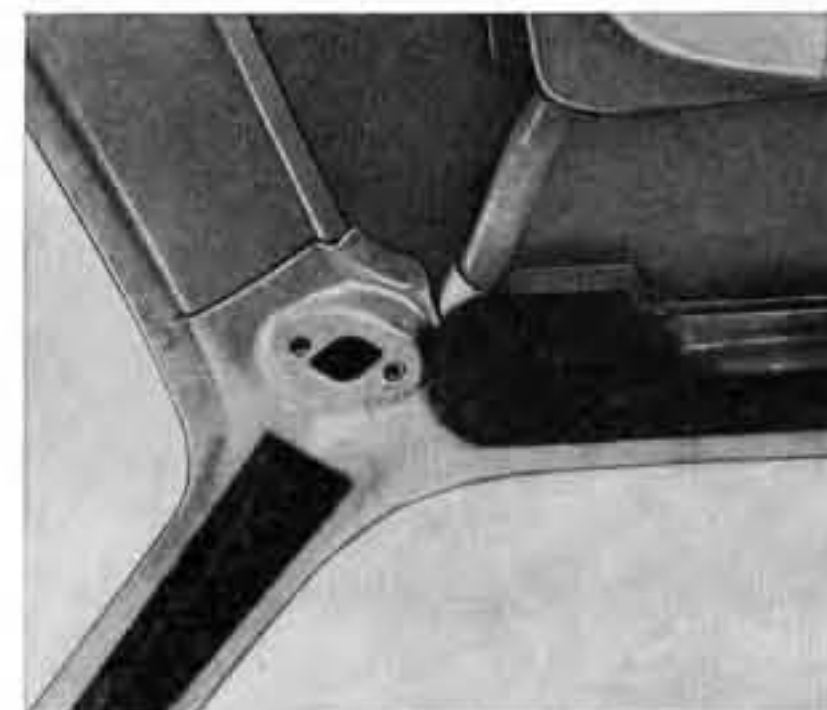

- c - Lifters set too low.

Sliding Roof Sealing

Water Drainage

Remedy:

- a - The ramp in the roof frame water channels must be properly aligned with the lifter (angled metal lug of rear sliding panel mounting plate).

Set ramp so that the contact point of the lifter is at the center of the ramp. The ramps must be so located longitudinally that at the moment the front panel edge touches the front seal, the lifters are at an angle of 45°.

The contact point of the lifter can be altered by tapping the ramps forward or backward.

- b - Fit new cables or drive gear.
c - Adjust lifters properly.

2 - Roof panel does not run parallel

Cause:

- a - Cables not adjusted properly.
b - Cables or drive gear damaged.

Remedy:

- a - Adjust cables or height of panel.
b - Fit new cables or drive gear.

3 - Drive gear not engaging properly

Cause:

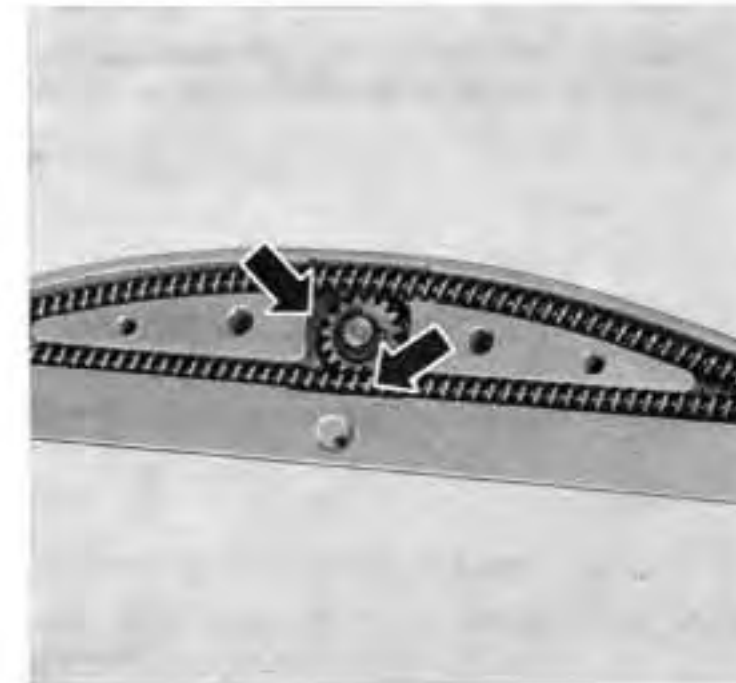

The cable is not projecting far enough into the center cable guide: This causes rapid wear on gear teeth.

Remedy:

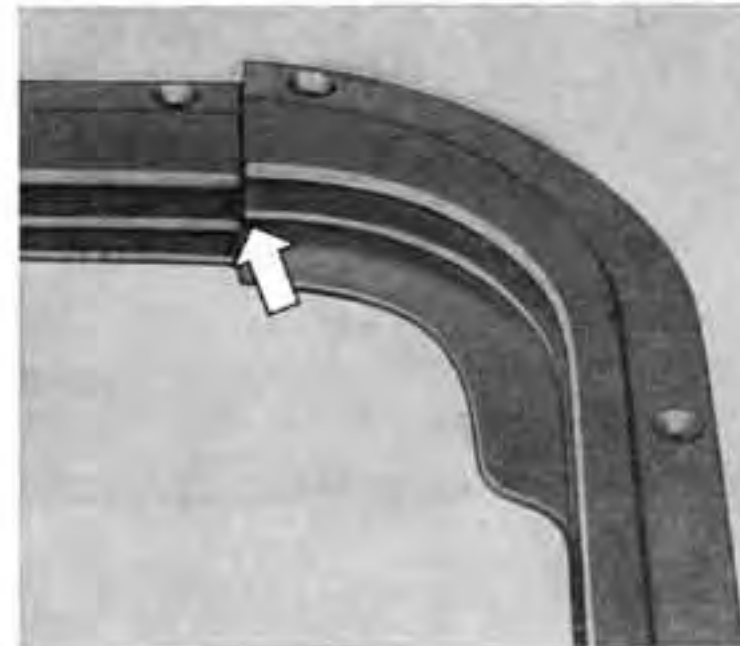

Check if the drive gear escutcheon is contacting the cable guide:

- a - It may be necessary to enlarge the clearance hole for the drive gear in the roof.
b - The padding or headlining is badly creased around the hole for the drive gear or has become jammed between drive gear and hole: Stick padding and headlining into position properly.

4 - Roof panel cannot be moved in either direction

Cause:

Upper or lower guide pieces not properly aligned with the side guide channels so that the cable can catch on the projecting corners.

Remedy:

Clean traces of priming paint out of the front corners of the roof opening or align channels by fitting washers or packing pieces. If necessary, chamfer the ends of the parts slightly.

5 - Roof panel rattles when open

Cause:

Too much play at front guides.

Remedy:

Press front guides together.

6 - Frame panel rattles or buzzes

Cause:

Frame panel not contacting roof.

Remedy:

Insert felt between frame panel and roof. The gap between frame panel and roof thus created should be sealed as otherwise the wind will force the headlining down when vehicle is moving.

7 - Roof leaks

Cause:

Front or rear drain pipes blocked.

Remedy:

- a - Clear pipes with flexible wire (old speedo cable).
b - If the trouble cannot be cured in this way, detach headlining on side concerned. The radius of the drain pipe should then be increased so that kink in hose is eliminated.

Why TMI Sunvisors?

TMI is the only manufacturer to use the Jersey Spring Clip mechanism, which allows exact positioning of the Sunvisor. It won't drop and remains tight.... you can feel the quality as you rotate it into place.

Bug Convertible

Convertible Tops

Bug 1949-1979

PART #	DESCRIPTION
TM-22-1310	Bug '50 - 57 Convertible Top
TM-22-1311	Bug '58 - 62 Convertible Top
TM-22-1312	Bug '63 - 67 Convertible Top
TM-22-1314	Bug '68 - 72 Convertible Top
TM-22-1315	Bug '73 - 79 Convertible Top

NOTE: Top material is not cut from window- must be done after top is installed

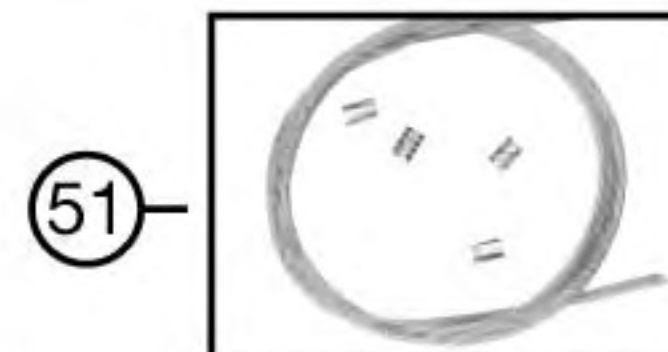

Why TMI Convertible Tops?

We use the same materials as Mercedes-Benz for superior stain and fade resistance. Each top is precision cut to a 30 thousandths tolerance, cross-cut, and RF Heat Sealed to stop shrinking and provide a tight, no flap, weather fit. It all adds up to an exact fit to the frame structure.

Tension Cables

Why TMI Upholstery?

All TMI products feature EXACT and AUTHENTIC colors, which makes matching OEM or TMI colors easy and accurate. Plus, future additions blend in perfectly. Some brands always seem to be a shade different, even when you think you're buying the right color. Mismatched colors look cheap and not very professional...why settle for "close" when you can have EXACT from TMI?

The "piping" (also known as Welt) on seats and door panels can be made two ways, Extruded or Wrapped. TMI's Extruded method produces piping made of solid color, that is 23 times thicker than vinyl wrapped cord. No matter how much wear you give Extruded Piping, it never shows the cord or white string like wrapped cord will show.

Note: All Basketweave and Squareweave upholstery comes with matching smooth vinyl trim.

Why TMI Panels?

It's worth checking to know if your new Door Panel uses cardboard or masonite wood panels. Cardboard can bend easily, and may deform, especially when dampened by rain or snow. Even cleaning sprays working in around the edges can begin the deterioration process. TMI only uses masonite wood backing. Wood is the ultimate in lasting quality. Extremely rigid, durable, and unaffected by moisture, they last and look new longer!

If you demand an exact match to Factory Embossing ...your only choice is TMI. Our door panels are embossed with a tool made from the ORIGINAL door panel!

Original ribbed vinyl top/bottom, with off-white center panel and off-white piping.

1978	218 2000 001 218 2300 000	
1979	219 2000 001 219 2300 000	

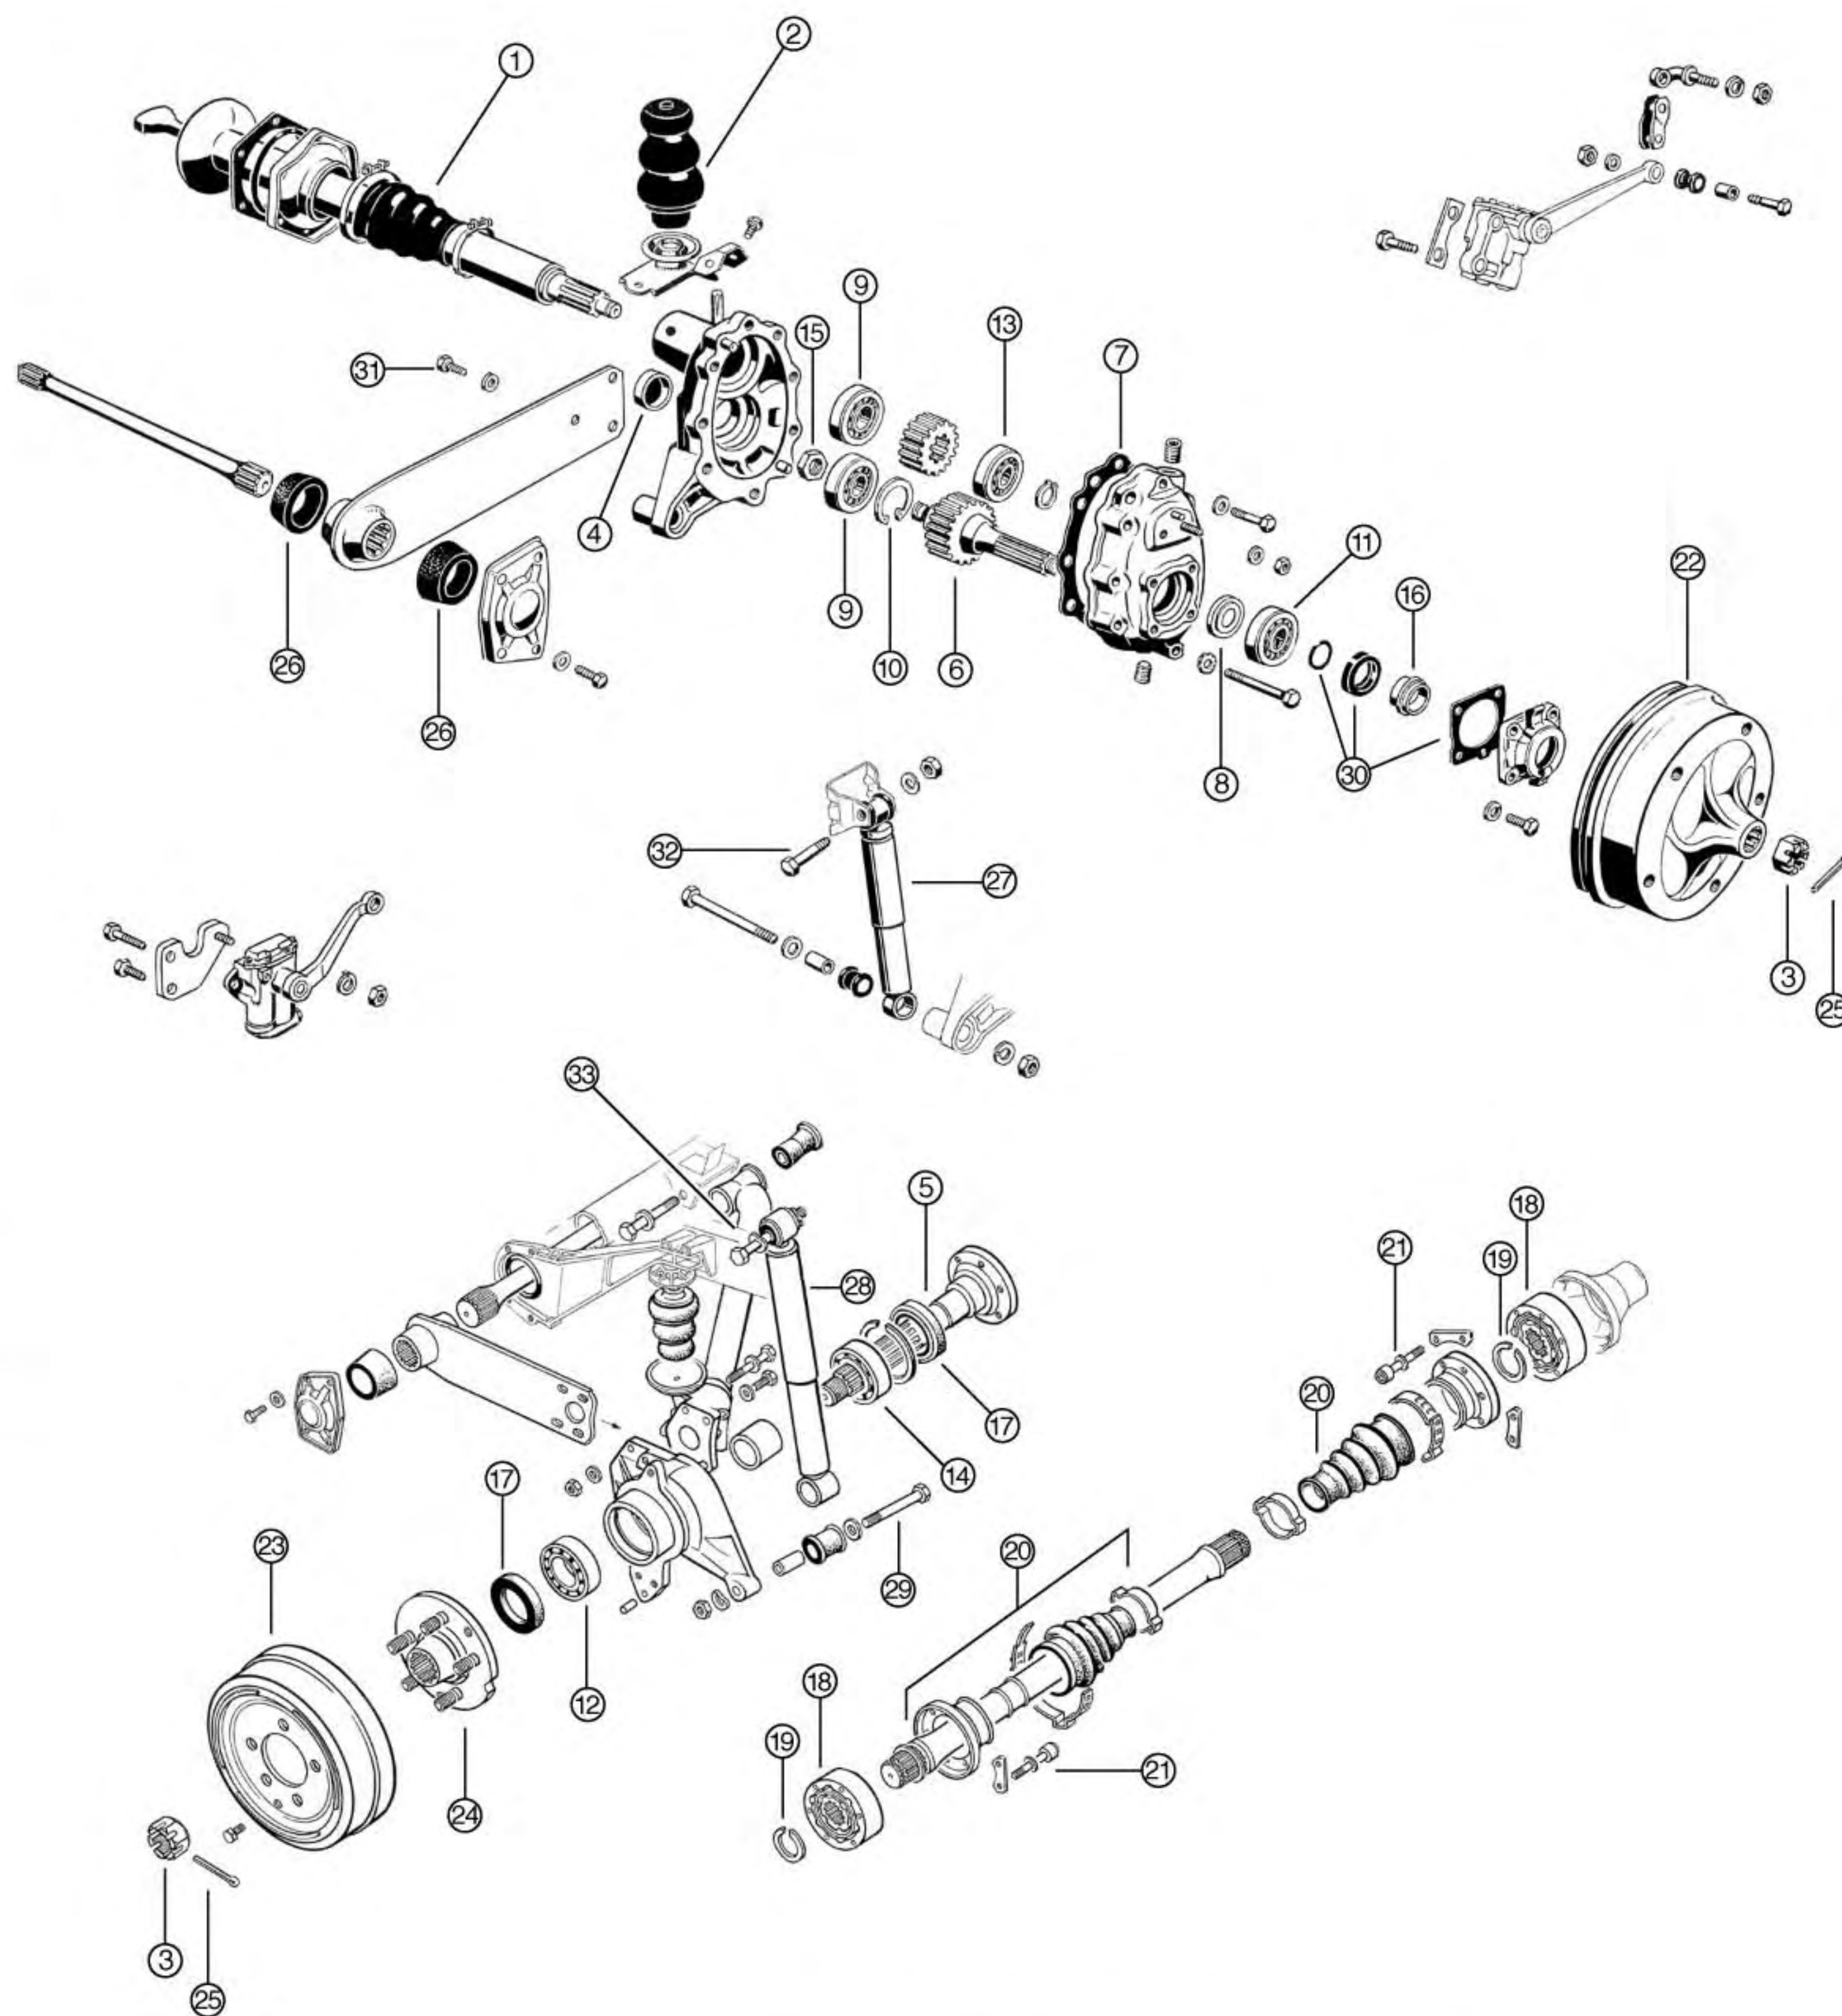

Note:

Beginning in 1965 the VW numbering system changed. Two digits were added in the front, which specified the model type. The 3rd digit indicates the model year. For instance, if the chassis number for a 1965 deluxe would be 245 105 652, then for the 1965 crew cab would be 265 205 652.

The second digit "4" indicates that you have a deluxe model, and the third digit "5" represents 1965 as the year model. On August 1, 1955 VW started production for the following year's model, called the Model Year. For instance, a Bus with chassis number 216 166 339 is a 1965 model built sometime in November 1966.

TYPE 2

8

Top Cover Removal and Installation

Removal

1 - Remove the countersunk screws and washers.

2 - Open the sliding roof and remove the two bolts that attach the top cover bow to the locking bow.

3 - Swing back the top cover so that the top cover and side strap retainer is visible.

4 - Remove the countersunk screws of the retainer, and take off retainer and top cover.

5 - Remove the hollow rivets from the top cover bow and take off the bow.

Installation

Reverse the above procedure and observe the following points:

1 - Apply some vaseline to the side guide rail and top cover bow bolts.

2 - Close the sliding roof and check tension of top cover. If necessary, correct at the top cover retainer.

Note:

Take care not to soil the top cover.

Lock and Stretcher Mechanism Removal and Installation

Removal

1 - Open the sliding roof. Remove the countersunk screws of the front guide bow and the two bolts that attach the top cover bow to the locking bow.

2 - Swing back top cover.

3 - Remove the screws that attach the side straps to the locking bow guide plates.

4 - Remove the locking bow guide plates.

5 - Press the escutcheon plate against the locking bow and drive out the pin.

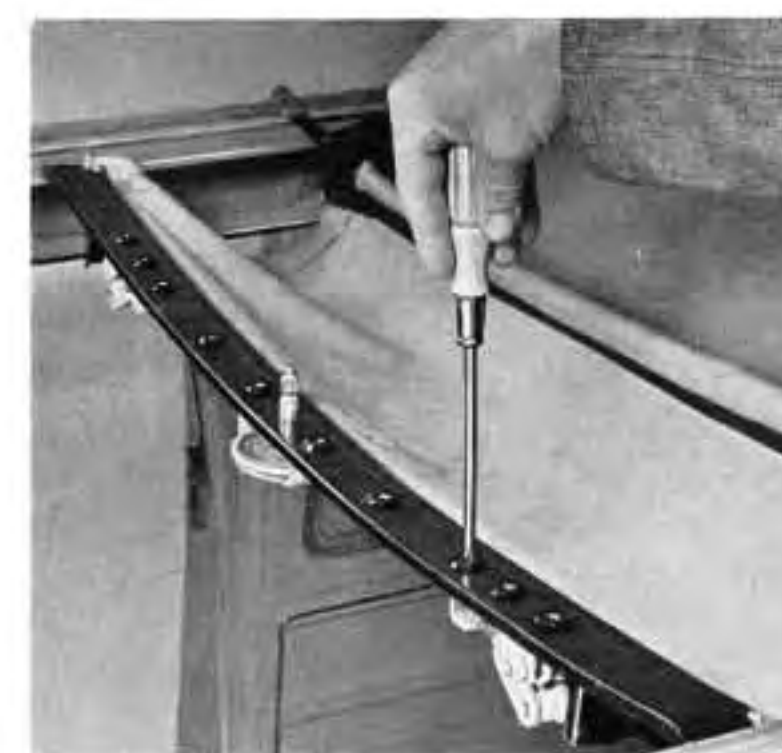

6 - Take off handle, escutcheon plate, spring and rubber insert.

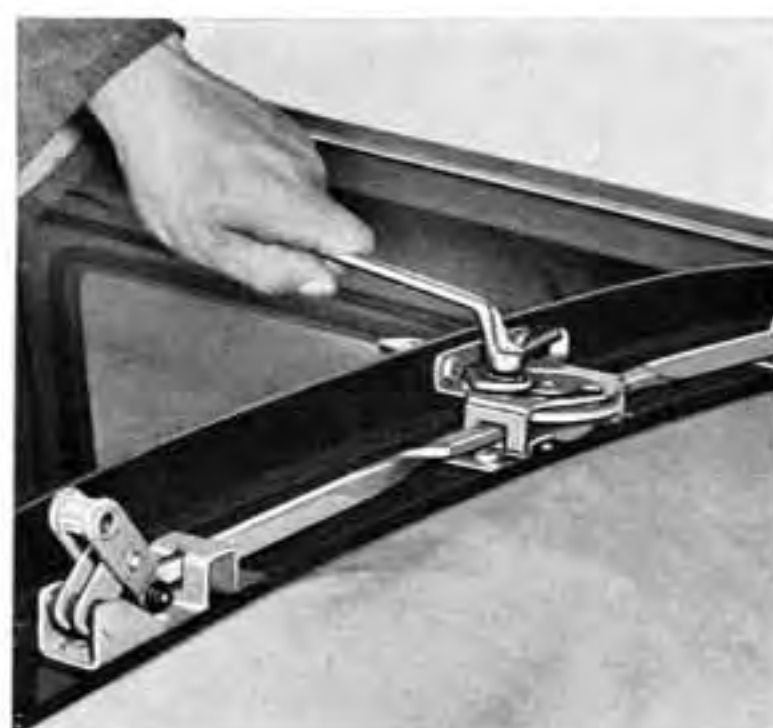

7 - Remove the cylindrical-head screws at the lock.

Turn the locking bow by 180 degrees and remove the Phillips head screws holding the

lock and stretcher mechanisms. Take off lock and stretcher mechanisms.

Installation

Reverse the preceding operations and observe the following points:

- 1 - Grease all moving parts of the lock and stretcher mechanisms with vaseline.
- 2 - Check lock for proper closing and opening. If necessary, correct at the screws of the locking bow guide plates.

Side Guide Rail Removal and Installation

Removal

- 1 - Remove rear guide rail screws and take off the rear rails.
- 2 - Push the guide bows and the locking bow towards the rear so that the front side rails are free.
- 3 - Remove front guide rail screws and take off the front rails.

Installation

Reverse the removal procedure and observe the following points:

- 1 - Check the guide rail beads for damage, replace as found necessary.
- 2 - Close the sliding roof, check and, if necessary, correct tension of top cover.
- 3 - Lightly coat the guide rails with vaseline.

Headlining Removal and Installation

Removal

- 1 - Remove the screws that attach the top cover and side straps and swing back top cover and side straps.
- 2 - Remove the three Phillips head screws from each locking bow guide plate and take off the guide pieces.

- 3 - Remove the two hex. screws from each locking bow guide plate and swing back the locking bow guide plates.

- 4 - Remove handle and escutcheon plate, spring, and rubber insert.

- 5 - From inside the vehicle, remove the four countersunk screws that attach the headlining to the guide bows of the sliding roof.
- 6 - Withdraw headlining from the lock operating shaft and turn the locking bow by 180 degrees.
- 7 - Remove the two hollow rivets, one at each end of the locking bow.
- 8 - Bend up the headlining retaining strip and withdraw the headlining from the locking bow.

- 9 - Remove the rivets that attach the struts to the flat bows and pull out the flat bows.

Why TMI Headliners?

It's the stitching that's a key. When it rots and stretches, down comes the headliner. TMI uses anti-microbial treated thread which resist mildew and rot, but more importantly... our Headliners remain tight and stay up. We manufacture both cloth and vinyl headliners.

Why TMI Carpet?

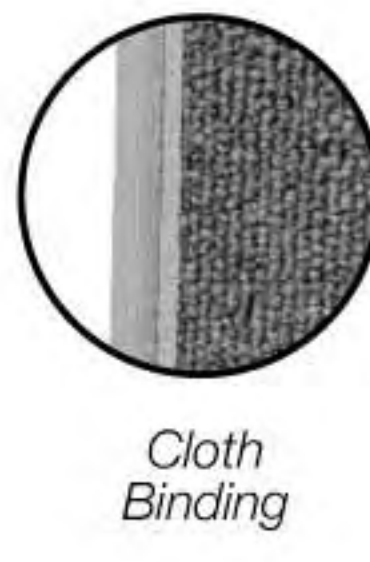

Thick 1/4" pile height and 250 count weave with FLW Backing make TMI carpet better. The 250 count weave gives the carpet superior wear and stain resistance. Our exclusive FLW Backing is the ultimate way to hold the weave in place and resist fraying or separation. Easy to install, cut-outs are provided.

Where is the Chassis Number? : Type 3

Type 3:

Stamped on frame tunnel under the rear seat.
Metal tag riveted to front apron under hood.

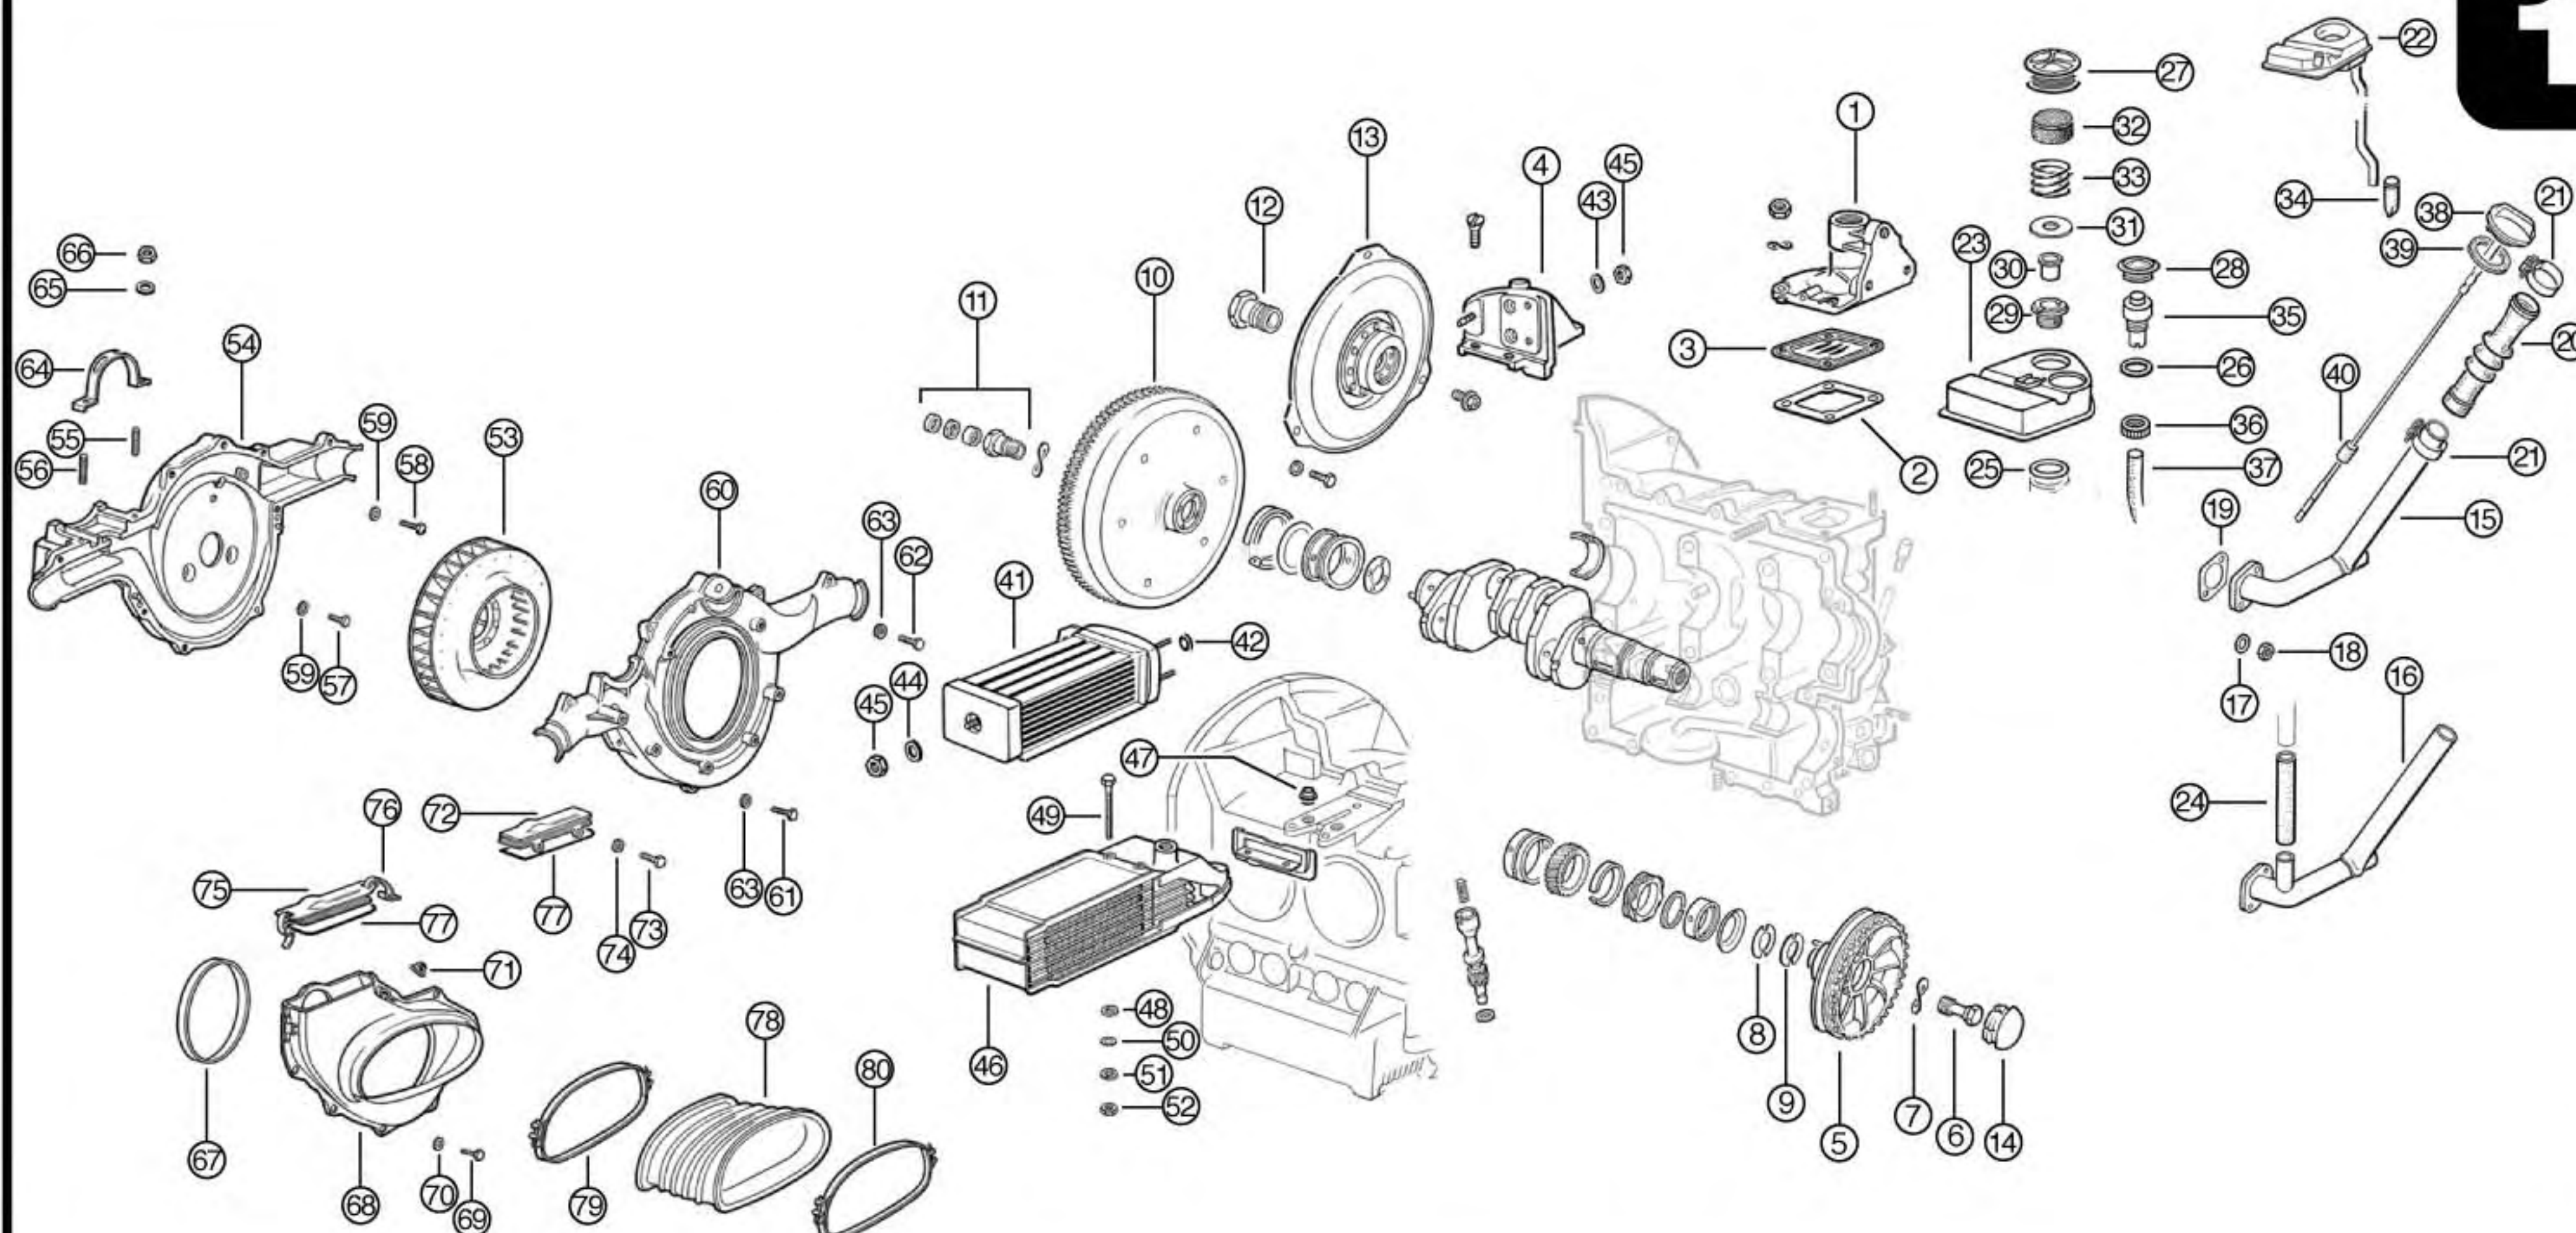

Starting Serial Number Chart:

The following list gives a survey of the Chassis numbers for each year and the introduction of substantial changes.

Year:	Chassis #	Changes
April 1961	000 001	Notchback and Type 3 Ghia introduced
Dec. 1961	011 041	
Aug. 1962	066 740	Squareback introduced
Dec. 1962	138 774	
Aug. 1963	221 975	First year S model
Dec. 1963	321 076	
July 1964	483 592	First year N model and last dual horn
Aug. 1964	315 000 001	First year push and pull switch
Dec. 1964	315 105 296	
July 1965	315 220 883	
Aug. 1965	316 000 001	First year disc brakes
Dec. 1965	316 140 226	
July 1966	316 500 000	
Aug. 1966	317 000 001	First year 12V. and narrow body trim
Dec. 1966	317 134 254	
July 1967	317 500 000	
Aug. 1967	318 000 001	First year fuel injection
Dec. 1967	318 103 144	
July 1968	318 500 000	
Aug. 1968	319 000 001	First year automatic and first IRS
Dec. 1968	319 108 899	
July 1969	319 500 000	
Aug. 1969	310 2000 001	New body style
Dec. 1969	310 2111 451	
July 1970	310 2500 000	
Aug. 1970	311 2000 001	Two speed fresh air fan
Dec. 1970	311 2108 457	
July 1971	311 2500 000	
Aug. 1971	312 2000 001	Black face gages and wiper switch mounted on column
Aug. 1972	313 2000 001	Four spoke steering wheel and three leg seats
1973		End of production for all Type 3 models

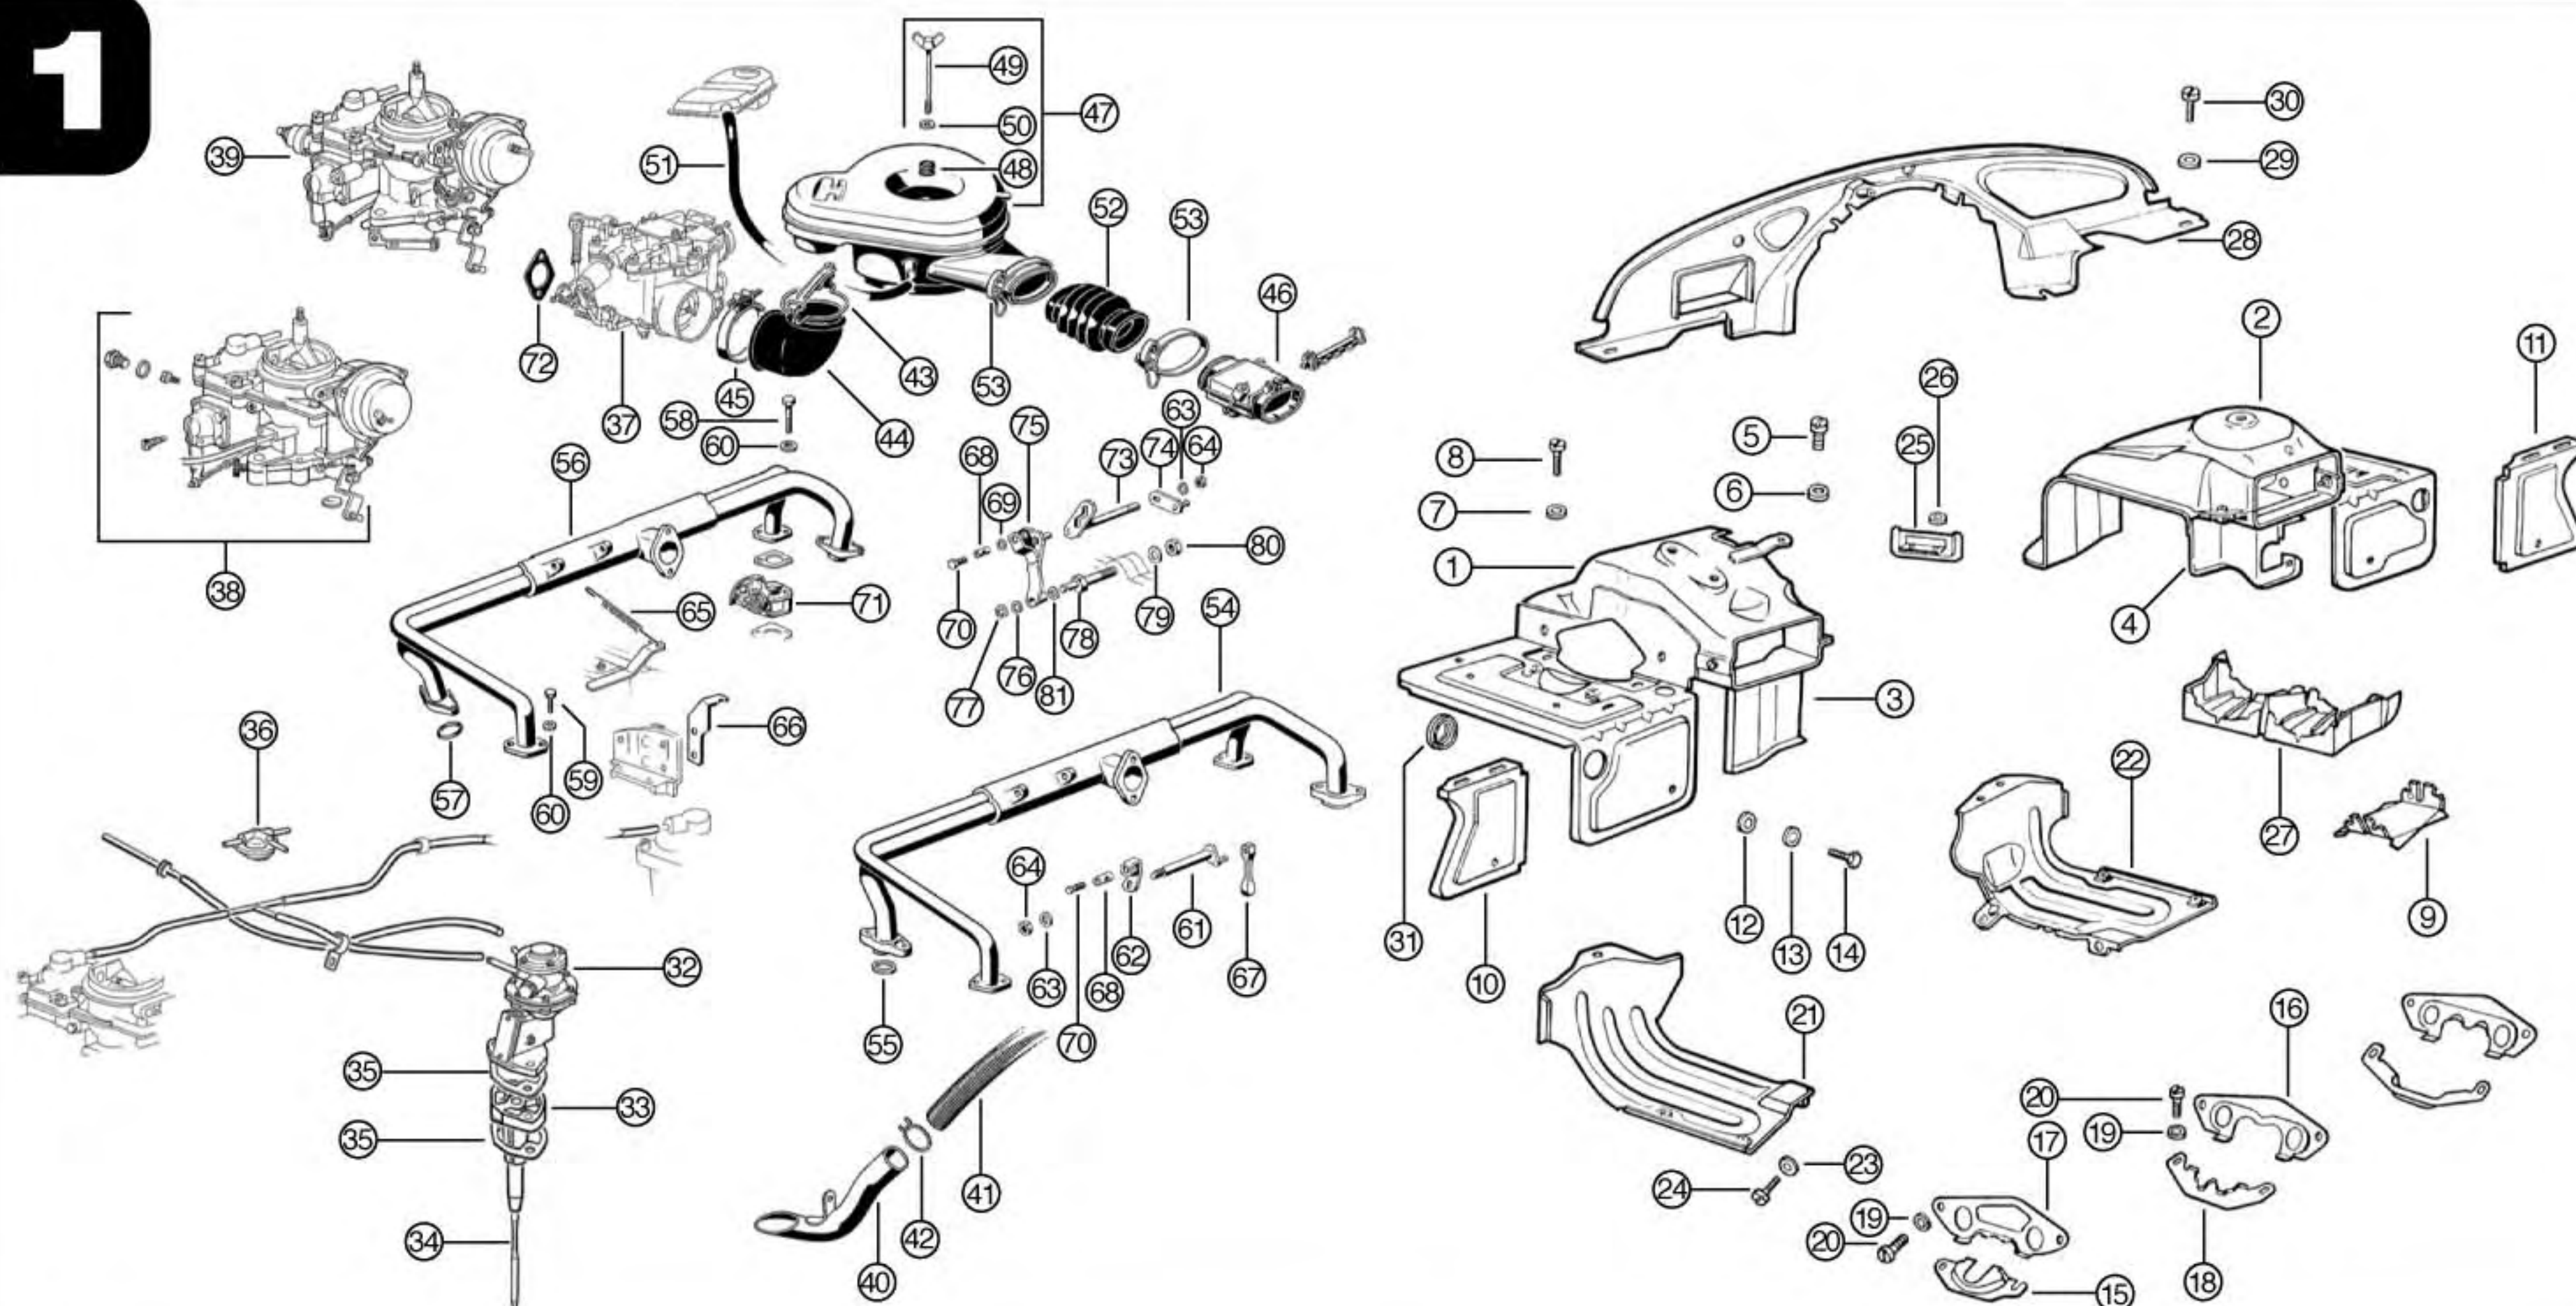

Please Note:

in 1965, VW implemented a new chassis number system. The first digit designates the vehicle type. All Type 3 models are designated with the number "3". The second digit designates the vehicle model, and the third digit designates the vehicle model year. For example, say you have a Type 3 with chassis number 366 000 001. The second digit "4" indicates that you have a squareback, and the third digit "6" represents 1966 as the year model. We say year model because VW shut down production during the middle part of the year (usually in August), then started production for the following year model. With this in mind, it is possible to own a vehicle that was produced in 1966 and be considered a 1967 year model.

HOW TO:

Change Floor Pan Halfs

Floor Plate Replacement

Before a floor plate is replaced, the frame should be checked accurately in the checking and repair jig VW 1141 (see page R-6). If it is found that the frame head also has to be replaced, a new frame must be fitted.

If the left-hand floor plate has to be replaced, the brake pipe on the tunnel should be removed and the retaining clips for the pipe torn off.

Cutting Out Floor Plate

The floor plate can be separated from the frame easily and cleanly, utilizing a compressed air hammer as described in the Workshop Equipment Manual, page A-38.

A chisel for cutting out sheet metal parts with even cut is required for the following operations.

All the following work carried out with the compressed air hammer can also be done with a parting disc or a torch.

- 1 - Remove insulating material and as much sealing compound as possible.
- 2 - Cut kick plate in the center over frame tunnel with a parting disc.
- 3 - Chisel kick plate off tunnel.

Important

When carrying out this operation, the frame tunnel must not be damaged. In addition, ensure that the end of the guide tube (arrow) for the foot level heating control cable is not loosened or damaged.

- 4 - Cut the floor plate with a hacksaw at the side in line with the rear cross member.

- 5 - Cut front of floor plate in line with end of frame head upper part, using a parting disc.

Important

The reinforcement plate on the floor plate must not be cut through.

- 6 - Chisel floor plate away from reinforcement plate on each side of moulded edge.

- 7 - Using a compressed air hammer, separate floor plate along reinforcement plate and welding flange of front partition.

- 8 - Using a compressed air hammer, separate floor plate along welding flange of rear cross member.

HOW TO:

Change Floor Pan Halfs

- 9 - Using a compressed air hammer, separate floor plate along frame tunnel welding flange.

- 10 - Chisel kick plate welding flange off frame tunnel.

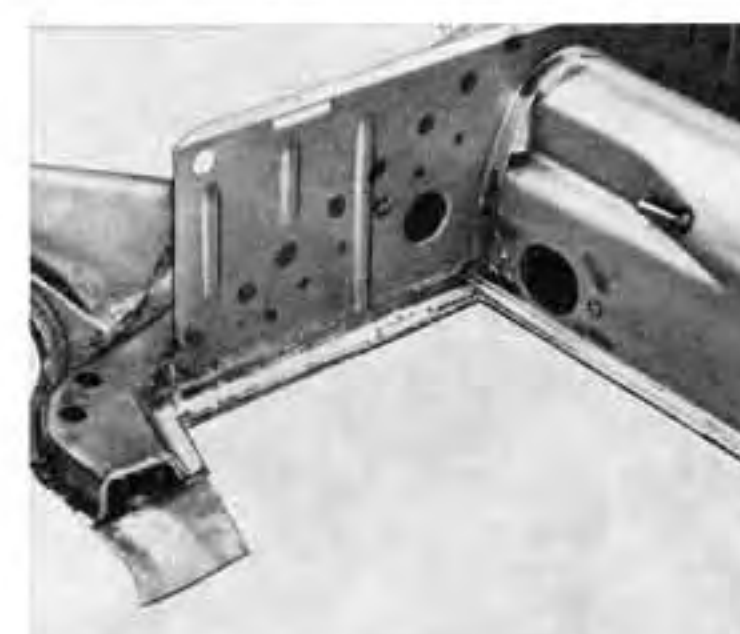

Important

The end of the guide tube (arrow) for foot level heating control cable must not be loosened or damaged.

- 11 - Pull floor plate remnants off reinforcement plate with pincers.

- 12 - Detach frame head upper part welding flange (arrow) from reinforcement plate with a chisel and bend up flange slightly.

- 13 - Grind all contact surfaces and welding flanges clean with a portable grinder.

- 14 - Turn frame over.

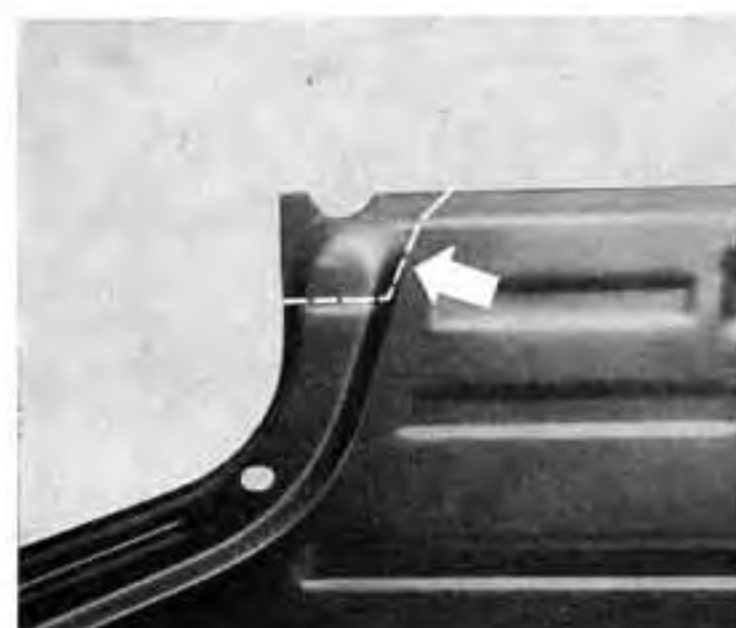

- 15 - Pull floor plate remnants off frame head lower part with pincers.

- 16 - With a portable grinder, grind floor plate contact surfaces flat. Grind all contact surfaces and welding flanges clean.

Floor Plate Installation

- 1 - Degrease new floor plate.
2 - Cut floor plate to shape.
3 - Fit floor plate into frame and secure with clamps.

Important

The front edge of the floor plate (arrow) must be pushed between the reinforcement plate and the welding flange of the frame head upper part.

4 - Place frame and floor plate on the checking and repair jig VW 1141 and clamp in position.

5 - Turn jig 180° and spot weld floor plate to frame head, frame tunnel and rear cross member every 4" (100 mm).

6 - Straighten floor plate welding flanges between spot welds.

7 - Spot weld floor plate to frame head, frame tunnel and rear cross member every .8" (20 mm).

8 - Tack weld floor plate to frame head at the sides with a torch.

9 - Tack weld floor plate to rear cross member with a torch.

10 - Turn jig 180° and take out frame.

11 - Finish spot welding floor plate.

12 - Straighten frame head upper part welding flange and gas weld it to floor plate.

Fully weld the transverse joint.

13 - Gas weld floor plate to rear cross member.

14 - Reduce the height of the kick plate slightly. This is necessary as the replacement floor plate fits over the welding flange on the frame tunnel, whereas the production floor plate fits underneath it.

15 - Fit kick plate and tack weld in position (arrows).

16 - Straighten kick plate welding flange and spot weld to floor plate every 1" (25 mm).

17 - Gas weld kick plate at the center over the frame tunnel.

18 - Straighten frame tunnel welding flange and gas weld with .4" (10 mm) runs every 1.2" (30 mm).

19 - Spot weld kick plate support.

If the old support is not usable, make a new one out of .06" (1.5 mm) thick sheet metal, according to sketch.

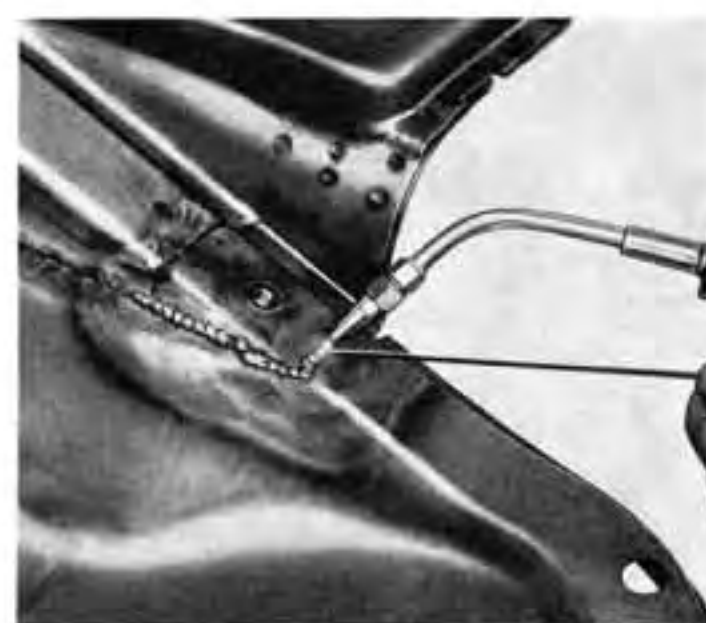

The position of the front of the floor plate is controlled by a locating pin.

At the rear, the floor plate must be secured to the test arm for the sub-frame center mounting point.

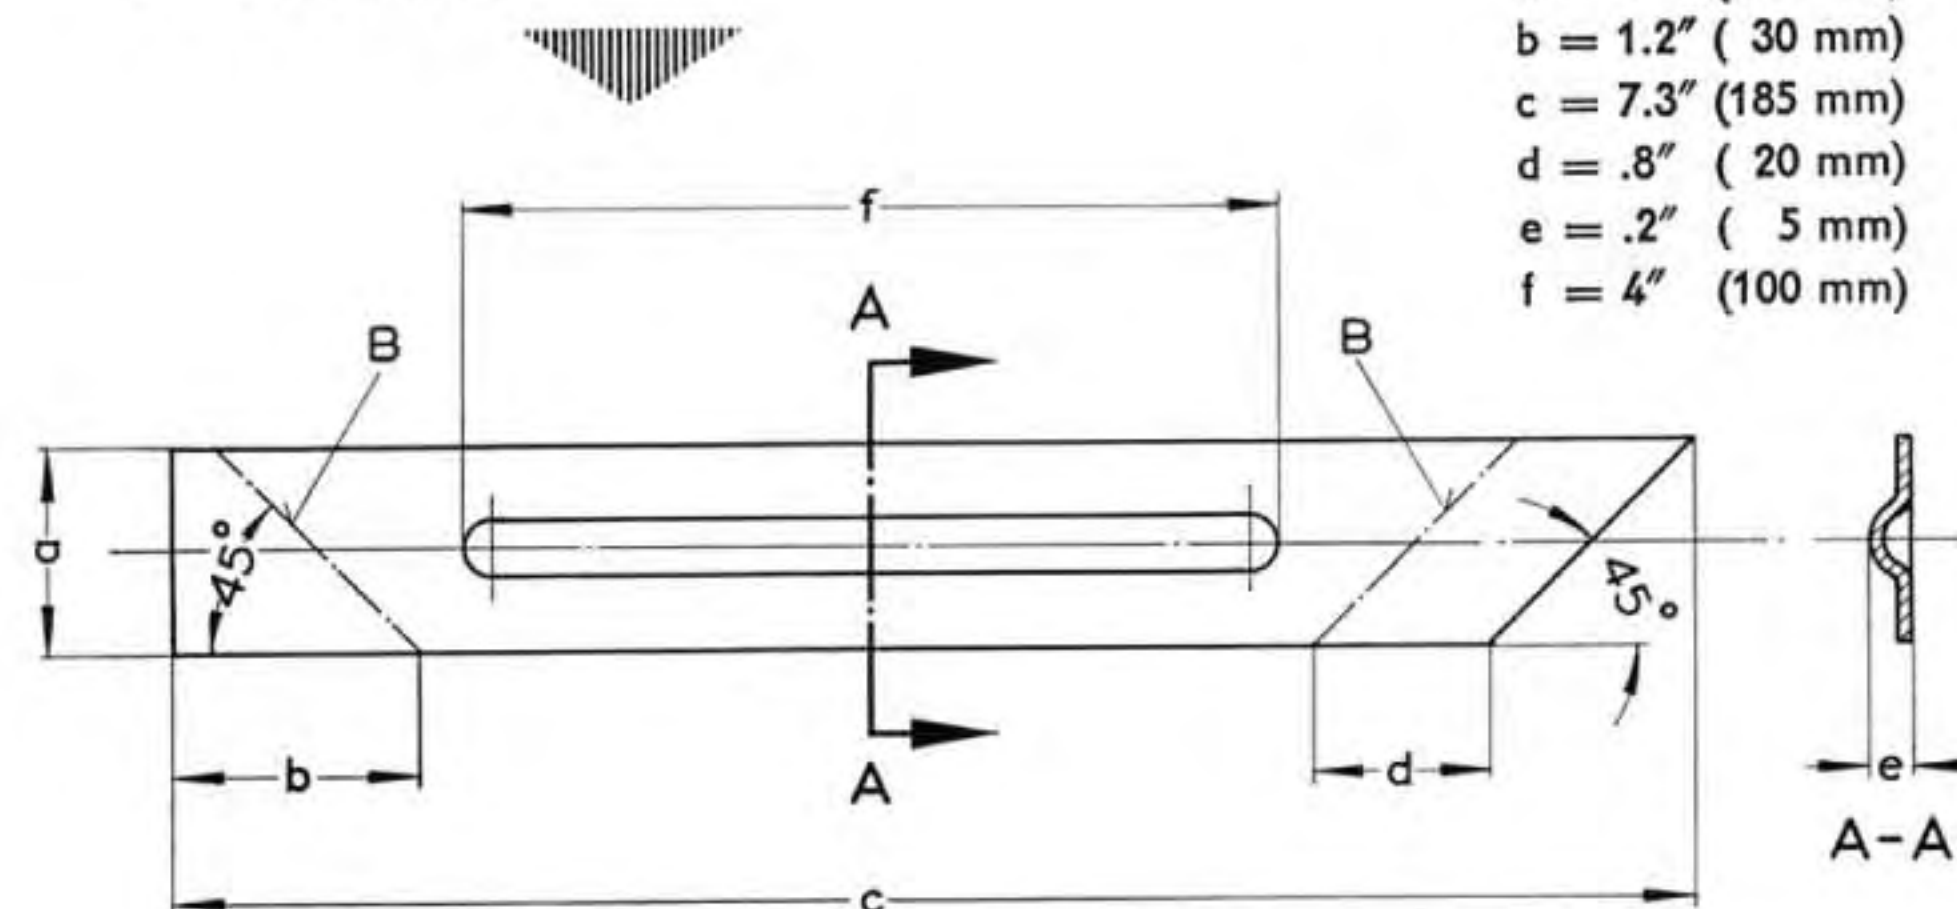

Important

If the left-hand floor plate is being replaced, do not forget the clips for the brake pipe.

The two ends should be bent at 90° in opposite directions.

B = bending line.

20 - Weld the front seat outer runners on with the aid of the locally manufactured jig VW 755.

Dimension a = .4" (10 mm) measured from the front edge of the support plate.

HOW TO:

Change Floor Pan Halfs

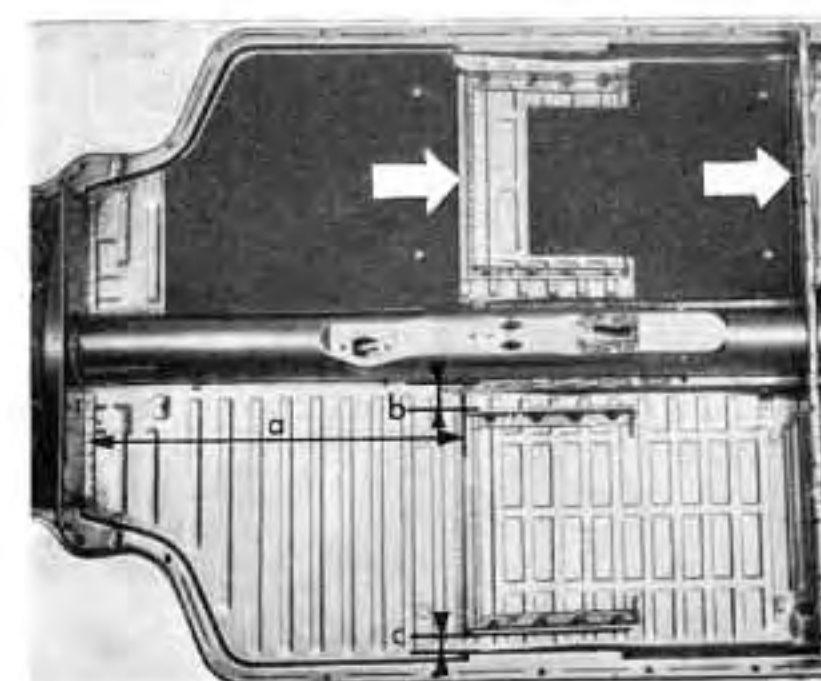

When installing the runners on a frame for a Karmann Ghia, note the following:

Important

The runners must be absolutely parallel.

Four press button supports must also be spot welded in to secure the floor mats.

The floor mats themselves should be used to locate the press button supports. Ensure that the rear edge of the front mat is against the cross bar between the seat runners and that of the rear mat is against the kick plate (arrows).

Fitting dimensions: a = 28.3" (720 mm)
b = 2.4" (60 mm)
c = 1.6" (40 mm)

21 - Turn frame over.

22 - Electrically weld reinforcement plate to floor plate.

23 - Weld floor plate to flange of frame head, frame tunnel and rear cross member with .4" (10 mm) runs every 4" (100 mm).

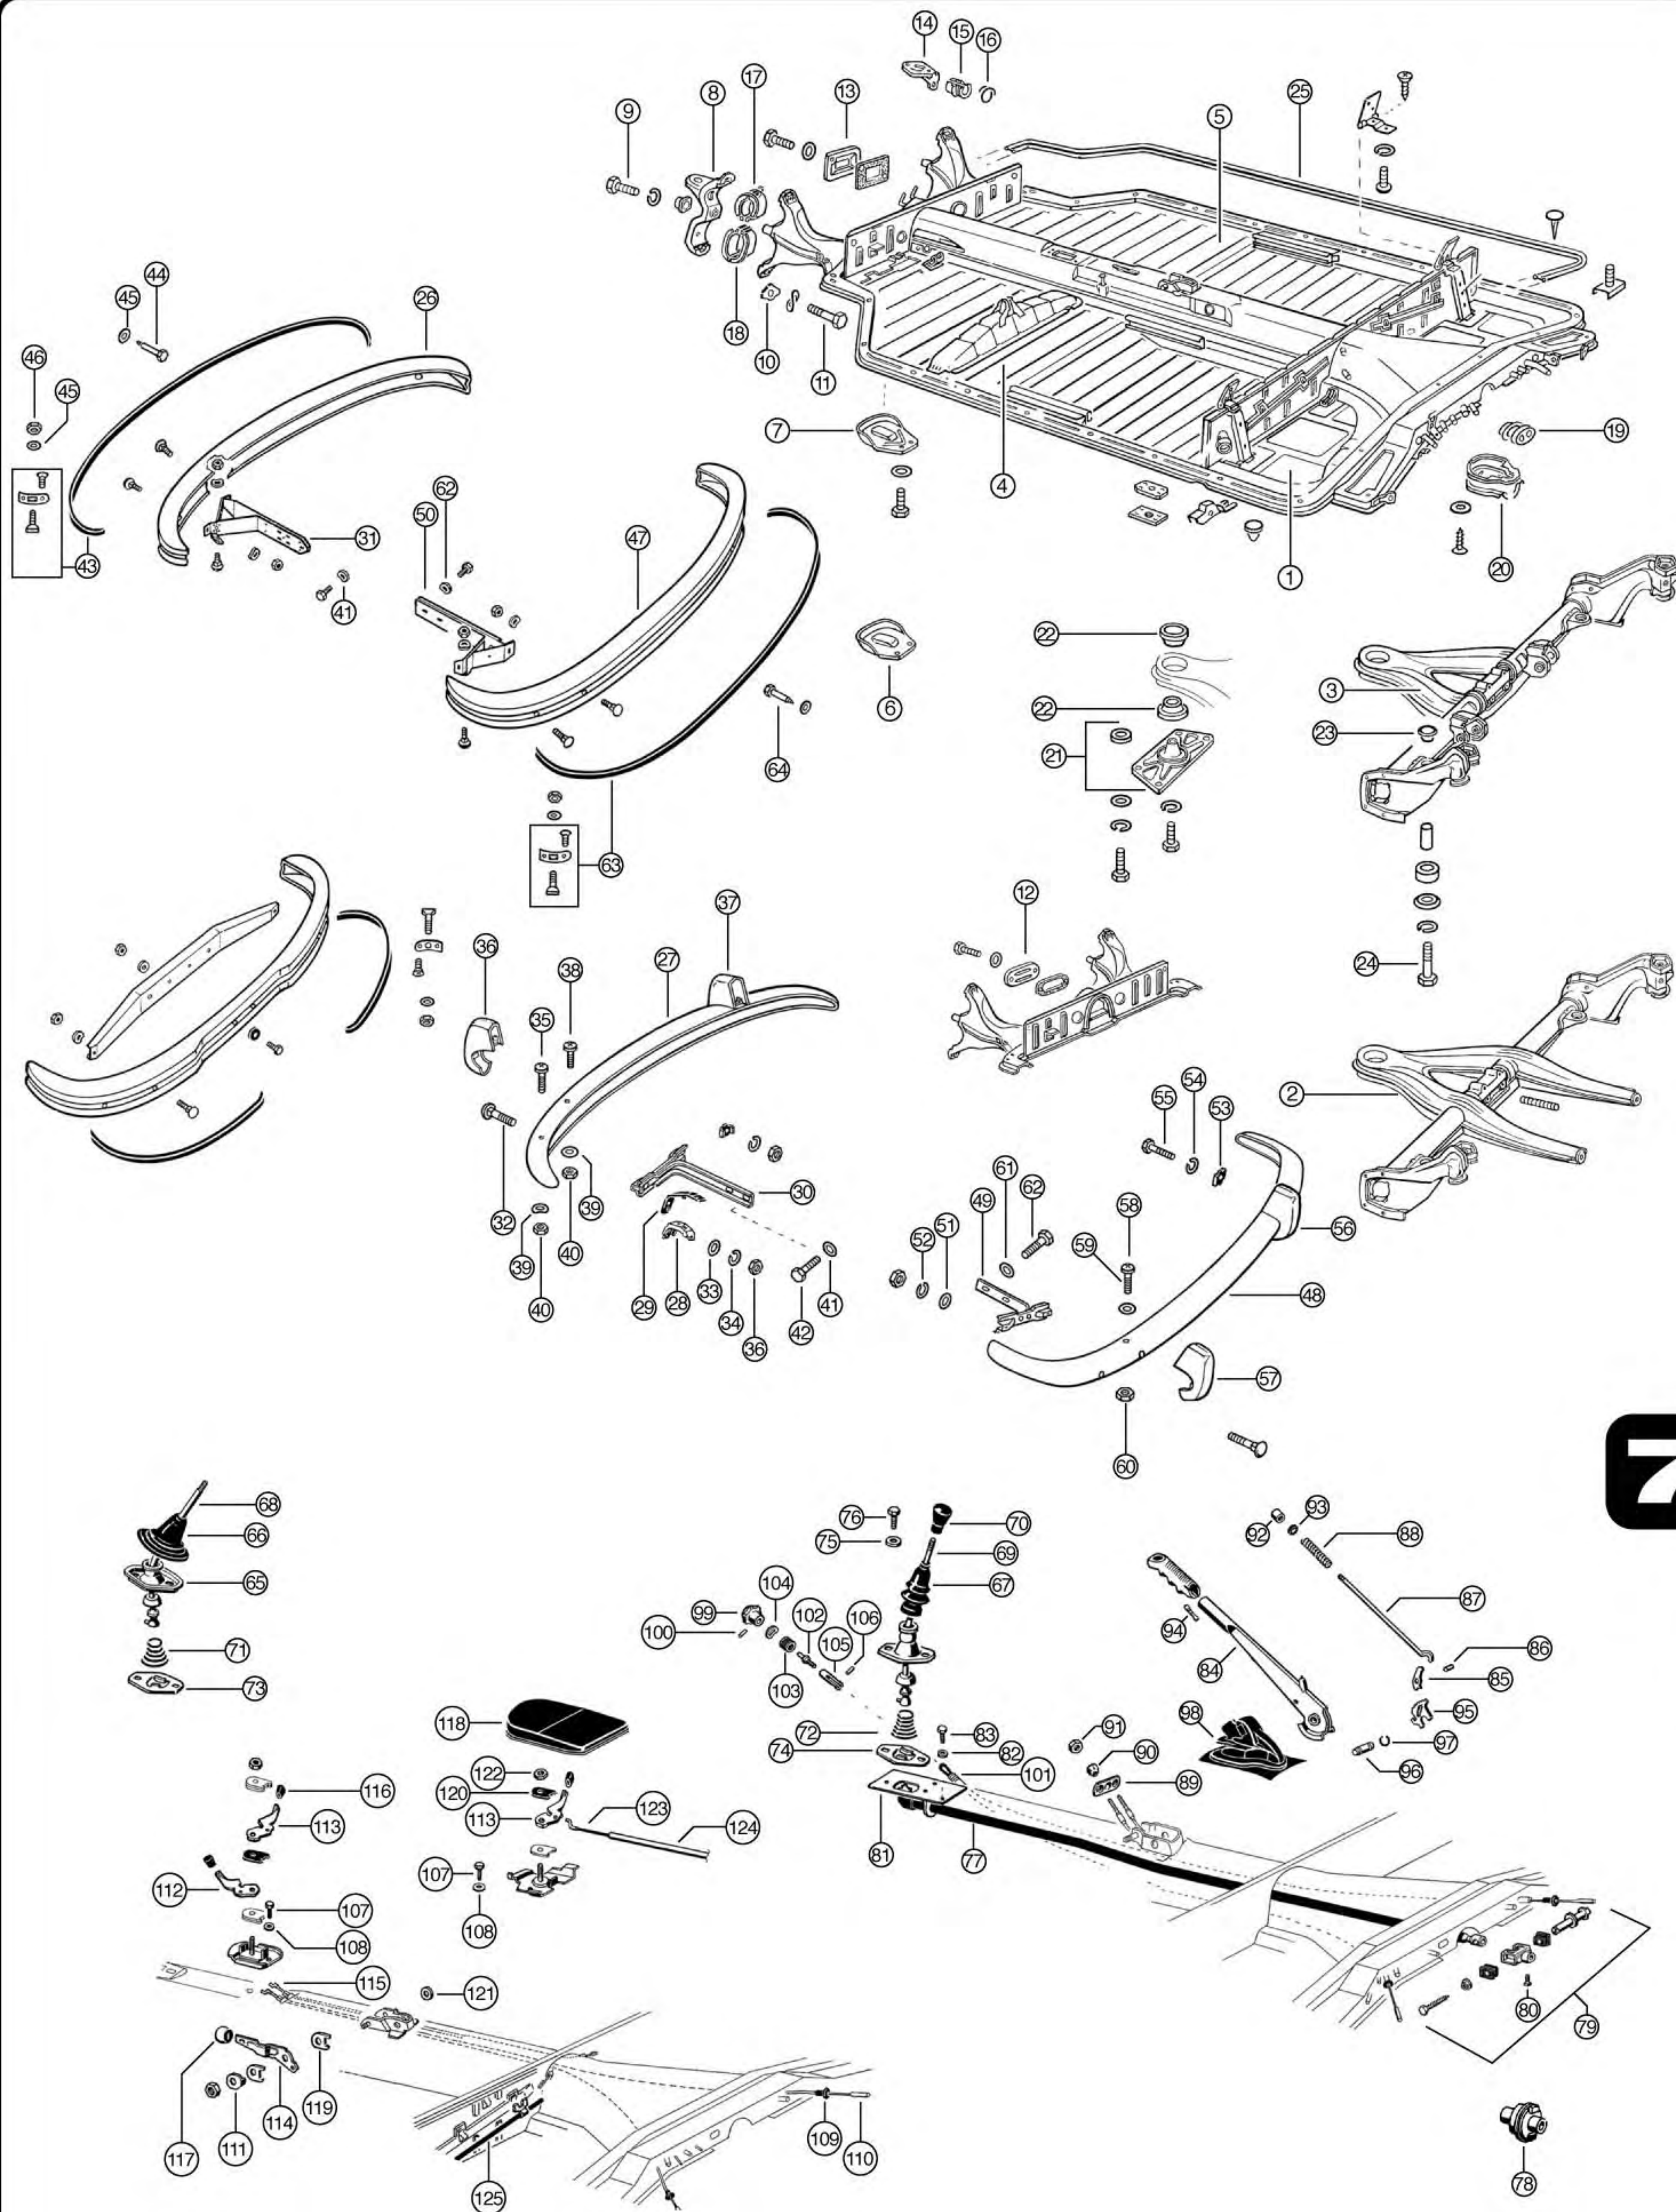

24 - Carefully seal all welded joints with genuine VW sealing compound D 17.

25 - Turn frame over and seal this side.

26 - Paint floor plate.

27 - Install insulation material.

TYPE 3 & 34

NOTCHBACK FENDER BEADING KIT INSTALLATION INSTRUCTION

1. Each Kit has 2 pieces 20" long with a #1 label
Fit #1 to front apron, #1 has a "T" shape profile.
2. Each kit has pieces 45" long with a #2 label
Fit #2 from apron top to front cowl, parallel to the outer edges of the hood, #2 has a round profile same as bug beading.
3. Each kit has 2 pieces 12" long with a #3 label
Fit the #3 to front fender top as it curves from the door to the front of the hood, #3 has a "T" shaped profile.
4. Each kit has 2 pieces 73" long with a #4 label
Fit #4 to rear fender from the edge of the fender near the tail light, all the way to the bottom of the door jamb, #4 has a 1/4 circle profile.
5. Each kit has 5 pieces 31" long with a #5 label
Fit #5 from apron top to rear cowl, parallel to the outer edges of the rear hood, #5 has a round profile same as bug beading.
6. Each kit has 2 pieces 12" long with a #6 label
Fit #6 to rear apron, #6 has a "T" shape profile.

Check your kit to make sure it is complete before you get started, total 10 pieces in 3 different profiles in lengths as detailed above. You'll have to trim around each fender bolt and pie cut where needed in order for the beading to curve, as on front and rear aprons and rear fender edge at the door jamb.

YOU MUST CUT OFF THE INSIDE EDGE AT POINTS WHERE YOU WISH TO MAKE SHARP TURNS

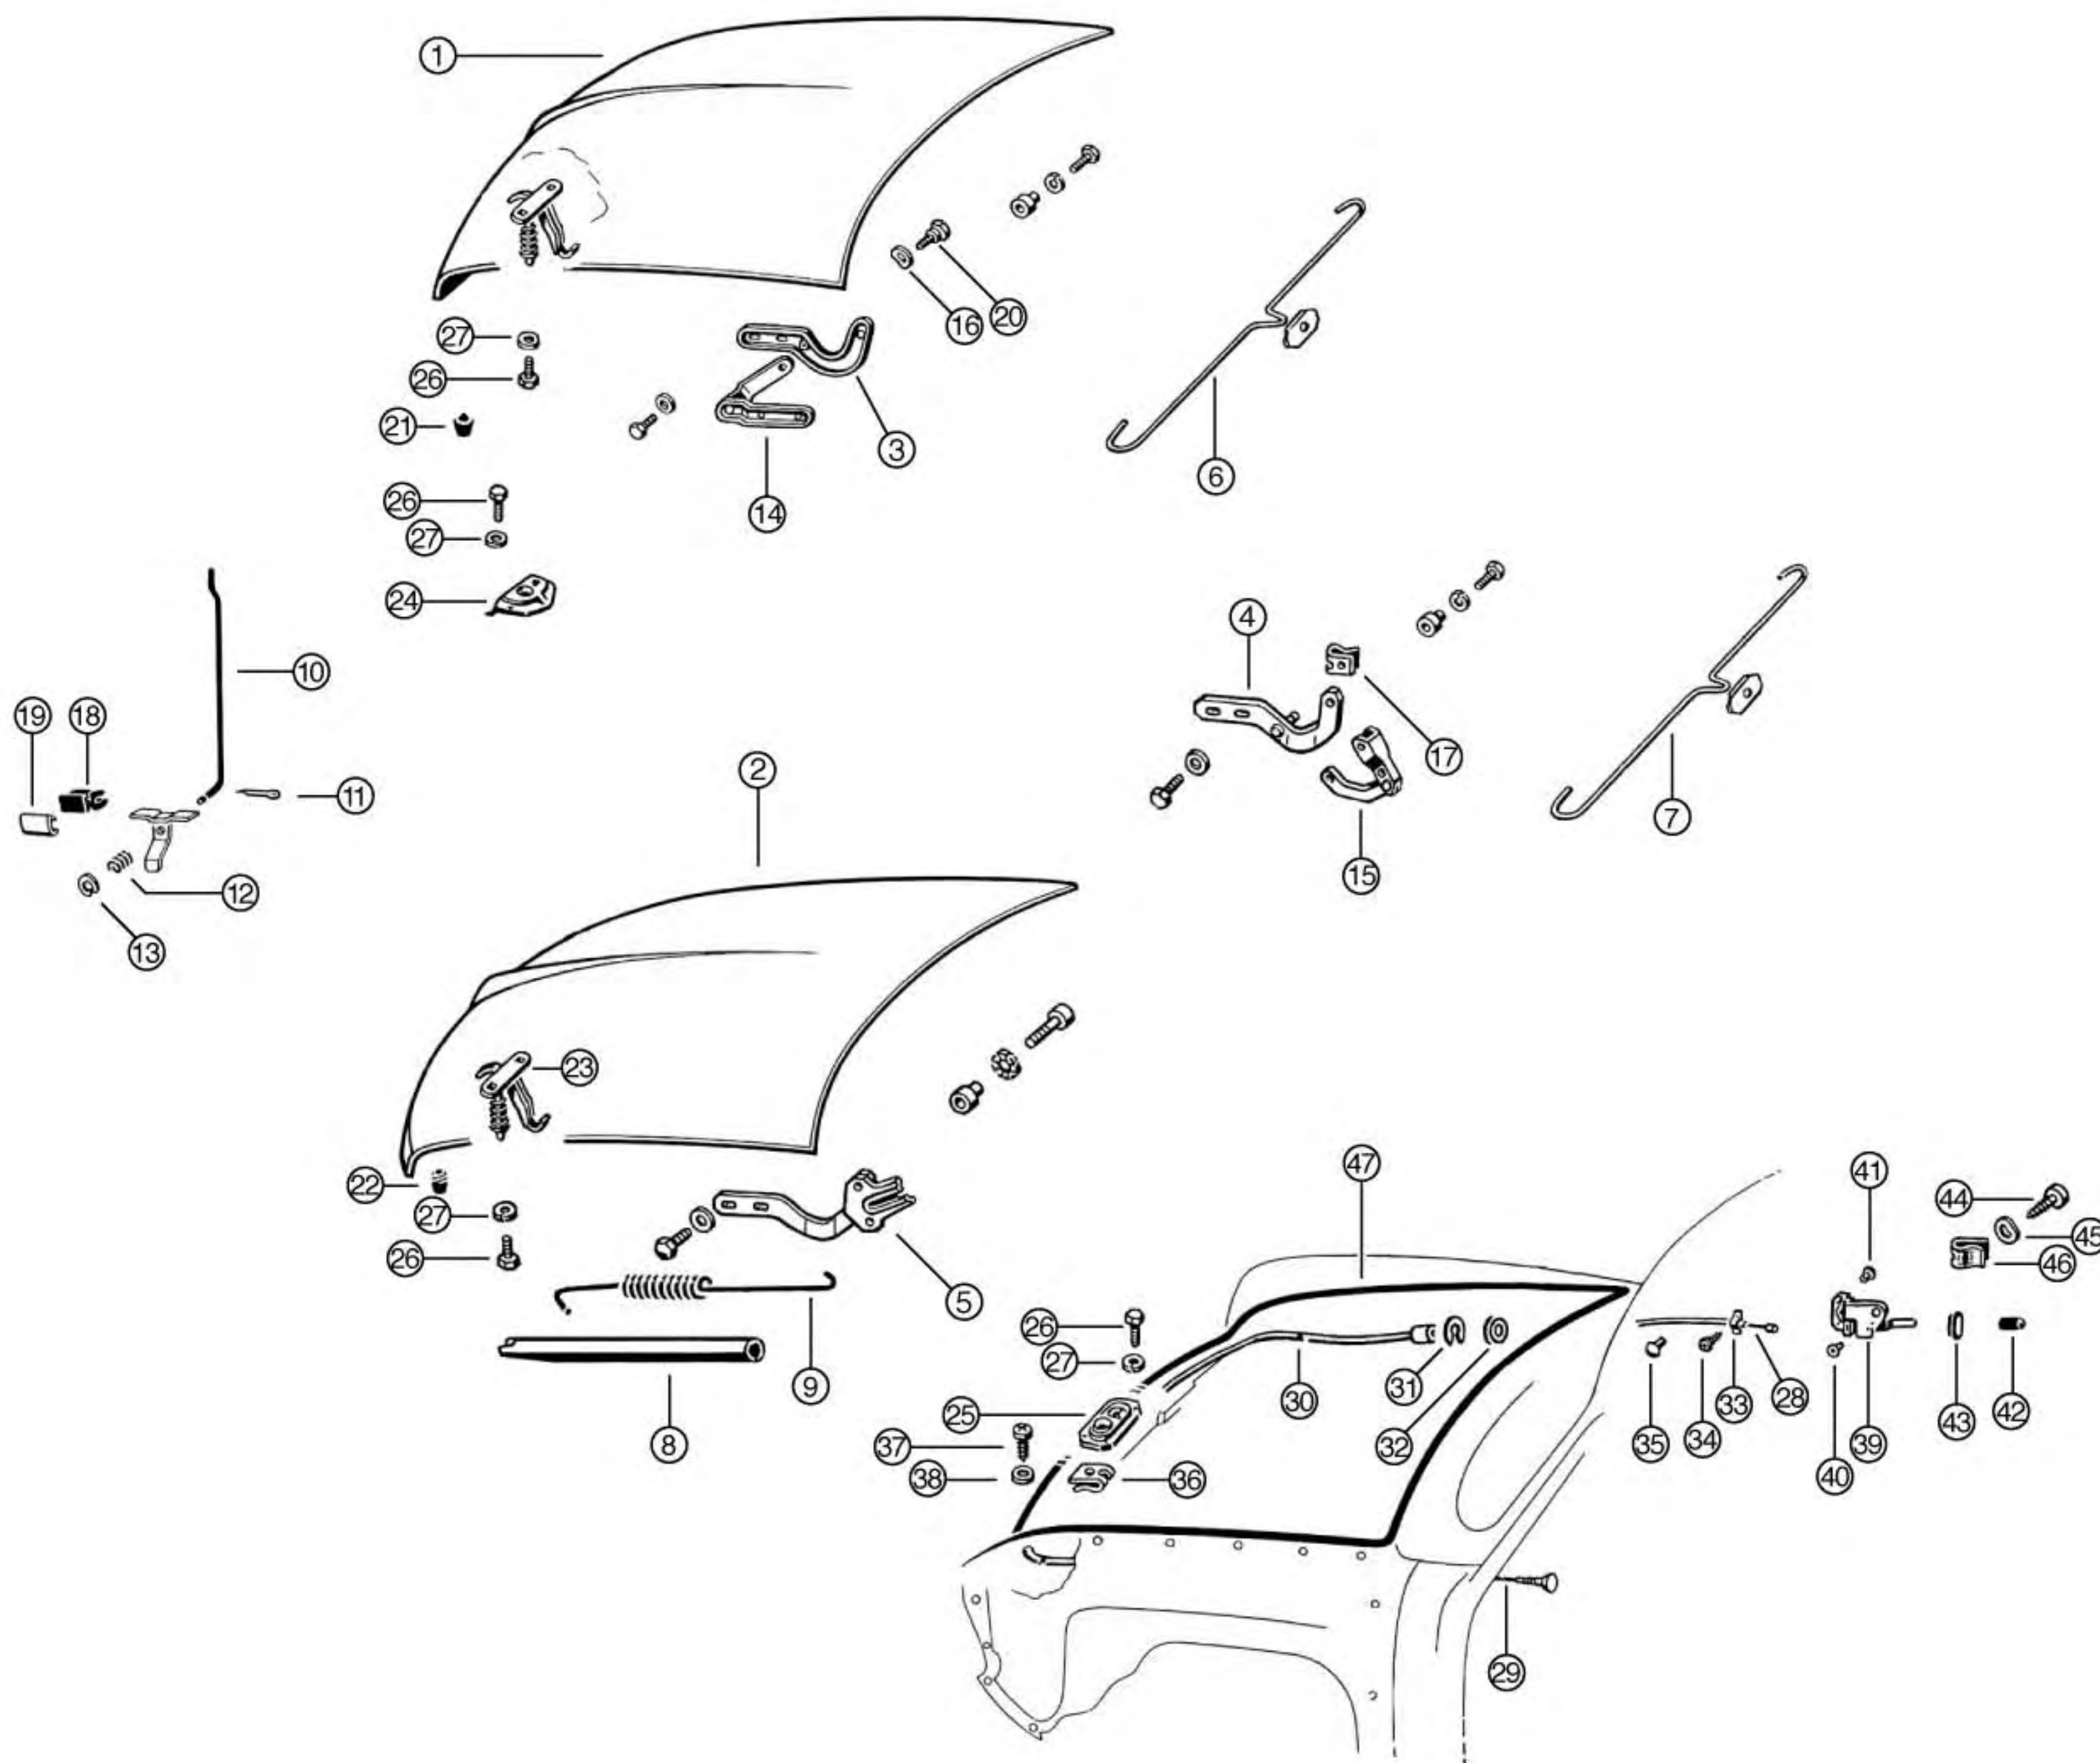

SQUAREBACK & FASTBACK FENDER BEADING KIT INSTALLATION INSTRUCTION

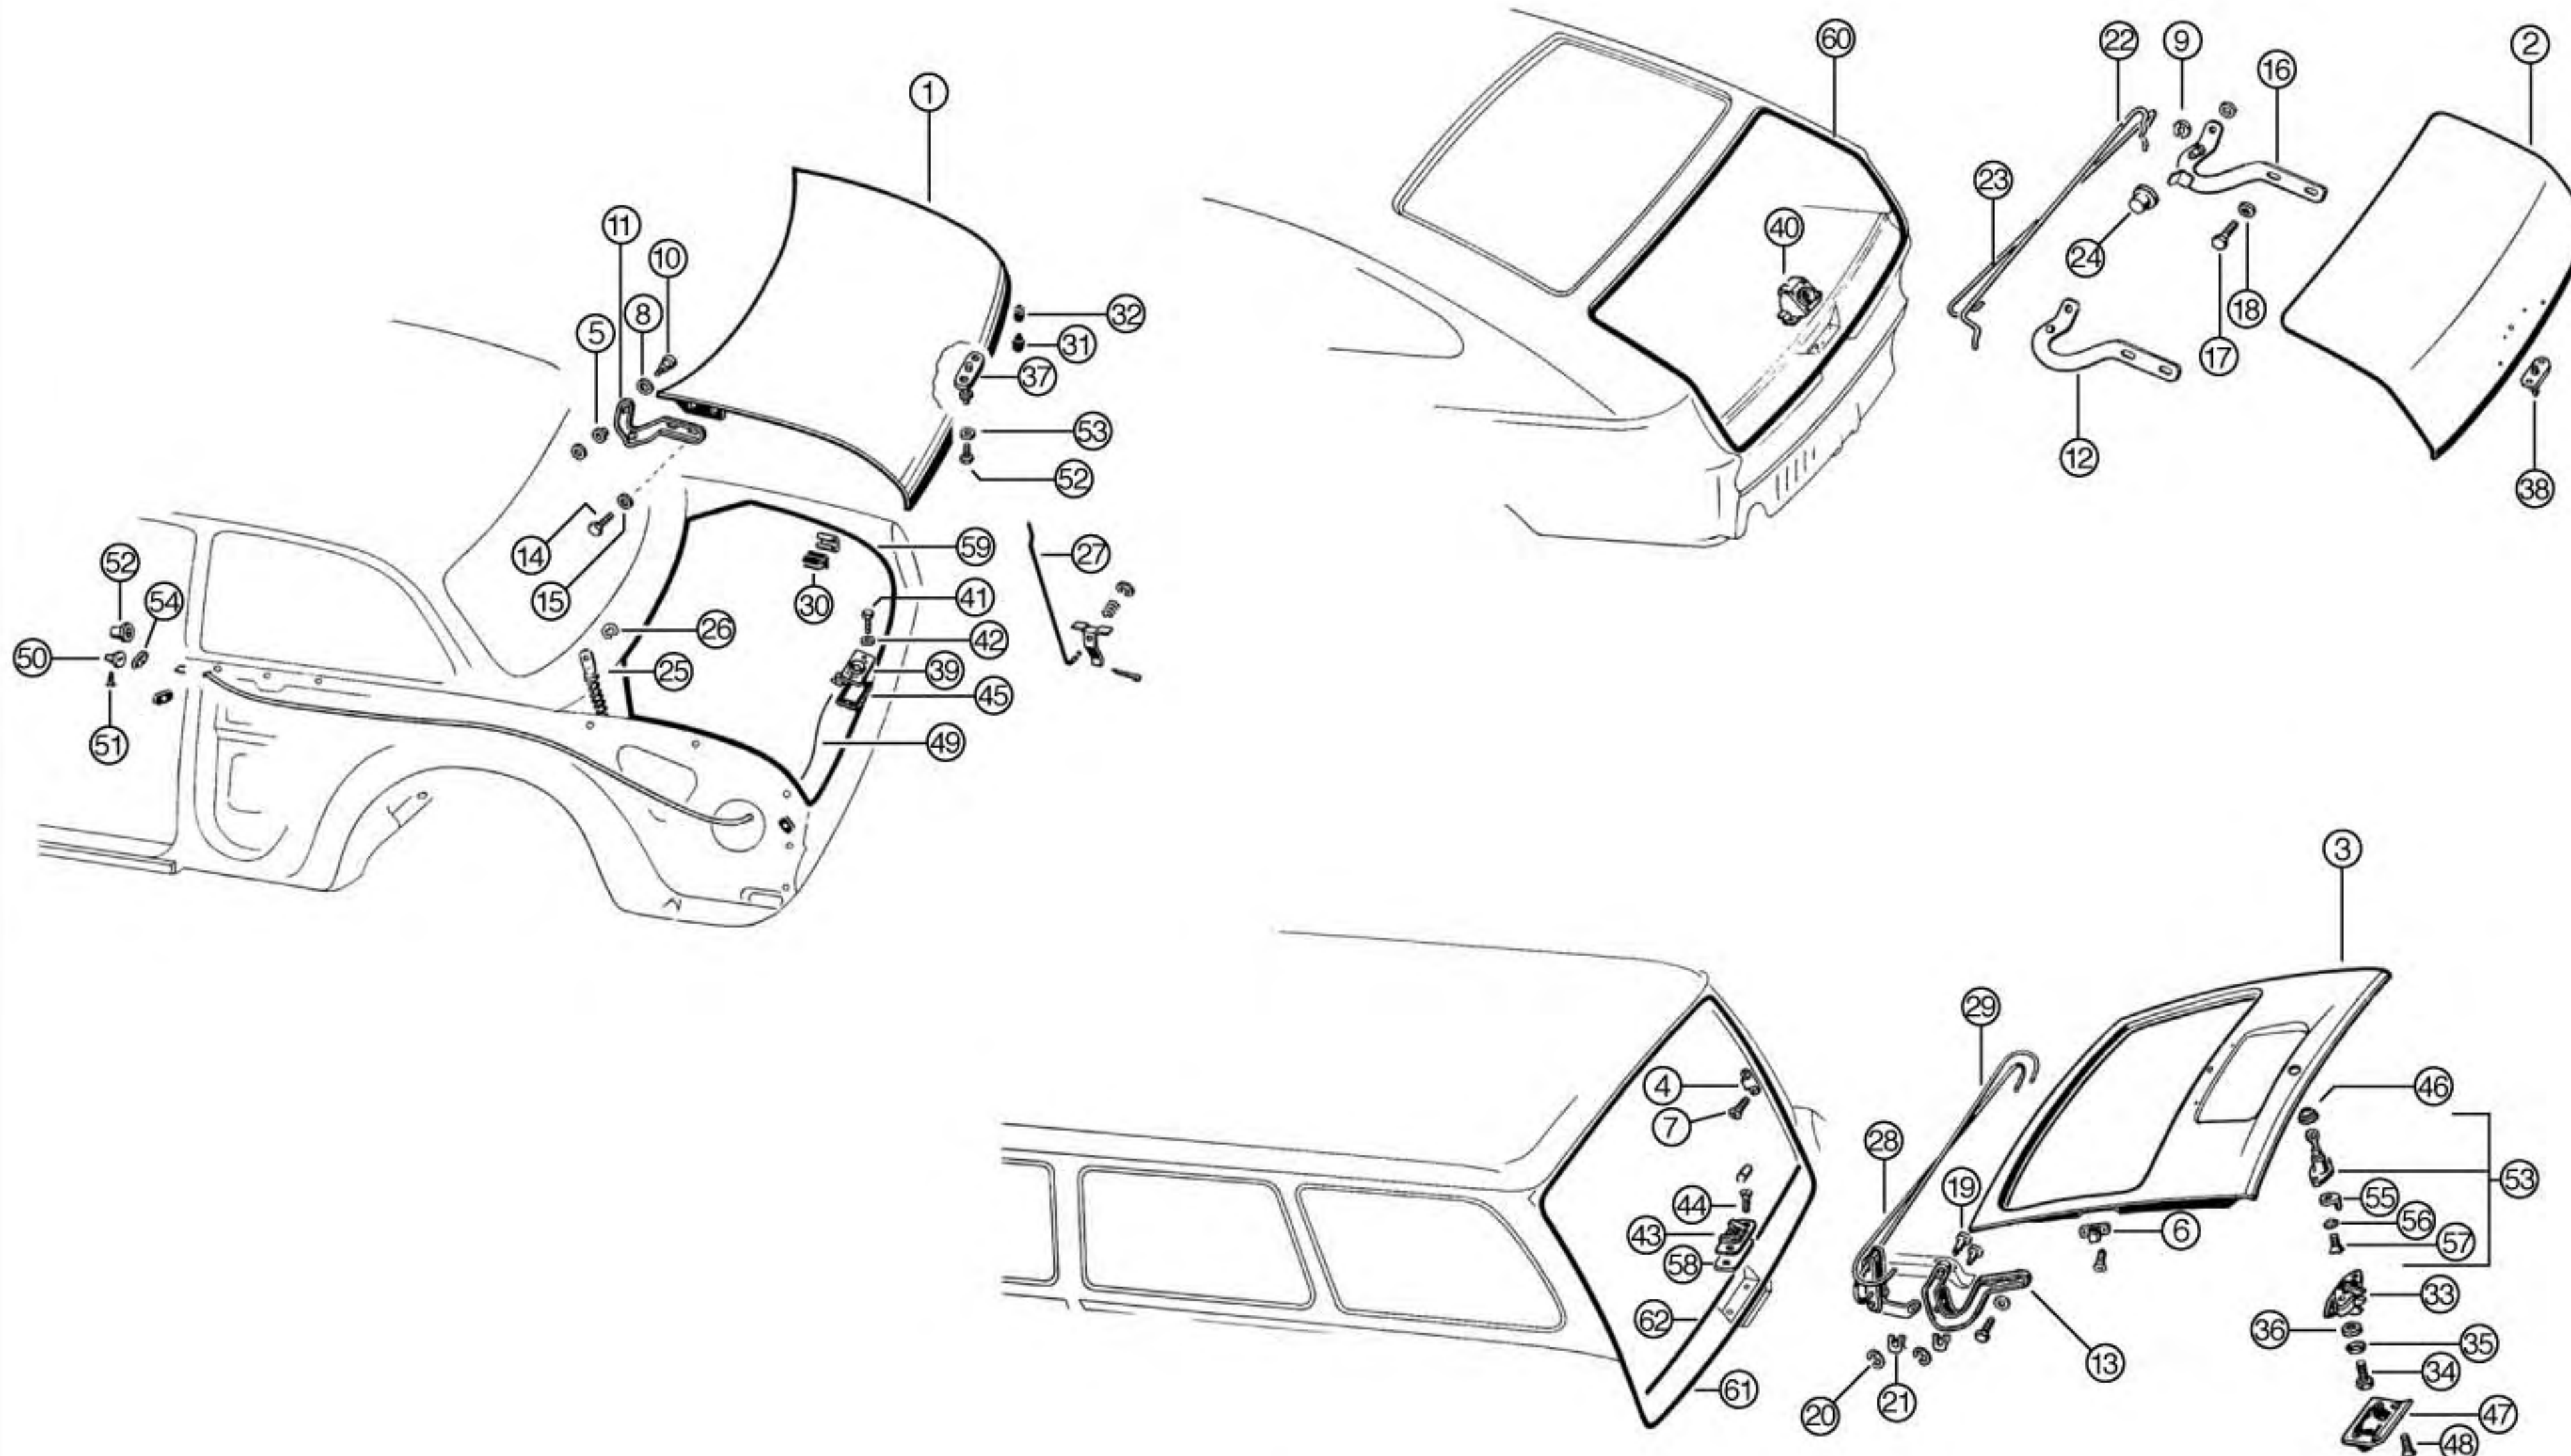

1. Each Kit has 2 pieces 20" long with a #1 label
Fit #1 to front apron, #1 has a "T" shape profile.
2. Each kit has pieces 45" long with a #2 label
Fit #2 from apron top to front cowl, parallel to the outer edges of the hood, #2 has a round profile same as bug beading.
3. Each kit has 2 pieces 12" long with a #3 label
Fit the #3 to front fender top as it curves from the door to the front of the hood, #3 has a "T" shaped profile.
4. Each kit has 2 pieces 93" long with a #4 label
Fit #4 to rear fender from the edge of the fender near the tail light, all the way to the bottom of the door jamb, #4 has a 1/4 circle profile.
5. Each kit has 2 pieces 12" long with a #5 label
Fit #5 to rear apron, #5 has a "T" shape profile.

Check your kit to make sure it is complete before you get started, total 10 pieces in 3 different profiles in lengths as detailed above. You'll have to trim around each fender bolt and pie cut where needed in order for the beading to curve, as on front and rear aprons and rear fender edge at the door jamb.

Wiring diagram VW Type 1, 1500, from August 1967 (US version)

- A - Battery
- B - Starter
- C - Generator
- C¹ - Regulator
- E - Windshield wiper switch
- F - Light switch
- G - Turn signal switch, dimmer switch and ignition / starter switch
- G¹ - Emergency flasher switch
- H¹ - Horn half ring
- H² - Steering column connection
- H³ - Horn
- J¹ - Turn signal and emergency flasher relay
- J² - Dimmer relay
- J³ - Brake light switch (2x)
- J⁴ - Oil pressure switch
- J⁵ - Back-up light switch
- J⁶ - Warning switch for brake system
- J⁷ - Fuel gauge sender unit
- K¹ - High beam warning light
- K² - Generator charging warning light
- K³ - Turn signal warning light
- K⁴ - Oil pressure warning light
- K⁵ - Speedometer lights
- K⁶ - Fuel gauge light
- K⁷ - Vibrator for fuel gauge
- K⁸ - Brake warning lamp with test button
- L¹ - Sealed beam unit, left
- L² - Sealed beam unit, right
- N - Distributor
- O - Ignition coil
- O¹ - Automatic choke
- O² - Electro-magnetic pilot jet
- P¹ - Spark plug connector, No. 1 cylinder
- P² - Spark plug connector, No. 2 cylinder
- P³ - Spark plug connector, No. 3 cylinder
- P⁴ - Spark plug connector, No. 4 cylinder
- Q¹ - Spark plug for No. 1 cylinder
- Q² - Spark plug for No. 2 cylinder
- Q³ - Spark plug for No. 3 cylinder
- Q⁴ - Spark plug for No. 4 cylinder
- R - Radio
- R¹ - Aerial connection
- S - Fuse box
- T - Cable adapter
- T¹ - Cable connector, single
- T² - Cable connector for horn under front luggage compartment lining
- T³ - Cable connector, triple
- T⁴ - Multiple cable connector
- U¹ - Front turn signal and parking light, left
- U² - Front turn signal and parking light, right
- V¹ - Door contact switch, left
- V² - Door contact switch, right
- W - Windshield wiper motor
- X¹ - Back-up lights
- X² - Brake and tail lights
- X³ - Turn signal lights
- Y - Interior light
- Z - License plate light

- ① - Battery to frame ground strap
- ② - Horn ring to steering coupling ground cable
- ③ - Transmission to frame ground cable
- ④ - Wiper motor to body ground strap

ORDERING INFO

Ordering by using our online shopping cart:

On each catalog page, just select the Quantity for the part you want. At the bottom of the page, click on the "Add Items to Shopping Cart" button and an order form will be automatically generated. When you're finished selecting all your parts, click on the "Check out" button, and you will be asked to enter your name, address, and other shipping information. When you are ready to place your order, click on the "Purchase" button and your order will be sent to our server. If you are uncomfortable with ordering online, you can also order by Fax or by email.

Ordering by Fax:

This is similar to ordering on line, but instead you just print your order out and fax it to us at (310) 637 1019 .

Ordering by Email:

If you prefer, you can just send us an e-mail message to sales@vwispwest.com telling us the part numbers, quantities, and a phone number where we can call you. Don't send us any credit card information in your e-mail message! It's NOT secure. We'll call you back and obtain your credit card information.

Customer Service:

Online help Monday thru Saturday 8am to 5pm. Please allow up to 8 hours for reply. We will make every effort to reply as soon as possible.

Backordered Items:

All Backordered Items will be cancelled automatically. If you still wish to purchase a backordered item from us, you may reorder the item(s) at a later time.

Returns and Refunds:

All returns are subjected to a 20% fee.

All returns and exchanges must be pre authorized.

All returns must be shipped " Freight Prepaid ".

No returns or exchanges on All Electrical.

All sales are final after 30 days.

Shipping damages must be handled at the time of delivery, a claim for damage must be promptly made with carrier.

All core charges refund will be voided after 90 days

Shortages:

All claims for shortages must be made within forty-eight (48) hours from the receipt of the merchandise.

Shipping Cost Calculator

Shipping within California must add 5%, all other states add 10%, except Alaska and Hawaii

Minimum Shipping Charge is \$8.00

All Oversize or Overweight packages will require additional charges

All Air Shipments will require additional charges

Shipping Policy:

\$2000.00 (Invoice Value) will be shipped freight prepaid in the Continental United States.

All Oversize or Overweight items, such as Sheet Metal, Engines, Front Beams, Seats, Roof Racks, etc...

Are FOB **ISP WEST** Warehouse, Carson California.

Alaska and Hawaii orders are only sold FOB our warehouse.

All export orders are FOB our warehouse **ISP WEST** reserves the right to select the carrier on all prepaid shipments.

All orders for Ground Shipments must be received and processed by 3pm for same day shipping.

All orders for Air Shipment must be received and processed by 10am for same day shipping.

No CODs
