Significant performance decrease in serials module

- **Article Type:** General
- **Product:** Aleph
- **Product Version:** 20

Description:
Serials librarian reports that (with version 20) the checkin operation takes significantly longer than it used to.
In a specific example, (and this is not the worst) it takes about 37 seconds to get from entering the system number to getting the check-in screen, and about two minutes to complete all navigation needed to perform a specific operation.

The culprit appears to be rep change 3099. Restoring the prior version of check_permission.gnt reduces the initial step to about seven seconds, and the total navigation time to about 29 seconds.

Resolution:
Corrected by:

v20 - rep_change #3493
v21 - rep_ver #17428
