BALTPLASTS

ELECTRICAL INSTALLATION MATERIAL MANUFACTURER

www.baltplasts.lv / info@baltplasts.lv / +37120221102

ABOUT US

SIA "BALTPASTS RKF" is a family owned business based in Latvia.

Company was founded in 2001.

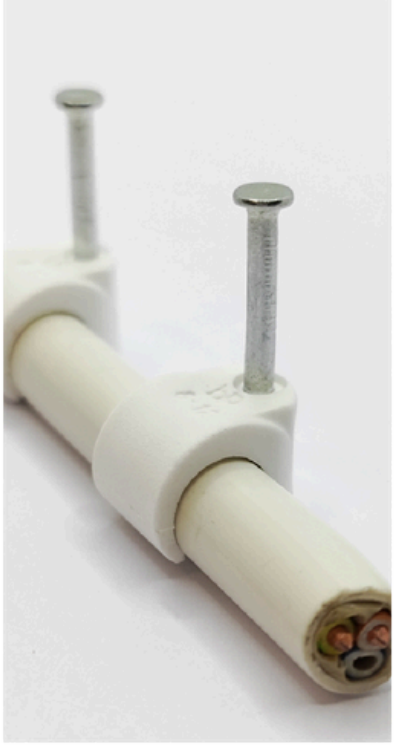

Main company business is production of electrical installation materials.

Company vision is to offer high quality products at competetive prices.

Starting mainly at local market in Baltic countries : Latvia, Lithuania, Estonia.

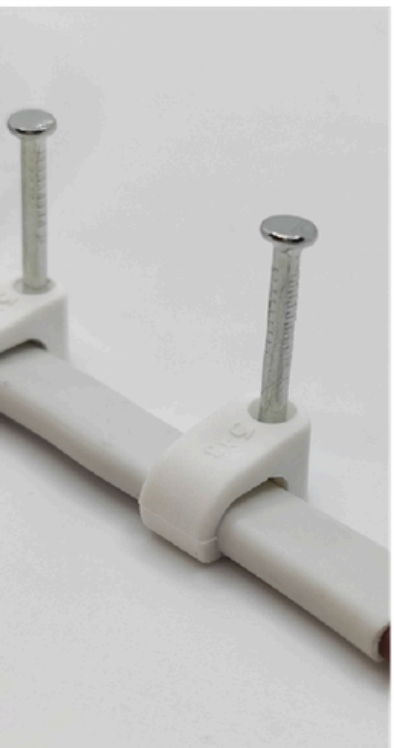

The company through years has developed business relationships with many foreign clients and has grown its client list, offering high quality products in 8 countries around the world.

New product development and existing product improvement keeps the company ahead of competitors, allowing to expand business to new markets.

CE ø32

CABLE CLIPS FOR ROUND CABLE

Intended for non-load-bearing external and internal for fixing cables

Material : Polypropylene

- Halogen-free
- UV-stabilized (+80 C˚)
- Frost resistant (-20 C˚)
- Anti-corrosive zinc plated steel nail
- Different nail lenght available
- Sizes available(mm): 3-5, 4-6, 5-7, 7-10, 8-12, 10-14, 14-20, 18-22, 22-26

Color: black, white

Ømm Suitable cable diameter (mm): 3-26

Packaging:

- Carton box
- Blister
- Plastic bag with carton hanger

PIPE HOLDERS

Intended for non-load-bearing external and internal for fixing pipes

Material : Polypropylene

- Halogen-free
- UV-stabilized (+80 C˚)
- Frost resistant (-20 C˚)
- Flame retardant
- Pipe size (mm) - 16/20/25/32/40/50

Color: black, white, grey

Compatible materials:

Packaging:

- Plastic bag
- Blister

BIO-BALLS

BIO-BALLS are small, ball-shaped bio-media used in aquarium filtration systems. They provide a large surface area for beneficial bacteria to colonize, which is essential for maintaining a healthy aquatic environment

Material: Made from polyethylene, which is durable and resistant to corrosion
Design: Have a high surface area due to their intricate structure, often featuring many ridges and holes

BENEFITS

- Biological Filtration: Provide a habitat for nitrifying bacteria, which convert harmful ammonia and nitrites into less harmful nitrates.
- Improved Water Quality: Help maintain stable water parameters by facilitating the nitrogen cycle.
- Low Maintenance: Require minimal cleaning compared to other types of filtration media.
- Reusable: Can be reused for long periods, making them a cost-effective solution for biological filtration.

USAGE

- Placement: Typically placed in the filter sump or canister filter of an aquarium.
- Maintenance: Periodic rinsing in tank water (not tap water) to prevent clogging without killing beneficial bacteria.

Considerations:

- Volume Required: The amount needed depends on the size of the aquarium and the bio load (number of fish and plants). Complementary
- Media: Often used in conjunction with mechanical and chemical filtration media to provide comprehensive water purification.
