

Secure infrastructure at the source: Wiz compliance checks built into StackGen and Aiden

Key Outcomes

Shift Security Left in IaC Development

Identify misconfigurations before deployment. Reduce **production vulnerabilities by 60%** through early detection in your module catalog.

Centralize Vulnerability Management

View and prioritize Wiz violations directly in StackGen. Cut **remediation time by 45%** with unified governance workflows.

Enable Secure Coding Practices

Surface violations in appStacks for instant visibility. Improve developer **security awareness by 70%** with in-context alerts.

Test Security Before Provisioning

Achieve **80% reduction in configuration drift** with unified control across multi-cloud environments and microservices.

Capabilities

IaC Vulnerability Scanning

Scans Terraform modules for security violations before deployment.

Module Catalog Compliance View

Shows Wiz violations in module catalog to prioritize fixes.

AppStack Security Alerts

Displays infrastructure violations at the developer's AppStack level.

Variable-Based Policy Checks

Validates security based on Terraform variable values in simulator.
