Overview

Install with Pole Straps

Using the pole straps enables users to hang a camera on a pole. This comes in two different sizes to ensure a proper fit on any size pole.

Install using 3/4 Conduit Pipe

Using a conduit pipe allows for cameras to suspend in the air at any desired location. Pole straps are not needed here.

Installation

Mounting on a Pole 1/2

If internally routing the cable through the pole, drill a hole into the pole large enough to accommodate the RJ45 connector.

Choose which set of the provided pole straps to use based on the diameter of the pole.

Thread the chosen pole straps through the slots on the Pole Mount and loosely fasten it to the pole using a drill with an 8mm hex socket bit.

Align the center of the Pole Mount with the drilled hole (if present). Secure the mount by tightening the pole straps completely.

Installation

Mounting the Pole 2/2

Once the Pole Mount is secured, align the Bullet Camera's Mount Plate to the A hole pattern on the mount.

Use a #2 Phillips screwdriver and the provided M4 screws to fasten the Mount Plate onto the Pole Mount.

Thread the RJ45 connector and cable through the holes on the Pole Mount and Mount Plate.

Follow the rest of the installation steps in the Bullet Camera Install Guide.

Installation

Mounting on 3/4" Conduit Pipe 1/2

Use the internal threads on the Pole Mount to screw it onto 3/4" Conduit Pipe.

Route the RJ45 cable through the opening in the Pole Mount with sufficient slack to connect to the camera.

Installation

Mounting on 3/4" Conduit Pipe 2/2

Align the Bullet Camera's Mount Plate to the A hole pattern on the mount.

Use a #2 Phillips screwdriver and the provided M4 screws to fasten the Mount Plate onto the Pole Mount.

Follow the rest of the installation steps in the Bullet Camera Install Guide.

Appendix

Support

Thank you for purchasing this Verkada product. If for any reason you're experiencing issues or need assistance, please contact our 24/7 Technical Support Team immediately.

Sincerely,
The Verkada Team
