2	Statement in accordance with Article 6(3) of Regulation (EU) 2023/1114	This crypto-asset white paper has not been approved by any competent authority in any Member State of the European Union. The person seeking admission to trading of the crypto asset is solely responsible for the content of this crypto-asset white paper.
3	Compliance statement in accordance with Article 6(6) of Regulation (EU) 2023/1114	This crypto-asset white paper complies with Title II of Regulation (EU) 2023/1114 and, to the best of the knowledge of the management body, the information presented in the crypto-asset white paper is fair, clear and not misleading and the crypto- asset white paper makes no omission likely to affect its import.
4	Statement in accordance with Article 6(5), points (a), (b), (c) of Regulation (EU) 2023/1114	The crypto-asset referred to in this white paper may lose its value in part or in full, may not always be transferable and may not be liquid.
5	Statement in accordance with Article 6(5), point (d) of Regulation (EU) 2023/1114	FALSE
6	Statement in accordance with Article 6(5), points (e) and (f) of Regulation (EU) 2023/1114	The crypto-asset referred to in this white paper is not covered by the investor compensation schemes under Directive 97/9/EC of the European Parliament and of the Council. The crypto-asset referred to in this white paper is not covered by the deposit guarantee schemes under Directive 2014/49/EU of the European Parliament and of the Council.

SUMMARY

7	Warning in accordance with Article 6(7), second subparagraph of Regulation (EU) 2023/1114	Warning This summary should be read as an introduction to the crypto asset white paper. The prospective holder should base any decision to purchase this crypto-asset on the content of the crypto- asset white paper as a whole and not on the summary alone. The offer to the public of this crypto-asset does not constitute an offer or solicitation to purchase financial instruments and any such offer or solicitation can be made only by means of a prospectus or other offer documents pursuant to the applicable national law. This crypto-asset white paper does not constitute a prospectus as referred to in Regulation (EU) 2017/1129 of the European

8	Characteristics of the crypto-asset	TRX (the “Token”) is the native token of Tron Network (the “Network”), a layer 1 (“L1”) blockchain created as a customised fork of the Ethereum network. The Token allows its holders to participate in the Network’s Delegated Proof of Stake (“dPoS”) consensus mechanism, where 27 Super Representatives are elected through community voting to validate transactions and produce blocks. Token holders can stake their Tokens to obtain Bandwidth and Energy, which are used to pay for the Network transaction fees. If users do not hold enough Bandwidth and Energy, their transaction fees will be paid with the Token. Tokens used to cover transaction fees are subsequently burned. Each user account, within the Network, is entitled to receive 600 Bandwidth; meanwhile, Energy can only be obtained by staking the Token. Staking the Token also entitles users to voting power, allowing them to participate in Super Representative elections. Token holders, who stake their Tokens and vote for elected Super Representatives, are rewarded with Tokens from block rewards minus the Super Representative commission, while those voting for Super Representative partners ranked 28th to 127th receive voting rewards, minus their commissions. Even though most transactions are covered with Bandwidth and Energy, or the Token in the lack of those, the Network sets fixed Token fees for specific transactions. For instance: • To become a Super Representative candidate. • Users must pay 9,999 Tokens. • 1,024 Tokens to create a TRC-10 token. • 1 Token to activate a new Network account. Furthermore, the Token serves as collateral to mint USDD, the Network’s decentralised stablecoin pegged to the US dollar. The Token’s supply follows a dynamic model. While new Tokens are distributed as block and voting rewards to Super Representatives and their voters, a transaction fee burning mechanism continuously reduces its circulating supply. Lastly,
---	--	---

		since October 2022, the Token has been recognised as an authorised digital currency and medium of exchange in the Commonwealth of Dominica.
--	--	---

		Any modifications to the Token's characteristics, rights, or obligations are implemented through the Tron DAO (the " DAO "). The DAO consists of a Committee formed by the 27 elected Super Representatives who vote on proposals regarding block rewards, voting rewards, block generation parameters, and transaction fee configurations. Changes to the protocol and Token mechanics are communicated through the Network's official channels.
09		Not applicable
10	Key information about the offer to the public or admission to trading	TRON Tech Limited (the " Person Seeking Admission to Trading ") is seeking the admission of the Token to trading on multiple EU regulated trading platforms (the " Exchanges "). The listing price will be the same as the existing publicly traded Token price across other centralised trading platforms where the Token is currently listed.

Part A - Information about the offeror or the person seeking admission to trading

A. 1	Name	TRON Tech Limited
A. 2	Legal form	Company limited by shares
A. 3	Registered address	Sea Meadow House, (P.O. Box 116), Road Town, Tortola, British Virgin Islands.
A. 4	Head office	Sea Meadow House, (P.O. Box 116), Road Town, Tortola, British Virgin Islands.
A. 5	Registration Date	2024/06/13
A. 6	Legal entity identifier	Not available
A. 7	Another identifier required pursuant to applicable	2150980

	national law	
A.8	Contact telephone number	12767884836
A.9	E-mail address	trx_contact@tron.network
A.10	Response Time (Days)	Within 48 hours
A.11	Parent Company	The Person Seeking Admission to Trading has no parent company.
A.12	Members of the Management body	Yang Zi Director Block 55 Normanton Park #04-45 117283 Singapore trx_contact@tron.network
A.13	Business Activity	Develops and maintains internal blockchain infrastructure to support token operations.
A.14	Parent Company Business Activity	Not applicable
A.15	Newly Established	TRUE

A.16	Financial condition for the past three years	Not applicable
-------------	---	----------------

A.1 7	Financial condition since registration	Since incorporation, Tron Tech Limited has operated as an internal blockchain infrastructure entity, supporting token related operations, validator maintenance, and smart contract deployment within the group. The entity does not engage in public-facing or commercial activities and has not generated revenue since incorporation. This review provides a fair and balanced assessment of the development, performance, and financial position of Tron Tech Limited from the date of registration to the latest available interim period, in line with the size and operational scope of the entity. The entity has been fully funded through capital contributions from affiliated individuals and/or entities. These internal contributions have been sufficient to cover all operating expenditures to date, which primarily relate to infrastructure costs, blockchain deployment, professional services (e.g. legal, audit, and regulatory), and administrative support. No third party financing or external debt instruments have been used. The company has incurred regular operating costs since incorporation and has maintained adequate liquidity throughout the period to support its activities. There have been no unusual, infrequent, or exceptional events materially affecting its income or financial condition during this time. At present, Tron Tech Limited does not have any confirmed financial projections or plans to begin generating income. The entity's role continues to be strictly internal and infrastructure focused. Should this change in the future, relevant financial forecasts and disclosures will be updated accordingly. The entity does not report non-financial Key Performance Indicators (KPIs), as it does not operate in external markets and has no user-facing, customer, or product engagement metrics relevant to its function. Where available, this assessment may be supplemented with references to internal financial statements, although the nature and scale of the entity
--------------------------------	--	--

		do not currently require standalone statutory reporting.

1	Activity	
C.1 2	Parent Company Business Activity	Not applicable
C.1 3	Other persons drawing up the crypto- asset white paper according to Article 6(1), second subparagraph, of Regulation (EU) 2023/1114	Not applicable
C.1 4	Reason for drawing the white paper by persons referred to in Article 6(1), second subparagraph, of Regulation (EU) 2023/1114	Not applicable
Part D - Information about the crypto-asset project		
D. 1	Crypto-asset project name	Tron Network
D. 2	Crypto-assets name	TRONIX
D. 3	Abbreviation	TRX

D. 4	Crypto-asset project description	The Network is a layer 1 blockchain created as one of the first Ethereum forks. While the Network shares many characteristics with Ethereum, it was customised to solve the scalability issues that traditional blockchains face. Therefore, the Network relies on its own version of the Ethereum Virtual Machine, known as the Tron Virtual Machine ("TVM"), modified to provide users with faster and cheaper transactions when compared with Ethereum. The Network team has created a modified version of the dPoS consensus mechanism, where a set of validators, known as Super Representatives, is limited to 27. Every 6 hours, there is a Super Representative election. To participate by voting in the elections, Token holders must stake their Tokens. To become a Super Representative candidate, users must run a full node and deposit 9,999 Tokens. Within the elections, the 27 Super Representative candidates with the most votes are elected to
------------------------	--	---

	cover the role of validating transactions and creating the Network's new blocks. Once they create a new block, after being randomly selected, they are rewarded with the Token issued as block rewards. These rewards are shared with the Token stakers who voted for them. Meanwhile, the Super Representatives ranked between the 28th and 127th positions are elected as Super Representative partners, entitling them to receive voting rewards. However, voting rewards are shared between Super Representative partners, the ones entitled to create blocks, and the Token stakers who voted for them. The TVM allows the Network to support decentralised applications deployed on Ethereum, with minimum modification. In this context, the Network has two types of transactions: those that interact with a smart contract, which are covered with Energy, and those that do not interact with a smart contract, which are covered with Bandwidth. However, if users do not hold a sufficient amount of Bandwidth or Energy, their transactions are to be paid with the Token. Additionally, the Network has special transactions that are to be paid with the Token (see Section F.6). The Network counts with an official stablecoin, USDD, pegged to the US dollar. The Token serves as one of its collateral, through an over-collateralisation mechanism, where those who deposit collateral are entitled to mint/borrow USDD against the value of their collateral. Lastly, the Network relies on the decision-making of its future and parameter updates and modifications to the DAO. Within the DAO, each category of Super Representatives covers a specific role. All of them, the first 27, the partners, and the candidates, are allowed to submit proposals. However, only the first 27 are entitled to vote on those proposals. The proposal subjects range from block rewards, voting rewards, block generation parameters, and transaction fee configurations.
--	---

D. 5	Details of all natural or legal persons involved in the implementation of the crypto-asset project	Justin Sun (justin@tron.network) CEO Founder of TRON, Callme (PEIWO) APP, and CEO of BitTorrent Inc. Justin was named 2017 Forbes 30 under 30 Asia. 1, Yishun Industrial Street 1, #05-34, A'Posh Bizhub, Singapore (768160) Marcus Zhao (marcus.zhao@tron.network) Head of Public Chain
-----------------	---	---

		Former Alibaba chief data mining expert 1, Yishun Industrial Street 1, #05-34, A'Posh Bizhub, Singapore (768160) Cong Li (no longer with the company so email and business address cannot be provided) Head of Developer Community Division
D. 6	Utility Token Classification	FALSE
D. 7	Key Features of Goods/Services for Utility Token Projects	Not applicable

D.8	Plans for the token	The Token was launched as an ERC-20 token on Ethereum with an initial supply of 100,000,000,000 Tokens. Once the Network was launched on June 21, 2018, the Token was re-launched as the Network's native token. At that point, holders of the ERC 20 Token version were encouraged to migrate to the Network's version to access all its functionalities as the Network's native token. The Tron DAO was established in July 2017 in order to govern the future of the Network. In October 2022, the Token was recognised as an authorised digital currency and medium of exchange in the Commonwealth of Dominica. The Network has also developed USDD, its decentralised stablecoin pegged to the US dollar. USDD, as the new Network's stablecoin, replaces its previous version, known as USDDOLD. The Token was USDDOLD's governance token. The last governance proposal, voted in January 2024, decided the creation of USDD. However, at the moment, the Token does not serve as USDD's governance token, since its governance structure is yet to be defined. Looking ahead, the Network's efforts are focused on expanding its ecosystem by improving smart contract capabilities, adding extra functionalities to the TVM, and increasing its DeFi integrations.
D.9	Resource Allocation	Not applicable
D.10	Planned Use of Collected Funds or Crypto-Assets	• Community governance (Apply to become SR, vote for SR, etc.) • TRON is a blockchain-based operating system on which one can create decentralized applications, tokens, stablecoins, DeFi and NFT applications.

		• Payment (a lot of platforms accept the Token as a method of payment) • As a system transaction fee for sending transactions on the TRON blockchain
--	--	---

Part E - Information about the offer to the public of crypto-assets or their admission to trading		
E. 1	Public Offering or Admission to trading	ATTR
E. 2	Reasons for Public Offer or Admission to trading	Admission to trading of the Token is being sought on multiple EU Exchanges with the aim to facilitate the acquisition of the Token for governance participation and usage of the Network.
E. 3	Fundraising Target	Not applicable
E. 4	Minimum Subscription Goals	Not applicable
E. 5	Maximum Subscription Goal	Not applicable
E. 6	Oversubscription Acceptance	FALSE
E. 7	Oversubscription Allocation	Not applicable
E. 8	Issue Price	Not applicable
E. 9	Official currency or any other crypto- assets determining the issue price	Not applicable
E.1 0	Subscription fee	Not applicable
E.1 1	Offer Price Determination Method	Not applicable
E.1 2	Total Number of Offered/Traded Crypto Assets	94,734,297,908.75787
E.1 3	Targeted Holders	ALL

E.1 4	Holder restrictions	The purchase of the Token from EU-regulated Exchanges will be available to all users of such Exchanges. Most trading and exchange services offered by Exchanges are open to retail holders, and may be subject to the compliance requirements of the respective Exchange. The Exchanges may impose restrictions on holders of Tokens on their respective Exchanges, in accordance with applicable laws and internal policies.
E.1 5	Reimbursement Notice	Not applicable
E.1 6	Refund Mechanism	Not applicable
E.1 7	Refund Timeline	Not applicable
E.1 8	Offer Phases	Not applicable

E.1 9	Early Purchase Discount	Not applicable

E.2 2	Subscription period end	Not applicable
E.2 3	Safeguarding Arrangements for Offered Funds/Crypto Assets	Not applicable
E.2 4	Payment Methods for Crypto-Asset Purchase	Not applicable
E.2 5	Value Transfer Methods for	Not applicable

	Reimbursement	
E.2 6	Right of Withdrawal	Not applicable
E.2 7	Transfer of Purchased Crypto-Assets	Not applicable
E.2 8	Transfer Time Schedule	Not applicable
E.2 9	Purchaser's Technical Requirements	Technical requirements will be specified by the exchange and may include the following: 1. A compatible digital wallet or account on supported exchanges; 2. Internet access; 3. A device (computer or mobile) to manage a digital wallet/private key and/or account on an exchange to carry out transactions
E.3 0	Crypto-asset service provider (CASP) name	Not applicable
E.3 1	CASP identifier	Not applicable
E.3 2	Placement form	NTAV
E.3 3	Trading Platforms name	• OKX; • Kraken;
E.3 4	Trading Platforms Market Identifier Code (MIC)	Not applicable
E.3 5	Trading Platforms Access	The Exchanges are accessible via their respective websites.
E.3 6	Involved costs	The use of services offered by Exchanges may involve costs, including transaction fees, withdrawal fees, and other charges. These costs are determined and set by the respective Exchanges and are not controlled, influenced, or governed by the Person Seeking Admission to Trading. Consequently, any changes to fee structures or the

		introduction of new costs are solely at the discretion of these platforms.
--	--	--

E.3 7	Offer Expenses	Not applicable
E.3 8	Conflicts of Interest	No known conflicts of interest.
E.3 9	Applicable law	Not applicable
E.4 0	Competent court	Not applicable
Part F - Information about the crypto-assets		
F.1	Crypto-Asset Type	Crypto-asset other than an asset-referenced token or e-money token

F.2	Crypto-Asset Functionality	According to the article 3(1)(5) of MiCA, a crypto-asset is a digital representation of a value or of a right that is able to be transferred and stored electronically using distributed ledger technology or similar technology. As reminded by the European Banking Authority (“EBA”), the term ‘right’ should be interpreted broadly in accordance with recital (2) of MiCA. The Token qualifies as a crypto-asset within the meaning of MiCA, as it a digital representation of the right to access the Network and participate in the Network’s governance. The Token can be transferred and stored using the distributed ledger technology (“DLT”). The Token facilitates Token holders’ interaction with the Network. The Token gives its holders the following rights (and has the following features): • Staking: Token holders can stake their Tokens on the Network to obtain Bandwidth and Energy resources. While each user account receives 600 Bandwidth daily, which can be increased by staking the Token, Energy can only be obtained by staking the Token. Additionally, staking their Tokens allows holders to obtain voting power to participate in the Super Representatives elections. • Transaction Fees: When users do not hold sufficient Bandwidth or Energy, their transaction fees are paid with the Token. • Fixed Payments: Some actions within the Network are taxed with fixed payments, to be paid with the Token. Examples are the 9,999 Tokens deposit to become a Super Representative candidate, the 1,024 Tokens to be paid when creating a TRC-10 token, the 1 Token that it costs to activate a new Network account, and 100 Tokens to update account permissions. • Block Rewards: The first 27 Super Representatives who validate transactions and generate blocks are compensated with the Token from block rewards. Block rewards consist of
-----	----------------------------	---

		8 Tokens per block. Token stakers who voted for elected Super Representatives receive a share of these block rewards, minus the Super Representative commission. • Voting Rewards: Super Representatives partners, ranked 28th to 127th, receive voting rewards consisting of 128 Tokens emitted with each new block. Voting rewards are shared between the first 27 Super Representatives, the partners, and the Token stakers who voted for the partners. • Collateral: The Token can be used as collateral to mint USDD.
F.3	Planned Application of Functionalities	Each of the functionalities mentioned in Section F.2 is already available.
A description of the characteristics of the crypto-asset, including the data necessary for classification of the crypto-asset white paper in the register referred to in Article 109 of Regulation (EU) 2023/1114, as specified in accordance with paragraph 8 of that Article		
F.4	Type of white paper	OTHR
F.5	The type of submission	NEWT

F.6	Crypto-Asset Characteristics	The Token is the native token of the Network, an L1 blockchain created as a customised fork of the Ethereum network. The Token allows its holders to participate in the Network's dPoS consensus mechanism, where 27 Super Representatives are elected through community voting to validate transactions and produce blocks. Token holders can stake their Tokens to obtain Bandwidth and Energy, which are used to pay for the Network transaction fees. If users do not hold enough Bandwidth and Energy, their transaction fees will be paid with the Token. Tokens used to cover transaction fees are subsequently burned. Each user account, within the Network, is entitled to receive 600 Bandwidth; meanwhile, Energy can only be obtained by staking the Token. Staking the Token also entitles users to voting power, allowing them to participate in Super Representative elections. Token holders, who stake their Tokens and vote for elected Super Representatives, are rewarded with Tokens from block rewards minus the Super Representative commission, while those voting for Super Representative partners ranked 28th to 127th receive voting rewards, minus their commissions. Even though most transactions are covered with Bandwidth and Energy, or the Token in the lack of those, the Network sets fixed Token fees for specific transactions. For instance: • To become a Super Representative candidate.
-----	-------------------------------------	---

		• Users must pay 9,999 Tokens. • 1,024 Tokens to create a TRC-10 token. • 1 Token to activate a new Network account. Furthermore, the Token serves as collateral to mint USDD, the Network's decentralised stablecoin pegged to the US dollar. The Token's supply follows a dynamic model. While new Tokens are distributed as block and voting rewards to Super Representatives and their voters, a transaction fee burning mechanism continuously reduces its circulating supply. Lastly, since October 2022, the Token has been recognised as an authorised digital currency and medium of exchange in the Commonwealth of Dominica. Any modifications to the Token's characteristics, rights, or obligations are implemented through the DAO. The DAO consists of a Committee formed by the 27 elected Super Representatives who vote on proposals regarding block rewards, voting rewards, block generation parameters, and transaction fee configurations. Changes to the protocol and Token mechanics are communicated through the Network's official channels.
F.7	Commercial name or trading name	TRX
F.8	Website of the issuer	https://tron.network/
F.9	Starting date of offer to the public or admission to trading	2025/11/17
F.10	Publication date	2025/11/15

F.16	Voluntary data flag	FALSE
F.17	Personal data flag	TRUE
F.18	LEI eligibility	TRUE
F.19	Home Member State	Malta

F.20	Host Member States	The admission to trading of the Token is passported in the following countries: • Austria • Belgium • Bulgaria • Croatia • Cyprus • Czech • Germany • Denmark • Estonia • Spain • Finland • France • Greece • Hungary • Iceland • Ireland • Italy • Latvia • Liechtenstein • Lithuania • Luxembourg • Netherlands • Norway • Poland • Portugal • Romania • Slovakia • Slovenia • Sweden
Part G - Information on the rights and obligations attached to the crypto-assets		
G. 1	Purchaser Rights and Obligations	The Token gives its holders the following rights (and has the following features):

		• Staking: Token holders have the right to stake their Tokens on the Network to obtain Bandwidth and Energy resources. Additionally, staking their Tokens gives users the right to participate in the Super Representatives elections. Unstaking the Token involves a 14-day waiting period. • Transaction Fees: If users do not hold sufficient Bandwidth or Energy, their transaction fees must be paid with the Token. • Fixed Payments: For certain actions within the Network, users must pay fixed fees with the Token. Examples are the 9,999 Tokens deposit to become a Super Representative candidate, the 1,024 Tokens to be paid when creating a TRC 10 token, the 1 Token that it costs to activate a new Network account, and 100 Tokens to update account permissions. • Block Rewards: Token stakers who voted for elected Super Representatives receive a share of the block rewards, minus the Super Representative commission. • Voting Rewards: Token stakers who voted for the selected Super Representative partners are entitled to receive part of the voting rewards, minus the partner commission. • Collateral: Token holders have the right to use the Token as collateral to mint USDD.
--	--	--

G. 2	Exercise of Rights and obligations	The rights outlined in Section G.1 may be exercised through the following actions: • Staking: To exercise their staking rights, Token holders have to stake their Tokens through the interface provided by the Network. • Transaction Fees: If users do not hold sufficient Bandwidth or Energy to pay for transaction fees with the Token, users must perform a transaction and hold the Token. • Fixed Payments: To pay for the actions within the Network taxed with fixed fees, Token holders must perform one of these actions. • Block Rewards: To receive block rewards, Token holders must stake their Tokens and vote for the elected Super Representatives. • Voting Rewards: To receive voting rewards, Token holders must stake their Tokens and vote for the elected Super Representative partners. • Collateral: To exercise their right to use the Token as collateral to mint USDD, Token holders must deposit the Token through the USDD interface.
-------------	---	--

G. 3	Conditions for modifications of rights and obligations	Any changes to the Token's rights, obligations, or features will be submitted by the Super Representatives entitled to validate transactions, the partners, and the candidates. However, the decision over submitted proposals corresponds to the set of 27 Super Representatives elected during the last elections. Any modification will be communicated to the community through the Network's official channels.
G. 4	Future Public Offers	Not applicable
G. 5	Issuer Retained Crypto Assets	Not applicable
G. 6	Utility Token Classification	FALSE

G. 7	Key Features of Goods/Services of Utility Tokens	Not applicable
G. 8	Utility Tokens Redemption	Not applicable
G. 9	Non-Trading request	TRUE
G.1 0	Crypto-Assets purchase or sale modalities	Not applicable
G.1 1	Crypto-Assets Transfer Restrictions	The Exchanges may impose restrictions on holders of Tokens on their respective Exchanges, in accordance with applicable laws and internal policies. Token holders who acquire the Token through 'private sales' are subject to restrictions as per the terms of sale.
G.1 2	Supply Adjustment Protocols	FALSE
G.1 3	Supply Adjustment Mechanisms	The Token has a dynamic supply since new Tokens are emitted with each new block of the Network, as block rewards, currently consisting of 8 Tokens per block, and voting rewards, currently consisting of 128 Tokens per block. The number of Tokens emitted per block can be modified by the DAO. Additionally, when users do not hold sufficient Bandwidth or Energy, and pay for their transactions with the Token, those Tokens are immediately burned, decreasing its supply. Nevertheless, none of these mechanisms is related to changes in the Token's demand.
G.1 4	Token Value Protection Schemes	FALSE
G.1 5	Token Value Protection Schemes Description	Not applicable
G.1 6	Compensation Schemes	FALSE

G.1 7	Compensation Schemes Description	Not applicable
G.1 8	Applicable law	Subject to mandatory applicable law, any and all disputes or claims arising out of, or in connection with, this whitepaper and/ or the Token, including the validity, invalidity, breach or termination thereof, shall be governed by, construed and enforced exclusively in accordance with the laws of the British Virgin Islands.
G.1 9	Competent court	Subject to mandatory applicable law, any and all disputes or claims arising out of, or in connection with, this whitepaper and/ or the Token, including the validity, invalidity, breach or termination thereof, shall be subject to the exclusive jurisdiction of the courts in the British Virgin Islands.
Part H – Information on the underlying technology		
H. 1	Distributed ledger technology	The Token has been launched on the Network.
H. 2	Protocols and technical standards	The Token was launched on the Network as its native token. Previously, it was launched on the Ethereum network as an ERC-20 token. The ERC-20 token does not have any utility within the Network.
H. 3	Technology Used	The Token was launched as the Network's native token, therefore, users can manage the Token through their own non custodial wallet software provided by third parties or by directly interacting with the token's smart contract through a third party API.
H. 4	Consensus Mechanism	The Token was launched on the Network, which relies on its own implementation of a dPoS consensus mechanism. To participate in the Network's consensus mechanism, users must become Super Representative candidates by depositing 9,999 Tokens, which are non-refundable, and running a full node. Candidates are entitled to participate in the Super Representatives elections, which take place every 6 hours. The 27 candidates with the most votes from Token stakers become Super Representatives and are in charge of validating the Network's transactions and creating new

		blocks.
H. 5	Incentive Mechanisms and Applicable Fees	In exchange for validating transactions and creating new blocks, Super Representatives are compensated with the Token, emitted as block rewards. Block rewards consist of 8 Tokens per block, which are given to the Super Representative who creates the block. Additionally, Super Representatives who validate the Network transactions and create its blocks are entitled to receive voting rewards, in the form of the Token, and emitted on a per-block

		basis. These rewards consist of 128 Tokens per block, which are distributed among all Super Representatives and Super Representative partners based on the number of votes they received. Super Representatives can set their own commission rate from 0% to 100%, which determines how much of these rewards that correspond to the voter they will retain. Every Network transaction incurs the payment of transaction fees, which are determined in the following manner: • Bandwidth transactions: Simple transactions like Token transfers are paid with Bandwidth. Each user account receives 600 Bandwidth daily for free. To increase their amount of Bandwidth, users must stake the Token. When users do not hold enough Bandwidth, they must pay for these types of transactions with the Token. • Energy transactions: Smart contract interactions are paid with Energy and Bandwidth. Energy can only be obtained by staking the Token. If users do not hold enough Energy, this type of transaction will be paid with the Token. The Tokens used to pay for transaction fees are immediately burned. • Fixed fees: The Network has some transactions which are taxed with fixed fees to be paid with the
--	--	--

		Token. For instance, to become a Super Representative candidate costs a fixed fee of 9,999 Tokens, 1,024 Tokens to create a TRC-10 token, 1 Token to activate a new account, and 100 Tokens to update accounts' permissions.
H. 6	Use of Distributed Ledger Technology	FALSE
H. 7	DLT Functionality Description	Not applicable
H. 8	Audit	TRUE
H. 9	Audit outcome	The results of the audit conducted on the Network can be found in the following link: https://skynet.certik.com/projects/tron
Part I – Information on risks		
I.1	Offer-Related Risks	The Person Seeking Admission to Trading neither operates, controls, oversees, nor manages the functioning of the Exchanges where the Token will be admitted to trading. Additionally, the Token's underlying protocol may evolve due to ongoing technical, regulatory, and industry developments.

		Unforeseen risks may arise, and new challenges or opportunities may necessitate changes in the Network's strategies, goals, and structure. The risks outlined below highlight regulatory uncertainty, liquidity limitations, governance risks, network centralisation concerns, security vulnerabilities, and potential adjustments to fees or token supply that could impact the offer and trading of the Token. • Regulatory Compliance Risks: Although the Token is designed to comply with existing regulations (such as MiCA), evolving regulatory landscapes could impact its classification, trading status, or market/ community acceptance. Changes in regulatory requirements may necessitate modifications to the Network's operation, structure, or governance. Token holders must ensure compliance with local laws, as regulatory treatment of crypto-assets varies across jurisdictions. • Market Volatility: The Token is subject to extreme price fluctuations, influenced by market speculation, investor sentiment, and broader industry trends. External factors, such as regulatory announcements or technological developments, may further contribute to volatility, potentially leading to financial losses for holders. • Liquidity Risks: The ability to buy, sell or otherwise transact Tokens depends on activity on decentralised exchanges ("DEXs") and, if applicable, centralised exchanges ("CEXs"). Limited liquidity may result in difficulties executing large trades without significant price impact, increasing the risk of loss. • Risk of Trading Platforms: When Token holders trade on Exchanges, the Person Seeking Admission to Trading does not act as a contractual party to these transactions. All legal relationships regarding these trading platforms are subject to their respective terms and conditions, with no responsibility assumed by the Person Seeking Admission to Trading for their operations, services, or outcomes. • Risk of Delisting: There is no guarantee that the Token will remain listed on any exchange. Delisting
--	--	--

		could significantly hinder the ability to trade Tokens, reducing liquidity and market value. • Risk of Bankruptcy: The Exchanges or trading platforms where the Token is listed may become insolvent or cease operations, potentially resulting in a loss of access to funds or Tokens.
--	--	---

		• Blockchain and Smart Contract Dependency: The Token relies entirely on its blockchain infrastructure. Any network downtime, congestion, security vulnerabilities, or smart contract failures could negatively impact its functionality, accessibility, or security. Additionally, the Network may initially operate under a centralised or permissioned model, where specific providers or node operators manage the network. This structure presents centralisation risks, including the potential for censorship or data monetisation. • Operational Risks: Risks associated with the Token issuer/offeree's internal processes, personnel, and technologies may impact the ability to manage the Token's operations effectively. Failures in operational integrity could lead to disruptions, financial losses, or reputational damage. • Financial Risks: The Token issuer/offeree may face financial risks, including liquidity shortages, credit risks, or market fluctuations, which could affect its ability to continue operations, meet obligations, or sustain the stability and value of the Token. • Legal Risks: Uncertainties in legal frameworks, regulatory changes, potential lawsuits, or adverse legal rulings could pose significant risks, affecting the legality, usability, or value of the Token. • Fraud and Mismanagement Risks: The risk of fraudulent activity or mismanagement within the Token issuer/offeree's operations may impact the credibility of the project and the usability or value of the Token. • Reputational Risks: Negative publicity – whether due to operational failures, security breaches, or associations with illicit activities – could damage the Token issuer/offeree's reputation and, by extension, impact the value and acceptance of the Token. • Technology Management Risks: Inadequate management of technological updates or failure to keep pace with advancements may result in security vulnerabilities, inefficiencies, or obsolescence of the Token and its supporting infrastructure. • Dependency on Key Individuals: The success of the
--	--	--

		Token and its ecosystem may be highly dependent on key individuals. Loss or changes in project leadership could lead to operational disruptions, a loss of trust, or potential project failure.
--	--	---

		• Conflicts of Interest: Misalignment of interests between the Token issuer/offor and Token holders may lead to governance decisions that are not in the best interests of the community, potentially affecting the value of the Token or damaging the credibility of the project. • Counterparty Risks: The Token issuer/offor's reliance on external partners, service providers, and collaborators introduces risks related to non-fulfilment of obligations, which may affect the Token's operations, liquidity, or overall ecosystem stability. • Industry Competition Risks: The Token issuer/offor faces competition from other projects, including larger and well funded ventures that may attract more users and liquidity, potentially diminishing the viability of the Token. • Investor Vesting Risks: While Tokens allocated to the team and other stakeholders may be subject to a vesting schedule to prevent "rug pulls" and conflicts of interest, the unlocking of Tokens over time could affect supply and demand trends and liquidity. • Speculative Nature of the Token: Other than as stated herein with respect to the rights, functions, governance, staking, and fee-payment, the Token has no inherent utility beyond market sentiment and community-driven interest. Its value is highly speculative and subject to fluctuations based on external perceptions. • Unanticipated Risks: There may be additional risks that cannot be foreseen. Some risks may materialise as unexpected variations or combinations of the factors discussed in this section.
--	--	--

I.2	Issuer-Related Risks	• Financial risk. The issuer may be exposed to various financial risks, including liquidity, credit, interest-rate, and market risks, that could impair its ability to meet its obligations, fund operations, or manage cash flow. Unexpected market volatility or adverse economic conditions can further magnify these risks. • Insolvency risk. If the issuer's revenues fall short of liabilities or if operational challenges arise, the issuer could become insolvent and unable to meet its financial obligations. Insolvency could result in the suspension of services, delays in payments, or complete loss of invested funds. • Funding risk. The issuer may find it difficult to secure additional financing, whether through equity, debt, or other funding sources, when needed. Market conditions, investor
-----	----------------------	---

		sentiment, or regulatory barriers may limit access to capital, potentially hindering growth plans and jeopardizing the issuer's ability to sustain its operations. • Legal risk. The issuer could face legal claims, disputes, or regulatory investigations. These matters may be costly, time-consuming, and distracting, and can result in fines, penalties, or adverse judgments that negatively affect the issuer's financial position and reputation. • Regulatory and legal changes. Amendments to applicable laws or regulations, including evolving interpretations of existing rules, may require the issuer to adjust its business model. In certain cases, regulatory changes could restrict or prohibit specific activities, limit services provided to customers, or necessitate additional licensing or reporting. • Reputational risk. Failure to maintain transparency and accuracy in public disclosures, engage with the community, or manage operational issues may damage the issuer's reputation. Loss of public confidence can lead to reduced demand for the issuer's products or tokens, difficulties in attracting investors, and long-term erosion of brand value. • Key person risk. The issuer's success may depend heavily on a small number of individuals with specialized expertise, relationships, or institutional knowledge. The departure or incapacity of key personnel could disrupt critical processes, delay execution of strategic initiatives, and require significant time and resources to fill.
--	--	--

I.3	Crypto-Assets-related Risks	• Market Volatility Risks: The Token's value is highly volatile and may fluctuate due to market speculation, investor sentiment, regulatory developments, and technological advancements. External factors, such as shifting trends in the crypto industry, changing demand for blockchain services, or macroeconomic conditions, could contribute to extreme price fluctuations, potentially leading to total depreciation. • Speculative Nature: No assurances of future value, performance, or rewards are made regarding the Token. Other than as stated herein with respect to the rights, functions, governance, staking, and fee-payment, the Token has no inherent or guaranteed utility beyond its role in the Network, and its valuation depends entirely on user adoption, demand, and community engagement. If adoption of the Network fails to grow as expected, the Token's value may be significantly impacted.
-----	------------------------------------	---

		• Liquidity Risks: The ability to trade the Token depends on the level of activity on DEXs and, where applicable, CEXs. Low trading volume may result in difficulties executing large transactions without significant price impact. Limited demand for the Token or the underlying protocol may further reduce liquidity, making it difficult to acquire, sell or otherwise transact with the Token. • Adoption and Network Demand Risks: The long-term success of the Token is dependent on widespread adoption of the Network. Adoption is influenced by various external factors, including user demand, competitive economic conditions, and organic community-driven expansion. The Person Seeking Admission to Trading has no control over the pace of adoption, and there is no guarantee that the Network will gain sufficient traction to sustain its economic model. If demand is too low, obtaining services through the Network may be difficult, while an inadequate supply may lead to delays in accessing services. • Blockchain Dependency Risks: The Token operates exclusively on its underlying blockchain network. Any disruptions, such as network congestion, downtime, or security vulnerabilities, could impact the ability to transfer, store, or trade the Token. Changes to blockchain infrastructure, governance, or transaction fees may also influence the Token's usability and cost-effectiveness. • Transaction Costs: While blockchain fees are generally low, network congestion, high demand, or changes in blockchain fee structures may increase transaction costs, potentially reducing the economic viability of using the Token within the Network. • Security Risks: ○ Smart Contract Vulnerabilities: Despite security audits and best practices, unforeseen vulnerabilities in smart contracts could lead to security breaches, impacting Token security or functionality. ○ Private Key Management: Token holders are solely responsible for safeguarding their private keys and recovery phrases. Loss of wallet
--	--	--

		credentials will result in the permanent loss of Tokens, as blockchain transactions are irreversible. ○ Scam and Fraud Risks: Token holders are exposed to risks associated with scams, phishing attacks, fake giveaways, impersonation of the Token issuer/offeror or its team, counterfeit Tokens, and fraudulent airdrops.
--	--	---

		Engaging with unverified third-party platforms or unofficial communications increases the risk of fraud. ○ Community and Narrative Risks: The Token's success is closely tied to community interest and the broader crypto narrative. Macroeconomic trends, emerging competitors, or declining community engagement may negatively impact the Token's perceived value and adoption. • <u>Regulatory and Compliance Risks:</u> ○ <i>Evolving Legal Frameworks:</i> Regulations governing crypto-assets differ across jurisdictions and are subject to change. New legal requirements may impact the Token's classification, availability, or functionality. ○ <i>Jurisdictional Restrictions:</i> Some jurisdictions may impose restrictions or prohibitions on the trading or use of the Token, limiting its accessibility for certain users. ○ <i>Regulatory Harmonisation Risks:</i> A lack of global regulatory alignment may create uncertainty, with some authorities potentially classifying the Token as a security or financial instrument, leading to increased compliance costs and legal obligations. ○ <i>Regulatory Enforcement Risks:</i> Government agencies may take enforcement actions against the Token issuer/offeror if the Token is deemed an unregistered security or if other financial laws are found to have been violated. Such actions could negatively impact the Token's availability, appeal, and value. • Anti-Money Laundering ("AML") & Counter-Terrorism Financing ("CTF") Risks: Crypto transactions may be scrutinised for potential links to illicit activities. Authorities may take action against wallets or platforms suspected of facilitating money laundering or terrorist financing, affecting the ability of Token holders to use or trade their assets. • Taxation Risks: The tax treatment of the Token varies by jurisdiction, and Token holders are solely responsible for understanding and complying with applicable tax laws. Any appreciation, conversion, or sale of the Token may trigger tax obligations that
--	--	--

		differ depending on the regulatory environment. • Team Vesting and Token Release Risks: Tokens allocated to the team and other stakeholders may be subject to a vesting and unlock schedule. When these Tokens are
--	--	--

		vested, unlocked, and released into circulation, they may affect demand trends and liquidity. • Technological Obsolescence Risks: The blockchain and crypto industries evolve rapidly. The emergence of new technologies, changes in market demand, or advancements in competing protocols could render the Token or its underlying blockchain infrastructure less competitive, reducing adoption and utility. • Software Weakness Risks: The Token's infrastructure relies on relatively new blockchain technologies, which may contain undiscovered bugs, vulnerabilities, or inefficiencies. There is no guarantee that the process of transacting, storing, or interacting with the Token will be uninterrupted or error-free. • Unanticipated Risks: Beyond the risks outlined above, additional unforeseen risks may emerge due to changes in regulatory, technological, or macroeconomic conditions, potentially affecting the Token's security, functionality, or value.
--	--	--

I.4	Project Implementation Related Risks	The Person Seeking Admission to Trading neither operates, controls, oversees, nor manages the technology underlying the Network. While efforts are made to ensure security and stability, blockchain-based technologies are still evolving, and various risks exist. Additionally, the success and sustainability of the project rely on various external factors, including macroeconomic conditions, regulatory developments, and technological advancements. • <u>Technical Development Risks:</u> ○ <i>Smart Contract Issues:</i> Despite robust security measures, unforeseen vulnerabilities or bugs in the smart contracts could disrupt Token distribution, refunds, or vesting mechanisms. ○ <i>Blockchain Dependency:</i> The Token operates exclusively on its underlying blockchain. Any network congestion, downtime, or security breaches could impact the project's implementation and functionality. ○ <i>Risk of Security Weaknesses in Core Infrastructure:</i> The project relies on open-source software, which may be modified by third parties not directly affiliated with the Issuer. Weaknesses or bugs introduced into the core infrastructure could compromise security and lead to the loss of digital assets. Furthermore, malfunctions or
-----	---	---

		inadequate maintenance of the Network may negatively impact the Token's usability. ○ <i>Bugs in Core Blockchain Code:</i> Even with rigorous testing, unknown bugs may exist in the blockchain protocol, potentially leading to disruptions, incorrect transaction processing, or security vulnerabilities. • <u>Regulatory and Compliance Risks:</u> ○ <i>Regulatory Actions in One or More Jurisdictions:</i> The Token and the underlying Network could be impacted by regulatory inquiries or actions, which may restrict further development, implementation, or usage. ○ <i>Evolving Laws and Regulations:</i> New and changing laws related to financial securities, consumer protection, data privacy, cybersecurity, and intellectual property could impact the project. Compliance with these laws may require significant resources and could impose additional operational constraints. ○ <i>Governance Risk:</i> Decision-making mechanisms in blockchain governance may be inefficient, slow, or disproportionately influenced by specific stakeholders, leading to potential centralisation or unfavourable network changes. • <u>Operational Risks:</u> ○ <i>Resource Allocation:</i> The project's success depends on the issuer of the Token and its core team allocating sufficient resources (both financial and non-financial) to ensure timely development and deployment. Poor resource management could lead to delays or failure to achieve key milestones. ○ <i>Team Vesting Risks:</i> While the team's Tokens may be subject to a vesting and unlock schedule to align interests with the community, the eventual vesting and unlocking of these Tokens may impact market stability or long-term commitment from team members. • <u>Market Adoption Risks:</u> ○ <i>Competitive Environment:</i> The crypto industry is highly competitive and trend-driven. There is a risk that the Token may fail to capture
--	--	--

		sufficient interest, limiting its adoption. ○ Community Engagement Risks: The success of the Token depends heavily on community-driven sentiment and engagement. Failure to build or sustain an active community could hinder growth and long-term tradability
--	--	--

		• <u>Timeline and Milestone Risks:</u> ○ <i>Delayed Milestones:</i> Key deliverables such as Token distribution and liquidity access may face delays due to technical, operational, or funding challenges. ○ <i>CEX Listing Risks:</i> Listings on centralised exchanges depend on securing the necessary funding for listing fees and meeting platform-specific requirements. Delays or insufficient resources could postpone broader market/ community access. • <u>Ecosystem Risks:</u> ○ <i>Dependence on External Partners:</i> The project relies on partnerships with infrastructure providers, liquidity providers/ market makers, exchanges and other third party service providers. Any failure or delay from these partners could disrupt implementation plans. ○ <i>Risk of Withdrawing Partners:</i> The Token holder understands that the feasibility of the project depends strongly on the collaboration of service providers and other key stakeholders. A loss of critical partnerships could impact project sustainability. • <u>Technology and Software Risks:</u> ○ <i>Risk of Software Weakness:</i> The Token holder acknowledges that blockchain and smart contract technologies are still evolving. There is no guarantee that Token usage will be uninterrupted or error-free. Vulnerabilities in the underlying blockchain, smart contracts, or supporting technologies could lead to the complete loss of Tokens or their functionality. ○ <i>Dependency on Underlying Technology:</i> The Network relies on blockchain infrastructure, hardware, and network connectivity, all of which may be subject to failures, outages, or vulnerabilities. ○ <i>Risk of Technological Disruption:</i> The emergence of new technology, such as quantum computing, could undermine the security of blockchain encryption and compromise the integrity of digital assets. • <u>Network Security Risks:</u>
--	--	--

		○ Network Attacks and Cybersecurity Threats: Blockchain networks can be vulnerable to cyberattacks such as 51% attacks, Sybil attacks, or distributed denial of-service (“DDoS”) attacks. These threats could disrupt network operations and compromise security. ○ Blockchain Network Attacks: The Network may be subject to validation attacks, including double-spend
--	--	--

		attacks, reorganisations, majority mining power attacks, “vampire” attacks and work race condition attacks. Successful attacks could compromise the proper execution of transactions and smart contracts. • <u>Privacy and Anonymity Risks:</u> ○ <i>Public Ledger Transparency:</i> Blockchain transactions are recorded on a public ledger, which may expose transaction history and financial activity. Certain transactions could be linked to specific wallet addresses, making users vulnerable to fraud, phishing attacks, or targeted scams. • <u>Economic and Governance Risks:</u> ○ <i>Consensus Failures or Forks:</i> Errors in the consensus mechanism could lead to forks, where multiple versions of the ledger coexist, or network halts, reducing trust in the network. ○ <i>Economic Self-Sufficiency:</i> The long-term sustainability of the Token ecosystem depends on sufficient transaction volume to generate fees to support rewards for validators, which in turn maintain network security. A lack of adoption could lead to governance-driven changes to monetary policy, fee structures, or consensus mechanisms. ○ <i>Incentive Model Risks:</i> Changes to block rewards, staking incentives, or governance models may be required to maintain network participation. Governance decisions could result in modifications that impact Token holders, including inflationary adjustments, transaction fees, or redistribution of rewards. • <u>Software Weakness Risks:</u> ○ <i>Unforeseen Bugs and Security Vulnerabilities:</i> The Token and its supporting infrastructure rely on blockchain technologies that may still be evolving. There is no guarantee that Token transactions will be uninterrupted or error-free. Software vulnerabilities, weaknesses in smart contracts, or infrastructure issues may result in loss of assets, security breaches, or unexpected network failures.
--	--	--

		• <u>Unanticipated Risks:</u> ○ <i>Unforeseen Regulatory, Technological, or Economic Challenges:</i> In addition to the risks identified, new threats may emerge due to changes in legal, technological, or economic conditions. Developments
--	--	--

		such as regulatory crackdowns, unforeseen Network vulnerabilities, or disruptive innovations could impact the usability, security, or value of the Token in ways not currently foreseeable.
--	--	--

I.5	Technology-Related Risks	The Person Seeking Admission to Trading neither operates, controls, oversees, nor manages the technology underlying the Network. While efforts are made to ensure security and stability, blockchain-based technologies are still evolving, and various risks exist. • <u>Blockchain Dependency Risks:</u> ○ <i>Network Downtime and Congestion:</i> The Token relies entirely on its underlying blockchain network, which may experience outages, congestion, or downtime. Such events could disrupt Token transfers, trading, or other functionalities. ○ <i>Scalability Challenges:</i> As transaction volume grows, the blockchain network may face scaling limitations. Increased congestion could lead to slower transaction processing times and higher fees, reducing efficiency and usability. ○ <i>Settlement and Transaction Finality Risks:</i> Blockchain transactions are designed to be irreversible; however, under exceptional circumstances such as network forks or consensus failures, there remains a theoretical risk that transactions could be reversed, or multiple competing ledger versions could persist. Transactions sent to an incorrect address are not recoverable, leading to permanent loss of assets. • <u>Smart Contract Risks:</u> ○ <i>Vulnerabilities:</i> While smart contracts are developed with security measures, undiscovered vulnerabilities or exploits may impact Token security, distribution, or access. Bugs in the contract code may lead to unintended loss of Tokens, unauthorised transactions, or exposure to external attacks. ○ <i>Immutability Risks:</i> Once deployed, some smart contracts cannot be altered. Errors or security flaws in the code could result in operational failures without the possibility of corrections. ○ <i>Security Exploits:</i> Bugs or vulnerabilities in smart contracts may expose the Token
-----	--------------------------	--

		ecosystem to potential hacks, allowing attackers to manipulate transactions, drain liquidity, or disrupt contract execution.
--	--	--

		• <u>Network Security Risks:</u> ○ <i>Risk of Attacks and Forks:</i> The blockchain may be susceptible to consensus-related attacks, such as double-spend attacks, majority validation power takeovers, censorship attacks, or forks. These risks could affect Token transactions, balance integrity, and overall network security. ○ <i>Cybercrime and Theft Risks:</i> Despite security efforts, blockchain-based assets and services may be exposed to cyberattacks, including hacking, phishing, or malware threats. Compromised wallets, exchanges, or smart contracts could lead to asset theft, loss of funds, or disruptions in Token functionality. ○ <i>Data Corruption Risks:</i> The reliability of blockchain data could be compromised due to software bugs, human error, or deliberate tampering. Such incidents may affect transaction records, network integrity, and user confidence in the system. • <u>Wallet and Storage Risks:</u> ○ <i>Private Key Management:</i> Token holders are solely responsible for securing their private keys and recovery phrases. The loss of private keys results in irreversible loss of Tokens, as blockchain transactions are final and cannot be undone. ○ <i>Compatibility Issues:</i> The Token is supported only by blockchain-compatible wallets. Incompatibility with specific wallet software, network malfunctions, or wallet provider shutdowns may affect access to and usability of the Token. • <u>Ecosystem Dependency Risks:</u> ○ <i>DEX and CEX Integration Issues:</i> The Token's availability depends on integration with DEXs and CEXs. Technical failures, security breaches, or delisting from these platforms could limit liquidity, disrupt trading, and reduce Network accessibility. ○ <i>Reliance on Third-Party Services:</i> Many blockchain services, including wallets, bridges, and oracles, depend on third-party providers.
--	--	---

		Failures, security breaches, or regulatory actions against these services could negatively affect the functionality of the Token. ○ Centralisation Concerns: Although blockchain networks are designed to be decentralised, a small number of validators or node operators could introduce centralisation risks. This may lead to potential
--	--	---

		censorship, control over transactions, or increased vulnerability to governance attacks. • <u>Software and Protocol Risks:</u> ○ <i>Bugs in Core Blockchain Code:</i> Despite rigorous testing, undiscovered bugs in the core blockchain protocol could lead to network failures, incorrect transaction processing, or security vulnerabilities. A failure to address such issues promptly could result in loss of user confidence and network instability. ○ <i>Risk of Technological Disruption:</i> Emerging technologies, such as quantum computing, could potentially compromise blockchain encryption, making networks vulnerable to attacks that could compromise data integrity or enable unauthorised asset transfers. ○ <i>Dependency on Underlying Technology:</i> The stability of the Token ecosystem relies on underlying technical infrastructures, including internet connectivity, computing hardware, and cryptographic algorithms. Disruptions in these foundational technologies may impact network security and operational efficiency. • <u>Privacy and Anonymity Risks:</u> ○ <i>Public Ledger Transparency:</i> Blockchain transactions are recorded on a publicly accessible ledger, which may expose sensitive transaction data. While addresses do not directly reveal identities, sophisticated data analysis could potentially link certain transactions to specific individuals or entities. ○ <i>Exposure to Fraud and Targeted Attacks:</i> Increased transparency may lead to risks such as phishing, fraud, or unauthorised tracking of user activity by malicious actors. Individuals with significant Token holdings may be targeted for scams or social engineering attacks. • <u>Economic and Network Viability Risks:</u> ○ <i>Economic Self-Sufficiency:</i> The long-term sustainability of the Token ecosystem depends on maintaining sufficient transaction volume to generate rewards for incentivising validators to ensure network security. If network adoption remains low, there is a risk of reduced validator
--	--	---

		participation, increased transaction costs, or a need for governance-driven changes to monetary policy, fee structures, or consensus mechanisms. ○ Incentive Model Risks: Changes to block rewards, staking incentives, or governance models may be required to ensure ongoing network security and
--	--	---

		sustainability. Governance proposals may introduce modifications that impact Token holders, including inflation adjustments, transaction fees, or redistribution of rewards. • Software Weakness Risks: ○ Unforeseen Bugs and Security Vulnerabilities: The Token and its supporting infrastructure rely on blockchain technologies that may still be evolving. There is no guarantee that Token transactions will be uninterrupted or error-free. Software vulnerabilities, weaknesses in smart contracts, or infrastructure issues may result in loss of assets, security breaches, or unexpected network failures. • Unanticipated Risks: ○ Unforeseen Regulatory, Technological, or Economic Challenges: In addition to the risks identified, new threats may emerge due to changes in legal, technological, or economic conditions. Developments such as regulatory crackdowns, unforeseen Network vulnerabilities, or disruptive innovations could impact the usability, security, or value of the Token in ways not currently foreseeable.
I.6	Mitigation measures	Not applicable
Part J – Information on the sustainability indicators in relation to adverse impact on the climate and other environment-related adverse impacts		
J.01	Name	TRON Tech limited
J.02	Relevant legal entity identifier	Not available

J.03	Name of the crypto-asset	TRX
J.04	Consensus Mechanism	The Token was launched on the Network, which relies on its own implementation of a dPoS consensus mechanism. To participate in the Network's consensus mechanism, users must become Super Representative candidates by depositing 9,999 Tokens, which are non-refundable, and running a full node. Candidates are entitled to participate in the Super Representatives elections, which take place every 6 hours. The 27 candidates with the most votes from Token stakers become Super Representatives and are in charge of validating the Network's transactions and creating new blocks.
J.05	Incentive Mechanisms and Applicable Fees	In exchange for validating transactions and creating new blocks, Super Representatives are compensated with the Token, emitted as block rewards. Block rewards consist of 8 Tokens per block, which are given to the Super Representative who creates the block.

		Additionally, Super Representatives who validate the Network transactions and create its blocks are entitled to receive voting rewards, in the form of the Token, and emitted on a per-block basis. These rewards consist of 128 Tokens per block, which are distributed among all Super Representatives and Super Representative partners based on the number of votes they received. Super Representatives can set their own commission rate from 0% to 100%, which determines how much of these rewards that correspond to the voter they will retain. Every Network transaction incurs the payment of transaction fees, which are determined in the following manner: • Bandwidth transactions: Simple transactions like Token transfers are paid with Bandwidth. Each user account receives 600 Bandwidth daily for free. To increase their amount of Bandwidth, users must stake the Token. When users do not hold enough Bandwidth, they must pay for these types of transactions with the Token. • Energy transactions: Smart contract interactions are paid with Energy and Bandwidth. Energy can only be obtained by staking the Token. If users do not hold enough Energy, this type of transaction will be paid with the Token. The Tokens used to pay for transaction fees are immediately burned. • Fixed fees: The Network has some transactions which are taxed with fixed fees to be paid with the Token. For instance, to become a Super Representative candidate costs a fixed fee of 9,999 Tokens, 1,024 Tokens to create a TRC-10 token, 1 Token to activate a new account, and 100 Tokens to update accounts' permissions.

Sources and methodologies		
J.09	Energy Consumption Sources and Methodologies	• The methodology builds upon four steps to generate data on the electricity consumption and carbon footprint of the TRON POS system. CCRI develops metrics to enable a valid comparison between previously analyzed PoS systems. • The methodology involves analyzing the TRON PoS network, estimating electricity usage of a single node, estimating electricity consumption of the complete network, and analyzing transaction and block information. • Electricity consumption is measured using Mystrom WiFi Switches.
