

Bullet series

High-performance coverage in a pronounced form factor

Overview

The bullet series offers enterprise-grade security in a pronounced form factor designed to withstand demanding environments. These models feature a factory-sealed aluminum unibody, built-in visor, and internal heating mechanism for protection against weather extremes and excessive precipitation. Bullet cameras can capture images with up to 4K resolution and feature advanced varifocal lenses and powerful IR LEDs for detailed people and vehicle capture at a variety of distances. They also offer license plate recognition (LPR) capabilities.

All models feature powerful onboard Ambarella processors, enabling Verkada's advanced people and vehicle analytics. Organizations can quickly search for and locate footage of interest using attribute descriptions, natural language queries, and motion-based search tools. In addition, users can leverage AI-powered features to accelerate investigations, receive actionable alerts, and surface key trends in operational data.

Like all Verkada devices, bullet cameras are easy to install. They are powered by power over ethernet (PoE) and require no additional setup, downloads, or configuration. Verkada also offers IR and white light illuminator attachments that connect directly to the CB63-E and CB63-TE models to optimize nighttime performance or deter potential threats.

Bullet cameras are ideal for perimeter protection, demanding exterior environments, and long-distance monitoring. Wide-angle models provide detailed coverage of outdoor areas thanks to their high-resolution image sensors, while telephoto models include a powerful zoom lens to focus on distant areas of interest. With license plate recognition capabilities, bullet cameras can also be used to monitor vehicle movements and gain visibility into how vehicles move across parking lots, drive-thrus, and other locations.

Key features

Enterprise-grade performance

- High-resolution progressive CMOS image sensors with up to 4K resolution
- Dedicated system-on-a-chip for an enhanced streaming experience
- Advanced edge processing for motion, people, vehicle, and AI analytics

Hybrid cloud architecture

- Onboard storage and processing for reduced bandwidth consumption and coverage at scale
- 30 - 365 days (256GB - 3TB) of onboard storage
- Redundant cloud backup and unlimited cloud-based archiving of footage

Plug-and-play installation

- No additional setup, downloads, or configuration required
- Automatic firmware updates
- LED install status light indicator
- Easily enable advanced analytics

1. The CD22 and CD22-E models support people and vehicle detection, but do not support advanced people and vehicle analytics.

Verkada Hybrid Cloud Benefits Overview

No NVR or DVRs

Enterprise-grade onboard storage saves up to 365 days of continuous video¹

Easy to scale

Bandwidth friendly and supports thousands of globally-distributed sites

Centralized management

Modern platform enables secure remote access on any supported browser or device

The Reliability of Onboard Storage, With the Accessibility and Scalability of the Cloud

Lightweight, hassle-free installation

- No NVRs, DVRs, or servers—just a PoE connection
- Cameras come online and configure in minutes without 3rd party plugins, thick clients, or downloads
- No additional software or complexities like port forwarding

Easy to use

- Intuitive UI for streamlined investigations and quick incident resolution
- Provision user accounts to access footage and features without additional training
- Find, download, and share footage from any supported browser or device

Predictable total cost of ownership

- Hardware includes a 10-year warranty²
- New software features are pushed over-the-air, without any additional cost

Scalable across sites

- Onboard storage and processing for reduced bandwidth consumption
- Cloud-based management platform centralizes globally-distributed devices
- Automatic firmware updates keep systems secure, eliminating the need for ongoing maintenance

1. All our cameras record in “adaptive quality,” capturing both standard and high quality streams. Standard quality (SQ) video is stored up to the amount of retention specified by the customer. The amount of high quality video stored on the camera will depend on the amount of motion detected by the camera over time. To learn more, visit our website: <https://docs.verkada.com/docs/adaptive-quality-recording-whitepaper.pdf>

2. The CD22, CD22-E, and all PTZ cameras come with a 5-year warranty.

Verkada Command: Centralized, Cloud-Based Management for Distributed Deployments

Command, Verkada's cloud-based management software, centralizes management of Verkada devices across globally-distributed sites. Within Command, users can provision new cameras, create and organize sites, manage device settings, access live and historical footage, manage users, and leverage advanced analytics.

Manage from anywhere

- Remotely access footage and manage devices from any supported browser or device
- Leverage the Command mobile app for visibility on the go

Quickly detect and respond to threats

- Stay informed with customizable, intelligent alerts
- Filter people using attribute search and create person of interest (POI) profiles for specific subjects
- Search and filter to find vehicles and license plates of interest

Scale with simplicity

- Add more devices and sites without complicating the user experience
- Leverage granular roles and permissions to manage users at scale
- SAML-based integration with single sign-on (SSO) solutions

Streamline incident management

- Accelerate investigations with intelligent people, face, and vehicle detection
- Consolidate relevant footage to easily review and share with internal and external stakeholders

Keep data secure

- [Enterprise-controlled encryption](#) provides robust data protection, security, and control
- Stay secure with data encrypted in transit and at rest¹
- Receive automatic firmware updates to stay a step ahead of emerging threats

Archive and share over the cloud

- Command licenses include unlimited cloud archiving and 30-days of cloud backup
- Easily export any footage in MP4 format and allow recipients to verify its authenticity
- Share live links and historical footage with first responders

1. Data on device is encrypted at rest using AES-128. Data in the cloud is encrypted at rest using AES-256. Data in transit to the cloud is encrypted using TLS 1.2 or greater.
